The St. Petersburg *Official Messenger* published the following telegram on Thursday from General Komaroff, despatched from Askabad on March 27: "A telegram forbidding the occupation of Panjdeh reached me on March 23. I only communicated it to commanders of outposts, and did not make it generally known. Colonel Zackrzewski, with my permission, interviewed by correspondence some British officers in a private capacity. I did not admit their right to treat officially. I addressed my demands direct to the commander of the Afghan forces. General Alikhanoff, with a sotnia of Turkomans, rode in the direction of Morkals along the river bank on the Russian side. It was by no means my intention to advance on Panjdeh. To march the sotnia in the rear of 4,000 Afghans was inconceivable. One company of Russians marched on the heights on the right bank of the Murghab River, but did not reach our videttes on the left bank of the same river. When the Afghans approached, however, this

one company, by my order, returned to camp."

The London *Standard* on Friday morning said positively that England had proposed to Russia to submit to any European sovereign for arbitration the simple question whether or not the agreement of the 17th of March, that, pending negotiations, neither Afghans nor Russians should advance or attack, was broken by General Komaroff's attack upon the Afghans at Puli-Khisti. It was also asserted that England had offered to end the dispute by conceding to Russia the Lessar line under a distinct pledge that it shall be the abiding limit of the Russian frontier. Russia was reported as being favorably disposed toward the proposed arbitration. It was believed that the King of Denmark would be chosen.

The London *Standard* on Saturday morning had a despatch from Tirpul, dated April 28, stating that the Russians had occupied Kalaï-Maur, on the Kushk River, about twenty miles south of Panjdeh, and were making a military road from there east to Merutchak, on the Murghab River. The *Daily News* (Government organ) said on the same day, that a special messenger had left St. Petersburg for London with Russia's formal acceptance of England's latest proposals. A London despatch to the Associated Press on Saturday asserted that an agreement has been concluded between the English and Turkish Governments by which the latter will allow British vessels to pass through the Dardanelles in the event of war. In return, Turkey will be allowed to send an expedition to occupy the Sudan by way of Suakim, and England will restore Cyprus to Turkey at the end of five years, and guarantees the integrity of the states of the Porte.

In the House of Lords on Monday afternoon Earl Granville, Secretary of State for Foreign Affairs, stated that England and Russia had agreed to renew the negotiations in London concerning the Afghan frontier question, and that the details had been arranged for the meeting of the Delimitation Commission. His Lordship said that both England and Russia had agreed that the difficulties which had arisen from the Panjdeh incident should be submitted to "a full investigation and reference to friendly Powers." Both Governments would facilitate the inquiry as much as possible. The Panjdeh district will remain neutral territory during the progress of the negotiations. "The Russian Government," continued Lord Granville, "have stated their readiness to consider the question of withdrawing their troops should the decision of the Afghan Boundary Commission prove to be against them. Any differences that may arise regarding the interpretation of passages in the despatches of the two Governments will be dealt with in a manner consistent with the honor of both countries." Mr. Gladstone made a similar statement in the House of Commons. "Russia," added the Premier, "has expressed herself as willing to agree to a removal of the Russian outposts." These statements were regarded as a complete assurance of peace. In London the announcement was received with general satisfaction. It was considered a slight to Sir Peter Lumsden.

After Mr. Gladstone's announcement in the House of Commons on Monday, the vote of credit was immediately called up. Lord Randolph Churchill, the young Conservative leader, immediately made a savage speech against the Government. He argued that the announcement just made of an agreement with Russia was a terrible piece of news to those anxious for the security of the Indian Empire. "The Government," he cried, "have made a base, cowardly surrender of every point at issue to Russia! I greatly fear that as a result we have lost India!" He protested against the conduct of the Government in submitting the vote of credit last Monday without giving the slightest indication of their policy and of the exact point at issue with Russia. The latter, he continued, had been for a long time breaking the agreement of 1873 with respect to Central Asia. He declared that the history of Russia's negotiations with England was a record of treachery, fraud, and falsehood. Mr. Gladstone replied that there had been no change in the Government's policy since last Monday, when the House unanimously agreed to the credit. In Mr. Gladstone's judgment, any appearance of hesitation in agreeing to the credit would be a serious public evil. He had no objection to sweeping criticism, but when, happily, there was a prospect of a favorable issue of a difficult crisis, he asked the House not to derogate from what it had already patriotically done. A number of attempts were made to adjourn the debate, the last of the motions being defeated by 164 to 106. The vote of credit was agreed to by 130 to 20, on the understanding that the subject could be still further discussed in Committee of Supply.

In the House of Commons on Tuesday Mr. Gladstone announced that Sir Peter Lumsden, the British Afghan Boundary Commissioner, and Colonel Stewart had been ordered to come home immediately. It was rumored that Lord Dufferin had resigned the Viceroyship of India. Mr. Gladstone explained that Sir Peter Lumsden had not been "recalled" in the diplomatic sense of censure, but had been called home for consultation, as the negotiations were to be conducted with Russia in London. On the other hand, there are rumors that Sir Peter has resigned because his advice has not been followed.

The British Government has been in confidential communication with Austria respecting the policy of the latter in the event of war between England and Russia.

Lord Wolseley left Cairo for Suakim on Wednesday.

The *Fortnightly Review* publishes an article by Charles Williams, Sudan correspondent of the London *Chronicle*, which asserts that Sir Charles Wilson could have rescued Gordon on January 24, two days before his death, but that he wasted precious time, although urged by the commander of Gordon's Nile fleet to hasten on to Khartum.

Nubar Pasha, Prime Minister of Egypt, has formally apologized to M. Tallandier, the French Chargé d'Affaires at Cairo, and the *Bosphore Égyptien* incident is considered ended. It was explained in the House of Commons on Monday that the Government found on investigation that the suppression of that paper was not justifiable, and so recommended the apology.

The Inventors' Exhibition was successfully opened in London on Monday by the Prince of Wales.

Whistler, Sargent, Alexander Harrison, and Frank Boggs are among the Americans represented in the French Salon this year. Thursday was varnishing day. The total number of works exhibited is 5,034, of which 2,488 are oil paintings.

A dinner was given to Mr. Henry Irving in London on Wednesday at the Criterion. Many notable guests were present. The Earl of Wharncliffe presided. Mr. Irving, in his speech, paid a warm tribute to America.

Mr. John Ruskin has intimated his intention to resign the Slade Professorship of Fine Arts at Oxford. He will deliver a few farewell lectures.

The London *Standard* editorially urges that a public farewell dinner be given to the retiring American Minister, Mr. Lowell, who has always been ready to preside when pressed by presidents of councils or committees to honor them with his presence, and whose after-dinner speeches were always attractive and genial. There are reports that Mr. Lowell may accept an Oxford professorship.

The Japanese Village Exhibition and Humphrey's Hall, Hyde Park, London, were burned on Saturday. Loss $175,000.

Gen. Brière de l'Isle telegraphs to the French Government from Tonquin that the Chinese are loyally fulfilling the conditions of peace.

Despatches from Tientsin state that the dispute between China and Russia regarding the frontier of Mantchooria has become acute, owing to the non-arrival of the Russian members of the Delimitation Commission and the constant postponement of the date of their arrival at the place of meeting to settle the boundary. The Chinese Commissioners have been ready for the past several months to begin the work of delimitation. Now that the difficulty with France in relation to Tonquin has been settled, China has become more courageous and has demanded that Russia fulfil her part of the agreement. It is said that China has also intimated that she is quite prepared to enforce her claims in regard to the frontier of Mantchooria.

Louise Michel, the Anarchist, refuses to accept a pardon unless as a part of a general amnesty to all political prisoners.

The Rome *Diritto* confirms the statement that Italy delicately hinted that she objected to the nomination of Mr. Keiley as United Minister to Italy.

A new opening has appeared in Mt. Vesuvius near Torre del Greco, from which the lava is abundantly flowing.

Dr. Koch, the German cholera investigator, has been chosen a professor at the University of Berlin.

Dr. Gustavus Nachtigal, the celebrated German traveller, is dead, in his fifty-second year. He died at St. Vincent, on his way to Africa. In 1863 he went to Algeria in search of health. In 1869 he undertook to convey the presents of the King of Prussia to the Sultan of Bornou. He left Tripoli in February, and in the summer following got from Fezzan into the mountain regions of Tibesti, no other European having ever penetrated so far southward. In July, 1870, he returned to Fezzan, after having passed through great dangers, arrived at Bornou and delivered his presents. In January, 1872, he undertook a journey from Kouka in Bornou to Begharmi and the slave-dealing regions south, all unknown ground, on which he made valuable scientific observations. Early in 1873 he set out for Wadai, where the first European ever seen there, Dr. Vogel, had been killed by the King. Dr. Nachtigal crossed this region safely and arrived in Darfur, which he left again just after war had been declared by Egypt, and arrived at Cairo in November, 1874. At the time of his death he was German Consular Commissioner for West Africa.

A number of people in Valencia, Spain, are being inoculated with cholera virus to escape the disease. This inoculation produces a tumor on the patient, who becomes severely prostrated from the effects in about twenty-four hours, but generally recovers entirely within forty-eight hours after the operation. It is believed that the success of the system has been established.

M. Delyannis has formed a new Grecian Ministry.

On Sunday night a fracas occurred between some Jamaicans and national soldiers at Culebra, on the Isthmus of Panama. The latter were disarmed, and afterward retired. After procuring reinforcements they returned and broke into the barracks where the Jamaicans were sleeping, and in the most barbarous manner killed twenty-five of them and wounded twenty others. Only one Colombian was killed and none wounded. The Jamaicans are leaving the Isthmus in great numbers. Their departure will delay the work on the canal. Martial law has been proclaimed on the Isthmus.

News was received on Tuesday that Colonel Otter, with 300 men, had had a severe engagement, near Battleford, on May 2, with Chief Poundmaker's force of 600 Indians, and had lost 8 killed and 12 wounded. The Indians lost about 50. The Canadians were obliged to retire to their barracks. It was a practical defeat.

THE TWO THEORIES.

Mr. Cleveland has now given the country an excellent opportunity to judge as to the relative wisdom of two theories regarding the conduct of the public service. During the first six weeks of his Administration he followed pretty uniformly the principle which controlled his selection of a Cabinet, namely, that capacity and merit—not "claims" and "influence"—should be the governing considerations as between different candidates for office. In the seventh week he made three notable appointments to Internal Revenue Collectorships which were based upon the opposite theory, that partisan service and political backing constitute the proper tests. The distinction between the two theories could not possibly be more sharply drawn than in the appointment of such men as Secretary Endicott and Postmaster-General Vilas in high places, and such men as McMullen, the new Appraiser for the port of New York, in lower places, on the one hand; and the appointment of such men as Pillsbury, Chase, and Troup, on the other hand. The stupidest voter perceives at a glance the difference between the two sorts of selections, and comprehends instantly the diametrically opposite theories upon which they are based.

Consider the matter solely from the party point of view. Here is a Democratic Administration recently installed in power, after the party has been in a minority for a quarter of a century. Its chief is naturally and laudably ambitious to secure for it a further lease of power when, three years hence, it shall appeal for a vote of confidence. In 1888 the record of Mr. Cleveland's Administration will be before the people. The supreme test which it must confront is its ability to command for the Democratic party the support of a majority of the voters in the next Presidential election.

The really practical question, therefore, is this—Will the Administration win larger support by making appointments on the score of merit, or on the basis of "claims"? The answer to this question is found in the reception by the public of nominations which illustrate the two theories. Take the case of Pillsbury, who is made Collector of Internal Revenue for the more important of the two Massachusetts districts. The Bay State gave Garfield 165,205 votes and a clear majority of almost 48,000 over all others in 1880, while Blaine received in 1884 only 146,724 votes in a much larger poll, and fell nearly 10,000 short of a majority. This great change was due to the fact that many thousands of former Republicans, who placed country above party, believed that the Republican candidate last year was unfit to be President, and that the Democratic party under Mr. Cleveland could safely be trusted. A large proportion of these men can be won over to the permanent support of the latter party if they find that better government may be expected from it than from the Republicans, while many of their old associates, who felt compelled unwillingly to vote for Blaine, are in the same condition, now that their apprehensions of some terrible disaster to follow a Democratic victory are already dispelled. At the same time both these classes of voters can be, and will be, held to their old party relations if it shall appear that the success of the Democrats only means the enforcement, by a new set of agents, of the old spoils theory of politics. The selection of so able, liberal, and high-minded a man as Judge Endicott for Secretary of War outlined the policy which would enable a rejuvenated Democracy to make a hopeful fight even in such an old-time "Republican stronghold" as Massachusetts. If the issue between Blaine and Cleveland could have been presented over again a month after inauguration day, the Republican plurality of November, in the opinion of many good judges, would have entirely disappeared. There is just one way to arrest this tide and to set it running in the other direction, and that is to follow up Endicott in the Cabinet with a row of Pillsburys in the local Federal offices. Endicott and Pillsbury admirably represent the opposite political poles. The one irresistibly attracts the great and growing body of independent voters in the State, which is already large enough to hold the balance of power, while the other as inevitably repels it.

It is the same way in Maine. The temporary success of the curious and otherwise inexplicable Fusion movement in that State, a few years ago, was due to Republican disgust with the odious methods of the party Machine far more than to any general acceptance of Greenback doctrines. The strength and persistence of this feeling were forcibly demonstrated by the fact that, despite all his efforts last fall, Maine's Favorite Son received a smaller majority in his own State than Lincoln, Grant, or any other Republican candidate for President, with the single exception of Garfield in the November following the local Fusion victory of September, 1880. There are plenty of former Republicans in Maine who are ready and anxious to exchange the tyranny of Blaineism for a progressive Democracy, but they will not jump from the frying-pan of Republican bossism into the fire of a Democratic ring rule which means the elevation of such political rascals as Chase, who shared with Pillsbury the disgrace of the attempted theft of the State in 1879-'80. An honest, straightforward, business-like Democratic Administration will make Maine a doubtful State; while the building up of a Democratic Machine, with such men as Chase for engineers and stokers, will assure its control to the Republicans.

The same rule holds good in Connecticut. A little body of men in that State has for a dozen years constituted the balance of power, and turned the electoral vote whither they would—in 1876 to Tilden, in 1880 to Garfield, in 1884 to Cleveland. Their ballots were given to Cleveland because they believed that he would appoint to office men of high character and spotless record. Until a fortnight ago he had justified their confidence, and he only needed to keep on in the same way to swell the ranks of these last-year supporters from among those who voted for Blaine. The appointment to a responsible office of a notorious blatherskite, who has been by turns a "labor reformer," Greenbacker, Butler man, and Bourbon Democrat, arrests this tendency; and clear proof that Troup is to represent the local standard of a Democratic Administration will give the Republicans a fine chance to win back the State.

What is true of Massachusetts, Maine, and Connecticut is equally true of the whole country. Whether the Republicans or the Democrats are to carry the next national election depends upon the consideration which party, by its course between now and 1888, will secure the adhesion of the Independent voters. There is, to be sure, a theory that the appointment of the worst sort of Machine politicians will "vitalize" the Democracy, so that it will not need any infusion of fresh blood in order to maintain a vigorous life. The experience of the Republican party, however, conclusively disproves this theory. A Government for the benefit of the politicians never satisfies even the politicians, simply because there are never spoils enough to go around. The result was that before its downfall the Republican party in almost every State was split into two or more factions, which usually fought each other more bitterly than they did the Democrats. The fact that in more than one State the Republicans are to-day congratulating themselves upon their improved chances of victory because they no longer have the offices to quarrel over, is the most eloquent answer that could possibly be made to the plea that patronage will build up a party better than principles.

AN ENGLISH VIEW OF THE LATE CAMPAIGN.

An Englishman who landed in this country for the first time in the midst of last year's Presidential campaign, and returned home two months later, has given his "impressions" to the British public in the form of an article in a recent number of the *Fortnightly Review*. Naturally those impressions are somewhat confused. The two months between August and November in any Presidential campaign, and especially in such an unusual one as that of 1884, do not afford the most favorable opportunity for a stranger to gain a clear and accurate idea of how Americans "work their political institutions." Yet this is what the *Fortnightly* observer attempted to do, and the result is a very remarkable article.

His first observation is the familiar one that "one of the great peculiarities of the United States is the absence of any leisure class. Every man is in business; no matter what fortune he may accumulate he continues in business," and at election time "every one is drawn into the fray, and ordinary business is almost at a standstill." Then, too, everybody marches in processions which are beyond compare greater than were ever seen in England. "The whole country is completely organized in military fashion for the purposes of the campaign. Brigades, battalions, troops, and batteries appear as numerous and as fully organized as in Germany when the order for mobilization is issued." It is evident that our observer never had the opportunity of a close inspection of the personnel of a campaign regiment, or stood where he could command an unobstructed view of such a regiment as it turned a corner. "The idea," he says, in summing up on this point, "forcibly presents itself that in the event of any internal disturbance or alarm of attack from without, this elaborate organization would be promptly turned to serious account." A story is told by James Russell Lowell, in his delightful essay on "Cambridge Thirty Years Ago," of a venerable Harvard

President who granted the request of the college militia to go to Boston for a general training, and added, with a twinkle in his eye: "Young gentlemen, have you made arrangements for having your muskets brought home in the evening?" The muskets were the property of the State, and the college was responsible for them. In case a campaign regiment were to be turned to "serious account" against an "internal disturbance" or "attack from without," it would be necessary to provide some means for bringing home the tin battle-axes, pasteboard helmets, and waving white hemp plumes which the mobilized brigades and batteries would carry into the fray.

The first Republican procession of dry-goods men made a great impression upon the visitor, who comments upon it with much shrewdness. There were a thousand of them, he says, and "those in the rear, who were too far from the band to march in time to the music, kept step to shrill and continuous cries of 'J !— G !—Blaine !— O ! — Hi ! — O !—J ! — G !— Blaine !—O !—Hi !—O !' The effect of hundreds of voices repeating this sharp cry was most remarkable, but I should doubt the Republican party having secured a single extra vote by its monotonous repetition or by any other feature of the demonstration." His observation did not go deep enough to discover the fact that this "monotonous repetition" was the beginning and end of the Republican principle at stake in the election.

One of the most lucid passages in the article is that devoted to Tammany and the part played by it in the campaign. We will not attempt to condense this: "As regards the Tammany Hall business, probably no one but a New York wire-puller could understand all the ins and outs of what took place. The most that could be learned by the uninitiated was that the leaders of Tammany Hall, which is a very old political and Democratic club in New York, sought to obtain the support of the managers of the Presidential election in appointing such city officers at the October election as would give them the control of the municipal administration and the valuable patronage connected with it. The position taken up by Tammany evidently puzzled the party leaders." We are unable to see how the "uninitiated" could have hoped to learn more than that, for there are several things in it which even a New York wire-puller never suspected before.

On the question of the use of money in elections, the observer contributes a large amount of new and rather startling information. "The actual purchase for money of single votes" is, he says, "of course useless and unknown," but there are "well-known methods of influencing whole classes and communities." One of these well-known methods is the "River and Harbor Steal," and this is the way in which our observer says that it works:

"Very considerable sums of public money which were some time ago assigned for the improvement of rivers and harbors, were expressly intrusted to individuals who are stated to have employed them solely for the purpose of influencing political votes. This subject was a very favorite one for Democratic journalism; and it was asserted that the Republican managers had promised, if returned to power, a further similar 'steal' to encourage their supporters in certain wavering localities."

The most striking portion of the article is that devoted to the celebrated Gould-Field-Blaine dinner, that followed so closely upon the heels of the Burchard incident with which it is destined to be inseparably linked in political history. The observer has an entirely new theory of this banquet, and we are not prepared to say that it is not the correct one. He declares that instead of the dinner being given to Mr. Blaine by his rich admirers, it was given by Mr. Blaine to them. Here is the notable passage in which this announcement is made:

"Mr. Blaine's personal connection with the railway monopolists was of course made a ground of special attack, and the large grants of public lands made to railway companies by the Republican Government were said to have been awarded for corrupt purposes. Mr. Blaine himself evidently valued the support of the great railway financiers sufficiently to induce him to disregard such insinuations; and he excited public curiosity by a great dinner given at Delmonico's in the end of October to the leading capitalists. New York society was particularly exercised as to Mr. Blaine's object in assembling the great moneyed interest around him at the famous restaurant, and extraordinary statements appeared in the newspapers as to the number of millions represented at the dinner-table. It was maintained by some that the Presidential candidate desired to impress the business community at large by a sign of the confidence reposed in him by his remarkable guests; but the more prevailing and perhaps the more correct idea was that the invitation of the millionaires was simply a little plot to squeeze them for further contributions to the dire necessities of the Republican campaign fund. Speculation was rife as to how the great men took the squeezing and the amount in which each individual was mulcted; and many witticisms were indulged in at their expense, on the supposition that they had all been more or less entrapped by the 'smartness' of the famous J. G. Blaine."

The article concludes with casual and appreciative allusions to the part played in the campaign by Benjamin F. Butler and Belva Lockwood, who are dismissed with the finely comprehensive remark that "they were neither of them of real political importance." The effect of the "impressions" upon the American reader is of wonder, not so much at the amusing mistakes made, as that a stranger could make any accurate observations at such a time.

ARBITRATION.

MR. GLADSTONE has virtually announced that all danger of war has passed, owing to the Russian acceptance of his proposal to refer to the arbitration of some European sovereign—it is rumored the King of Denmark—the question whether the Russians were to blame for the fight at Panjdeh, or in other words, for a violation of the Boundary Convention. It is now said that Russia agrees to arbitration if the question submitted to the arbitrators be, not whether Russia is to blame, but who is to blame for the Panjdeh affair. The matter is one peculiarly suitable for arbitration because the question to be submitted is rather one of self-love, or what is called "honor," than of either loss or gain. It is exceedingly difficult, in the existing condition of human nature, to get two powerful nations to submit to the peaceful decision of a third party any question involving territory or money on a large scale. The success of the plan in the case of the San Juan boundary line was largely due to the smallness and remoteness of the territory in dispute. Its success in the case of the *Alabama* claims was largely due to the openly-expressed American determination to retaliate in kind whenever England was engaged in a foreign war. This weighted English diplomacy heavily in all European complications, and was counted on by her Continental neighbors. To be able to get rid of the danger by payment of a round sum in cash was, therefore, a very valuable opportunity, of which Mr. Gladstone had the wisdom to avail himself. But if the question had been simply and solely whether the United States or Great Britain should pay $15,000,000 in cash, it is very doubtful whether public opinion in England would have sanctioned arbitration. As it was, the Gladstone Ministry was undoubtedly weakened, and its overthrow in 1874 in part caused, by the arrangement.

The great difficulty in the way of settling international disputes by arbitration in Europe to-day is the danger of being thought afraid to fight. This is the almost inevitable concomitant of the military system of the great Powers, and of the extent to which every one of them holds property or dominion of some sort by the strong hand. There is not one of them which is not in possession of something to which its neighbors question its title. To provide for this state of mutual distrust, great armies and fleets are maintained, and in order to keep them in good fighting order every government has to cultivate a condition of military touchiness. If it did not, if it showed readiness to pocket insults and to let small injuries pass without notice, the army and navy would be humiliated and lose heart. It would seem as if the Government dared not use them, and the sympathy of the people with them would be so great that the whole country would be plunged in shame and sorrow. Consequently even the most peace-loving ruler, even a man like Gladstone, when put at the head of an empire which holds millions of people in subjection by the power of the sword, has to put on more or less swagger, and either twist his moustache or pull up his shirt collar when he gets into a dispute with a foreign government about anything. No matter how trifling the matter in controversy may be, policy, or what is called "prestige," compels him to keep telling people that, trifling as it is, he is quite ready to fight over it, if need be, and that the slaughter of tens of thousands of young men, and the waste of millions of treasure, have no more terrors for him than for anybody else. This attitude, too, is forced on him by nearly all foreign critics. As a general rule, neutrals are always in favor of having international disputants go to war, and the neutral press stimulates their animosity by encouragement and taunts. Neutrals like the spectacle of a fight which is going to cost them nothing, and they generally think they will make pots of money out of the belligerents in one way or another. Consequently any sign of unwillingness to fight generally draws forth a shower of jeers, which not only touches the old animal pride of the peace-loving country, but fills its people with a vague fear that if it does not fight now, it will lose its "prestige," and be "put upon" in some dreadful way at a later period. There is no argument which military men use with more effect in getting up wars than this. They always maintain that now is the time to fight, if you want only a little fighting, and at a comparatively small cost. If you do not, they say, the war will be simply

postponed, and will be far more terrible when it comes, because your enemy will probably be reinforced by others who will be led by your pusillanimous conduct on this occasion to believe that you are an easy prey, and that they can, by joining in the attack on you, have some share of the spoils.

Against all these forces Mr. Gladstone has to contend at the present moment. Military opinion is a great social and political force in London and in the House of Commons. In India it is omnipotent. Probably the whole weight of Indian influence on home opinion is thrown to-day on the side not only of war but of speedy war. Moreover, the Conservatives are disposed to consider the proposed arbitration a sort of fraud on them, inasmuch as when they voted the large credit they supposed the Ministry meant to fight; and they maintain that when Mr. Gladstone asked for the money he knew there would be no fight. Accordingly the Tory papers are filled with lamentations over the fresh humiliation of England, and about the drugging of the nation by the Gladstonian rhetoric. It must be remembered that if Russia and England were to fight for five years, they would probably end by calling on some arbitrator to fix the boundary line between the Afghans and the Turcomans. England could not have a boundary line of her own, and then maintain an army on it to see that the Russians did not cross it. In other words, the war would end in just such an arrangement as Gladstone is now making, and everybody would be satisfied with it. But so strong are the barbarous instincts of the race, even among the more civilized nations, that probably a very large proportion of the English people to-day do not like it, simply because it has not been preceded by extensive human slaughter, the burning of large numbers of merchantmen, and the wasting of great tracts of country by fire and sword. They want to see the attention of the civilized world distracted for a year or two from commerce, and art, and science, and literature, and invention, in order to count the mangled corpses on great battle-fields, and rejoice over the number of buildings destroyed and ships sunk. They want to see the Russian clergy thanking Almighty God for the slaughter of so many Englishmen, and the English clergy praying to Him to help the English gunners to kill plenty of Russians with the least possible loss to themselves, and fill the land with widows and orphans whom nobody else will take care of.

THE PULLMAN EXPERIMENT.

Two recently published reports of State Bureaus of Labor and Statistics—those of New Jersey and of Illinois—have inserted as an appendix to the respective volumes a special report on the organization of labor created by the town and works of Pullman, in the vicinity of Chicago. This establishment, representing probably the most notable existing combination of labor and capital in the world, was made the subject of a special examination by the chiefs of thirteen State Bureaus in June, 1884, whose report is annexed to the volumes referred to. Descriptions of the town of Pullman have been made from time to time by many competent writers, one of whom, Mr. R. T. Ely, gave an exceedingly graphic picture in *Harper's Magazine* for February last, accompanied by some philosophical reflections not exactly favorable to the experiment. The report of the bureaus is more thorough and complete than that of Mr. Ely, and differs from the conclusions reached by that gentleman as to the effect upon the laboring classes, and upon the progress of industry, of "a gilded cage" for the workingman as compared with a repulsive and forbidding one.

The population of the town of Pullman consists of 8,513 persons of various nationalities, about one-half being natives of the United States and the remainder from Canada and various countries in Europe. The chief industry of the place is the building of railway cars. The idea at the bottom of the enterprise was neither philanthropy nor avarice, but an intelligent conception that the highest rate of profit for capital was consistent with the highest state of comfort for labor. Conjoined to this idea, and a necessary part of it, was the belief that tasteful houses, clean rooms and streets, good drainage, free libraries, cheap and wholesome amusements, good schools, churches, bazaars, and markets, would attract and retain the best and most intelligent class of workingmen, would lessen the tendency on their part to "strike," and would thus in the long run pay the extra expense involved in providing such unaccustomed luxuries for wage-workers. The result has proved the accuracy of this prevision. Shortly after the heavy expense had been incurred of building a large town on a plan of high architectural merit and "with all the modern improvements," the present business reaction set in. The Pullman Company had no monopoly privileges to give it an advantage in the race of competition with other car builders. It was compelled to meet falling prices and dull times in the same way as other manufacturers. It has had no adventitious aids of any kind. On the other hand, it has had a vastly larger capital to provide dividends upon than any competitor—a capital in bricks and mortar, in plumbing and paving, in decoration of all sorts, in churches and school-houses, in theatres and libraries, and other presumable waste, which no other establishment was encumbered with. If the hard times had pulled down the Pullman Company as a financial enterprise, everybody would have said that its ruin was the natural and inevitable consequence of a chimerical attempt to better the condition of the working classes and to make a great show.

Nothing of the kind has happened. It has borne the strain with entire success, not without difficulty perhaps, but without disturbance and without strikes. It has been compelled to reduce wages, but these reductions have been made upon a presentation of all the facts relating to the state of the markets, the prices obtainable for cars, the cost of raw materials, etc. There has been no intervention of trades unions, no assistance from professional labor reformers and socialist spouters to enable the men to discover their rights. By drawing to his establishment a class of men capable of forming their own opinions as to the state of the markets, and able to understand that the rate of wages is not an arbitrary sum decreed in the counting-room, but the resultant of forces working outside, and beyond the control of either employers or employees, Mr. Pullman has secured himself the first and most important factor in the successful conduct of any business. It is said that the common opinion among the workmen now is, that Mr. Pullman is merely the agent employed by them to secure steady work at such wages as the car-building trade will afford.

It has been no part of Mr. Pullman's plan to furnish anything for nothing. The workmen must pay a rent corresponding to the actual value of their apartments; they must pay for the schooling of their children and for their seats in church, and for their admission to the theatre, and for everything they have and enjoy as much as they would pay anywhere, and as much as the privileges are worth. No sense of obligation rests upon them; they are free to come and go at their pleasure. Only one restriction is imposed upon them—they cannot procure strong drink in the town, and no habitual drunkard is allowed to rent an apartment or to be employed in the place. In view of the great results accomplished, the Commissioners who made the examination last June say that it is a matter of secondary concern whether the experiment is pushed forward another stage, to the end of giving the laborers a share of the profits of the company. So much has been done for them that the future may be trusted to care for itself.

THE LOCALITIES OF AUTHORSHIP.

We suggested in these columns, a few weeks ago, a compilation from travellers' diaries; we would now urge on any one who has a taste for compiling, to make a volume bringing before us the scenes in which famous works have been written. As Mr. Morley has said: "It is always interesting to know the circumstances under which pieces that have moved the world were originally composed"; and often there is a striking dramatic contrast, sometimes a beautiful harmony, between the work itself and the circumstances of its composition, which one finds it worth while to become aware of.

Authors are fond of picturing to us their moments of inspiration, and the records of them are numerous. Those of Rousseau, naturally, are among the foremost, and it was they that occasioned the sentence we have quoted from his biographer. We know how he was walking along the road from Paris to Vincennes one hot summer afternoon, going to visit Diderot, then in prison for his 'Letter on the Blind,' when, seeing in a newspaper the theme proposed by the Dijon Academy, his hitherto unembodied genius instantaneously asserted itself "with a force and confusion that threw me into unspeakable agitation." Diderot, when they met, perceiving his excitement, "I told him the cause of it; and I read him the prosopopœia of Fabricius, written in pencil under an oak. He urged me to give wing to my ideas and to compete for the prize. I did so, and from that moment I was lost. All the rest of my life and my misfortunes were the inevitable result of that hour of bewilderment." In other words, from that moment he was a leader of men.

Of Gibbon, whose great work made him not a leader of men but a master of students, we have perhaps heard quite enough concerning "the moment of conception" and "the hour of my final deliverance"; quite enough about "the ruins of the Capitol," and "the barefooted friars," on the

15th October, 1764, and "the summer-house in my garden," and "the *berceau*, or covered walk of acacias, . . . on the day, or rather night, of the 27th June, 1787, . . . when all nature was silent." But we shall never hear enough of (what he himself does not tell us) the ruffles and powder in which he was wont in his solitude to array himself for the majestic presence of his history—an admirable contrast to the Dominican robes and lamp-lit rooms in which Balzac wrote the "Comédie Humaine"—just as our interest is insatiable in hearing from Mme. de Genlis that Rousseau told her that "he wrote all the letters of Julie on pretty little note-paper with vignettes, which he afterward folded as letters and re-read on his walks with as much delight as if he had received them from an adored mistress." This power of acting his characters to himself reminds one of what was told the other day of Mr. Dickens by his daughter, in an article in the *Cornhill*. She describes being with him, when a child, in his working hours, and seeing him spring up from his writing-table and go to a mirror to bring before himself more vividly, by dispositions of his own face and figure, the looks and ways of the personage he was creating.

But to return to localities. It is interesting to know that George Eliot wrote 'Adam Bede,' full as it is of England, in a foreign land, at Munich; and it is perhaps even more interesting to know that George Sand wrote 'Jacques,' which Lord Acton calls "the most ignominious" of her stories, 'André,' one of the most plaintive of her idyls, and, as she herself described it, "the least complicated and most indolent of fictions," and 'Léone Léoni,' the counterpart of 'Manon Lescaut,' all in Venice in rapid succession. She was there in solitude and desolation; the carnival was roaring and whistling together with the icy wind outside her great dreary apartment in the Palazzo Nasi. She sought by the help of imagination to escape from melancholy, and, she says, "I began at haphazard a romance which opened by a description of the place, of the gayety without and of my solemn apartment"; it was finished in a week, and the breath of her life still quickens it after fifty years.

Passing over the prison within whose walls Bunyan entered into the "large upper-chamber whose window opened towards the sun-rising: the name of the chamber was Peace," let us turn to the poets, and to Burns's exquisite account of the "bonnie, sweet, sonsie lass"—his fellow-laborer in the harvest field in his fifteenth autumn—who, a year younger than himself, first inspired him with love and poetry. "She sang sweetly, and it was her favorite reel to which I attempted" to vent in rhyme the emotion with which "I looked and fingered over her little hand, to pick out the cruel nettle-stings and thistles." The pendant to this, which may be found in Mrs. Burns's account of the circumstances connected with the writing of "To Mary in Heaven," is infinitely touching. She told how, on a frosty autumn evening after a day spent in harvest work, he appeared, as the twilight deepened, to grow "very sad about something," and she found him slowly striding up and down the barnyard contemplating the sky, which was singularly clear and starry. When he entered the house he immediately wrote the verses exactly as they now stand, as if copying from memory—

"Thou lingering star, with lessening ray."

Turning to a lesser man, we know that Lodge, one of the sixteenth-century singers, wrote his fine and glowing lines to "Rosaline" on a voyage to "the islands of Terceras and the Canaries," which gives occasion to Mr. Palgrave to shape a somewhat far-fetched eulogium of them in which "those southern seas" and "the almost contemporary art of Venice" play a rather remarkable part—after a fashion we trust our compiler will not imitate. And the lovers of Spenser are reconciled to the thought of the stately and odorous flower of his great poem growing on the "savadge soyle" of Ireland by the pretty picture he makes, in "Colin Clout's come home again," of reciting his verses to Sir Walter Raleigh:

"Amongst the cooly shade
Of the green alders by the Mullaes shore."

We have gone wandering carelessly through France and England, but our happy compiler should carefully seek out in Italy, Spain, and Germany the self-revelations concerning their works of the creators of the 'Divina Commedia,' 'Don Quixote,' and 'Faust.' With regard to Dante, he might be aided by a dry but interesting little volume by Ampère, 'Voyages Dantesques.' And when he is busying himself with Goethe let him not forget the passage in the 'Italienische Reise' where he speaks of his "griechische Reisegefährtin." "At the Lago di Garda," he says, "while the strong south wind drove the waves against the shore, and I was not less alone than my heroine on the coast of Tauris, I first sketched her in, and carried on the work afterward at Verona, Vicenza, Padua, and most diligently at Venice. Then it came to a standstill, for I was drawn to a new conception, namely, of writing an 'Iphigenia at Delphos,' which I should immediately have done if I had not been prevented by distractions and by a feeling of duty toward the older piece."

THE SPOILS SYSTEM IN FRANCE.

PARIS, April 22.

THE downfall of Jules Ferry took not only France, but Europe, by surprise. Only two days before he fell he had obtained a vote of confidence from the Chamber; he had been in power for two years, and it seemed almost certain that he would continue to remain in power till the dissolution and the general elections. He was negotiating with England on the subject of Egypt; the International Conference on the Isthmus of Suez had just begun its work in Paris, under his presidency. He had succeeded in getting in the diplomatic world a status which none of his predecessors had obtained. Even his enemies were beginning to say that there was more real strength in him, more logic, more character than in Gambetta; he was recognized as one of those leaders who are able to conduct the affairs of a great country. The war against the congregations was almost forgotten, as well as the remodelling of the magistracy and the attack on the principle of the unremovability of the judges. Jules Ferry had imprudently wished to revise the Constitution, but was able to limit the revision within narrow bounds. In every field he seemed to be successful, when the news came to Paris, on a Sunday afternoon, that our troops were in full retreat in Tonquin, General Négrier was wounded, and General Brière de l'Isle telegraphed that he *hoped* to be able to preserve the Delta of the Red River. The consternation created by this news was great; "Sedan" was in everybody's mouth. The boulevard was black with people, who assured each other that none of the French soldiers would ever come back from Tonquin; that the fatal expedition to that distant land would end in a national disaster. The Chamber met the next day, under the influence of these sentiments, and Ferry fell without a struggle. Without a word he left the Chamber, amid a tempest of screams, of insults, of threats, and offered his resignation to the President of the Republic. Could he have done otherwise? You will know, says a proverb, the good pilot in a tempest. Ferry did not face the tempest; he submitted like a man who thinks that you cannot reason with madness.

Time has shown that the Chamber was mad on that eventful Monday which followed the bad news from Tonquin; it has shown that the bad news was much exaggerated, that the retreat of the French column, which had, perhaps imprudently, gone as far as the frontier of Yunnan, did not end in a complete disaster, that the loss of Langson did not mean the loss of the Delta. Time has shown, also, that at the very moment when Jules Ferry was conducting the war in Tonquin with a vigor which had its dangers, he was also conducting negotiations for peace; and the instrument of peace, such as it is, is now in the hands of his successors. If I speak of this ministerial change, it is not in order to repeat what everybody knows at the present hour; but, in my opinion, the defeat in Tonquin was only a pretext—it was the lever in the hands of the Chamber. The real field of battle between Ferry and the Chamber was a question of patronage; it was the question which the American people have had recently to examine, and which in the United States goes under the name of civil-service reform.

Jules Ferry has in reality fallen by the same secret forces as Gambetta. The present Chamber was elected by what is called the *scrutin d'arrondissement*. The elector, in this system, votes not for a ticket but for a man. This man, once elected, becomes, or tries to become, a tyrant in his arrondissement. In order to secure his future election he must fill it with his creatures. Everything must give way to that necessity. Gambetta had a great dislike of this system; he felt that the ministers could have no force as long as they depended on deputies who consulted only their private interests. The arrondissement deputy has established his fatal influence; all the interests of his electors are centred in him; he takes care of them as if they were his own interests. If you go into the antechamber of a minister, you will find a dozen people waiting patiently, humbly for their turn. Suddenly a man comes in, the *huissiers* rise as if they were pulled by a string; it is a deputy. All the doors are opened, the deputy enters at once the cabinet of the minister; he cannot, he must not wait: he is a sovereign. He gives his orders, he demands something every day; must he not give collectorships, places to young aspirants in the bureaux, licenses for the sale of tobacco (tobacco is a state monopoly in France), places as inspectors of asylums, of prisons, places in hospitals; furloughs for young soldiers; favors of all sorts—promotions, changes of residence, etc., etc.? Who could number the things which the deputy can ask for? In old times, what we call the "Administration" was all-powerful; the fountain of grace was either the prefect or the minister himself. The system had its inconveniences, but it had at least some established rules, it was not purely arbitrary. Some attention, and in the majority of cases much attention, was paid to the character, to the merit, to the record of a candidate for office or for promotion; if a favor was granted it was for motives derived from the nature of things. The arrondissement deputy knows no such limitations; he ignores the checks of routine, of administrative delay; he struggles for life; and to him all means are good.

When Gambetta, borne on the wave of a great popularity, accepted the task of forming a Cabinet, everybody was surprised to see that the Chamber did not manifest any enthusiasm. In fact, the first declaration which he read to the Chamber, his programme, was received very coldly—so coldly that the same evening he said to a friend that he must fight at once a battle with the Chamber, win or lose. The Minister of the Interior whom he had chosen was M. Wal-

deck-Rousseau, who was likewise M. Ferry's Minister of the Interior. He developed the ideas of Gambetta in a circular. Gambetta, in his declaration to the Chamber, had said that he meant to "free the Administration from personal influences." The circular was more explicit: "It cannot be permitted that solicitations, petitions for office or for advancement, shall continue to reach the Minister over the heads of his subordinates. The authority of these functionaries is thus diminished without profit to anybody, and the services which they can render are diminished. I have resolved to return unanswered the requests of this sort thus sent to me, and to accept no recommendation not transmitted through you." This circular was addressed to the prefects, and M. Waldeck-Rousseau added: "The time has come when the Republicans of Parliament will no longer have to maintain their credit by adding their signatures, with a recommendation, to petitions and requests, but by applying themselves to the study of the complex problems which are asking for a solution, and by finding a solution in conformity with the views of our democracy."

M. Waldeck-Rousseau, I have been informed, went so far as to address in an envelope a copy of this circular, which was written for the prefects, to every member of the Chamber. The lesson was hard, and it was understood. The Chamber felt that Gambetta wished to get rid of the local tyrants of the arrondissements. In order to complete his work, he introduced at once a bill changing the system of vote by arrondissement to the system of *scrutin de liste*, or vote by departmental tickets. It is quite clear that this last system changes the character of the deputy: he ceases to depend on the petty local influences of the arrondissement; he becomes the nominee of a party; he represents that party in the wider sphere of the department; he is no longer the slave of a few electors, and therefore he is not obliged to spend all his time in securing their future votes by obedience to their wishes.

The Chamber born of the *scrutin d'arrondissement* was hostile to the views of Gambetta. There seems to be a peculiar pleasure in being at the same time slave and tyrant. The deputies who had been sent to Paris, and who intended to remain there four years, were alarmed at the prospect of a change in the electoral law, which might be followed by a dissolution. "Was für Plunder!" (What rubbish!) old Blücher is said to have exclaimed when he saw Paris for the first time. These provincial conquerors owed their election to a great party struggle (the struggle against what is called the 16th of May—the dissolution made by Marshal MacMahon). That was very well for the present, but they had the future to secure; they had their own interests to promote, and the interests of their electors, closely bound up with their own.

The opposition against Gambetta, timid at first, became by degrees very loud. The word "dictator" was pronounced: it was whispered that he wished to be uncontrolled; that he despised the new Chamber, and called it a Chamber of *sous-vétérinaires* (under-veterinarians); that he wished for the *scrutin de liste* merely in order to have a Parliament of his own choosing, since he, with his Home Minister, would himself make up all the tickets. The struggle was not long: the *scrutin de liste* was rejected, and Gambetta fell, to the surprise of the whole world, having only been three months in office.

The Chamber has now spent all its activity, and, strangely enough, toward the end of its life, it has voted this very *scrutin de liste* which it rejected four years ago. It voted it at the request, we might almost say, at the command of Jules Ferry; but it voted it with fear and trembling. It was thought that Ferry was unassailable, that nothing could upset him, that he would, as the saying is, make the elections. It was highly important for each deputy to be on his side, otherwise he risked having his name stricken from the future tickets. I have it from very good authority that the Chamber would not have voted the new electoral law if it had thought it possible to change the Cabinet. The Chamber in reality dreaded Ferry and did not like him. It dreaded Waldeck-Rousseau, and did not like him either. The new law, voted at their request, had not yet gone to the Senate when the terrible news arrived from Tonquin. The deputies felt that they could now get rid of their leader. They had not dared to vote against him as they had done against Gambetta, on the question of the *scrutin de liste;* they took advantage of the emotional character of the Parisian population, and, I might almost add, of their own emotional and sensational disposition. They turned Ferry out, with the air of men who must sacrifice everything to the honor of France, with a heroic attitude, with a show of sensibility and of patriotism which was truly touching; in reality they avenged their own wrongs. They had not found Ferry and the Home Minister very complaisant tools; the spoils of office did not seem large enough in their own eyes; they were alarmed at the future; they felt that the country was discontented with them; they needed an expiatory victim. They found it in the person of the very man who, for two years, had led them at his will.

Correspondence.

THE END AND THE MEANS.

To the Editor of The Nation:

Sir: From Mr. Taussig's 'History of the Present Tariff' and your notice of that book it clearly appears that, in the general imposition of war taxes in 1864 and 1867, certain private interests were allowed to arrange the rates of customs pretty much at their own discretion; that the rates thus imposed have been in any case reduced but slightly, have been nearly all maintained and many of them even increased, and this notwithstanding that the internal taxes, against which they were assumed in a certain degree to be an offset, have been long since swept away. All expedients—tariff commissions, Executive recommendation, popular agitation, efforts of individual members—have failed to afford any remedy, and the tendency has been to relieve the surplus revenue by taking the taxes off of whiskey and tobacco; the very last articles which, by all doctrines of political economy, ought to be relieved. The natural conclusion is, that the tariff at this time is not a financial but a political question; not of abstract essays upon free trade and protection, but of the expedients for resisting hostile forces; not of explaining to the people that they are robbed, but of showing them how to defend themselves from being robbed; not of what to do, but of how to get it done.

Meantime, it may fairly be said that the tariff, more than all other causes put together, is chargeable with the paralysis of business. Not so much from its actual condition—that could be borne: business will in time, and after a fashion, adjust itself to high rates or low rates. But what no business can bear is an absolute uncertainty whether a given condition of things will be maintained or suddenly and violently reversed, and that uncertainty every session of Congress brings with it.

The apparent hopelessness of obtaining any systematic revision of the tariff is driving public opinion into a demand for "horizontal" reduction. It may be doubted whether the remedy is not as bad as the disease. In the first place, as Mr. Taussig points out, it can be too easily repealed, as witness the ten per cent. reduction in 1872 and its repeal in 1875. The evil of uncertainty therefore remains. Again, a small reduction, by stimulating imports, is quite as likely to increase as to diminish revenue; while any reduction which should be large enough to admit of an increase of imports with a decrease of revenue might involve serious financial danger. The tariff is completely bound up with our system of currency. Besides legal-tender and national-bank notes, we have a vast fabric of bank deposits, both national and State, in the form of trust companies, the whole resting upon a comparatively small basis of specie, not to mention the complications involved in the silver coinage. It is not merely manufactures, but this expanded currency, which is protected by the tariff, just as a dam in a mill-stream protects the lake which is formed above. Whatever else may be said of the tariff, it placed a heavy check upon imports in the speculative years 1879 to 1883; and thus, when the panic of last year took place, and now, when a European war is threatened, instead of being heavily in debt abroad, and thus furnishing the instrument for a drain of specie, we find ourselves but lightly in debt, with a bank surplus of more than fifty millions in cash, and with foreign exchange obstinately sticking below the point of export of specie, notwithstanding that money in London has for a time ruled considerably higher than here. A sudden and large horizontal reduction of the tariff would produce an effect, if not so immediate, yet similar in kind to that which would follow from knocking a hole in the dam of a large lake immediately above a town. Once more, the industries which have been artificially nurtured by the tariff, though imposing an unjust burden upon the consumer, exist less through their own fault than through that of the Government. They are entitled to any consideration consistent with the main object, to reasonable time, and gradual and equitable readjustment of duties. Experience, as well as theory, has shown that systematic revision cannot be expected from secret committees of Congress, working under pressure from the lobby and with suppression of public discussion. There is needed some agency which shall represent the national interest against private and local ones; which shall be exposed to public, constant, and efficient criticism, in a manner which will render intrigue impossible, and make every member of Congress responsible before the country for the motive and the effect of his vote. This agency can be found only in the Secretary of the Treasury having a seat on the floor of the houses, with the right to a share in debate, but without a vote.

To those who regard this as a mere notion, an impracticable "fad," I will submit only one fact. On the 4th of February, 1881, Hon. Geo. H. Pendleton presented in the Senate a report signed by all the eight members of a committee of that body, recommending that all the members of the Cabinet be admitted to both houses, with the right to share in debate, but without a vote, and that on certain days in the Senate and certain others in the House, they should be present for the purpose of answering any questions addressed to them; suggesting certain modifications of the rules necessary for this purpose; and adding a long list of examples showing that it is in accordance with the practice of every government in the world making any pretence to constitutional forms. The names of these Senators will show that it was no doubtful matter which could bring them to unanimous agreement. They were George H. Pendleton, W. B. Allison, D.W. Voorhees, James G. Blaine, M. C. Butler, John J. Ingalls, O. H. Platt, J. T. Farley. In this re-

port occurs the following sentence: "The advantages of the system proposed are so obvious and so manifold that the committee feels relieved from a detailed statement of them, and confines this report to an examination of the question of its constitutionality," which they demonstrate beyond the possibility of doubt.

The question next arises, Why is it, if its advantages are so obvious and it is so strongly recommended, that this measure has never since received the slightest attention in or outside of Congress? This brings us to the next link in the chain of argument. If this measure is most likely to produce tariff reform, and if tariff reform is what the lobby and therefore the committees object to, then they will for that reason oppose and endeavor to suppress the measure. Again, Congress, as at present composed, very much prefers the great power of its committees and their chairmen, and the party use of that powerful instrument, the Speaker, to any national reforms which would involve a surrender of a portion of these privileges. The interest of the country is exactly opposed to the interest of Congress in its present form, and it is to be noted that while the question of tariff reform implies control of a mass of details easily manipulated by the lobby, Cabinet responsibility forms a simple and definite issue, to be met only with "yes" or "no," and which the lobby would be powerless to resist if once the country was determined upon it. It is a singular thing that while so many past Cabinet officers (and I could give a surprising list) have expressed themselves strongly in private in favor of the measure, there is not one of them who dares to lend his name to the public advocacy of such a radical departure from the beaten track of routine.

I have observed lately that at public meetings, and especially dinners, orators, occupying the highest political positions, have attempted to outline the policy of the two great parties, their efforts extracting from the public only shouts of laughter or sneers of contempt. The fact is, that neither party has any policy at all, nor any reason of existence beyond its relation to the civil war of a quarter of a century back. Now the Senate report above quoted offers a definite line of policy open to competition by either party—a policy warranted to wear, and to wash without change of color. Executive responsibility; separation of executive and legislative power; national interest as against private and local; a continuous and developing policy as against spasmodic and impotent efforts; publicity in place of secret intrigue; the will of the people as against the lobby; individuality against impersonal majorities—there are as many notes in it as keys to a piano, and they may be played upon in combinations to suit individual genius and taste. What artist of reputation will open the concert?

G. B.

Boston, April 27, 1885.

POPULAR VIEW OF THE ADMINISTRATION.

To the Editor of The Nation:

Sir: One needs to breathe the atmosphere of the capital if he wishes to trace to their sources the mutterings of discontent which now and then make themselves heard against the new Administration. To those of us who stay at home, it seems that all things are working together for the good of the country. It seems to us that the President is wise in refusing the exorbitant demands of eager office-seekers. It seems to our rural and simple minds that the President is carrying out a solemn promise when he adheres to his civil-service-reform principles. We know, as long as we stay at home, that he is *the* great apostle of reform. Moreover, we feel assured that much depends upon that reform which he is so honestly and so bravely carrying out. We have all seen the evils of the spoils system. We want no more of it.

But when we get to Washington, we are told by the first office-seeker we happen to meet that there is a suppressed murmur rising up from the people, which shortly will break into a terrible yell or howl. We ask the reason of this intended howl, and we are told that the President is moving too slowly in the matter of distribution of offices, and the people will not stand it. We are also told that the President is a new man, without experience—that he is no politician; and then, when we involuntarily ejaculate, "Thank God for that!" our friend calls us a Mugwump, and indignantly takes his departure.

In truth, the people are more than satisfied with the Administration; there is among them a quiet satisfaction and a perfect confidence. They care as little about the supposed grievances of the office-seekers as do the office-seekers about the real welfare and good of the country.—Very respectfully, J. H.

Madison C. H., Va., April 30, 1885.

THE REWARD OF BOLTING.

To the Editor of The Nation:

Sir: The Independents do not expect and should not accept office under the present Administration. But their feelings are entitled to consideration.

It was very painful to me, a Republican from boyhood, to bolt the party nomination last year, but I did it as a matter of public duty, and worked with voice, pen, and—within my modest means—purse, for the defeat of Mr. Blaine.

At about the same time, as would appear from his pamphlet, "America's Egypt," Mr. James M. Morgan bolted his party's nomination, to work for the opposite candidate, Mr. Blaine. Mr. Blaine was not elected, but Mr. Morgan has received from Mr. Cleveland what he doubtless hoped for from Mr. Blaine. That this man should be rewarded by office, under these circumstances, is a blow in the face to every Republican that left his party for the country's good. B.

Washington, May 1, 1885.

FREE SHIPS, FREE GOODS.

To the Editor of The Nation:

Sir: In an editorial paragraph of a late number of the *Nation* the opinion is expressed that "if war should unfortunately be waged on the ocean between England and Russia the rule 'free ships, free goods' would be of enormous benefit to the Government and people of the United States if they only had (as they have not) the ships to do the carrying trade for both belligerents."

Does not the writer of the article lose sight of the fact that, in the event of war between the two countries named, we could not safely carry the goods of either enemy upon our vessels, as the four articles contained in the Declaration of Paris apply only to the signers of, and not to us who refused to accede to, the convention? It is true that during the Crimean war England *waived* the right which, she had persistently claimed, belonged to her under the law of nations, of seizing enemy's property laden on board a neutral vessel, and that the United States did the same during the late civil war. But, if I mistake not, the English Government has always maintained that the Declaration of Paris applies solely to the signatory Powers, and that the second article, which nearly expresses the rule quoted, is designed for the exclusive benefit of neutrals *who are parties* to the Declaration.

If this is England's position, would she not, in the event of war, feel at liberty to seize Russian goods found in our ships, and would not Russia, even if disposed to act differently, be then driven to retaliate by confiscating British goods discovered in American bottoms?—Yours very respectfully, T. S.

Fort Leavenworth, Kansas, April 29, 1885.

[England not only "waived" the right of seizing enemy's property on board a neutral vessel, but formally abandoned it in 1854, and adopted the principle of "free ships, free goods." She went further than this, and, by an Order in Council, permitted her own subjects to trade with enemy's ports in neutral bottoms. There is no more probability of her reviving the old claim than of her reviving the claim to search foreign vessels for British seamen. The old doctrine about enemy's goods in neutral bottoms is simply dead, and there's an end on't. The declaration of the Treaty of Paris with regard to enemy's goods in neutral bottoms was attacked in the British House of Lords in 1856, but Lord Clarendon made light of the concession it contained on the part of England, on the ground that it was simply the abandonment of a claim "which she could not maintain."—Ed. Nation.]

Notes.

The fourth volume of the *Q. P. Index Annual* (No. 17 in the valuable series of which it bears the distinctive name) is a key to the contents of upward of thirty American, English, and German periodicals for the year 1884. For the major part of these Mr. Griswold also furnishes a tabular statement of the number of the last page in each monthly issue.

Roberts Bros. will shortly publish 'New Poems,' by Jean Ingelow, from advance sheets; a plain edition, 12mo, of Hamerton's 'Landscape'; and 'The Fall of the Great Republic, 1886 88.'

'The Russian Revolt,' by Edmund Noble, for some time a resident in Russia; and 'Down the Ravine,' a child's story, by Charles Egbert Craddock, will be published during the present month by Houghton, Mifflin & Co.

J. B. Lippincott & Co. will be the American publishers of the Ashburton edition of Carlyle's works, in seventeen volumes, just begun to be issued at the rate of one a month.

The war poems of Mrs. Kate Brownlee Sherwood, and a little volume containing two essays by Mrs. Helen Ekin Starrett and Mrs. Frances Ekin Allison ("The Future of Educated Women," "Men, Women, and Money"), are in the press of Jansen, McClurg & Co., Chicago.

Somewhat more than two years ago we praised, as considerably above the average of its class, Prof. Robert K. Douglas's 'China.' This work has now been reprinted by D. Lothrop & Co., Boston, under the editorial supervision of Mr. Arthur Gilman, who furnishes an analytic table of contents and an index. Mr. Yan Phou Lee, of Yale College, has suggested a few notes.

We notice a new edition of Rees's 'Life of Edwin Forrest' (Philadelphia: T. B. Peterson & Bros.), for the sake of quoting from the preface a crucial test of the writer's inability to discriminate between *shall* and *will*, of which we have heard so much lately. Says Mr. Rees, of a certain photograph: "Mr. Forrest was so well pleased with it that he declared 'he would never

sit for another picture to mortal man.' It was, alas! too true; for his death followed shortly afterward."

Among the latest English author bibliographies is the little volume of 'Hints to Collectors of Original Editions of the Works of William Makepeace Thackeray' (London: Redway; New York: Scribner & Welford), which gives an exact copy of the title-page of every book, with a full collation of pages and illustrations, and notes of differences in editions. Prices obtained at recent sales are also appended. This innocent work has caused great tribulation, as it sets up a strict canon, tested by which many so-called first editions are found wanting and must fall from their high estate. A similar volume of 'Hints to Dickens's Collectors' is announced as in preparation.

Mr. Joseph Skipsey, who is now editing in London a series of "Canterbury Poets" in shilling volumes, has drawn freely from American authors. Volumes of selections from Longfellow and Poe have already appeared, and Whitman and Whittier are announced as ready to be issued in early volumes. The little books are intended to appear at monthly intervals.

Mr. Andrew Lang is engaged in preparing, for the Parchment Library, selections from Burns and from Scott. He has already given the same series an excellent edition of Poe's poems.

The Dunlap Society, of this city, has had itself duly incorporated that it may legally receive gifts of books about the stage (and especially about the American stage), portraits, prints, playbills, autographs, manuscripts, etc. The Treasurer is Mr. Thomas J. McKee, 338 Broome Street. The Society hopes to hold a loan exhibition at its annual meeting next January.

The list of private laws passed at the second session of the 48th Congress is the most striking feature of No. 3 of Mr. J. H. Hickcox's important monthly catalogue called *United States' Publications*. But piquant is the note under Senate Report No. 577, which nominally consisted of "questions propounded to the President of the Western Union Telegraph Company." "The 'questions' occupy 4 pp. The remainder of the 'report' [32 pp.] consists of 'Press comments on the action of the Associated Press in furnishing reports of the Presidential election, November, 1884.' The report has been suppressed for want of paternity."

From the Signal Service Bureau we have two "Notes," Nos. 16 and 18, 'The Aurora in its Relations to Metrology,' by Private Alexander McAdie, and 'The Effect of Wind-Currents on Rainfall,' by Private G. E. Curtis. Several maps accompany the former. One shows the relative frequency of auroras and thunder-storms and annual mean humidity and pressure in the United States for the years 1881, 1882.

From the Bureau of Education comes No. 1 of the Circulars of Information for 1885, a compendious account of the City School Systems of the United States, by Mr. John D. Philbrick; and a pamphlet on 'Planting Trees in School Grounds, and the Celebration of Arbor Day'—a sort of manual for this new festival, which has become epidemic, as well as a tract against forest devastation.

A little pamphlet, 'What Profession Shall I Choose? and How Shall I Fit Myself for It?' represents a "symposium" of professors at Cornell, and is meant to direct attention to that institution of learning. Its hints will be found more widely useful. That on the necessary preparation for journalism we can instance as sensible. Such a statement, however, as that "the editorial chairs established originally by men of uncultivated genius are now more and more occupied by successors who have been thoroughly educated" is disputable, especially if we lay stress on the word "thoroughly." If true, considering the present state of the press at large (which seems to us less hopeful than a dozen years ago), it suggests some painful reflections.

The Newton (Mass.) Civil-Service Reform Association has published a useful summary sketch, by its President, Rev. Henry Lambert, of 'The Progress of Civil-Service Reform in the United States.' We are glad to observe that Mr. Lambert does not overlook an essential link in the chain of events—a letter written to the *Nation* in August, 1880, which brought about the reorganization of the New York Association, and gave the signal for the final organization of the friends of pure and efficient administration throughout the country.

Mr. W. E. Foster's annual report of the Providence Library under his charge is a very encouraging document, though the new spirit which such an institution always awakens appears to have shown itself among donors rather than readers. Mr. Foster remarks that the Presidential campaign of 1880 coincided with a falling off in the use of the library, while that of last November seemed rather to stimulate it.

The twelfth number of Mr. Ponce de Leon's 'Technological English-Spanish Dictionary' carries the work well into the letter R, page 640 containing the compounds of the fertile word *rope*.

The etchings of *L'Art* for March 15 and April 1 include a very spirited marine, the "Tempest" of Franz von Pausinger, the "Resurrection" of Van Dyck, from the collection of the late Mr. Boesch, of Vienna, and a Wouverman military piece from the same source. Among the facsimile reproductions are drawings after Millet and particularly after Bastien-Lepage—all fine and interesting in a high degree. The literary quality of these numbers is also considerable, whether we name M. Badin's account of M. Maurice Sand's marionettes, or Mr. Charles Diehl's archæological discourse on Ravenna, the illustrations to which are the firm and broad work of a woman, Mlle. Herwegen.

Science for April 24 has a very clear map of the Saskatchewan region, the scene of the Riel rebellion; and for May 1, a map of Central Asia, including the whole of Afghanistan, reduced from one made from the Anglo-Russian surveys up to 1881. In fact, this latter number of *Science* is conspicuous for the attention it gives to the great dispute now pending in the Eastern hemisphere.

A curious illustration of the ignorance of geography of the English press has just been shown. On April 4th it was announced that the British flag had been hoisted the day before at Port Hamilton, which was to be occupied as a coaling and naval station. The *Times*, *Pall Mall Gazette*, and other papers, including *Nature*, to our surprise, described the new possession as consisting of the large Corean island of Quelpart. The fact is, as a glance at any recent map would have shown, that Port Hamilton is a harbor formed by three small islands lying about twenty miles south of the southern extremity of the Corean Peninsula, and about 170 miles northwest of Nagasaki, and nearly 400 miles northeast of Shanghai. The acquisition of this harbor was the last public act of Sir Harry Parkes, the late British Minister to China.

The Proceedings of the Royal Geographical Society for April contain a translation of a paper by M. Paul Lessar descriptive of Kara-Kum, or desert of Tufkomania, in the south of which Merv is situated. M. Lessar is a civil engineer, who was sent by the Russian Government in February of this year to London with its proposals regarding the Afghan frontier. In 1883 he conducted a survey, of which this paper is a brief account, the principal aim of which was to explore the dry channel known as the Unguz with the view of ascertaining its adaptability for being utilized as a way for the Amu River to the Caspian Sea. The difficulties to be overcome in carrying out this scheme he pronounces unhesitatingly to be "practically insurmountable." Incidentally he refers to a similar scheme, which the Russian Government have for years been investigating, for utilizing the Uzboi, another dry channel, for connecting the Aral with the Caspian, saying that either a canal or a railroad "would cost immeasurably less than an artificial river."

The other papers in the Proceedings are a description of the beautiful "King Country" of New Zealand, and a brief account of the new "Free State of the Congo," by Mr. E. Delmar Morgan, accompanied by a map showing the boundaries as laid down by the Berlin Conference. The White Book just issued by the German Government, it may be noted here, contains a map of Central Africa, showing not only the boundaries of the various countries on the Congo, but those of the other territories recently acquired by the Germans in Africa.

A recent letter from Przhevalski, the Russian traveller, giving an account of his discovery of the sources of the river Hwang-ho, says that he came upon a party of Tanguts who were engaged in gold-washing. Though working in the most primitive way, they showed him "whole handfuls of gold in great pieces, none of which were smaller than a pea." He prophesies that Tibet will prove to be a second California.

A novel feature of the celebration of Bismarck's birthday at Berlin was the exhibition of a collection of more than one hundred and fifty separate works in different languages—biographies, poems, stories, political treatises, etc.—relating wholly to the Prince. The walls of the room containing this collection were hung with photographs of pictures and statues representing scenes in his life, together with various portraits of him and nearly fifty busts and medallions.

Mr. Christern sends us the prospectus of an important series of photographic reproductions of original drawings by the old masters contained in the Old Pinakothek at Munich ('Handzeichnungen alter Meister,' etc.) under the direction of Dr. W. Schmidt, Curator of the Kupferstich-cabinet at the Pinakothek. Letter-press of a technical descriptive character will accompany each *Lieferung*.

J. Rouam, 29 Cité d'Antin, Paris, is about to issue 'Médaillons Contemporains,' by the artist Ringel, of which *L'Art* has published several specimens. They are very spirited.

At the Cambridge (England) Observatory one of the observations of the nadir point was interrupted for a while by a singular circumstance. Professor Adams reports that on the morning of April 22, his assistant, Miss Walker, had prepared to make the observation, and was looking into the eye-piece, when she perceived that the image of the wire was making violent oscillations. She found it necessary to wait for several minutes before the image became sufficiently steady to allow the observation to be made. It was not till afterward that she was made aware that a slight earthquake shock had taken place at the exact time when she was attempting to make the observation.

Whoever watches history in the making will always be very suspicious of those theories which explain the origin of any important movement in the past by a single cause. Therefore it is a satisfaction to see Weingarten's 'Ursprung des Mönchtums' (1877), which traces monasticism to the devotees of Serapis, opposed. Bornemann, 'In investiganda monachatus origine quibus de causis ratio habenda sit Origenis' (Göttingen, 1885), points out that the monastic institution is very complex, that it took different forms in different places and at different times, and that

these forms imply a variety of originating causes, as, the practice of the precepts of the Gospel, penitence, repugnance toward a worldly life, a love of the marvellous, the customs of contemporary philosophical sects, the precarious state of society, and the expectation of a speedy end of the world.

On the 15th of last month the family of Goethe became extinct by the death, at Weimar, of Kammerherr Walther von Goethe, the poet's grandson. He was the elder son (born in 1818) of Julius August Walther von Goethe (1789-1830), the only one of the many children born to the poet by Christiane Vulpius who outlived the age of childhood. The younger, Wolfgang Maximilian, born in 1820, died a little more than two years ago, and their only sister, born in 1827, ended her short life in 1844. None of the three was married. The two brothers were endowed with respectable talents, and the younger was the author of several works, mainly poetical; but both were oppressed and depressed through life by the burden of the great name which they bore, spending their days in melancholy taciturnity at Weimar, as keepers of their grandfather's collections, which, in fact, they are said to have shown with reluctance. They were, however, treated with kindness and distinction by the court of Weimar. Their mother, born in 1796, died in the same city in 1872.

Holland has lost one of the most distinguished representatives of her liberal school of theology and Bible criticism in Johannes Henricus Scholten, who died in the early part of last month. He was born in 1811, and became Professor of Theology at the University of Leyden in 1843, a position which he held till the age of seventy. He was the author of numerous works, philosophico-religious, dogmatic, and critical, which have exercised a powerful influence upon the recent theological evolutions in the Protestant world. By his critical examinations of the Gospels and other New Testament writings he raised himself to a position analogous to that held by Baur in Tübingen. Among his most important productions are 'Het Evangelie naar Johannes,' (1864), 'De Evangelien naar Mattheus en Marcus' (1868), and 'Het Paulinisch Evangelie' (1870). He was one of the editors of the Leyden *Theologisch Tijdschrift*, of which Professor Kuenen is now the leading spirit.

—Mr. W. K. Sullivan sends us from Chicago the following: "The article on the proper use of shall and will, in a recent issue of the *Nation*, recalled to my mind a rhyme which was given in the grammar used in the National Schools in Ireland twenty-five years ago, as a rule to guide learners in the use of shall and will. For aught I know it is still printed in the National School grammar. I think it covers the ground. It is as follows:

> "'In the first person simply shall foretells,
> In will a threat or else a promise dwells;
> Shall in the second and third does threat,
> Will then simply foretells a future feat.'"

—The fifth volume of collections just published by the Minnesota Historical Society, an octavo of 535 pages, is a monograph concerning the Ojibway Indians. Three-fourths of the book is the production of a man whose maternal ancestors were Ojibways. Except Lewis H. Morgan's treatise on the Six Nations, scarcely any volume on our aborigines can be compared with this. The author, Mr. Warren, born in 1825 at La Pointe, on Lake Superior, the centre of the Ojibway country, passed his childhood there, and was afterward for five years at school in New York. At the age of sixteen he returned to the Indian country, and became Government interpreter and a member of the Minnesota Territorial Legislature. But for the next twelve years, until his death in 1853, his labor of love was searching out lodge-fires and listening to the lodge-stories and legends of his Indian grandfathers. He thus secured the testimony of contemporary witnesses regarding all tribal events in the present century. He makes a plausible claim that the traditions he gathered run back at least to the year 1500, and that they are trustworthy—worthy, indeed, of more credit than French adventurers and Jesuit Relations. In 1842, Mr. Warren saw at La Pointe the family register of the leading hereditary family among the Ojibways—the Cranes—and heard it explained by the first chief. This was a circular plate of virgin copper, with eight deeply marked indentations, denoting the number of generations that had passed away since the tribe had established their headquarters on that spot. Each generation was estimated at forty years.

—It is not generally understood how grand a tribe the Ojibways, still, perhaps, better known as Chippeways, were and are. They once encompassed Lake Superior as the Roman Empire did the Mediterranean, and their western frontier stretched more than a thousand miles from Lake Winnipeg to the mouth of the Wisconsin. In 1883 the United States and Canadian census-takers found their number to be 28,530. Is there any tribe now larger? There are also, according to Mr. Warren, about 5,000 Ojibways of French or American extraction, or mixed blood. This Minnesota contribution from an unhoped-for source must be welcome to every ethnological student. It ought to have been published thirty years ago. It throws a long desiderated light on the totemic system, on the origin of Western mounds, on the author's vernacular, on the myths of his tribe, on their confederations and disunions, on their faith, worship, and customs, on their architecture and other arts, on their cannibalism and island abodes, on their first impressions of the whites—indeed, on something upon every page. Mr. Warren laments that he wrote away from books. The truth is, his book is the better for that lack. Dr. Neill, the historian of Minnesota, drawing from official and other records, has added a hundred pages to Mr. Warren's details. He has doubtless corrected some dates and other figures; but his lucubrations are dry bones, while the narrative based on tradition has the unity of breathing life. Warren was a kinsman of his namesake who fell at Bunker Hill, and he died young, but not before he had reared a lasting monument of his nation.

—The *Century* now comes out on the first of the month of which it bears date—a fact which will do something to dispel the superstition that any magazine wishing to outstrip its contemporaries must be in the field ahead of them. Its hold upon the public (its first edition is now 250,000) has been established by the interest and excellence of its contents, and it now appears to find that there is, under these circumstances, no real danger in being two weeks behind its competitors. In the May number more than seventy pages are devoted to war articles, and some lucubrations on the subject of General Grant by General Badeau, and the rest is of such equal merit that it is hard to pick out what is most interesting. Mr. Howells contributes the seventh instalment of "The Rise of Silas Lapham," in which the women are drawn with just that combination of sympathy and irony which women best appreciate. Mr. Howells in this number solves the question propounded in the last, as to whether Silas on a certain occasion was or was not drunk, in the affirmative; and the scene between him and Corey in consequence is very good, though to our mind not so perfect as the subsequent scenes produced by Corey's declaration. This story, with its photographic reproductions of a certain side of American life, seems to be the best thing that Mr. Howells has recently done, and may serve a hundred years hence to help our descendants to understand our day and generation. Mr. E. V. Smalley has a good illustrated article on the New Orleans Exposition, which brings out clearly the energy and enterprise and even self-sacrifice of its promoters, but at the same time suggests the inquiry, When is this thing to stop? The truth of the matter is, that with all their energy, enterprise, and self-sacrifice, they could not have made the Exposition a success without Government aid—that is, without a tax upon the people of the whole country. If the cotton-growing section is to have a tax for its benefit, ought not each section in turn to have one; and if New York or Boston wants a loan from the Government, or San Francisco or Chicago, where are we to draw the line? Of course these expositions are money-making ventures for somebody—the exhibitors perhaps, the hotel-keepers and the railroads certainly. It would be worth the while of these two last interests to have an exposition somewhere every six months. Among the illustrations of the present number are noticeable some engravings of dogs, by Gaston Fay, that representing a St. Bernard being a conspicuous example of skill in woodcutting in the best vein of the art.

—*Harper's*, besides its serials and illustrated articles, still has for its best reading the Editor's Easy Chair, in which Mr. Curtis this month has something to say of "Manners, Old and New." This little essay is a model of its kind—suggestive, allusive, light, leaving in the reader's mind a very distinct impression of the view taken by the writer of the tendency of modern manners, although nowhere laying it down dogmatically. The truth is (if we may venture to translate what he says into plainer and grosser language) that the new breeding is that of stable-boys and barmaids; and as American manners were, a generation ago, proverbial for over-refinement, they now threaten to become, in the course of another, noted for the opposite. The effect of this will be, and we believe already is, to drive refined and cultivated people (for such there must always be) out of "society." Without attaching too much importance to the connection between good manners and morality, and admitting that true goodness does not produce as a necessary consequence good breeding, nor good breeding true goodness, it is certain that refinement and cultivation revolt against vulgarity, and ignorance, and insolence, and display, and boisterous egotism. Consequently, if society becomes, as Mr. Curtis suggests, a "sailors' boarding-house," a good many of the older tenants will seek more solitary quarters, and in the end there will be nothing like what used to be known as "society" at all. To be "in society" will merely mean that you have a quantity of money, a big house, and bad manners, and associate with persons whose room is generally considered among people of taste better than their company. In our effort at translation, we have perhaps outrun the original; but what we have said is at least implied in what the Easy Chair says.

—Mr. Richard A. Proctor, who appears to have taken all knowledge for his province, has an article in the May *Atlantic* on "The Misused H of England," in which he combats with vigor the position assumed by the late Mr. Richard Grant White as to this letter. A philologist no longer living is at the mercy of his enemies, if they make their attacks with wisdom, for there is no one to make reply, the *odium philologicum* being so great that there is no living student of words but has theories of his own which forbid him to come to the rescue of a deceased brother. In the interest of fair play, therefore, we desire to call attention to the fact that, whatever the merits or demerits

of Mr. White's theories about the letter H, Mr. Proctor's views must be accepted with a good deal of reserve. That a man may be great in astronomy, and know very little about whist, is the conclusion which has been forced upon many readers of Mr. Proctor's essays on the latter subject; that he may know a great deal about a great many things, and yet not have got to the bottom of the misuse of the letter H, is a conclusion which will be forced upon many readers of the present article. The question is, why the *h* is prefixed to words to which it does not belong, and left off words which are properly aspirated. Mr. Proctor suggests two explanations: First, that in all great cities (it is taken for granted that the disease is of London origin) men shorten their words as much as possible. Time is money, and therefore in Paris people say, instead of *cette femme, c'te f'me*, and *Voilà ce que c'est* becomes *V'là c'q'c'est;* while in London an *omnibus* is called a *'bus; conductor, 'uctor*, and so on. This will account for the *h* being dropped, though Mr. Proctor throws in another reason which would not have occurred to many people—that London fogs make it so disagreeable a task to open the mouth, that the avoidance of an aspirate conduces to the convenience of Cockneys. But then if this is so, why is the *h* put on where it does not belong? It is introduced for the sake of emphasis, Mr. Proctor thinks—the desire to be emphatic overcoming *ad hoc* the tendency to slur and elide. If all these things are true, they show that Mr. White's theory was entirely wrong, and his idea that the elision of the *h* was once a common practice among educated English people a delusion. We confess that we do not altogether follow Mr. Proctor. Is not the "*'umble*" of Uriah Heep much more emphatic than *humble* would have been? Is it conceivable that Paris slang such as he quotes is due to the hurried life of a great capital? And is there not a sufficient number of educated English who drop the *h* in some words to make us suspect that it was once much commoner than it is now? and does not the line quoted from Tennyson as an illustration of the "Northern" dialect—

"Wheer '*asta* beän saw long and meä liggin' '*ere* aloän"—

throw a good deal of doubt on the fundamental assumption that dropping the *h* is a disease peculiar to London?

— Mr. Philip G. Hubert, jr., has an interesting article in *Lippincott's* on "New York's Lyceum School for Actors." It seems that this school was not started by enthusiasts for the elevation of the drama, but had its origin in the system followed with great profit by the Madison Square Theatre, of keeping half a dozen travelling companies "on the road" acting the same play. To keep such a system going, it is obviously necessary that there shall be a supply of competent actors and actresses ready to be "laid on" in the various parts in the different provincial towns and cities, to take the place of members of the travelling companies who may die, or be taken ill, or for any reason compelled to cancel their engagements. For this purpose Mr. F. H. Sargent, then an instructor in elocution and dramatic reading at Harvard, was invited to come to New York and classify the applicants for admission. For the immediate purposes of the Madison Square Theatre it was apparently necessary at first only to teach people to act a very few parts, chiefly if not altogether those contained in "Hazel Kirke," a play which has been acted continuously in one or more parts of the United States for more than four years. At the height of the "Hazel Kirke" rage, the supply of Hazels was very considerable, and after proper training they were kept, to speak vulgarly, "on tap," so that if, for instance, the manager received a despatch from St. Louis, announcing the illness of the local Hazel, and asking for a substitute, all he had to do was to take down a ledger, turn to a page headed "Hazel," select the young woman who lived nearest St. Louis, and send her a despatch to report for orders to the local manager. "Gradually the theatre came to have several hundred persons of more or less experience, and living in all parts of the country, looking to it for employment and opportunities." Out of this came the idea of the Lyceum School, a school connected with the new Lyceum Theatre; the object of the manager, Mr. Mackaye, being mainly to have a competent corps from which his "road" companies could be drawn. Mr. Sargent is at the head of it, the applicants are numerous, and the teaching, from what we have observed of its effects, good. The curse of the American stage at present is the gross ignorance and want of proper training of its actors and actresses. Training in the rudiments of the art of acting, in enunciation, pronunciation, the carriage of the body, in the use of the voice—all this, to say nothing of the higher branches, is now to be had at the Lyceum School. The school is a standing warning to such as desire to study the dramatic art, that hereafter the prizes are only to be had by such as will abandon the stale delusion that acting comes by nature.

—Mrs. Elizabeth Cady Stanton makes in a *North American* symposium a tremendous onslaught upon Christianity, which she insists is far from having "benefited woman." The elevation of woman is due, Mrs. Stanton says, not to Christianity, but to the deep affection for noble women early observed by Tacitus and other candid foreigners among the Germanic tribes. "It is only in countries where Germanic ideas have taken root that we see marks of any elevation of woman superior to that of Pagan antiquity; and as the condition of the German woman in her deepest Paganism was so striking as to challenge the attention of Tacitus and his contemporaries, it is highly unreasonable to claim it as an achievement of Christianity." The Christian side of the argument is taken up by Bishop J. L. Spaulding, who makes the point that Tacitus never himself crossed the Rhine; that he gives us very few facts about the position of women in ancient Germany; that really the lot of woman among the Teutonic tribes was what it has always been among barbarians. He cites in proof the fact that the fine for killing a young woman among the Germans, no matter how noble she was, nor how deep the affection felt for her, was only two dollars. We may add to this that among modern Germans the position of woman is not at all what Mrs. Stanton would like to derive from the "Teutonic idea." That Christianity has done much to elevate the position of the weak and defenceless in the world is generally conceded. Women are naturally weak and defenceless. Therefore the conclusion seems irresistible that Christianity *has* benefited woman. We pronounce judgment for Christianity and its defender, Bishop Spaulding.

—In the *Athenæum* of April 11, Mr. Sutherland Edwards calls attention to a pamphlet by J. B. Pérès, entitled 'Comme quoi Napoléon n'a jamais existé,' first published, as he says, in 1817, and asks if the originality of Whately's 'Historic Doubts relative to Napoleon,' which appeared in 1819, has ever been questioned. Though the similarity between the two lies rather in the conception than in the details, it is no doubt possible, if Pérès did publish his satire in 1817, that Whately may have obtained from it the idea which he so ingeniously develops. But it is by no means certain that the French pamphlet is the earlier of the two, for though Larousse and the 'Nouvelle Biographie Générale' give 1817 as the date of the first edition, Lorenz and 'La Littérature Française Contemporaine' give 1827, the 'Biographie Universelle' gives 1835, while, according to the third edition of Barbier's 'Dictionnaire des Ouvrages Anonymes,' perhaps the best authority on a question of this sort, the pamphlet was first published anonymously, with the title 'Grand erratum. Source d'un nombre infini d'errata à noter dans l'histoire du XIXe siècle' (Agen, Noubel imp., 1836). The second and third editions appeared at Paris in the same year, 1836; the title being changed with the third edition to 'Comme quoi Napoléon n'a jamais existé. Grand erratum,' etc. The fourth edition (Paris, Risler, 1838) bears the name of the author, and no further change seems to have been made in the title, though it ran through a number of editions (the tenth bearing the date 1864), and it was also reprinted in several collections, such as the 'Histoires drolatiques de l'Empereur Napoléon,' etc. If, as seems most probable, the dates given by Barbier are correct, it is clear that there can be no question as to the originality of Whately's 'Historic Doubts,' whatever may be said of Pérès. It is possible that Mr. Edwards may have in his possession such evidence in favor of the date 1817 as will prove Barbier to have been mistaken; but his evident ignorance of the history of the pamphlet, and the inaccuracy displayed in several instances by him, in this same letter, are not calculated to inspire confidence in his statements of facts. Thus he spells his author's name "Pérez" instead of Pérès, the correct form; he speaks of the fourth edition of Whately's 'Historic Doubts' as the last, though the tenth edition appeared so long ago as 1850; and his statement that this pamphlet by Pérès has never been published in English shows that he is unaware that a slightly abridged translation may be found in the first volume of 'Philobiblion.' This seems also to have escaped the notice of Mr. Garnett, who, in the *Athenæum* of April 18, corrects some of Mr. Edwards's mistakes, and takes occasion to announce that an English version is on the point of publication. Mr. Edwards also overlooks the fact that the reference made by Pérès to Delavigne as the author of the 'Nouvelles Messéniennes' (1822-24), unless he can show that it does not occur in the first edition, is conclusive internal evidence that the French pamphlet must have been written at least some four or five years after the appearance of the 'Historic Doubts.'

—The life of the late Dr. Karl Hillebrand, our lamented colaborer, has been sketched in extensive obituaries, or rather biographical essays, by eminent contributors to leading journals both of Germany, his native land, and of Italy, where he spent the latter years of his but too brief career. The latest sketch, that of O. Hartwig in the Munich *Allgemeine Zeitung* of April 9, 10, and 11, is alike appreciative and rich in characteristic traits, and embodies details drawn from Ludwig Bamberger's obituary in the *Deutsche Rundschau*, H. Homberger's in the Berlin *Nation*, F. Dernburg's "Recollections" of the deceased writer in the *Nationalzeitung*, and Prof. Giacomo Barzellotti's lecture on him published in the *Archivio Storico Italiano*. Want of room forbids us to make extensive excerpts from these tributes of friendship and admiration, but we cannot refrain from quoting a few lines from a letter of Hillebrand's penned in the shadow of slowly but surely approaching death—lines of retrospective contemplation worthy, we believe, to be engraved on monumental marble. Not to impair their exquisite flavor, we give them in the original:

"Je ne me plains pas. . . . J'ai eu ma belle part au banquet de la vie. Les dieux m'ont toujours voulu du bien: ils ont toujours tenu loin de moi le spectre du besoin, ils ont puni avec indulgence et *pede claudo* les fautes et les vices dont j'ai pu me rendre coupable dans ma jeunesse; avant tout ils m'ont donné et conservé un tem-

pérament heureux, qui fait que les blessures cicatrisent vite, et que la stérile réflexion sur le passé, l'inutile sondage de l'avenir, ne m'ont jamais gâté le présent ; j'ai pris un vif intérêt à la comédie de ce monde et j'en ai joui ; l'amour le plus noble et le plus constant a toujours étendu son aile sur moi comme un ange guardien ; les amitiés les plus sûres, vraies et voyantes m'ont soutenu dans tout le cours de ma vie; les hommes en général m'ont montré de la sympathie et les femmes m'ont choyé ; j'ai obtenu le genre de réputation discrète, circonscrite, mais de bon aloi, qui était ma seule ambition, et si les dieux m'accordent encore une fin calme et proprette, j'aurai mauvaise grâce dans une autre vie de me plaindre de celle-ci."

—Doctor Kleiber, of St. Petersburg, publishes in the *Astronomische Nachrichten* the results of investigations by himself and Doctor Keller on the amount by which the earth's mass is increased each hour by the meteors falling upon the globe from space. The original memoirs, which are printed in Russian, have not reached this country, but the summary referred to is extremely interesting. Observations by Professor Schmidt, of Athens, and others, have shown that on the average a single observer will see about ten meteors per hour. This is a number which depends upon experiment simply. A single observer does not command the whole sky above his horizon, but only some 23 per cent. of it. Professor Newton, of Yale College, has shown that about 10,460 times as many meteors fall on the whole earth in an hour as fall so as to be visible above any one horizon. Combining these separate deductions, it follows that $10 \times 100 \times 10{,}460 \div 23$ (or about 450,000) meteors fall on the surface of the whole earth *each hour*. It is to be remembered, too, that only such meteors as would be visible to the naked eye are included in this enumeration. Every astronomer knows that there are vast quantities of extremely minute telescopic meteors in the heavens. One can hardly work for two or three hours without seeing at least one meteor in the very small field of view of the telescope. The number given above, then, is clearly a minimum. Prof. Alexander Herschel has shown that the average weight of a meteor may be taken as 5 grams ; whence it follows that the earth receives *hourly* not less than 2,250 kilograms, or 4,950 pounds of foreign material, deposited upon it from the celestial spaces.

—The earth moves in its orbit with a velocity of about nineteen miles per second, and passes through an immense number of these meteorites. Doctor Kleiber's main object is to determine how many such bodies there are in space at the distance of the earth from the sun, or rather what is the *density* of the interstellar spaces, supposing these meteors to be uniformly distributed. 450,000 meteors fall on the earth, compelled by its attraction, every hour. He has shown that the earth's *attraction* is responsible for 20 per cent. of these, and that therefore 360,000 would be encountered in one hour by a globe the size of the earth provided such a globe had no attraction. As he says, "from this minimum value it may be seen how vast the number is of these small cosmical bodies; and that we must consider all of them together as a peculiar dust-like, interplanetary medium, which seems fit to play an important rôle in the economy of the solar system." By comparing the weight of these 360,000 meteors met in each hour with the space traversed by the earth in this time, it follows that the density of the interplanetary medium cannot be *less* than $\frac{1}{10{,}000{,}000{,}000{,}000{,}000{,}000{,}000}$ of the density of water. A Russian memoir by Doctor Keller has shown that the density of the interplanetary medium at any distance from the sun is inversely proportional to the square root of the distance. From this law, and from what has gone before, it follows that the quantity of sunlight reflected from this cosmical dust cannot be less than $\frac{1}{5{,}000}$ of the light of the full moon. Observations of the light of the solar corona show that its brightness is not greater than that of the full moon. And hence the density of the interplanetary medium is not *greater* than $\frac{1}{1{,}000{,}000{,}000{,}000{,}000{,}000}$ of the density of water. If it were greater we should have a solar corona brighter than the full moon, which is contrary to experience. It is an important step to have fixed such limits as these even approximately, and there are various interesting applications of these data to pending astronomical problems, such as the effect of a resisting medium on comets, etc.; and to these Doctor Kleiber intends to return in a later paper.

PARLIAMENTARY RULES.

A Practical Manual of Parliamentary Rules, compiled for the ready reference of Societies, Conventions, Public Meetings, and Deliberative and Legislative Assemblies. By Ainsworth R. Spofford, Librarian of Congress. Chicago: A. H. Andrews & Co. 1884. 16mo, pp. 207.

THIS latest addition to parliamentary manuals is of great value, although it will not fully meet the hopes of its author. His aim is "to make a book of practical utility in the conduct of business in voluntary societies and public meetings," but it must be said that Cushing's 'Manual,' for so many years the standard authority, is much better adapted for the use of the bodies named. As we propose to show, Mr. Spofford's book is defective on the essential points, just where Cushing's is most precise and ample, and in reality is distinctly inferior to it. On the other hand, this new Manual is of value as giving a very good idea of the parliamentary law of Congress, especially of the House of Representatives; and its comparisons of American practice with British and French methods are very instructive and novel.

Parliamentary law is the common law of assemblies, based primarily on common sense, and secondly on the experience of centuries. Like the common law, it yields to positive statutes, but it must be presumed to exist and to govern in all cases where no direct rule has been adopted. For example, it is an axiom of parliamentary law that the majority rules. Again, no one disputes the principle that the major part of any body is usually a quorum, and that the majority of that quorum can in regular sessions act with the authority of the full body. It will be conceded that there must be a presiding officer with power to maintain order, and a recording officer to preserve minutes of all official action. No assembly can meet without a few such principles being of necessity operative, because without them the gathering is but a mob.

But, after these few natural rules, come many others which experience has shown to be of nearly equal importance, and these are now considered to be accepted as parliamentary law. Such are the rules that members shall be courteous to each other and refrain from personalities; that only one member shall speak at a time; that a subject once disposed of shall not be revived; and that a continuing assembly shall have a definite and well-known order of business, so that every member may know his rights. By a further refinement it has been found that a few general motions include all the possible variations, and parliamentary law undertakes to specify these and to prescribe their effects.

Thus, a motion having been made, it may not be in the best form or of sufficient scope ; hence comes the idea of amending it. Again, the assembly may or may not be ready to act ; hence motions to table, to assign, or to vote at once. Debate may have continued sufficiently ; or a member may wish to have a subject rejected. It may be desirable to reconsider former action, or to send a matter to a committee ; and, lastly, the assembly may adjourn, either *sine die* or to its next meeting, without coming to any vote. Add to these the motion to suspend any formal rule of the body, and the motion of appeal from a decision of the chair, and the list will cover probably all parliamentary law of the highest force.

As a specimen of parliamentary law in its second stage, the motion for the previous question is of interest. It arose first as a motion to avoid putting the main subject to vote, and was as follows : "that the main question be put." If negatived, the main question was suppressed for the whole session of Parliament, without a vote on its merits. Sir Harry Vane is credited with the next form of the motion—"that the main question be *now* put"—which, if refused, suppressed that main question only for the day. The present form of the motion is the same, but it is used also to cut off other motions. Thus, A makes a motion, B moves an amendment, C moves to assign the matter or to commit it to a committee, D moves the previous question ; if this be voted, the effect is to come to a vote on A's motion, cutting off those of B and C. But, by long-continued custom, B's amendment is not cut off, and is considered first : an apparent contradiction, which, however, seems to work well. Herein we see a rule evolved from its first stage, which was to prevent any putting of the question, next applied to stopping debate, and lastly used to check dilatory motions already made, but which, *if put first*, might be favored by the majority. Experience had taught the leaders the advantage of having the affirmative side of any vote.

The next step of Parliamentarians was to state what of these standard motions could be applied to each other. It was soon agreed that an amendment could be amended ; but almost as soon it was decided that only one amendment to a pending amendment could be entertained. Then they required that an amendment should be germane to the subject matter. But it was ruled that a motion to lay on the table or take from the table could not be amended, postponed, or otherwise dealt with, because it was in itself a perfect, single act. A motion to postpone or assign to another hour or day, however, was obviously open to amendment to another date; but as these motions are applicable to the main subject, they cannot be applied to each other. If A makes a motion, and B moves to assign the consideration, and C moves to lay on the table, C's motion is to lay the whole subject there with the pending motions, all of which are of record. But C cannot move to lay B's motion on the table, because the latter is part of the main subject and applicable to it only.

One variation from the rule has been made quite recently. Under the law as above stated the previous question could not apply to any of the subsidiary motions : it affected only the main question. If an amendment was offered, no motion could be made to table, assign, commit, or reject the amendment alone, nor for the previous question on *it* alone. Yet an amendment often caused a long debate, and other members were afraid to move the previous question, as they had amendments to offer. Hence Congress (House of Representatives) has provided that the previous question may be called for, specially, on an amendment, so as to close debate and procure a vote at once on that amendment, leaving the main topic open for further amendment. So, again, recognizing possible varying shades

of opinion, some bodies, like the Massachusetts House of Representatives, have invented a motion to close debate at a fixed hour and minute, which motion ranks lower than that for the previous question, and does not order the *main* question to be put, free from pending motions to assign, commit, etc. It is of no tactical value, but simply stops debate.

It must be evident that all manuals must agree upon the main points of parliamentary law. The value of each treatise will therefore depend upon the clearness with which these principles are set forth, and the diligence with which difficult points are searched out and expounded. Since Cushing we have had "Warrington" (*i.e.*, W. S. Robinson, Clerk of Mass. House of Representatives), Robert (Major Henry M.), and Fish (George T., of Rochester), the latter offering a system of references and diagrams not without value to the expert. But we cannot discover that Mr. Spofford's Manual is any improvement on these in plan or execution. He seems to consider the national House of Representatives to be the highest authority; but in fact its rules are often entirely unfit for smaller bodies, and a recital of them obscures the subject. For example, his eighth chapter, pp. 79-158, is devoted to the topic of Questions, *i. e.*, Motions. Yet in no place does Mr. Spofford set forth a list of subsidiary or usual motions, such as Cushing's Manual gives on pp. 46-48. For popular use some such brief statement is of prime importance, for these are the first motions the presiding officer must decide.

Probably few errors will be found, though Spofford on p. 80 says, "It is a rule without exception that no one can address the chair or the meeting except to make a motion of some kind, or to speak upon a motion of some kind already before the body." This certainly avoids, if it does not negative, the point so often raised, that a member may speak before making his motion (see Cushing,' Law of Parliamentary Bodies,' secs. 1557, 1558). Mr. Spofford does not in terms explain the question of a quorum under the rules of the House. If a quorum be present but does not vote, what happens? The House must have a practice if not a rule on this point, but we do not find it in this book.

The comments on the custom of Parliament and the French Chamber of Deputies are new and interesting. They fail, however, to show that "they manage these things better abroad." In fact, the English House of Commons found its rules utterly inadequate a few years ago, and was obliged to reconstruct them. The practice of our State Legislatures is probably much nearer a proper standard, and even our large cities have councils or assemblies of a size sufficient to call for considerable knowledge of parliamentary law. As an illustration, Spofford says (p. 153): "The motion to lay upon the table is among the most frequently offered motions in public assemblies. It is not amendable nor debatable." This may be true at Washington, but the Massachusetts House allows ten minutes' debate, and it would seem that the general law must be like that custom. In fact, in many bodies the motion to table is of very infrequent occurrence. The order of business established by an assembly soon settles the question of the tactical value of motions, and this affects their frequency. For many obvious reasons the practice of Congress is not a good rule for other bodies. It is useful for comparison, but it does not establish parliamentary law even for this country. A philosophic treatise on the subject is still to be written, and until one shall appear in which the conclusions on doubtful points are well fortified by reasoning, there can be no standard authority. It is to be hoped that this country may yet have the credit of furnishing the model.

A BALTIC REALIST.

Im Gottesländchen. Erzählungen aus dem Kurländischen Leben. Von Theodor Hermann Pantenius. Mitau. 1880-'81. 2 vols., pp. 267 and 276.

THE countries to the south of the Baltic, the North German lowlands and the Baltic provinces of Russia, have a well-marked and peculiar character. The long-drawn-out landscape, with here a heath, there a marsh or lake, further on immense stretches of slightly rolling grain-fields, with few low hills and no rocks, has a colder and sterner character than that of the Low Countries bordering on the North Sea. It is the home of a strong race with ways of its own. The soil is so rebellious to culture, the climate so hostile, that the mere struggle for existence would have occupied all the energies of a race inferior to this; but this one, though slow-growing, has always had strength to spare: witness, for example, that style of Gothic architecture which begins to be seen already at Hanover and Lüneburg, and dies away on the façade of the Schwartzhäupterhaus at Riga; which produced the great castle of the Knights of the Teutonic Order at Marienburg, and cities so fair as Lübeck and Danzig. The style is in general severe and somewhat deficient in grace, like the land and its owners, and when it bursts out into an exuberance of ornament, the result is rather grotesque than beautiful; but its better examples have a dignity, an individuality, a picturesqueness that place them in the first rank of German monuments.

To the southwest of the Baltic these lands have been gradually subdued to something like softness. Nowhere can finer beechwoods be seen than in East Holstein; the neighborhood of Lübeck often reminds one of parts of England; the fields of Mecklenburg prompt the fat laugh of Fritz Reuter. But as one goes on toward the east, the ungrateful nature of the soil becomes more and more evident; strange types of people often and oftener uncouth in costume and increasingly doubtful in respect of cleanliness appear, until in the Baltic provinces of Russia it is only along the coast that one finds a narrow border of the civilization of Germany, a little dulled in its outer aspects, and back of that an immense stretch occupied by Finns, Esthonians, Letts, Lithuanians—peoples whose development is only beginning.

The traveller will remember seeing in this district towns in which are entire quarters where no one not born noble may build or live. The nobility and *bourgeoisie*, kept carefully apart from one another, are still equally of German origin; the peasants are separated from both, not only by barriers of caste, but also of race and language. The coast towns have the air and features of old-fashioned North German cities before the great Prussian machine had crushed the native individuality out of them; but one has only to take a short drive back into the country to find that, aside from a German *Hof* here and there, the houses and the people are utterly unlike anything in Western Europe. For ourselves, we have never been able to shape exactly in words the impression produced by these landscapes. There is no doubt that they are melancholy even when clothed in the tender green of early summer. Under the pale northern sky the thin vegetation stretches out for miles and miles in gentle undulations. The ragged edges of both roads and culture, the unkempt look of the farmsteadings, the meagre and antiquated utensils, the sad-colored, often squalid, costumes of the peasantry, have nothing of the hopeful rawness of our frontier settlements. They have rather the jaded look of centuries of bad management and poverty. An oppressed race, upon an unfriendly soil, and in a rude climate, has for ages fought a battle for existence, not quite a losing one, but one where the gains have been but slight for all the courage and perseverance displayed. There is, of course, better and worse among these provinces, and it may be that the picture we have drawn is not of the best portions. Oppression is everywhere a thing of the past. The peasants, who were freed about half a century ago, have lately been working into the position of land-owners, and there are many signs of a new life and a better future.

For the hurried traveller these lands may seem to present but slight attractions, but to a closer examination there is no such thing as an uninteresting country. We are therefore glad to find in the author cited as the pretext of this article the means of a real and thorough acquaintance with one, at least, of the Baltic provinces.

The world that Pantenius opens to us is that of country life in Courland. There are the nobles on their estates with their bailiffs, gamekeepers, and other dependents, the *bourgeois* proprietor, the country doctor, parson and lawyers—all these of German blood; and the peasants, tenants, and owners, and servants, all these Letts. We had been told long ago that the nobles of the Baltic provinces were full to absurdity of the pride of caste, and, on the whole, in spite of the amiable and liberal examples whom he presents to us, Pantenius strongly bears out the charge. His principal characters are generally charming people, but we find the baronial head, as a rule, furnished with obsolete prejudices, and his manners too often of that Prussian type which, when scratched, reveals the drill sergeant. There is no suggestion of caricature. These are simply Germans of the good old types; banished from the brand-new empire, they still linger beyond the imperial frontier: like the art of their race, there is always in them, with a hundred admirable and noble qualities, a side of quaintness, even grotesqueness. Where there is grotesqueness in the characters of Pantenius it is merely because they are living and true. The author, of course, does not see it as we do—for that he would need to be a foreigner; but he is evidently conscious that his native Courland is a rich mine of individuality, and he works it as one who takes pleasure in his work. A long residence in the neighborhood of the Baltic brings home to us in a peculiar manner the fidelity of his portraits. The faces, the little turns of manner, the style in conversation, all are known to us, and we recognize them in the pages of our author as in a photograph. It is, then, the first of his qualities that, even to the last *comparse*, his figures are alive. You feel that you have met every one of them. With them it is as if you had actually visited Courland, had been made at home in every circle, had even taken part in family affairs. In this way the local questions, political and social, the cultivation of the soil, the relations even of given landlords and tenants, assume for you a personal importance. Of course, in a way, any novel that is at all good takes you for a while into its world. We mean to assert here that in this respect the novels of Pantenius have a peculiar force. It is long since any fictitious world has so impressed us with a sense of its reality. At this writing we can scarcely persuade ourselves that we have not recently come back from Courland with a store of fresh memories and a new circle of friends and acquaintances.

If the first quality of Pantenius be that he sets before us a living Courland, his first defect is part and parcel of the same. He has sought to portray his province on all its sides at once, and as a consequence you are sometimes led to wish that the people would talk a little more about their love affairs and their small passions, the naughty ones as well as the excusable, and just a

trifle less about the relations of Germans to Letts, nobles to *roturiers*, Courlanders to Russia and Germany. We would not intimate that the author falls into the unpardonable sin of didacticism; given the serious nature of the German race, it is quite probable that we get in these stories an even smaller proportion of talk on such topics than we should get in a week spent at Mitau. We are really instructed and, what is more, interested, and the essence of our complaint, if it be one at all, is that the realism of these novels, being German, is perhaps a shade too conscientious—that in works of art we might have hoped to be spared altogether what would in real life have made the heavier moments of our week in Mitau. The personages, moreover, have in themselves an interest so great, so absorbing, that we could wish that the force of the writer had been exclusively occupied with their development. However, the book was written by a Courlander for Courlanders, and for Courlanders who seem still to need the agitation of questions that to us are somewhat elementary; and, as we have said these conversations really help one to a better, understanding of country and people, and so we may conclude that, if there be a defect at all, it is at worst but the exaggeration of an excellence.

Since we are on the chapter of defects we will make a clean breast of them. Our author has a way of giving a likeness in a few strokes that reminds one of Dickens, the more so that there is with it something of the Dickens tendency to mark individuality by catchwords. An easy extension of this *Schablonensystem* makes an irritating blot upon the surface of one story, "Im Banne der Vergangenheit." The central idea, the mainspring of the story, is the suffering of the present generation in consequence of the mistakes and misdeeds of its forefathers. The theme, handled with a force that is truly tragic is denaturalized, to a certain extent, by the manner in which, at stated intervals, each character, in words recurring like the refrain of a song, pronounces himself under the curse of the past. The dignity of tragedy, as well as the verisimilitude, is impaired by a touch borrowed from the vaudeville.

The worst fault of all is the catastrophe of "Im Banne der Vergangenheit." The hero, Werner, a young man cast in the Hamlet mould, with his melancholy, his irresolutions and contradictions, and the beautiful Therese, a person of great charm and distinction, ought, in the circumstances in which they were placed, to have brought about the catastrophe solely by the joint working of their characters. The germs of a noble tragedy were all there, and needed only development. To end such a situation by a *deus ex machina* was certainly a failure in invention, such as one must often put up with in the settlement of the affairs of this world, but which one cannot pardon in a work of art amenable to human reason in its composition.

But how nobly these faults are redeemed! In fact, they scarcely count at all in the general effect. The pleasure of knowing so intimately one's new acquaintances—of finding them all so full of life, so individual—makes one forget that on occasion they may, like other people, say too much about a given subject, or that their end is sometimes different from what one might have wished. We fear it will be long before we make the acquaintance in fiction of a person so charming as Tante Evchen. You learn to know her solely from her own sayings; there is no explanation of her, so that we misunderstood her in the beginning and then came to love her, just as we should have done in the every-day world. We love, too, Karl Johanson and Eberhard; we are fascinated with the Countess Westerberg; and we are sure that we ought to like the wise and wordy Senator, and are sorry that we cannot. But most of all we like the Count in "Unser Graf"—to our mind the most complete as a work of art of the four stories that make up the two slender volumes. One expects to find a man so universally praised full of faults, and so he is: very humanly faulty, however, so that one yields to the force of the charm that has subdued every one else. It is only when the author gives in to the temptation to create a personage to give utterance to his favorite principles, as in the case of the Senator, that he fails to touch our sympathy. The case, however, is of extreme rarity. The portraiture is generally of so impartial a realism, and yet, though the wrinkles are all drawn, the relief is so full, so vigorous, that the result is almost an illusion. It would not be easy in our English literature to find a parallel to so much impartiality. We might instance figures like Christina Light in 'Roderick Hudson,' but in general the novelists of our tongue show very plainly whether their sympathies are for or against the creatures of their art. Even Thackeray points the finger at Becky Sharpe, and George Eliot does not hide her conviction that Hetty is but a poor creature. But here are people, perhaps not on the same level as creations, who stand so alone by themselves that it would often be easy for two readers to take exactly opposite views of their characters. In judging them, we feel that we are judging, not words, or actions, or principles, but flesh and blood.

We have repeatedly asked ourselves with what group Pantenius might be classed—what were his nearest literary relationships. As chance would have it, we read his volumes between a novel of Zola and 'I Promessi Sposi' of Manzoni. The latter has nowadays (more's the pity!) no very near kin. It helps, however, to give largeness to our view of the things of to-day, if we put them into direct comparison with the things of the past; and Manzoni has served in this case very much the purpose that might be served by putting a landscape of Corot into the Square Room of the Louvre. All that makes the work of Corot distinctively modern and French would be thrown into relief by the contrast. To put Pantenius into relation with Manzoni would, however, at present lead us too far. With Zola a comparison would be more legitimate, as Pantenius seems to have studied contemporary "naturalism" in France, although, by the conventions of the society in which he lives, and the exigencies of his nature, he is not naturalist, but realist, like the writers of our tongue. The two classes have been confounded, but they are in fact far from being the same thing. A more serious Jane Austen, a somewhat profounder Anthony Trollope, a Thackeray who should take the wrongs and foibles of society in a spirit of hopeful philosophy, would all have more or less direct kindred with Pantenius. It is not a question of putting the one in the same rank with the others—it is merely a question of affinities. With all this, our author still remains always a German in qualities of race, while in all that gives local coloring he is—and this he would probably prefer to be considered—a true Courlander, and the most amiable and charming of *ciceroni* to that interesting country.

PERRY'S AMERICAN EPISCOPAL CHURCH.

The History of the American Episcopal Church. 1587-1883. By Wm. Stevens Perry, D.D., LL.D., Bishop of Iowa. [Projected by Clarence F. Jewett.] Boston: James R. Osgood & Co. 1885.

BISHOP PERRY'S history is conspicuous in the crowd of ecclesiastical histories that have lately issued from the press, and is the most ambitious of them all. It is in two superb quarto volumes of 665 and 696 pages, printed upon beautiful paper, in handsome, broad-faced type, with generous margins. There are many illustrations, some of them very interesting—faces of distinguished men and pictures of old churches. There are also hundreds of facsimile autographs and facsimiles of various important documents referred to in the text. The method of the work is similar to that of the monograph 'History of Boston.' But in the present case the body of the history is from a single hand, while the monographs are relegated to an appendix of about 200 pages, in the first volume, and a little more than 200 pages in the second.

Bishop Perry's 950 pages afford a capital illustration of Carlyle's distinction between artist and artisan history. The Bishop's work is conspicuously of the latter kind. Everywhere there is evidence of the utmost industry and patience and fidelity in the collection of materials and the interpretation of the various tendencies at work in the development of the Church. He can have found his place no sinecure, adding a task like this to his habitual cares, and he deserves the gratitude of his fellow-churchmen in full measure for its performance. But if he cherished the ambition of Macaulay, to make his history "as interesting as a novel," he certainly has not succeeded. He has made it generally dull. That he has not assimilated his materials is impressed upon us from the beginning to the end. Roxbury pudding-stone is not so full of pebbles as these chapters are full of quotations, and they make a constant friction for the reader's mind. The temper of the book is conciliatory in the main, so far as different parties in the Church are concerned. In the ritualistic controversy the author takes refuge in the barest and meagrest matter-of-fact statement. But his sympathy with Doctor Muhlenberg in the "Memorial Controversy" of 1853 is undisguised, and is not easily reconciled with the strictness of his churchmanship in general. The tone of advocacy and apology is dominant throughout, but of belligerency there is very little. The relations of the Churchmen and the Puritans is most trying to Bishop Perry's patience. He cannot love the Puritans, but his treatment of them is the milk of human kindness as compared with Doctor Coit's monograph on the same subject. It is not a little strange that Doctor Coit was chosen for this topic, as his temper had been already proved. His monograph is a screed, a diatribe, which can be profitably skipped. Its heat and passion come upon us all the more disagreeably after Mr. Robert C. Winthrop's dispassionate monograph, "The Relations of the Founders of the Massachusetts Colony to the Church of England." What Doctor Coit will have it was a vile apostasy, Mr. Winthrop is disposed to think a necessity of the general situation of the colonists in a new world, where bishops were remote and prayer-books were but few.

Bishop Perry's first volume brings his ecclesiastical annals to the conclusion of the Revolutionary War. His chapters on the relations of early discovery and settlement to the Church of England are merely curious. They may please a certain vanity, but the events so patiently unearthed had no appreciable influence upon the subsequent direction of ecclesiastical affairs. The succeeding chapters on the first Churchmen in New England, Virginia, and the Middle States are of much more importance. Bishop Perry is not disposed to allow that his own Church was without its earnest pioneers, willing, if need be, to suffer for their faith, and having frequent opportunity. Other interesting chapters in the first volume are those on "Governor Andros and the Building of King's Chapel, Boston"; "The Wesleys and George Whitefield, Missionaries of the Church in Georgia"; "The Struggle for the

Episcopate"; and "The Position of the Clergy at the Opening of the War for Independence." The last-named of these subjects has ever been unsavory to the American Episcopalian of more recent times. But Bishop Perry makes it plain that all the Episcopalians of the Revolutionary time were not Tories. In Pennsylvania the prevailing sentiment was revolutionary. In New York "the influence of the leading clergy was most patiently and perseveringly exercised in the interests of the crown. . . . These gifted, keen, intelligent men were untiring in their efforts to counteract the wild schemings for independence manifested by the people of Massachusetts." Samuel Seabury, the ablest of them all, was the "Westchester Farmer" of the celebrated pamphlet war in which Alexander Hamilton, then a boy of eighteen in King's College, first made his mark. He had been to Boston, and had come back a convert to the doctrines of the Sons of Liberty. Seabury remained a royalist all through the war; and the fact that he was the first bishop consecrated when the war was over, is significant of the average political state of mind of his coreligionists in New England and New York. It is evident that Provoost, the patriot rector of Trinity, New York, was the favorite of a much smaller party.

Bishop Perry begins his second volume with an account of the men and measures of the period of reorganization that was made necessary by the successful termination of the war for independence. The Church had lost its royal head, but it could now have the bishops it had so long desired in vain. Seabury, refused consecration in England, secured it in Scotland; but White of Pennsylvania and Provoost of New York were soon after consecrated at Lambeth. Provoost, who was by no means anxious to make the American Church an exact transcript of the English Church, is not a favorite with Bishop Perry. It is evident that the laxity of his theological opinions was a trait of many Churchmen of his time. Our historian describes the type as "a theology raised but a little above the level of morality in its human bearings, and barely exceeding the teachings of natural religion in its relations to God." In practice "the level of morality" was not always reached. Bishop Provoost's proposed prayer-book gave particular offence because it required the minister "to repel an evil liver from the holy table." This proposed prayer-book, which was finally rejected, is the subject of a chapter, and there are other chapters on the principles underlying the Church Constitution of 1789, on several of the earlier episcopates, on the different parties in the Church and its expansion South and West. Only a few pages are given to the influence of the Oxford Tractarian Movement on the American Church, and, in truth, it was but slight. The next chapter must have been a painful one to write, and a paragraph would have been sufficient for the ends of justice. It treats of "Troubles in Pennsylvania, New York, and New Jersey," the Onderdonk trials for drunkenness and lechery, and Bishop Doane's unfortunate financial management. The mantle of charity is made as broad as possible, but there is a margin which it does not cover.

"The Attitude of the Church during the Civil War" is disposed of in seven pages. Of its attitude on the questions leading up to it there is not a word. The hardest things that have been said against the Episcopal Church for its complaisance in the matter of slavery are less damaging than this dreadful silence. The word slavery does not occur. That there was such a thing in existence; that the country was distracted by it for thirty years—of this no sign. Words having come to blows, Bishop Perry is happy to record the general refusal of the Church to take any part in the great struggle. The only exceptions were a day of fasting with a collection for the Sanitary Commission, and "the pastoral of 1862," which "stands alone among our Church 'state papers' in respect to its declaration of opinion on matters of a civil nature." What the opinion was, we are not told. In the special prayers ordained for the day of "fasting and humiliation," it is noticeable that there is no reference to the matter of slavery, though Lincoln's first Emancipation Proclamation had been published only two weeks before. The chapter on "The Reunion of the North and South" is equally discreet in its avoidance of all expressions that might give offence to those whose sympathies were with slavery and secession. But in these respects Bishop Perry's chapters are in perfect keeping with the general attitude of his Church throughout the anti-slavery contest and the war. Like the spirits whom Dante encountered in the outer court of hell, it was "neither for God nor for his enemies."

There are eight monographs in the first volume and eleven in the second. They constitute the more interesting and valuable portion of the whole. Of Mr. Winthrop's and Doctor Coit's we have already spoken. Mr. DeCosta's, on "The Early Discoveries and Settlements of the New England Coast," is a polemical exaggeration of the function of Gorges and Hakluyt as compared with the Pilgrims and the Puritans. Prof. Moses Coit Tyler has a congenial subject in "Dean Berkeley's Sojourn in America," and treats it pleasantly. The seventh monograph, so called, is in reality a polygraph, for it is made up of fifteen brief monographs on "Historic Churches." The eighth also is composite; its subject being "The Church Charities of the Eighteenth Century." One of these was the Orphan House at Bethesda, Georgia, to which Whitefield contributed the proceeds of the slave-labor of a plantation which had been given him by his pious friends.

The monographs in the second volume are of unequal interest. To vary Mr. Lincoln's phrase a little, for those who like such a discussion as that on the "General Ecclesiastical Constitution of the American Church," it is just the sort of discussion they will like. It is good after its kind. Probably no other person could have done the thing so well. Mr. Wittmeyer's monograph on the Huguenots does not tell the story of Ribault and Menendez so well as Mr. Parkman's 'Pioneers of France in the New World,' but it demonstrates that the early Huguenots were in closer fellowship with the Episcopal Church than with the Dutch Reformed and Presbyterian. Bishop Provoost came of this stock, and Peter Faneuil of Boston. Mr. Phillips Brooks's monograph on "A Century of Church Growth in Boston" is not such impressive reading as his sermons, but it gives the facts and figures well enough, and is enriched with several pictures of his church. One, of the tower, is by all odds the most beautiful illustration in the two volumes. His closing sentence contains an expression of his own ideal, made that of many others by his genius and sincerity: "A lofty belief in man's spiritual possibilities, a large hope for man's eternal destinies, a desire for the careful and critical study of the Bible, and an earnest insistance upon the comprehensive character of the Church of Christ." There is a monograph of monographs on the educational institutions of the Church; one on "The Church in the Confederate States," written with less consideration for Northern than for Southern sentiments, and with none for General Butler's feelings. Mr. Henry Coppée writes of the literary Churchmen of the ante-Revolutionary period with an instructed air, and Mr. Julius H. Ward of "Church Literature since the Revolution," with the broadest sympathies. He reserves his final word of praise for Dr. A. V. G. Allen's 'Continuity of Christian Thought,' a book which Dean Stanley would have found encouraging and satisfactory. The concluding monograph, on "The Hymnology of the Church," is generally depressing. There is an excellent index. The proofs throughout have not been read so carefully as they should have been, especially in the matter of dates.

A Dictionary of Music and Musicians. Edited by Sir George Grove. Part 20. Macmillan.

THIS part of Grove's Dictionary, presumably the last but one, extends from "'Tis the Last Rose" to "(Die) Verschworenen." Tschaikowsky is very inadequately treated, so that "Verdi" is the only long biographical article (fifteen pages). Among the technical subjects, the following are of special importance: Toccata, Tonal Fugue, Tone, Tonic Sol-Fa, Touch, Transposition, Treatment of the Organ, Tremolo, Trio, Trombone, Trumpet, Tuning, Turn, United States, University Societies, Variations, Vaudeville. In Dr. C. H. H. Parry's contributions on "Variations" and "Trio," the reader will find, as usual, the clearest and most impartial treatment of the subject in hand; while Mr. W. H. Stone's contributions represent the other extreme of misstatement and prejudiced suppression of interesting facts. In the article on "Trio," Doctor Parry briefly characterizes the works of this class by the leading composers, but omits all mention of the most *poetic* trio ever written—namely, Chopin's. Mr. Stone makes the entirely original statements that Mozart "seems to have known the capabilities of every instrument better than any musician that ever lived"; that "no instrument has been so misused and *neglected* by modern composers as the trombone" (!), and that "the quiet, smooth, legato method of using it is almost a lost art." It is useless to refute such statements at length, for every tyro knows that it remained for Berlioz and Wagner to develop fully the capabilities of wind, and especially brass, instruments; but these composers are not mentioned either under "Trombone" or "Trumpet," whereas Handel and Mendelssohn, whom no one has ever accused of unusual powers in orchestrating, are of course duly considered.

How completely these two second-rate composers still dominate over English musical life, is shown in the article on that peculiar English system of notation called the Tonic Sol-Fa—the benefits of this system being naïvely summed up by referring to "the many hard-working people all over the world who have thus been taught, in a simple way, to enter into the enjoyment of the music of Handel or Mendelssohn." The statement is made that 39,000 copies of the "Messiah" have been sold printed in this notation; that one firm has printed in the same way 16,000 pages of music; and that 80 per cent. of the children in English primary schools, who are taught to sing by note at all, learn on this plan, which has also been introduced in the English colonies. Such a thing is only possible in a nation which cultivates the oratorio almost exclusively, and worships Handel and Mendelssohn as the highest gods. Nations not exclusively addicted to simple oratorio music will never accept this notation, because as soon as complicated music is used, which frequently changes its key, the advantages of this system are lost. To instrumental music it is not applicable, thus necessitating the learning of two systems. The Sol-Fa is, in fact, a modernized form of a mediæval system that was crowded out in the struggle for existence by the staff notation, which is infinitely superior to Sol-Fa because it gives to the eye a sensuous representation of the rising and falling of tones.

It appears as if Doctor Grove had been some-

what careless in editing the present part of his dictionary. In the article just named, C is referred to as "a certain white key lying between two black keys" on the piano. The word Nibelungen is repeatedly misspelt "Niebelungen." Regarding Doctor Tourgée, we are told that "he is at present in robust health, and it is to be hoped that his useful life may be spared for long"—a statement which hardly seems in place in a musical dictionary. The greatest surprise, however, is reserved for the reader in the article on Verdi. The writer, who seems to be an Italian, asserts with reference to Wagner that "Paris has notoriously shut her ears to him, and New York appears as yet not to have heard one of his operas"! Such ignorance may be pardonable in an Italian, but is not in the editor, for whose benefit we will state that "Tannhäuser" and "Lohengrin" were first heard in New York twenty-six and fifteen years ago respectively; that "Lohengrin" has since that date been given almost every year; that the "Flying Dutchman" and "Die Walküre" are also known here; and that at the past season of German opera at the Metropolitan Opera-house twenty-five performances out of fifty-eight were devoted to Wagner. The writer of the article in question chuckles through several columns over the fact that "amongst living composers Verdi is undoubtedly the most universally popular"—which is notoriously untrue, since in Paris Meyerbeer and Gounod are more often performed, and in Germany (the only country that has a large number of first-class opera-houses) Wagner, Meyerbeer, Mozart, Lortzing, and Weber outrank Verdi in popularity; while New York, as just shown, seems disposed to follow Paris and Germany.

Two of the most entertaining articles in Part 20 are on Touch and on Tourte. In the former it is clearly shown why "all the higher qualities of pianoforte technique, such as crispness, delicacy, expression, sonority, etc., depend entirely upon touch"; and the writer justly maintains, against Mr. Orlando Steed, that it is possible to vary even the quality or timbre by differences in touch, owing to differences produced in the intensity of certain partial tones of which any given note is composed. Regarding the organ, the writer says that: "Until recent times, touch was an impossibility upon large organs. Burney, in his tour, in 1772, speaks of a touch so heavy that 'each key requires a foot instead of a finger to press it down'; again, of a performance by a M. Binder at Dresden, who at the conclusion was in as violent a heat with fatigue and exertion as if he had run eight or ten miles full speed over ploughed fields in the dog days."

What a good touch is on a keyed instrument good bowing is on instruments of the violin family; and in this matter the world owes so much to the French bow-maker Tourte, that the three columns assigned to him here are no more than his due. He replaced the "fearful implement" in use before his day by a bow of Pernambuco wood, which was strong and elastic without being heavy. He regulated the length of the stick, determined the rule for making it taper gradually toward the point, and invented the method of spreading the hairs and attaching them by means of a movable metal fitting on a slide of mother-of-pearl. "A very fine Tourte has been recently sold for £30; common ones vary in price from £5 to £10. It is a singular fact that there is no difference of opinion among violinists as to Tourte's merits. His bows are universally preferred to all others; and they show no signs of wearing out."

Mind Reading and Beyond. By William A. Hovey. Boston: Lee & Shepard.

Extracts from the published Proceedings of the (English) Society for psychical Research, in the matter of thought transference, make up nine-tenths of this little book. The reprint is a convenient condensation of this part of that Society's published work, and is illustrated with reproductions of the facsimile drawings of the original. To those who would like to understand what has been done, with the precautions used against accidental errors or intentional deception, Mr. Hovey's compilation presents within easy compass all that is valuable. The "Beyond," in this case, is the last chapter, of twenty pages, which is the author's personal contribution to the general theme. It is in substance this argument: that the body in no true sense is the man—that the man is the soul; that the body certainly dies, and that the man probably lives after the body's death; that it is not incredible that the soul or spirit should project itself beyond its own body during life, as, indeed, he thinks the telepathic phenomena he has collected prove; and when disembodied at death, being thus freed from physical trammels, *a fortiori* it almost certainly possesses such power. We may very honestly hold that there are spirits, ministering or otherwise, not in the flesh. But it does not seem that Mr. Hovey's reasoning settles it; for it by no means follows that the human spirit has the power of communication after separation from the body, any more than that an arm can strike after its nervous trunks have been severed. It is probable that the union of the spirit with the flesh is essential for the manifestation of the former; and as, for instance, physical agents are necessary to demonstrate electricity, so brain substance is required for the operation of mind.

The book is well made, but in the decoration on the cover, interesting when understood, sarcastic sceptics might see a suggestion of expectant credulity.

The English School of Painting. By Ernest Chesneau. Translated by L. N. Etherington, with preface by Professor Ruskin. Cassell & Co.

Roadside Songs of Tuscany, translated and illustrated by Francesca Alexander, and edited by John Ruskin. Part 5. John Wiley & Sons.

We had occasion to review the original edition of Chesneau's study of English art, and have only to say of this translation of it into English that it is careful without being faithful, for it misses the spirit of the original and almost justifies what Ruskin said in one of his lectures, that the French language was that of criticism. It is, however, literal, and, in spite of an awkward rendering here and there, will, to those who cannot read the original, convey all the essential elements.

But what enhances the interest of this edition for English readers is the preface by Professor Ruskin, and two or three notes to the text, in which he introduces his French confrère to the English public in a generous and appreciative spirit, which is really characteristic of one side of the many-sided—and many-angled—English master. The chief point in this brief preface is curiously illustrative of Ruskin's general error in reference to art, lying in the assertion that "every nation is, in a certain sense, a judge of its own art, from whose decision there is no appeal: in the common sense of the phrase, it 'knows what it likes,' and is only capable of producing what it likes"—a dictum which can only be made plausible by putting the theme which is made the occasion of art before art itself; and, even so, it is of disputable justice. A nation chooses and rejoices in its own subjects of contemplation, taken, in the main, from its own social structure or history; but the art which is employed in portraying those subjects is the same for all nations, and liked or disliked, not according to nationality or individuality, but according to art education. It is this confusion between art and the material with which art deals that lies at the base of the apparent, and sometimes real, contradictions in Ruskin's teaching, and which in part accounts for his failure as an art teacher. This failure he himself sadly acknowledges, not appreciating, apparently, that when his pupils came to him for art instruction he only taught them drawing, and even that in a way which ignored the side by which art approaches it—*style*—to which he seems utterly indifferent.

One statement in reference to Turner in this preface we do not comprehend, coming from Professor Ruskin, or accept as a fact by whomever stated, viz., that "Turner is essentially a chiaroscurist." It seems to us, on the contrary, that though Turner had a singular and singularly artistic feeling for light and shade, he was essentially a colorist, and that in all his work the dictates of his color feeling absolutely ruled his color works. He was only a chiaroscurist when his picture was designed for white and black, as in the 'Liber Studiorum' and the pictures of the epoch which preceded the evolution of his system of color. In the pictures subsequent to that, he is essentially a colorist, and the proof of this lies in the fact that though he himself was able to translate this color into his own chiaroscuro, nobody else has ever been able to do so, and no engraving done since Turner's death has hit the secret of his translation. In all the drawings which Turner did expressly for the engraver, the color-feeling was necessarily subordinate; but in all that he did under the control of his fully developed powers, the white and black does not enter as a motive. Rembrandt was essentially a chiaroscurist, and his system of light and shade is ever dominant; and the comparison of the two will make it clear that Turner in his most developed work was essentially a colorist. To illustrate by an analogy in letters, we may say that Emerson, though a writer of verse, was essentially a prose writer, and Shelley as essentially a versifier; the basis of all literature—ideas—being a constant quantity and really the substantial frame of the whole work, whereas the designation of prose writer or versifier, as well as chiaroscurist or colorist, relates purely to the form in which the idea is clothed, and in this relation Turner is not so eminently distinguished as chiaroscurist as he is as colorist.

The want of perception of the value of style in drawing, which is a curious and perplexing trait of Ruskin's perceptions of art, accounts for his enthusiasm for Miss Alexander's work, of which one of the most justly eminent English artists has said, "We can excuse Ruskin's not believing in Michael Angelo, but not his believing in Miss Alexander." Miss Alexander's work has a most extraordinary precision and methodical quality of pen-line. It is like excellent Dutch engraving—patient, plodding, exact in outline and light and shade. Her drawing of flowers is altogether exquisite (for line work) as well as naïve and self-taught, and hence original as far as drawing can be original to a woman almost brought up in a studio, and familiar all her life with Italian art. But when it is a question of anything but flowers, it is artless in every sense of the word. She delights in compositions of the figure which certainly have the qualification of naïveté, but which are pure and even exaggerated *pose plastique*, without the slightest knowledge of human structure; for her figures are oftentimes heads, hands, and feet put on to sacks and bundles, the hands and heads drawn with the delicacy she gives her flowers, but with no other intention than the flowers. As for the composition and what most people who study art regard as its higher quali-

ties, the naïveté becomes simple childishness. Of these "lovely drawings," one of which is rendered in this number, Professor Ruskin says, they "are to my mind the most joyful, *because most credible*, sacred designs I ever yet saw"—in which statement we find again the repetition of the confusion before noticed between art and the verisimilitude of story-telling; a confusion which not only paralyzes all Ruskin's *art* teaching, but separates him in opinion and influence from the great body of artists and genuine *art*-teachers, to the injury of all concerned. It is worse than useless to link art to pietism; for however desirable it might be for the good of humanity to bind out art as the handmaid of religion, even the broadest, it could only succeed in diminishing the power for good of the one and the capacity for delight of the other. Even to science art has no obligation, nor, except incidentally, any relation; and its freedom and highest capabilities are instantly sacrificed when we insist on making it work on the lines of determined and absolute facts. The fact that Professor Ruskin finds his highest satisfaction in a work of art in the credibility of the design as an historical statement, demonstrates anew what we have always maintained, that in his view of things art is subordinated to, or confounded with, the moralities and naturalism. It may be that it would have been better for the world if it were so, but in fact the world was made a long time ago, and, we begin to find out, not on the same lines as the church; and while it may give a great shock to the sentiment of morality to learn that the most obscene art of Pompeii contains precisely the same æsthetic elements as the most devout art of the middle ages (and probably in much larger degree, on account of its entire freedom from any restraint of the schoolhouse), any study or teaching of art which does not recognize that it is so, will never operate from the fundamental principles of all art, on which alone a genuine school can be founded.

In admitting that morality is more important than art, and that science even has claims before it, we do not, therefore, accept any implication of its being in service to the one or the other. Art lends the faculties it has trained to the needs of education in any sphere of human thought—science, moral or social reform, as to hagiolatry or idolatry—as poetry might do and has done; but those faculties are merely the organs of expression, and the ideals which in art's supreme work are expressed by them are not those of morality or science any more than of idolatry or obscenity, but are its own, not to be confounded with any utilities, moralities, or immoralities. The end of art is the ideal—not nature, or history, or religion.

The Microscope in Botany: a Guide for the Microscopical Investigation of Vegetable Substances. From the German of Dr. Julius Wilhelm Behrens. Translated and edited by Rev. A. B. Hervey, A.M., assisted by R. H. Ward, M.D., F.R.M.S. Boston: S. E. Cassino & Co. Illustrated, 8vo, pp. xv, 466.

THIS translation of the well-known work of Doctor Behrens will be a very welcome handbook for students of microscopical botany. The principal American editor, Mr. Hervey, is known for his valuable contributions to the knowledge of the Algæ, while his assistant, Doctor Ward, is among the best-known experts in microscopical technique. They have been able, therefore, to make a division of labor which gives good results in both parts of the book. In the original, Doctor Behrens disclaims any purpose of making an exhaustive treatise upon the construction of the microscope, or of entering the proper domain of structural botany. He has given such a general description of the microscope and its accessories as will suffice for an intelligent command of its resources in actual investigation, and has made his strong point in a somewhat full treatment of the reagents most useful in the examination of vegetable substances, and of the tests for the principal substances themselves. When to this is added full instructions in the most approved methods of manipulation in this department of botanical work, the book becomes a really useful tool-book for the investigator.

The American edition differs most from the original in the first part, where very considerable changes and additions have been made. In the description of the microscope stand, Behrens naturally followed the Continental models. Doctor Ward, in adapting the work to American students, has substituted in his illustrations and descriptions the best of the simpler forms of American instruments, in which economy of cost has been successfully united with good workmanship, and with advantages generally found in European instruments of none but the more expensive class. He has added, also, a host of ingenious devices in accessories and in implements, which make the book one of the very best in this respect that have appeared. In the portions relating to the discrimination of substances by means of chemical reagents, there was less room for addition to the labors of Behrens, but Mr. Hervey has noted many of the suggestions of other recent experiments which bring the work down to date. The mechanical execution of the volume is excellent, and the illustrations are well drawn and engraved. Where the additions by the translator and his assistant editor have been incorporated into the text, they are marked by brackets and initials, so that no confusion between the original and the addenda is likely to arise.

BOOKS OF THE WEEK.

Alden, W. L. The Adventures of Jimmy Brown. Illustrated. Harper & Brothers.
Smith, Mary Stuart. Virginia Cookery Book. Harper & Brothers.
Stewart, Prof. B., and Gee, W. W. H. Lessons in Elementary Practical Physics. Vol. I. General Physical Processes. Macmillan & Co. $1.50.
Stoddard, Dr. J. T. Outline of Lecture Notes on General Chemistry. Boston: Harris, Rogers & Co. $1.
Taylor, H. His Autobiography. 1800—1875. In 2 vols Harper & Brothers.
The Book Annexed to the Report of the Joint Committee on the Book of Common Prayer, as Modified by the Action of the General Convention of 1883. E. & J. B. Young & Co. Also, James Pott & Co.
The Power and Authority of School Officers and Teachers, as Determined by the Courts of the Several States. Harper & Bros.
Thomann, G. Liquor Laws of the United States; their Spirit and Effect. United States Brewers' Association.
Towle, G. M. England and Russia in Asia. With Maps. Boston: J. R. Osgood & Co.
Trautmann, Prof. M. Die Sprachlaute im Allgemeinen, und die Laute des Englischen, Französischen und Deutschen im Besondern. Leipzig: Gustav Fock.
Treat, Mary. Home Studies in Nature. Illustrated. Harper & Bros.
Van Orden, W. H. Famous People of All Ages. A. L. Burt. 50 cents.
Vasili, Paul. Die Wiener Gesellschaft. Leipzig: H. Le Soudier; New York: Westermann. $1.90.
Waring, G. E., jr. How to Drain a House: Practical Information for Householders. Henry Holt & Co. $1.25.
Walcker, K. Richard Cobden's Volkswirthschaftliche und Politische Ansichten. Hamburg: Nestler & Melle.
Wells, H. P. Fly-Rods and Fly-Tackle: Suggestions as to their Manufacture and Use. Illustrated. Harper & Bros.
Wendell, B. The Duchess Emilia: a Romance. Boston: J. R. Osgood & Co.
Williams, G. W. History of the Negro Race in America, from 1619 to 1880. Popular edition, two vols. in one. G. P. Putnam's Sons. $4.
Wilson, J. Thoughts on Science, Theology, and Ethics. Trübner & Co.

New Books.

MILITARY MANNERS AND Customs. By J. A. Farrer, author of 'Primitive Manners and Customs.' 12mo, $1.50.

A most interesting, instructive, and scholarly work.

HOW TO DRAIN A HOUSE. Practical Information for Householders. By Col. Geo. E. Waring, jr., M. Inst. C. E., etc. 16mo, $1.25.

"A volume which should be in the hands of every man who owns a house or is about to build a house. . . . He treats the subject entirely from the view of the individual householder who has got so far that he knows bad drainage to be an enemy to the well-being of his household. . . . It is well worth the while of every householder to read what he has here set down from cover to cover."—*Boston Transcript.*

TAINE'S FRENCH REVOLUTION. Vol. III. By H. A. Taine, D.C.L., Oxon, author of 'A History of English Literature,' etc. Translated by John Durand. Vol. 3. $2.50. The complete work, 3 vols., $7.50.

AT THE SIGN OF THE LYRE. Poems by Austin Dobson. Square 12mo. Uniform with "Vignettes in Rhyme." $2.00.

HENRY HOLT & CO., N. Y.

MIND READING AND BEYOND, by William A. Hovey (price $1.25), says the *Boston Advertiser*, "will be regarded as a valuable and welcome addition to the recent literature of the subject."

THE COÖPERATIVE COMMONWEALTH in its Outlines. An Exposition of Modern Socialism. By Laurence Gronlund. Cheap edition, paper, 25 cents.

"The best expose of the subject ever written," says the *N. Y. Sun.*

NEW ILLUSTRATED EDITION.

SELECT POEMS. By Harvey Rice. Price $1.

"The brain of a poet conceived these verses," says the *Commercial Advertiser, New York.*

NEW EDITION. Paper, 50 Cents; Cloth, $1.

THAT HUSBAND OF MINE.

*** One of the most famous books ever published on this continent.

A MANUAL OF HOMŒOPATHIC Veterinary Practice. Designed for all Domestic Animals. Second Enlarged Edition, Illustrated, Large 8vo, substantially bound, Price, $5.

This book is specially written for the Stock-raiser, Farmer, Livery-stable man, and Farmer. The directions for treatment are plain, concise, and reliable. Sent free by mail on receipt of price. Address, BOERICKE & TAFEL'S HOMŒOPATHIC PHARMACIES at New York, Philadelphia, Baltimore, Chicago, Pittsburgh, and Washington.

Business Established in 1835.

The Nation.

NEW YORK, THURSDAY, MAY 14, 1885.

The Week.

THERE is a growing uneasiness at the Treasury Department in view of the steady decline in the revenue, which has already overpassed the shrinkage estimated by ex-Secretary McCulloch. The unsatisfactory condition of trade is reflected in the lessened receipts from customs and internal revenue. Mr. McCulloch's estimate of $330,000,000 of revenue from all sources for the year ending June 30, 1885, is too large by $20,000,000, possibly by $25,000,000, while the estimate of expenditures ($290,000,000) was too small by the sum to be expended during the fiscal year for new cruisers authorized by Congress at the last session. The estimates of expenditures included $47,000,000 for the sinking fund, and showed a surplus over all disbursements of $39,000,000. According to present appearances there will be a surplus not exceeding $15,000,000, and it is likely to fall below this amount, since the shrinkage of receipts appears to be progressive. Of course the redemption of the public debt by bond calls must upon this showing cease. The operation of the sinking fund will reduce the actual liabilities of the Government, but we have come to a pause in the cancellation of the interest-bearing debt. This is perhaps not an unmixed evil, since, with the stoppage of bond calls, the whittling away of the security of the national banks ceases for the time, and opportunity is given for devising means for preserving that beneficent system, or providing a decent substitute for it. This incidental advantage is offset, however, by the growing menace of the silver coinage, which becomes more serious exactly in proportion as the surplus in the Treasury declines, and as the public expenditures encroach upon the public receipts.

Secretary Manning is fully alive to this danger. Orders have been issued to the sub-treasuries at the principal cities to pay out only such funds as the payees desire, and not to force silver or silver certificates upon unwilling creditors so long as other funds hold out. This is decidedly the most prudent and manly course to pursue, since it leaves nothing open to conjecture or suspicion. It is equivalent to a public proclamation that the policy of the Administration is to adhere to the gold standard as long as the means hold out, and to make no discrimination in favor of or against any locality. If failing revenues, or increasing expenditures, or any other compulsion, brings us to the use of a depreciated currency, the responsibility will rest upon Congress and not upon the Executive. An issue must be made up in plain terms, and the battle must be fought without disguise or subterfuge. It cannot be postponed longer than the next session. If the silver crisis can be put off till December by means of the narrow margin still remaining between the public income and outgo, that is undoubtedly the extreme limit of time left for debate and experiment. It must then be determined whether we are to have a financial break-down preparatory to a rebuilding on the silver basis, or not. One thing is quite certain, that when the crisis comes the "gold bugs" will be well prepared for it. They are employing the interval in getting their funds in such shape that the depreciation will do them the least possible harm. By investing their ready money in sterling exchange or in gold-bearing securities, they are putting themselves beyond the reach of serious injury, and preparing to speculate upon the necessities of less fortunate people. Only a limited number of persons can protect themselves in this way, but they happen to be the very class whom the silver fanatics imagine that they can reach and punish by lowering the standard of value.

The appointment of Mr. E. O. Graves as Chief of the Bureau of Engraving and Printing in the Treasury Department, is one of the wisest and most useful selections that Secretary Manning has made or could possibly make. Mr. Graves has made a reputation for himself, in an unobtrusive way, as one of the very best class of public servants. His efficiency was early recognized by Secretary Sherman, who placed him at the head of the Commission appointed some years ago to investigate the Engraving Bureau. He found that this branch of the public service had been converted into a sort of general hospital for broken-down politicians. Appropriations had been voted from year to year by Congressmen for no other purpose than to make places for their henchmen, and this bureau had been selected for their retreat because it was less exposed to public observation, and was surrounded with more mystery, than any other. Shelves had been put up in obscure corners for the reception of this class of invalids, who had nothing to do but to draw their pay, and who were generally incapable of any more active employment. Mr. Graves gently but firmly drew them from their hiding places, and reduced the force 30 per cent., actually increasing the efficiency of the service by making elbow room for the real working force of the bureau.

The Administration is developing a commendable disposition to undo a blunder. Through too implicit reliance upon endorsers whose recommendations ought to mean something, the President was induced to appoint a brother of Senator Blackburn as Collector of Internal Revenue in Kentucky, and Secretary Bayard to promise the consulate at Nagasaki, Japan, to J. Ernest Meiere. The latter turned out to be not only an "unreconstructed Rebel," but a fellow of most disreputable character in his personal and domestic relations. Blackburn proves to be the typical Southern bully and braggart of the ante-war period, who celebrated his advent in the Confederate service by writing a letter, worthy of the average dime-novel hero, in which he declared his desire to "make the Union men of Kentucky feel the edge of my knife," invoked hell as his portion if he ever spared one of them, and expressed his hope to "see Union blood run deep enough for my horse to swim in." The appointments of both these ruffians have been revoked, and the lesson which such incidents teach will hardly be lost upon the appointing power. That lesson is the absolute worthlessness of the endorsements of office-seekers by professional politicians. Meiere was recommended for appointment not only by leading Democrats of Colorado, but by prominent Republicans, like Senator Bowen; and equally strong endorsements can be secured by almost any clever scamp. The Meiere and Blackburn cases furnish fresh arguments in favor of Assistant Secretary Fairchild's suggestion that the names of all applicants for office be made known some time before action is taken.

Senator Dawes, of Massachusetts, will get himself disliked by such Republicans as Senator Frye, of Maine, if he keeps on. Mr. Frye is the man who remarked the other day that everybody who had been appointed to office was either a Rebel or a Copperhead, and that he saw nothing at all to commend in the Administration. Senator Dawes is about starting for the Indian Territory with a committee appointed to investigate the system of leasing Indian lands. He tells a reporter that the trouble grows out of the fact that the Secretary of the Interior in the last Republican Administration was involved in a scheme to let the cattlemen get control of the Indian lands without being himself directly or technically responsible, and that it is this way of doing business which they now have to remedy. He has had several interviews with the new Secretary of the Interior and the new Commissioner of Indian Affairs, whose appointment he heartily endorsed, and he says that so far as he can see there is every reason to expect a good administration of Indian affairs. Moreover, a mention of President Cleveland's name called forth the remark that thus far he had no fault to find with the Administration. Mr. Dawes's attitude, as that of a Senator ambitious for reëlection next year, is much more creditable to the people of Massachusetts than is that of Mr. Frye, who has a similar ambition, to the voters of Maine.

The most industrious propagator of protectionism in public office during the past half dozen years has been Mr. Joseph Nimmo, jr., Chief of the Bureau of Statistics, whose removal was announced on Tuesday week. The greatest effort of his life was a report made two or three years ago to show that the internal commerce of the country was twenty-five times greater than the foreign commerce, The purpose and object of this essay was to enforce the idea that efforts to extend foreign commerce were of trifling importance and of questionable utility, as though a merchant who had twenty-five customers in his own town and one in a neighboring town should not trouble himself to get any more trade. The plain implication was that the twenty sixth customer was of doubtful advantage anyway, and that a few more of the same kind might break up the business altogether. In subsequent treatises Mr. Nimmo modified his statistics so far as to

acknowledge that the foreign commerce of the country was about one-seventh of the total volume of exchanges effected, but the protectionist doctrine that the part of a thing is greater or more valuable than the whole, was as plainly discernible in the later investigation as in the earlier. Mr. Nimmo added to his other disqualifications as a statistician those of "an offensive partisan," one of his latest productions being a compilation of figures showing how important it was that the Republican party should be continued in power. Such abilities as his must be in great demand in that numerous class of private undertakings where a great deal of figuring is required to puzzle the human understanding, and to befog the simplest questions of business and finance.

There is a remarkable contrast between the first important steps in Southern affairs taken by the Garfield and the Cleveland Administrations. Four years ago the Republican Executive sustained the course of the party in the Senate in making a coalition with the Virginia repudiationists, and carried out the bargain by turning over to Mahone for his personal use the control of the Federal offices in that State. This year a Democratic President takes early occasion, by the unmistakable character of his first important appointment in Louisiana, to indicate his purpose of making war upon the Democratic ring, based on the Louisiana lottery swindle, which has for years brought upon the latter State an odium scarcely inferior to that fixed upon Virginia by the Mahone gang. The attack upon this ring is to be continued by a series of prosecutions against the lottery company, which it is announced that Postmaster-General Vilas proposes to have brought before the Federal Courts in a number of States. Such action by the Post-office Department will deepen the resentment of the Louisiana Machine against the Administration, to which Senator Eustis has given voice, but it will in the same ratio strengthen Mr. Cleveland's hold upon the country. The favor shown by a Republican Administration to the Virginia repudiationists was a potent element in the demoralization and defeat of the Republican party, and the hostility of a Democratic President to the Louisiana lottery gang will be equally potent in the contrary direction.

The appointment of Mr. G. V. N. Lothrop, of Michigan, as Minister to Russia is one of the best selections made by President Cleveland for any branch of the public service. Mr. Lothrop is a man of the same type as Minister Phelps—a lawyer of eminence and character, if not the foremost at the Michigan bar, certainly in the foremost rank. Mr. Lothrop has always been a Democrat in politics, was a pronounced Union man during the war, and has never, we believe, been a candidate for office. Four of the five principal missions have now been filled in a highly creditable way, and one only by a questionable appointment. This is certainly as high an average of diplomatic strength and respectability as we are accustomed to. The appointment of Mr. Lothrop has also a special significance, entirely aside from the question of his fitness, because it is a clear and unmistakable declaration of independence on Mr. Cleveland's part. There is no State in the Union where the spoils-seeking Democrats have made such a "dead set" for the control of the patronage on the old basis as in Michigan. The Democratic Congressmen-elect and the Democratic candidates who were defeated last fall met in Detroit a few weeks ago, and arranged a complete slate of all the Federal offices in the State, which early this week they submitted to the President. Mr. Cleveland, whom they had coolly relegated to the place of a mere recording clerk, heard them through, and remarked with a smile: "Gentlemen, I will consider the names which you have presented, but please remember that I reserve the right to reject any or all bids." Not only was Mr. Lothrop's name not on the slate, but none of the delegation had ever thought of recommending the appointment of men of his grade.

The selection of an educated and accomplished colored man of the highest character as Minister to Hayti is a convincing answer to the charge that the State Department withheld the commission from George W. Williams because it was prejudiced against him on the ground that he is a negro. The treatment of Williams, whose nomination for this post by President Arthur just before his term expired was a discreditable use of his power, and the appointment of Dr. Thompson, alike show a commendable disposition on the part of the Administration to treat the black man exactly like the white man. Investigation of Williams's record showed that he was not fit to represent this Government in a foreign country, and his own conduct since the 4th of March has removed the last doubt in the matter. Dr. Thompson, on the other hand, is a gentleman of high standing, who has received a liberal education and appears to be well qualified in every respect for the place he is to fill. The fact that his race can present so excellent a candidate for a foreign mission is a striking evidence of the rapid progress which it is making; while the selection of a negro by a Democratic President for such an office is gratifying proof of the advance which the party has made since it was last in power.

The removal of Postmaster Palmer, of Chicago, and the appointment of Mr. S. Corning Judd in his place, is a change made in strict accord with the principles laid down by President Cleveland in his letter to the Civil-Service Reform League. Mr. Palmer falls within the definition of "an offensive partisan" in the sense that his office has been one of the working agencies of the Republican party from the time that he took possession of it, in the latter part of General Grant's term, till the end of the late campaign. The business of the Post-office has, nevertheless, been well managed, and it would be unjust to describe Mr. Palmer as "offensive" in any other than a partisan sense. He has simply adhered to the old party methods, and followed the fortunes of General Logan, to whose partiality he owed his appointment. His chief subordinate, Colonel Squier, is one of the best Postmasters in the United States, and, like Postmaster Pearson, a man wholly absorbed in the duties of his office. Under an ideal system of civil service, Mr. Squier would be entitled to the position of Postmaster upon the occurrence of any change in the head of the office. It is altogether probable that the new Postmaster, Mr. Judd, will retain the services of the trained employees, whether they are embraced in the Civil-Service Act or not. This policy may be looked for with the more confidence since Mr. Judd was not a candidate for the place, and consequently can have no outstanding pledges.

Students of hygiene will be greatly interested in some facts bearing upon that science which have recently been reported from Washington. It is the general opinion all over the country that the present spring, by reason of its backwardness, has been exceptionally trying, and this opinion is fully sustained by the unusually large mortality almost everywhere reported. The season has been unpropitious at the national capital as elsewhere, and it might be supposed that the number of cases of illness among persons employed in the Government service would have considerably exceeded the average. But the surprising discovery has been made that the cold, raw spring of 1885 has been the healthiest ever known among Government clerks. In the Sixth Auditor's Office, for example, where the same force is now employed as a year ago, the sick leaves have sunk from an average of 550 days per month to only about 200 in either March or April. It appears that this improvement in the health of employees became plainly visible immediately after the 4th of November last.

The Supreme Court has just rendered an important decision in what are known as the Tennessee bond cases, which have long been the subject of litigation. Under an act of the Legislature for the establishment of a system of internal improvements, passed in 1852, the State of Tennessee issued bonds to various railroad companies, the State retaining a lien to secure the payment of the interest. The interest was paid until the breaking out of the war, but the burden then fell upon the State, which at various periods after the Rebellion issued new bonds to fund the accrued interest and the matured bonds. In 1870 the Legislature passed an act permitting the railroads to discharge their indebtedness in the legally issued bonds of the State, and two years later nearly a dozen of the lines were sold under foreclosure of mortgage for $6,698,000, the greater part of which was paid in depreciated bonds and coupons. The question raised in the suits just decided was whether the lien with which the State was invested upon the issue of its original bonds to the companies, bound the property of the companies for the payment of the bonds and interest to the several holders or only to the State; and the Supreme Court holds, as the lower courts had done, that security to the State was the sole purpose of the lien, and that the provision for foreclosure was manifestly for the benefit of the State alone. The practical effect of this decision will apparently be that the holders of the bonds in litigation, who have delayed funding them in the hope of getting more out of the railroad companies, will now fund them, and it does not involve a reopening

of the State debt question, as the decision in the Virginia coupon cases does.

The killing of the Field Code does not do away with the necessity for reform in the law, and does not nullify the mandate of the State Constitution which directs the Legislature to appoint three commissioners to do something about codifying the law. It will be observed, however, that the Constitution does not call for "a written and systematic code of the whole body of the laws of this State." It leaves it to the discretion of the Commissioners to "codify so much and such parts thereof as they shall deem practicable and expedient." Consequently there is no need whatever for setting commissioners to do work which probably no one set of commissioners would be capable of accomplishing. The history of the Field enterprise is full of instruction on this point. The attempt to codify ought to be made piecemeal, and ought at the outset to be confined strictly to experiment. One subject should be taken up at a time, and the work submitted to the rigid scrutiny of the bar and the judges before any attempt is made to enact it; and the commissioners, having done their work, ought to be the very last men to urge its adoption before the Legislature. Mr. Field's own lobbying on behalf of his Code to induce laymen not to mind what his professional brethren thought about his work, has been from the first a discreditable spectacle.

All codes or parts of codes ought to come to the Legislature through the bar. To procure their adoption, the weight of professional testimony ought to be overwhelmingly in their favor. Lawyers have their weaknesses like other men, but their interests are all on the side of clearness in the law, because their business depends on their being able to advise confidently, and on being able to make it clear to their clients when they lose their cases why they lost them. Nothing makes men so unwilling to litigate as uncertainty as to whether their dispute will be tried on its merits. The amount of business withdrawn from lawyers in this city alone, and given to Arbitrating Boards, in order to secure a trial simply on the merits by a competent jury, is enormous and is increasing. Nothing will arrest this tendency but some such reform in the law as will make more clear to litigants beforehand the point on which their case will turn. At present this is shrouded in mystery. There is hardly any civilized community as well provided with judges as we are, and yet there is not one which suffers more from the law's delay. A speedy decision on the merits, that is, on the essential facts of the case, is what all laymen mean by justice. This, too, is what all real law reform aims at. What prevents our getting it in this State is not half as well known or as carefully examined as it ought to be. It would be well worth the while of some Bar Committee, or some member of the bar to whom the dull times give leisure, to give the public a report as to the nature of the points on which appeals have been taken and new trials ordered in this State during the last ten years. The proportion of them which had any relation to the merits would, we fear, be found very small; the proportion which had relation solely to matters which business arbitrators would set aside as wholly irrelevant, would be found very large.

The persistency with which General Grant's physicians adhere to their original diagnosis of his case is a sore trial to those of our esteemed contemporaries who are not able to agree with them. That physicians who are with the patient daily should overrule the decision of able editors who have not seen him at all, but who arrive at their conclusion after an investigation which is calmly and scientificaily conducted at a safe distance from the symptoms, is naturally very irritating. Wood-cuts of the offenders should be published in order that they may be held up to the ridicule of all mankind, and the publication ought to be accompanied by the views of the various "quacks" who applied for permission to cure the General and were refused. Suppose, by the way, that a quack had been allowed to try his treatment at the time when the General was so low. Suppose that he had tried the "mind cure" which is making such a commotion in New England. What would have been the result when this remarkable rally, which the General has made without their aid, took place? It would have been hailed as one of the most "miraculous cures" of modern times, and the impetus which would have been given to "quackery" of all kinds would have been immense.

Two remarkable illustrations of the apparently growing incapacity of legislators to draft bills which will hold water, are reported almost simultaneously. The Iowa Legislature at its last session passed a very important law to secure the enforcement of the prohibitory amendment forbidding the sale of liquor, which practically gave any citizen the power to close a rumshop by securing an injunction against its keeper—that is to say, the Legislature intended to pass such a law, and everybody supposed when it adjourned that it was as binding as any part of the statutes. But in a test case which came before the courts last week, counsel for a liquor-seller argued and apparently proved that the bill in question never became a law, because the journal of the lower branch of the Legislature contains no record of its passage, the original prohibitory amendment a few years ago having been annulled by the Supreme Court on this very ground. The Oregon Legislature at its recent session, after thorough discussion, passed a High License Bill, which the public accepted as a well-considered measure, likely to produce the same good results as similar laws in Illinois and other States. But the discovery has just been made that the statute is really of no effect, through its failure to provide a penalty for selling liquor without a license, and the saloon-keepers are preparing to continue their business without paying any fee. The loss to the State under two years of free rum will be so great that the Governor is urged to call a special session of the Legislature for the sole purpose of remedying this defect. These gross blunders reinforce the arguments which were already strong enough for the general adoption of some system, like the appointment of a lawyer as permanent legislative counsel, which Governor Hill recommended last January, to insure the detection of errors and the exposure of weaknesses before it is too late to mend the mischief.

The Prohibitionists have again come to grief through their disposition to secure the end which they have in view by disregarding individual rights. The Kansas Legislature, at its recent session, passed a new law to enforce the policy of prohibition, which its advocates urged would be effectual. This statute conferred upon the County Attorney dictatorial powers, authorizing him to institute a court of inquiry when complaint was made, to subpœna witnesses and administer oaths, and empowering him at his sole discretion to punish any witness for contempt, for disobedience of subpœna, or for refusal to be sworn or to answer questions. In short, the new law aimed to endow scores of prosecuting county officers throughout the State with judicial powers of the most sweeping character, and its practical effect would have been to set in operation a great number of star-chamber courts. The first test case was made at Leavenworth last week, and it resulted, as any reasonable person might have expected it would, in a judicial decision that no such power can be exercised in a free State. The County Attorney having committed a witness to jail for contempt, because he refused to answer an inquiry on the ground that he might criminate himself, the prisoner was taken on a writ of habeas corpus before a judge, who promptly ordered his discharge. The judge held that the power of summoning witnesses and committing them for contempt was a judicial prerogative which could not, under the Constitution, be conferred upon a county attorney, and that such a tribunal would not only be in violation of the Constitution, but, by virtue of its partial character, would violate every fundamental idea of the due administration of justice. The reasonableness and justice of this decision cannot be impugned.

Gladstone had another of his narrow escapes on Monday night. He got a majority of only thirty on the division, on the motion of censure made by Lord George Hamilton; but then the Parnellites, who number about twenty-five, voted with the minority, as usual, without any regard to the merits of the case, so that the Ministerial majority, as a test of the strength of the Cabinet with the English and Scotch members, may fairly be set down at fifty-five. This is not bad, considering that it followed on what was really a humiliating announcement of the abandonment of the expedition against Khartum, and on a refusal to say what are the terms of the understanding with Russia. The Tories put themselves, however, clearly and even ludicrously in the wrong by showing great dissatisfaction at hearing that any settlement with Russia had been made on any terms. The Ministerial plan with regard to the Sudan is, however, for the first time marked by sound sense. The attempt to take Khartum and smash the Mahdi is to be utterly abandoned. The Mahdis—for there now appear to be two—are to be left to their own devices. The Egyptian frontier is to be fixed at Wady Halfa. Suakim is to be held indefinitely, as it was the leading point for the export of slaves to Arabia proper.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 6, to TUESDAY, May 12, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday suspended Frank W. Palmer, Postmaster at Chicago, and appointed S. Corning Judd to succeed him. Palmer was, an active if not an "offensive partisan." The President has also appointed I. Parker Veazey, of Baltimore, to be Postmaster of that city, to succeed Postmaster Adreon, whose term expired on May 5. Mr. Veazey is a lawyer, the partner of ex-Judge Pinkney, the brother of ex-Senator Pinkney Whyte.

The President on Friday appointed George V. N. Lothrop, of Michigan, to be Envoy Extraordinary and Minister Plenipotentiary of the United States to Russia; Boyd Winchester, of Kentucky, to be Minister Resident and Consul-General of the United States to Switzerland; John E. W. Thompson, of New York, to be Minister Resident and Consul-General of the United States to Hayti. Mr. Lothrop is said to be one of the ablest lawyers of the Michigan bar. He has been an active Democrat, but has not been connected with the factions of that State. He was graduated from Brown University in 1838, and was made LL.D. in 1873. He is sixty years of age. Dr. John E. W. Thompson, a young colored man, was born in Brooklyn and is a resident of New York city. He is a graduate of the Medical Department of Yale College. Later he pursued his medical studies in Paris, where he became proficient in the French language. He was highly recommended for the position by the Faculty of Yale, as well as by many leading citizens of his native State.

President Cleveland has revoked the appointment of James Blackburn, a brother of Senator Blackburn, to be Revenue Collector of the Lexington, Ky., district. He did this on being shown a letter written by J. Blackburn in 1861, in which he declared his purpose "to make every Union man in Tennessee feel the edge of my knife," etc.

The appointment of Dr. J. Ernest Meiere to be Consul at Nagasaki, Japan, will be revoked. The wife of Dr. Meiere recently obtained a divorce on the ground of neglect and cruelty.

Arthur D. Bissell has been appointed Collector of Customs for the District of Buffalo. It is Mr. Cleveland's first appointment for Buffalo. Mr. Bissell is a brother of Wilson S. Bissell, the President's former law partner. Particularly among lake and canal men is the appointment received with satisfaction.

A. P. Swineford, of Marquette, Mich., was on Friday appointed Governor of Alaska.

The resignation of Captain Burrill, Superintendent of the Bureau of Engraving and Printing, was requested on Saturday morning, and Mr. E. O. Graves, Assistant Treasurer of the United States, has been tendered the position, to take effect June 1. The appointment of Mr. Graves will certainly be conceded to be a striking illustration of civil-service reform. He has worked his way up, on his own merits, from a subordinate clerkship to the position he now occupies. He was one of the original civil-service reformers, and was, perhaps, the first Government official to enter heartily into civil-service reform, under the Grant Administration. He has fought for civil-service reform through several administrations, and has had the respect and confidence even of the public men who differed from him in regard to the reform. He has not sought the position as Chief of the Bureau of Engraving and Printing. It has been tendered to him unsolicited by the Treasurer, the Secretary of the Treasury, and the President.

H. B. James has been removed from the position of Chief of the Customs Division of the Treasury Department. There are no charges against his efficiency or integrity.

The Second Battalion of United States Marines, numbering 400, embarked at Aspinwall on Thursday for New York, on the steamer *Colon*. The First Battalion still remains to guard the Isthmus. The court of inquiry recently ordered at Aspinwall by Admiral Jouett, to investigate the charges against Commander Kane, in its decision says: "The conduct of Commander Kane was in our opinion eminently proper. He acted with judgment, with discretion, with firmness, and in accordance with his orders. Had Commander Kane acted otherwise than as he did, there is no doubt that the lives of the American citizens imprisoned by Prestan would have been sacrificed, with no benefit to Americans or to other foreigners, either in the saving of life or property."

Governor Hill, of New York, on Friday vetoed various items of the Appropriation Bill, among them: (1) the salary of the Secretary of the Regents of the University, $5,000, an increase of $1,500. The point is urged that an appropriation bill should make provision only for fixed charges, and should not contain legislation. The Governor was unable to veto only the increase, and special provision will have to be made for the salary. (2) Item of $25,000 for the State survey to initiate making a topographical map. No definite plan has been laid out for this work, which will probably cost, before completion, half a million and possibly a million dollars. (3) Item of $25,000 for the Adirondack survey. No results have been obtained proportionate to the expense of over $75,000 which it has thus far cost. The work should be done under the direction of the State Engineer and Survey. (4) Item of $26,000 for Commissioners of Fisheries. The Commissioners are directed to expend $3,500 of this amount in stocking Lake Ontario and the St. Lawrence River, part of which are foreign waters. This direction is the subject of objection, the Commissioners having no option.

The Field Civil Code was finally defeated in the Assembly at Albany on Thursday by a vote of 52 to 67.

The Assembly on Monday night, by a vote of 84 to 24, passed the bill exempting soldiers from the Civil-Service Act. In the Senate on Tuesday an effort to make it a special order for the afternoon of that day was defeated, 8 to 19. It therefore went to the Judiciary Committee, and will probably not be favorably reported.

By the clever parliamentary tactics of Walter Howe the Assembly at Albany, on Tuesday, was forced to pass a bill limiting the price of gas in cities of more than 400,000 inhabitants to $1 50 a thousand feet. This applied to New York and Brooklyn. Later in the day, however, the bill was recalled from the Senate, to which it had already been sent, by a vote of 63 to 54.

In the Thirty-fourth Illinois Legislative District on Wednesday, the Republicans so successfully conducted a still hunt that they elected their candidate, Weaver, in place of a Democrat. The district is strongly Democratic. This stroke of political management gives the Republicans 103 votes on joint ballot in the Legislature (a majority of 2), and will enable them to elect a United States Senator to succeed John A. Logan.

The annual meeting of the Civil-Service Reform Association was held in this city on Thursday evening, with Mr. George William Curtis in the chair. Mr. Curtis commended the efforts of President Cleveland on behalf of civil-service reform, and severely criticised the Earl bill exempting veteran soldiers and sailors from the provisions of the State Civil-Service Law. Similar sentiments were expressed in the report of the Executive Committee. The report stated that all of the cities in this State have adopted regulations for admission to their service excepting Hudson, Watertown, Oswego, Rome, Elmira, Schenectady, Newburgh, and Lockport. It is estimated that the whole number of positions brought within the application of the civil-service rules as at present established in the State of New York is between 12,000 and 13,000, being in the State service, 3,600; in New York city, 5,540; in Brooklyn, 1,418; estimated elsewhere, 1,765.

The Association of the Army of the Potomac, which met at Baltimore on Wednesday, reëlected General Grant its President.

The Congress of American Churches was opened at Hartford, Conn., on Monday. The great Protestant denominations were represented by many of their leading clergymen.

The trial of Richard Short, for attempting to kill Captain Thomas Phelan, was ended on Wednesday evening in the Court of Oyer and Terminer, in this city. The jury returned a verdict of not guilty, which was received with loud applause by Short's friends. When silence was restored, Judge Van Brunt said he was astonished at the verdict, and discharged the jury from any further attendance on the court. Short was then released. One of the jurors was arrested on Friday for contempt of court in having been seen in Rossa's office during the trial.

A despatch was received from Auckland, New Zealand, on Wednesday, that Maxwell, the murderer of Preller, had been arrested there. He is held for a requisition from this country.

A fire in the lumber district of Chicago, on the southwestern outskirts of the city, on Friday afternoon, caused a loss of more than $800,000.

A committee of the exhibitors at the Prize Fund Exhibition, held at the galleries of the American Art Association in this city, has made the following allotment of the prize paintings to the cities named: "A Rough Day; Entrance to the Harbor of Honfleur," by Frank M. Boggs, to Boston; "The Last Sacrament," by Henry Mosler, to Louisville; "Near the Coast," by R. Swain Gifford, to the Metropolitan Museum, New York; "La Crépuscule," by Alexander Harrison, to St. Louis. The Association announces that the first Prize Fund Exhibition has been a gratifying success, and that a similar one will be held in March next.

FOREIGN.

The London *News* was authorized on Thursday to deny that Russia had stipulated that England should not occupy Port Hamilton. The *News* believes that Russia has offered England positive assurance that she has no intention of taking possession of Herat. She, however, refuses to make any treaty so binding herself.

Lord Edmund Fitzmaurice, in the House of Commons on Thursday afternoon, said that General Ridgway, with Captain Yate and others, would remain in charge of the Afghan Boundary Commission. "The instructions sent to Sir Peter Lumsden," Lord Edmund continued, "do not cancel his appointment. He has not been summoned to London to advise the Government about the frontier."

The London *Morning Post* on Friday asserted that Lord Dufferin had resigned the Viceroyship of India. On the other hand, the *News* (Government organ) asserted that he approved the settlement that had been made of the Afghan dispute. In the House of Commons on Thursday night Mr. Gladstone refused to say whether or not Lord Dufferin approved the Government's course; but on Friday Government officials denied his reported resignation. Mr. Gladstone, in reply to questions, also said that subsequent information greatly affected his original statement that the Panjdeh affair was an act of unprovoked aggression. It is reported that the attitude of the British Government is partly due to the receipt of a report from General Sir Donald Stewart, the Commander-in-Chief of the Indian forces, that it would be imprudent to undertake an expedition to Herat until a railway has been completed to the Pisheen Valley, which will take three years.

In the House of Commons on Friday afternoon Sir Stafford Northcote gave notice that he would on Monday move that the House is entitled to the fullest knowledge of the Gov-

ernment's action in regard to the Afghan dispute, and the uses to which the $55,000,000 are to be put.

In London the statement of the *Official Messenger*, of St. Petersburg, that the Afghan dispute will be submitted to arbitration only in case of necessity, was declared semi-officially on Friday to be inaccurate. Earl Granville holds that Russia's acceptance of arbitration must be absolute. The dissatisfaction in London over the arbitration scheme grew very general by Saturday, and there were predictions that the agreement would not stand. Before arbitration is possible, it is necessary for both Cabinets to agree upon the specific details to be submitted to the arbitrator. This may consume considerable time.

At a plenary Cabinet council held on Saturday, the Admiralty was directed to cancel the orders issued to provide for the conveyance of 2,000 British troops to India. Three steamers had been chartered for this purpose and were ready to sail.

In the House of Commons on Monday, Mr. Gladstone announced that an arrangement had been concluded between England and Russia on the Afghan frontier dispute which was alike satisfactory to Her Majesty's Government and the Earl of Dufferin, Viceroy of India. He hoped that the arrangement would be made the subject of a convention with Russia. A similar announcement was made in the House of Lords. Lord Hartington, Secretary for War, stated that the decision reached by the Government in regard to the Sudan practically involved the abandonment of the advance to Khartum. The Government had resolved to make Wady Halfa the most advanced position as a permanent defence of Egypt. The British troops would be withdrawn as soon as the Nile rose. It is expected that the rising will occur about the end of May. The withdrawal of the troops involved the abandonment of the engagement to advance to Khartum. This statement was received with cheers from the Government benches.

As soon as Mr. Gladstone finished his statement in the House of Commons on Monday night on the Afghan agreement, the Conservatives began a bitter attack on the Government. Lord George Hamilton moved consideration of the amendment to the Consolidated Fund Bill, refusing assent to the bill "until informed of the present policy and purpose for which the money to be granted is to be applied." Lord George said: "The Secretary of State for War has just made the most extraordinary statement which ever fell from a Minister in this House. After announcing their intention of taking Khartum, the Government have announced the abandonment of the Sudan after having murdered 6,000 or 10,000 men. The great objection I have to the Premier's policy is that from the very day he assumed office until now, he has shown a readiness to sacrifice anybody and anything to save himself." After speeches by Mr. Chamberlain and Sir Stafford Northcote, Mr. Gladstone made a telling speech, in which he said that the Opposition had pressed the motion without waiting for the promised papers, and made up for their deficiency of knowledge by a variety of baseless suppositions. When the papers were presented it might appear that Sir Peter Lumsden had returned in full conformity with the Government's policy, and that a frontier had been secured through the friendly relations between Lord Dufferin and the Amir. Lord Randolph Churchill spoke in favor of the motion, but was less bitter than usual. He, with Sir Stafford Northcote, denied that the Conservatives were the war party. Lord George Hamilton's motion was defeated by a vote of 290 to 260. The majority consisted entirely of Liberals. The Parnellites voted with the minority.

On Tuesday the Chancellor of the Exchequer announced in the House of Commons that about $35,000,000 of the $55,000,000 vote of credit had already been absorbed. The Channel Tunnel Bill was defeated on Tuesday by 281 to 99, the Government opposing it. The motion of Sir Edward Massey Lopes, to insert a clause in the Registration Act, charging the expenses of registry on the general treasury, was then called up. After a strong speech against it by Mr. Gladstone it was rejected by a vote of 280 to 258. The Government's majority of 22 was obtained by threats of resignation if they were not sustained. The Parnellites voted against the Government.

It is reported that the British Government have decided to drop the question of renewing the Crimes Act for Ireland, and to revive the milder Peace Preservation Act which expired in 1880. The opposition of Mr. Joseph Chamberlain in the Cabinet is partly credited with this result.

An Irish Local Government Bill will probably be introduced in Parliament before the close of the present session. The new measure provides for popularly elected councils in each county, whose duty it shall be to conduct the administration of business hitherto relegated to grand juries. Provision is also made for a central council in Dublin, to be elected by the county councils. This council will discharge the functions of the Boards of Education and Public Works, etc. It is also meditated to abolish the Lord Lieutenancy and create a Secretary of State for Ireland, but this is still undecided.

Baron Fitzgerald, the London *Globe* understands, will be appointed Lord Chancellor of Ireland. Baron Fitzgerald is a Liberal, has been Solicitor-General and Attorney-General for Ireland, and Justice of the Queen's Bench. He is seventy years of age, and was appointed a Lord of Appeal-in-Ordinary in 1882, with a peerage for life.

Mr. Errington, the English representative at the Vatican, failing to persuade the Pope to appoint Dr. Walsh to the vacant Archbishopric of Dublin, has left for London for consultation with the British Government. The Pope, it is said, had to consult the wishes of the Irish clergy in the matter.

The Anglo-German International Commission appointed to arrange the terms of occupation of British and German colonies in the Pacific Ocean has concluded its labors. It is arranged that British subjects shall be on perfect equality with those of Germany in the territory recently seized by the latter Power, and that Germans shall be on perfect equality with British subjects in New Guinea. No differential duties are to be imposed. The importation of arms, powder, and alcohol is prohibited, and the Solomon, New Hebrides, Friendly, and Navigators' Islands are to remain open territory. The status of Samoa remains unsettled.

The corporation of Worcester, England, on Wednesday, presented Mr. Lowell with an illuminated address, expressing regret at his departure from the post of United States Minister to England, and eulogizing his literary aid to the Worcester Library. Mr. Lowell spoke in high terms of his successor, and said he was confident Mr. Phelps would do all in his power to maintain the cordial relations existing between England and the United States.

William Ward, the first Earl of Dudley, is dead. He was sixty-eight years of age, was a Liberal Conservative, was enormously wealthy, and eccentric to the point of insanity.

Mrs. Weldon was on Thursday awarded $50,000 damages by the Sheriff's Court in London, in her suit against M. Gounod, the composer, for libel, slander, breach of contract, and assault.

Reports reach Dongola that the Mahdi's forces have suffered fresh defeats at the hands of the insurgents in Kordofan, aided by the garrison at Senaar. The remnant of the Mahdi's forces has retreated to Abu Haraz. The Mahdi himself is at Umderman, near Khartum, but he has only a few troops with him and is unable to send reinforcements against the insurgents. The delay in the British evacuation of the Sudan is due to Lord Wolseley's opposition.

A large force of British and Indian troops and friendly natives under General Graham marched out from Suakim at midnight on May 5 to Takool, where they surprised and defeated 400 rebels, killing 150 of them and capturing twelve prisoners and 150 head of cattle. After burning the village they retired to Suakim, fighting continuing until they had passed Hasheen. The British loss was five wounded.

The French Chamber of Deputies on Thursday adopted, by a vote of 308 to 57, the treaty concluded on August 21, 1883, between France and Anam. It has virtually been in force for eighteen months.

It is reported that China will dethrone the King of Anam for intriguing with Cambodia against France.

Signor Mancini, Italian Minister of Foreign Affairs, has resigned. Prime Minister Depretis will assume the duties of the office.

Count Tolstoi, the Russian Minister of the Interior, is suffering from an attack of melancholia. It is believed that he will die.

Baron von Schaeffer, the Austro-Hungarian Minister at Washington, has, it is reported, been instructed by his Government to object to the appointment of Mr. Keiley as United States Minister to Vienna.

Ferdinand Hiller, the celebrated German composer and pianist, died on Monday at the age of seventy-four. He was the author of more than 200 musical compositions, including six operas.

The two rebel leaders, Portazal and Cocobolo, who advised and assisted Prestan in the burning of Colon and who have been held prisoners on the *Galena*, were delivered on Wednesday morning to General Reyes, commander-in chief of the Colombian forces, by Commander Kane of the *Galena*. They were immediately tried by court-martial and sentenced to death, and in the afternoon were hanged on the spot where the rebels had started the fire which destroyed the city. This action has already had a salutary effect on the rebels. Prestan is now besieging Carthagena.

General Middleton's forces engaged in a field fight with Riel's rebels all day Saturday, near Batoche. The list of killed and wounded among Riel's forces is believed to be very large. The attack was brought on soon after daylight on Saturday. The Grenadiers advanced as skirmishers, and Battery A supported them, pouring hot shot from a ridge down on the rebels. While they were doing so a number of rebels crept stealthily up through the bush, escaping observation until they were within twenty yards or less of the battery. When they were discovered they made a wild charge for the guns. At this point Captain Howard, of the Second Regiment, Connecticut National Guards, who is with the Canadians in charge of the Gatling Battery, saw the danger, and promptly took measures which saved the Canadian troops great loss of life, if not utter rout. With cool daring he ran a Gatling gun in front of the battery, and, opening a rapid, skilful fire, he sent a shower of bullets into the rebels. At 6 o'clock, after 12 hours' fighting, the Canadians camped for the night where they fought.

A political indignation meeting was held at Toronto on Friday night for the purpose of considering the Franchise Bill proposed to be passed by Sir John Macdonald, Premier of Canada. The bill was condemned in unmeasured terms, and it was stated that the province of Ontario would withdraw from the confederation before its people would submit to such despotism as was proposed by the bill.

Emma, Queen Dowager of the Sandwich Islands, died there on April 25, at the age of forty-nine. She was the wife of King Kamehameha IV., and was a candidate for the throne after the death of Lunalilo.

THE SHORT VERDICT.

THE jury in the Short case have been very severely criticised for acquitting him, by the judge, as well as by a portion of the press. They have, however, a very strong defence against all fault-finding. In the first place, they were a very intelligent and respectable body of men—three Germans and nine Americans—none of them having the smallest sympathy with the gang to which both the prisoner and prosecutor belonged. In fact, considering the way juries are made up under the existing law, it is a wonder that in a case like Short's so good a one was found. In the next place, the evidence that Phelan went to O'Donovan's office in a fighting temper and got into a fight there with Short, and was worsted—owing to Short's being too quick for him, getting hold of a knife on the table, and seizing Phelan's arm before he could draw his pistol—was overwhelming. Several witnesses gave it. Some of them had every appearance of being perfectly trustworthy men; but whether they were or not, no attempt whatever was made by the prosecution to impeach their testimony in a single particular. The only evidence on the other side was Phelan's, and this was fatally damaged in the eyes of the jury, both by the man's own air and by the positive testimony of the lieutenant of the Capitol police that he had been dismissed from that force owing to the badness of his character, and that he would under no circumstances believe him on his oath. There was nothing whatever to corroborate Phelan's story except his scars, which were exposed in court to the jury. These showed clearly, however, that he had received the blows of the knife in front, and in front only. Moreover, the prosecution produced nothing whatever against Short's character. Finally, the jury had no alternative but to convict the prisoner of assault with intent to kill or to acquit him. They were instructed, with great distinctness, that they must find him guilty or not guilty of the particular offence with which he was charged, and not of an offence less heinous. They could not convict him of fighting with murderous weapons, or anything of that sort. They therefore could not express their opinion of Short's conduct in any way. Their verdict simply contained their belief that he had not gone to O'Donovan Rossa's office and attacked Phelan, without provocation, with the design of assassinating him. He may have done so, but there was no proof of it. What called forth Judge Van Brunt's expression of condemnation of the verdict we do not know, but the unseemly yells with which the friends of the cutthroats who crowded the room received it, probably had something to do with ruffling his temper.

Judge Van Brunt writes to the *Times*, declaring that the case of the People against Short was "presented with the greatest care, skill, and courage, and that nothing was omitted by the prosecution which, in any degree, tended to prevent this gross miscarriage of justice." This is, of course, very high testimony to the efficiency of the prosecution, but unfortunately it is not the highest. The object of a criminal prosecution, under our system of jurisprudence, is not to win the approval of the judge for the prosecuting officer, but to convince the jury. If the prosecuting officer fails to accomplish this, his conduct of the case is simply so much rhetorical gymnastics. In the present instance the jury was not convinced, and we are therefore forced to conclude either that the prosecution was inefficient, or that the jury was unusually stupid, or very corrupt. This stupidity or corruption is what the Judge must mean when he describes the verdict as "a gross miscarriage of justice," and he ought to say it in plain terms. But he would have great difficulty in proving it. One of the jury, Mr. Woods, is a member of the Governing Committee of the Cotton Exchange, and tries nearly as many cases in the course of the year, probably, as Judge Van Brunt himself, and in point of integrity stands just as high in the community. He describes himself as having gone into court believing Short guilty, but he changed his mind on hearing the evidence. Moreover, if the jury had been divided, it would perhaps be easy to obtain credence for the theory that some of them had been corrupted or frightened. That the whole twelve were led astray in this way, however, is hard to swallow. As between such a jury as this one, and such a prosecuting officer as Colonel Fellows, Judge Van Brunt, with great respect be it said, would have acted with more decorum if he had refrained from writing to the newspapers to decide which was to blame, in a case tried before himself, for a miscarriage of justice. The character of the jurors for integrity and courage and perspicacity is just as dear to them, and ought to be an object of as much solicitude to the Court, as Colonel Fellows's character for care and skill. We may make the same criticism on District-Attorney Martine's outpourings to the reporters.

That the case was feebly pushed by the District Attorney's office was manifest to many who watched the trial. No attempt was made to break down the testimony of Short's witnesses, or to show Short's character. The cross-examination of them was not effective, and nothing was done to fortify Phelan's story or protect his reputation. Here is the real root of the difficulty in dealing with this sort of ruffians in this city. The trial is useful in one way, in showing us what would probably happen if an attempt were made to bring O'Donovan Rossa and Pat Ford to justice for collecting money to be used in procuring murder and arson. That they have both been doing this for a considerable time, there is no doubt. In fact, they have gloried in it. But an attempt to punish them for it would undoubtedly fail. In the first place, there would be great difficulty in procuring witnesses whom anybody would believe, or who would not be contradicted by the same number of other witnesses equally reliable. In the second place, there would be a want of vigor in the District Attorney's office in pushing any prosecution against Irishmen for offences even remotely connected with politics, and especially English politics, and in New York there is a touch of politics in every row or crime in which Irishmen are concerned. Every Irish criminal is more or less of a politician, and insists on the support of his party when he gets into "trouble." Moreover, this is an excellent period for Irish crime, inasmuch as both the leading political parties are more or less disposed to compete for the privilege of winking at it. The Irish vote was won over by the Blaineites last fall by barefaced flattery of the dynamiters and incendiaries and murderers, and by promises of support to the Catholic clergy in their efforts to get at least part possession of the public schools. The Democrats cannot make up their minds to write the Irish off as a dead loss, but still hanker after them, and are disposed to pardon their little eccentricities in the matter of cutting, shooting, and blowing up. The Irish, 'cutely enough, do not declare themselves, and prefer to remain an uncertain quantity between now and the fall election, so that the Phelans and Shorts and Rossas are literally in clover.

The proceedings in court bore every sign of an understanding of some sort with the dynamiters that they were not to be criticised, impeached, or their den unroofed, or, in other words, that nothing was to be said in court tending to expose or discredit them. That a gang of men should have been allowed to come into an American court-room to bear witness about a crime committed by one of their number, in the room in which they meet daily to plot murder and hire murderers, and raise money to pay the expenses of the murderers, and not one word should have been said to them or to the jury by the officers of the law, touching their designs or pursuits, is surely a national disgrace. That this should be followed by an apparent attempt to persuade the public that business men of high standing, who happened to serve on the jury, were in a league with the dynamiters to procure the escape of the criminal, is, however, something more than a disgrace. It is a piece of charlatanry which calls for punishment, and will receive it. Mr. Martine must not persuade himself that this little performance of his is not making a profound impression on that portion of the public to which he owed his election, or that it will be forgotten should he have the audacity to seek any other place of trust or emolument. We supported him last fall in the belief that he was a man of high professional as well as personal character. We felt, however, on his reappointing Colonel Fellows as his assistant that there was to be plenty of "politics" as well as law in the office, for Colonel Fellows is nothing if not a politician; and that if the office were by any accident brought into collision with the Irish dynamiters and assassins, there would be but little chance that justice would be done. Our anticipations have been fully realized, but Mr. Martine must not flatter himself that his tricks are performed under a bushel.

THE SUEZ CANAL CONFERENCE.

THE Suez Canal Conference has reached the interesting stage at which some decision must be had upon the neutrality, or otherwise, of the lands immediately adjoining its banks and of the waters in close vicinity to its approaches. These are questions of the deepest interest to ourselves, since the conclusions reached by the Conference will constitute the highest form of precedent in dealing with the Panama Canal, if it is ever finished, or with any other in-

teroceanic water way in Central America. Any such canal will, like the Suez, concern the commerce of the whole civilized world, and must have substantially the same place in the eye of public law. The object of the Conference is to define and prescribe what is meant by neutrality, as applied to an artificial water way of international character and importance: how neutrality is to be assured, and to what things it is to be restricted. Right here comes the inquiry whether any such canal can be really neutralized without the concerted action of the great Powers? Can the United States *alone* neutralize either the Panama or the Nicaragua Canals? Can we legislate on that matter for England, Germany, and France? We can promise to protect either canal, or the State of Panama or Nicaragua, if assailed by any nation; but how can we put another nation under the promise and duty not to assail, or carry on war, in the canal? We can *promise* that Panama as a State, and Nicaragua as a State, and either canal, shall be neutral, and we can keep the promise if we have the physical power. But what if we have not the power?

The Suez Canal is in a somewhat different situation from that in which the Panama Canal will be, since Panama, barring revolutions, is more under the control of her local government than Egypt is. The Panama concession is not international in the sense that the Suez concession is. Panama, as a State, has not been swept under the control of the European concert as Egypt has been. But the questions relating to the free navigation of each canal will be much the same. England has relations to Suez not unlike those which the United States would have to Panama, aside from the Clayton-Bulwer convention. How shall each be neutralized or internationalized? Will it be sufficient to neutralize the water way without making of a portion of Egypt alongside of it, and of the waters at either end, a sort of mimic Belgium or Switzerland, where, by the agreement of all the Powers, war shall never come? Shall the same be done in Panama and in Nicaragua?

In the end, and before these great questions can be finally and satisfactorily settled as to Panama and Nicaragua, there will be a very thorough overhauling of the principles and the policy that inspired the Clayton-Bulwer convention, its renunciation by the contracting parties of dominion in Central America, and its plan of neutralization. Was the plan good or was it bad? Was it statesmanlike or the opposite? Was it for the benefit or the injury of the United States? Was the maintenance of the "general principle" described therein to depend solely on carrying out the "particular object" of the treaty, which was the construction of a Nicaragua Canal under the concession of 1849? Were the two sets of obligation—one relating to the particular canal and the other to all future canals—separate, or were they mutually interdependent? Did not the contracting parties wish and really intend, in 1850, to accomplish both objects? General Cass again and again declared that what he and the Democratic party wished was "the security and *neutrality* of the interoceanic routes." Certainly the United States sought the coöperation of England in 1850. Again and again did American statesmen, from 1850 to 1861, repudiate the wish to put the control of the canals under any one Power. That suggestion was first formulated by Mr. Blaine. General Cass explicitly repudiated the idea in his note to Lord Napier of November 8, 1858. If the Clayton-Bulwer treaty be torn up, will not England recover its liberty of action in Panama and in Nicaragua? How can the United States alone, or England alone, guarantee and maintain "the *perfect* neutrality" of any interoceanic canal? What injury to the United States can come from the cooperation of England, France, Germany, Russia, Italy, Spain, and China, in the effort to neutralize a canal anywhere in Central America, together with enough of the territory on its sides and the approaches by water at either end?

Those questions are not simple ones; on the contrary, they are very complicated. But they must be soberly dealt with, and answered in our day. Neutralization, by the aid of Europe, of the Central American canals is the reverse of interference with the canals. It is a promise to abstain from interference with the owner of the canal and the collector of tolls thereon. It is not unlikely that Minister Phelps has received instructions to give immediate attention to these most interesting questions and come to a satisfactory understanding with England concerning them. Meanwhile, what is going on in Paris over the Suez Canal is of the highest importance, and it is to be hoped that Mr. McLane may be speedily at his post of observation.

GLADSTONE'S CRITICS.

One of the strangest episodes in the crisis through which the British Ministry is passing is the abuse which is being heaped on Mr. Gladstone just now. In his speech, when asking for the vote of $55,000,000, which won so much applause, he was most distinct and emphatic in his declarations that the Government was in "a state of preparation" simply; that in other words he was getting ready for war, not because the peace negotiations had failed, but lest they should fail. Nothing has since occurred to falsify this declaration. The negotiations have been going on ever since. Of their nature it is safe to say nothing is known. That the Ministry has surrendered any claim it ever made, or that it has failed to make any claim it was ever expected to make, are charges which rest on nothing but the vaporings of the Russian press. To reveal the various steps in the negotiations would, of course, work infinite mischief. They have, in the excited state of the public mind in both countries, to be kept secret in order to succeed at all. Consequently nobody outside the inner official circles knows anything about them to complain of.

What Gladstone's assailants, therefore, really mean to complain of is, that, having got the money to prepare for war, he does not use it to go to war at once. There seems, in fact, to be an insane delusion running through the public mind in England, that whatever is wrong in the present situation will be set right by the mere fact of fighting. People seem to think that if Russia be attacked by land and sea, all danger to India will be at once removed. Vámbéry is apparently fully possessed with this belief. He thinks the best time to fight is now; but the experience of all wars between adversaries of equal or nearly equal strength shows that the best time to fight is when you cannot help it—that is, when you are actually attacked. No belligerent has probably ever yet lost anything by waiting till the enemy drew the sword. Nothing is more dangerous in a war which has to be carried on by popular support than fighting without a distinct object. If England attacks Russia now, without a definite and tangible object in view, she may fight for years without making the war profit her anything in the eyes of the world. Suppose, for instance, she should fight because Russia will not promise to abstain from seizing Herat. Suppose that, at the end of a long and bloody struggle, Russia should make the desired promise, what greater value would it have than her promise not to seize Khiva or Merv? If on the other hand England should go to war to secure Herat for herself, what would be the value of position there, with the cunning Abdurrahman Khan and the ferocious and unfriendly Afghans lining her communications with India? The Russians would not be driven away from Sarakhs, or Merv, or the Caspian Sea. They would remain to threaten Herat continually, and to intrigue with the Persians and Afghans, and the war party in England would be continually calling on the Government to chastise them for some fresh menace or breach of faith.

On the other hand, if the Russians commit some overt act of attack about the nature and object of which there is no mistake, such, for instance, as an invasion of Afghanistan, or a march toward India, all that will be needed to make fighting fruitful in prestige, will be to defeat and stop them. The Powers are playing a game in which each seeks to impress the Asiatic populations with the idea that it is the greater of the two. In such a game, the aggressor undoubtedly runs the greater risk, for in war, even more distinctly than in law, the man in possession is the best off.

That Mr. Gladstone thus far has been working to make Russia plainly the aggressor, there is no reason, so far as the facts are known, to doubt. In negotiating, too, he probably has in mind not simply the state of English opinion now, but the probable state of English opinion after two or three years of bootless slaughter and devastation. It is this latter condition of the public mind which every statesman who is tempted to try war has to think most of. Nothing is more evanescent and unreliable than the mood in which a nation takes up arms. It is always passionate, unreasoning, vainglorious, and evanescent. When the sober second thought comes, nothing but sudden and overwhelming successes such as Bismarck achieved against Austria in 1866, and against France in 1870, can, in our day, save a minister who begins a war from unpopularity or discredit. It may be that the English Liberals are making a mess of the Russian complication, but the materials for a judgment about it do not yet exist.

ENGLAND: THE REDISTRIBUTION OF PARLIAMENTARY SEATS.

London, May 2.

While the thoughts of the English have been constantly occupied for the last three months by

the affairs of Sudan and Afghanistan, the time of Parliament has been chiefly spent on the bill for the redistribution of seats, a measure which, as the necessary complement of the extension of the franchise, has to be passed before the next general election can be held. As your readers will remember, it is based upon the scheme settled on by the leaders of both parties in secret conference last November, and therefore is not a controversial bill, but one to which the general support of both Tories and Liberals has been given. It has thus made far more rapid progress than an opposed measure could, under our Parliamentary rules, with their infinite opportunities for obstruction, hope to accomplish. Yet even with this advantage, it has not yet reached the stage of third reading in the House of Commons, although the Government have obtained for it the whole available time of the House, to the complete exclusion of private members, who, during this whole session, have been unable to bring forward either motions or bills. From such a fact it is easy to see how enormous would have been the expenditure of time had its details been fought over with our usual party acrimony. That its passing may be now confidently looked for is due to the compromise effected between Mr. Gladstone and Lord Salisbury; and this has reconciled people in Parliament, and still more out of Parliament, to a method of proceeding without precedent in our history, and open to the imputation of seriously trenching on the independence of the Legislature. It has also gone far to reconcile ardent reformers to the deficiencies in the present measure. They see that it marks an advance larger than could have been looked for by means of an ordinary party struggle, and they are content to put up with not getting everything when they perceive that they have got more than anybody, seven months ago, expected.

The debates on the bill have turned almost wholly on points of detail, not very interesting even to English politicians, and not worth the attention of people outside England. Much time has been consumed over the question of naming the new divisions of counties and boroughs. One set of persons wished to call these divisions by the points of the compass—north, northeast, southwest, and so forth. Others preferred to name them from the chief town lying within their area, or from some old local appellative. There was much to be said for both views; and in some places one was more convenient, in other places the other. The controversy has been temporarily settled, in a truly English fashion, by allowing both sorts of names to be used alternately. In Warwickshire, for instance, the divisions are to be called "The Northern or Tamworth Division," "The Northeastern or Nuneaton Division," "The Southwestern or Stratford-on-Avon Division,' "The Southeastern or Rugby Division." Here the four town names commemorate four eminent persons respectively, for Sir Robert Peel was member for Tamworth and lived near it; George Eliot is associated with Nuneaton; Stratford is a place of pilgrimage to all the world, while Dr. Arnold and his biographer Dean Stanley, have given some little share of fame to the quiet country town of Rugby. More sentiment than might have been expected from a usually prosaic nation has come out in the eagerness to get hold of historic names for the divisions—St. Augustine and Isle of Thanet, in Kent; Gower, in Glamorganshire, are instances—while in some cases amusingly warm contests have arisen between two towns, each of which sought to give its name to the division, and spared no pains in canvassing members by letters, and circulars, and interviews to procure their support for its claims. American readers may be surprised to hear that among the devices for naming that have been put forward, no one proposed to number the divisions. Names drawn from numbers are an abomination to the Briton. Streets are never so called, nor churches (except rarely in Scotland), nor local government areas. Even regiments in the army contrive to find some other title than merely that of their number, and now they are officially called from counties.

In another point, however, which has much occupied us in England, there has appeared a far greater coincidence between the views of Englishmen and Americans than might have been predicted. When the Redistribution Bill was presented in December last, its most novel feature was the general adoption of the plan of single-membered constituencies; a plan foreign to the old constitution of England, which gave two members to each borough and each county, and used, ever since the Reform Bill of 1832, only in the case of boroughs and counties obviously too small to have more than one representative. To cut up every county into districts, with one member each, and to destroy the Parliamentary unity of the great cities by splitting them up into ward divisions, each returning one member, seemed an innovation sure to provoke discontent and opposition. Nothing of the sort has happened. Some few persons here and there, mostly persons of a critical or philosophical turn of mind, have murmured their fears that an inferior set of men will get into Parliament through these ward constituencies, which will in many cases consist wholly of poor people. But the active local politicians, Tories and Liberals both, have welcomed a change which makes them more important in their several spheres. Moreover, the Tories have hoped to secure the county divisions by the influence of local landowners, and to win those parts of the great towns in which the wealthier classes reside, while the Liberals have concluded that the multiplication of town districts will increase their party strength. Local feeling, always a potent force, has rejoiced in the additional dignity which a local area receives when it has one member all to itself, instead of a share in two or three members. Thus the general voice of the country has approved, and there is small likelihood that we shall ever go back, as the French are doing now, from small to larger electoral districts.

One consequence of this unforeseen development of opinion was to "snuff out," to use a familiar phrase, the agitation for what is called proportional representation. Several persons of eminence, politicians of a speculative cast of mind, had taken up the old idea of Mr. J. S. Mill and Mr. Thomas Hare that a fairer representation of the nation would be obtained by permitting the voter, in voting for a number of candidates, to declare his wish to transfer his votes from his first candidates, if already elected, to some other candidates, than by the plan hitherto employed of voting simply for A and B (if there are two persons to be chosen), or A, B, and C (if there are three). They propounded a scheme which they deemed sufficiently plain and practical for common use, and stumped the country during the months of January and February on its behalf, winning, by their evident earnestness, much respect and even some little sympathy. Believing the nation to be averse to one-membered districts, they hoped to get their scheme adopted as the alternative to such districts, because it would enable large constituencies to be retained, and yet protect the minority in those constituencies. But as their belief proved to be groundless, their hopes were wrecked. People accepted the one-membered districts willingly, and found the proportionalist scheme—that of the transferable vote, as it was called—hard to understand, and liable to uncertainty in its working. One night was allowed them to expound their views to the House of Commons, but the debate was dull, and the support they obtained on a division too small to justify perseverance in the enterprise. For the present, the notion has been dropped, although some of its apostles profess to believe that before long the defects of the new one-membered system will recall attention to its claims, and give it a prospect of success.

The division of counties and boroughs into new electoral districts raised a large crop of very delicate questions, because it was in many cases plain that the political complexion of the new constituency would depend on the boundaries allotted to it—upon the particular streets or parishes which it was made to include. Here was matter for abundant and strenuous controversy between the parties. To avoid dispute it was arranged between the leaders of the Government and the Opposition that a body of boundary commissioners should be named—persons above suspicion of partisanship—who should determine the limits of the new electoral districts, following as much as possible existing limits, such as those of parishes, wards, sessional divisions, and other areas for the purposes of local government. These commissioners completed their work in little more than two months' time, and produced results which were received with general approbation. Here and there one political party, which thought that it suffered by the boundaries proposed, protested, not against the good faith, but against the suitableness of the division. But these cases have been extremely few in England or Scotland; and as the leaders of both parties now agree to abide by the decision of the Commissioners, the arrangements made by them have been embodied in the bill with very slight variations. In Ireland similar acquiescence could not be expected. The Orangemen complain that they will obtain scanty representation in that island, the Protestant minority in the southwest and centre being swamped in almost every constituency by the Roman Catholic majority, because, large as it is collectively, it is a minority in each locality. The Nationalists, on the other hand, accuse the Commissioners of having gerrymandered several districts so as to secure to the Protestants more than their fair share of members. England and Scotland look on quietly, and suppose that the Commissioners must have behaved pretty honestly since they are assailed with equal warmth from opposite quarters. In point of fact, the proportion of Protestants to Catholics in the population of Ireland is likely to be fairly represented by the proportion which Protestants will bear to Catholics in the new Parliament. Considering the extreme delicacy of the operation, and the keenness with which parties are wont to contest every possible electoral gain, it is much to the credit of Great Britain that the bill has gone so smoothly through, and in particular that this question of boundaries has been so peaceably disposed of. If English statesmen on both sides were as skilful in our foreign as they have latterly been in our domestic affairs, we should deserve the envy of Europe.

HOMER'S COLOR PERCEPTION.

To the Editor of The Nation:

Sir: Your contributor's review of my book is so cordial and appreciative that it would appear

ungrateful in me to reply to any part of it in a controversial spirit, and I have no wish to do so; but I should like to point out that the difference of opinion between your critic and myself on the subject of Homer's perception of color is not so great as he seems to believe. Toward the close of my chapter on "Land and Sea in the Odyssey" I have been careful to observe that the limitation of Homer's color vocabulary may have been due to the narrowness of that vocabulary in his time, and that when such a vocabulary was very narrow, "a man of genius might be unable to express the variety of his own sensations." My conclusion was that Homer's perceptions of color were primitive and often indeterminate, but that "the exact degree of a poet's sensitiveness can hardly be ascertained when we have only his writings, and he himself had no terms at his disposal outside the meagre nomenclature of his time." This, I think, is much nearer to your reviewer's own opinion than to the theory of Magnus. When I say that Homer's perceptions were primitive and often indeterminate, I mean no more than that they may have resembled the perceptions of people in our own time who have not been trained to distinguish tints by the practice of some color-art. I imagine him to have been very much in the position of some Gaelic bard in the Highlands of Scotland, using the word "black" for any dark shade of anything, but still probably able to distinguish better if he were put to it, without, however, approaching the delicate distinctions of painters. I myself had instanced, as examples of inadequately distinctive language, the use of "black wine" for red wine by the Italians, and of "white wine" for sherry by the English. Undoubtedly the Italians and English are able to see that these wines are not black like coal, and white as milk is white. In a word, I am not conscious of any important difference of opinion between me and your reviewer on the subject.

May I say a word in defence of the binder? Your reviewer thinks that the binding of the large-paper copies is "rather flimsy," and suggests that purchasers will probably have it removed. The binding in question is of strong, sound, real vellum, and is very durable. As I had nothing to do with the design, I may say that it is at least in simple and severe taste. The only objection to white vellum bindings that I am aware of is that they are easily soiled.

Sincerely yours,

P. G. HAMERTON.

AUTUN, April 27, 1885.

A STILL MORE YOUTHFUL JUDGE.

TO THE EDITOR OF THE NATION:

SIR: It is odd that the *Nation*, in instancing youthful judges, should have overlooked so conspicuous a case as that of Joseph Story, who was younger even than Johnson when appointed to the bench of the Supreme Court of the United States. His son says, in his biography of the Judge, that, with the exception of Buller, who was made an associate of Mansfield at the same age, Story was the youngest man who ever took so high a place in England or America. Like Johnson, he had been three terms in the State Legislature, and he had served, besides, for part of a term in Congress. Story, to be sure, was only nine days younger than Johnson was at the date of his appointment, but that is enough to give Massachusetts the lead of South Carolina.

May 6, 1885.

THE MISUSED H.

TO THE EDITOR OF THE NATION:

SIR: Some remarks in the last number of the *Nation*, criticising Mr. Proctor's article on "The Misused H of England," suggest the following lines from Catullus:

"Chommoda dicebat, si quando commoda vellet
Dicere, et hinsidias Arrius insidias;
Et tum mirifice sperabat se esse locutum,
Cum, *quantum poterat*, dixerat hinsidias.
. . . . . .
Hoc misso in Syriam, requierant omnibus aures,
Audiebant eadem haec leniter et leviter.
Nec sibi postilla metuebant talia verba,
Cum subito affertur nuntius horribilis,
Ionios fluctus, postquam illuc Arrius isset,
Jam non Ionios esse, sed Hionios."

—*Carmen lxxxiv.*

The words "*quantum poterat*," 'with all his might,' would certainly seem to indicate that the H in question may have come about by way of emphasis. As for "'umble" and "humble," if we find the former more emphatic, is it not simply because any peculiarity of speech has for us an emphasis which we do not find in the more usual form? M. D.

ROXBURY, MASS., May 11, 1885.

THE POPULAR VIEW OF THE ADMINISTRATION.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "J. H.," has brought out so forcibly one element of the political situation that I cannot refrain from noticing it. He says that in Washington the office-seeker will tell you that there is a suppressed murmur rising up from the people which will shortly break into a terrible yell or howl, and this because the President is moving too slowly in the matter of distribution of offices, and the people will not stand it. On the other hand, he says that the people are more than satisfied with the Administration; that they care as little about the supposed grievances of the office-seekers as do the office-seekers about the real welfare and good of the country.

The truth is, that the people do not understand the simply *awful* situation in which the President is placed. It is not merely that he has to resist the pressure from his own party. It is admitted that where Republican officials have been unfaithful he has a right to displace them, and in filling the vacancies it is almost impossible that he should not consider party claims. Thus all over the United States he has to balance the evidence for turning one man out and then the evidence for putting another man in, and all this under the most tremendous pressure. If he makes a mistake and puts in a Pillsbury or a Higgins, not merely the Republicans, but the Independents, whom he is naturally anxious to please, turn upon him, as witness the letter of "B." immediately following that of "J. H.," in your last issue. And he has to bear it all in silence, being unable to utter a word publicly, either of himself or by his Cabinet officers, in his own defence. It is no wonder that we hear that his health is not as good as it was, or that when he goes to Gettysburg he seems weary and depressed and declines to make a speech. I watch such reports with intense anxiety, believing that the strain is more than mortal strength can bear. And then to have the papers attribute his failure of interest at Gettysburg to want of patriotism! Verily the bed at the White House is not one of roses.

The only effective remedy in this case, also, is to be found in Cabinet responsibility. I would not detract from the credit of the civil-service reformers. They have done a great work in arousing public sentiment and in establishing the Commission. But I think they would themselves admit that their strength at this juncture is in the character of the President. Had he been other than what he is, their fabric would have been swept to the winds. The responsibility for every appointment now comes back upon the defenceless President. If the Cabinet officers had to stand up at intervals in Congress, and were subject to question upon notice by any individual member, each Secretary would have to explain any doubtful appointments in his own department; and the liability to this in the case of bad appointments would be so disagreeable that it would soon become easier to refuse than to yield. In fact, the Cabinet would soon become the most earnest and efficient apostles of civil-service reform, as relieving them from a burdensome responsibility. It was precisely in this way and for this reason that the Ministry of Lord Aberdeen, in 1853, forced civil-service reform upon a reluctant Parliament.

I can fancy some of your readers exclaiming that if the President had the toothache, "G. B." would say that it was because the Cabinet officers were not in Congress. After joining heartily in the laughter, I beg to point out the limits of my position. The reform proposed applies to all, and only all, which is included in the comprehensive word "administration." The curse and the danger of this country is that there is too much hap-hazard legislation and too little administration, the case being far worse with the local governments than with that of the United States. The public and individual responsibility of the chief executive officers being held to be the means of reforming administration, its advantages can be illustrated by everything which has to do with administration—that is, by every phase of the political side of society. It seems almost impossible to make people understand the nature of such a reform in the States and cities, but the chain of administration in the Federal Government is otherwise so admirable, that if this one connecting link can be made to bring legislation and administration into harmonious action, there will be a passion for similar local reforms; and if they can be successfully effected, our popular Government, which is staggering under the burden of defective administration, will start on a fresh career of prosperity and success. G. B.

BOSTON, May 9, 1885.

THE WEST-POINT OATH.

TO THE EDITOR OF THE NATION:

SIR: A letter recently appeared in the Fayetteville (Tenn.) *Observer*, written by Mr. J. W. Newman, a lawyer of that town, from which the following extract is taken:

"In 1870 Col. J. H. Holman, who had been an officer in the old army and had resigned, and in 1861 went into the rebellion as Lieutenant-Colonel of the First Tennessee (Confederate) Regiment, was elected Attorney-General of the Sixth Judicial Circuit of Tennessee. Soon thereafter, and after entering upon his duties as Attorney-General, he was indicted in the Federal Court at Nashville for holding office in violation of the Fourteenth Amendment. He plead in abatement of the writ (ex-Governor Marks, of Tennessee, being his attorney) the fact that he had never taken an oath as officer in the United States army 'to support the Constitution of the United States,' that the only oath he had taken was the oath copied above from Dunlop. The War Department at Washington furnished him an exemplified copy of his oath and he went to trial upon it. The Court sustained Col. Holman's plea and quashed the indictment. The District-Attorney-General, Mr. McPhail Smith, appealed to the Supreme Court of the United States, from which court it was *dismissed* by the Attorney-General of the United States *without a hearing*. So it will be seen the question is *res adjudicata*, and Mr. Garland need not have pleaded the eligibility of Mr. Lawton on the ground of 'pardon,' but might have put it with equal force upon the ground of his not being amenable to the penalties of the Fourteenth Amendment."

The oath referred to is the following, and it is the one which was prescribed for officers and soldiers before the late war:

"I, *A. B.*, do solemnly swear, or affirm (as the

case may be), that I will bear true faith and allegiance to the United States of America, and that I will serve them honestly and faithfully against their enemies or opposers whomsoever; and that I will observe and obey the orders of the President of the United States, and the orders of the officers appointed over me, according to the Rules and Articles of War."

At the time General Lawton entered the Military Academy in 1835, *cadets* were not required to take an oath, but they, "in the presence of the Superintendent or some one deputed by him," subscribed to an engagement of the following form:

"I, Cadet ——, of the State of ——, aged —— years and —— months, do hereby engage, with the consent of my guardian, to serve in the army of the United States for eight years, unless sooner discharged by the proper authority. And I, Cadet ——, do hereby pledge my word of honor as a gentleman that I will faithfully observe the Rules and Articles of War, the Regulations for the Army, and the Regulations for the Military Academy, and that I will in like manner observe and obey the orders of the President of the United States, and the orders of the officers appointed over me, according to the rules and discipline of war."

In 1842 the above engagement and oath were combined into a single form, and thereafter the cadets *subscribed* and *swore* to the new form.

From the nature of the various comments made upon General Lawton's appointment, it would seem that the above decision and facts are not generally known. S. E. Tillman.

West Point, N. Y., May 11.

THE PERSONALITY OF GEORGE ELIOT.

To the Editor of The Nation:

Sir: The reviews of Mr. Cross's 'Life of George Eliot' have been nearly as interesting a study as the 'Life' itself. Without undertaking to review the reviewers, one may call attention to a special point in Lord Acton's paper in the *Nineteenth Century* for March as very suggestive.

However straitly a critic may hold himself to the consideration of George Eliot's purely literary genius, or to the question of the moral effect of her writings as such, it is impossible for him to avoid a general view of her based on a very special fact, viz., that George Eliot, being a woman of immense talent and of undoubted moral purpose, deliberately defied or opposed the customs and beliefs of her generation in respect of marriage. The emphasis is unconsciously laid on the words woman, talents, morals, customs, beliefs, as the fact comes before the mind. No man can escape this general color and background. His mental retina responds to the vivid sensation in a degree and manner which depend on the sum of his own experiences and judgments.

These reviews are, then, especially interesting as truly and unconsciously representing certain typical points of view. Lord Acton's is:

"To deny herself to old friends, to earn with her pen an income for her whose place she took, to pass among strangers by a name which was not her due—all this did not seem too high a price for the happiness of a home. She urged with pathetic gravity that she knew what she was losing. She did not know it. Ostensibly she was resigning a small group of friends and an obscure position in literature. What she really sacrificed was liberty of speech and a tomb in Westminster Abbey."

It seems worth while to take this out of its general setting and to let it stand by itself as one conclusion. Is this conclusion satisfying? Is not the fault in Lord Acton's final estimate one which may have come to him by studying his author too well? Has he not entirely left out of view in his memoir, as she often did in her work, that element of the possible, the unforeseen, the unexpected which may lie just back of all that can be determined by careful, minute, and exquisite dissection of a mind and motives? Do we not need more synthesis and more imagination here? Almost any human being will surprise us at some time with a revelation of an unexpected divinity within. We are mysteries or no mysteries according to the standard of our human judges. This view, which may seem complete on Piccadilly, might be found lacking in a desert solitude where conclusions did not press. It seems that some underlying element has been left out, and that to accept this judgment as final is slothfully to avoid the vital centre of the question which every man will ask himself, and which, so far, is left unanswered.

The one thing that the world would inwardly accept, though it would outwardly disapprove, would be the conviction that this great genius was matched by an overmastering passion as great. If this were true, the decision not to barter a present and perfect joy for a future tomb, however glorious, might not seem so irrational. The obvious meaning of the 'Life,' however, does not seem to point this way. The first, as well as the last, marriage is made to appear as if it were based on an affectionate longing for companionship and gentle daily care and love; for comfort of the mind and the affections. It is idle to deny that the vital question of George Eliot's place as a *personality* is here. If this place is to be called in question at all, it seems well in all respects that it should be settled on high grounds, both human and divine, and not decided by a reference to a local distinction, however marked. X.

Notes.

C. A. Nichols & Co., Springfield, Mass., have in press 'Descriptive Portraiture of Europe in Storm and Calm: Twenty Years' Experiences and Reminiscences of an American Journalist,' by Edward King. The illustrations for this book will be numerous and have been designed by Félix Régamey, the well-known Paris artist.

Jansen, McClurg & Co., Chicago, will control the American edition of an exhaustive monograph on Sappho, prepared by Henry J. Wharton, with the assistance of J. Addington Symonds. It will be issued in large and small-paper copies.

It is to be hoped that the recent regrettable failure of James R. Osgood & Co. will not materially delay the appearance of their promised 'Life, Letters, and Journals of Henry W. Longfellow,' edited by his brother, the Rev. Samuel Longfellow.

The firm of Ginn, Heath & Co. has been changed to Ginn & Co., Mr. Heath retiring. Lamb's 'Tales from Shakspere,' minus "Measure for Measure," and somewhat simplified verbally, has been added by these publishers to their 'Classics for Children.' They will issue in the same series during the present week 'Tales of a Grandfather' and the 'Swiss Family Robinson.'

The new and promising translation of 'Don Quixote,' of which the first volume has just been published by Macmillan & Co., will consist of four volumes, to appear monthly. We shall reserve comment till the work is complete in our hands.

Wisconsin is at some pains not only to preserve but to popularize its history. More than thirty years ago two volumes on that subject were compiled and published at the expense of the State by W. R. Smith, one of its prominent pioneers. But this work may be said to have ended before it began. Smith's politics were not those of the legislative majority, and so the State, which could not be sued, broke its contract with him when his narrative had only reached 1836, or the beginning of the Wisconsin territorial period. Last month, however, commissioners were appointed by the Legislature to examine a volume embracing that period of twelve years from 1836 to 1848, written by Moses M. Strong, who has resided in Wisconsin from the outset of its territorial existence, and was from the first conspicuous among its politicians. The commissioners report that Mr. Strong's manuscript, though by no means their ideal of what such a history should be, covers ground hitherto unoccupied and so is a work of merit. Two thousand copies of an octavo in 700 pages will be printed at the public charge, and Mr. Strong's labors will be fully compensated, though he does not belong to the dominant party. The State volumes will be distributed among all libraries, institutions of higher education, and other public establishments, and preëminently through the State Historical Society in exchange with similar associations.

A trip in a boat fifteen feet long by thirty-one inches broad from Lake George to the western coast of Florida, by the way of our inland waters, was a feat requiring no little courage, skill, and endurance. Dr. C. A. Neidé and one companion started on their adventurous voyage in August, 1883, and, after considerable danger from rapids in the Ohio, the sudden and violent storms of the Mississippi, and the fogs and tremendous surf of the Gulf of Mexico, safely reached Pensacola in the following February. The story is told simply in 'The Canoe *Aurora*' (*Forest and Stream* Publishing Company), and gives us glimpses of river life hidden from the eyes of the ordinary traveller.

The semi-centennial improved edition of Dr. John Todd's 'Index Rerum' was issued two years ago (New York: Baker & Taylor). It is now freshly put out again by these publishers. Mr. James M. Hubbard, who has had the bettering of it, points out Dr. Todd's imperfect employment of his own tool when, in his illustrative examples, he made "references to writings upon slavery, probation, Christianity, and infidelity," and placed them not under these words but under "'eloquent,' 'difficulties,' 'importance,' and 'reflections.'" Mr. Hubbard's examples unconsciously show the change in the times; he instances "Bible, Biography, Capital and labor, Christ, Civil-service reform, History, Novels, Poetry, Science, Socialism, Travels, Tariff."

The title-page of the most recent issue in the series of "Simplified Grammars" has a typically cosmopolitan look; it reads thus: 'A Compendious Sanskrit Grammar, with a brief sketch of Scenic Prākrit. By Hjalmar Edgren, Ph.D., Professor of Sanskrit in the University of Nebraska, U. S. A., formerly Lecturer on Sanskrit in the University of Lund, Sweden. London: Trübner & Co.' That is, the exposition of a language of ancient India by a Swedish professor in Nebraska is published by a famous German firm in London. The little book is designed for the use of beginners before they proceed to the full and elaborate grammar of Whitney, whose authority and system Edgren—himself a pupil of Whitney—has naturally followed.

We have received a copy of the catalogue, in two quarto volumes, of the library of Mr. George Gordon King, of Newport. This work, privately printed "regardless of expense," but with commendable good taste and accuracy of impression, is in some sort designed as a monument of the founder of the library, the uncle and namesake of the present owner. The elder Mr. King was, if we may judge from the list of his acquisitions, hardly to be called a collector. It is not easy to discover leading lines in what is essentially a "gentleman's library." Books of travel were perhaps most sought after for their own sake, yet with little system. The library, too, is chiefly English. Apart from the classics, books in foreign languages are generally curiosities of early

printing. Mr. King was, however, very fond of prints, of which he had amassed a great number in books and in portfolios, and to these last the whole of volume ii is devoted. The cataloguer, Mr. Joseph Allan Nolan, has imitated the example of our best public-library catalogues in analyzing the contents of comprehensive works; though he outstrips them when he performs this service for Serjeant Ballantine's 'Some Experiences of a Barrister's Life' not less than for Emerson's 'Miscellanies,' or Burke's Works.

The ordinary book catalogue abridges the titles of books freely. It is thought to be extravagant when it copies a title in full, and sometimes, as a rare luxury, is allowed to indicate the end of lines in the title-page which it is copying by interrupting its own lines with a vertical dash. The Florentine ex-banker, M. Horace de Landau, however, in the catalogue of his private library, regards this luxury as a meanness, only condescends to use it for a few modern books, and for the bulk of his collection indicates each line of a title-page by a separate line of his catalogue, so that in some cases a single title occupies a whole page. He is a pupil and imitator of the Rothschilds, and can afford the cry, "Hang the expense." Unfortunately, he has printed only one hundred copies of his catalogue, and we fear few will reach this country.

In 1869 Dr. James Rush left his estate, appraised at over a million, for erecting a fire-proof library building in Philadelphia. The will contained various foolish provisions, in consequence of which the clumsy building cost much more than it ought to have done for its storage capacity, and very little money was left for running the library and for the purchase of books. But the most fatal provision placed the library in an out-of-the-way quarter of the city. The result is shown in the last report of the Philadelphia Library Company, to which the building and the relics of the bequest have come. Last year an average of twenty-one persons a week-day visited the "Ridgway Branch," as it is called, and 6,014 volumes were used. The $1,000,000, if well invested, would be producing at least $40,000; instead of that, it circulated 6,014 volumes, or, in other words, the use of each volume cost $6 50. Girard, Rush, and Stewart have not, perhaps, made the most objectionable wills ever received to probate in this country; but in their college, library, and cathedral they have left the most conspicuous monuments of unwisdom. Yet two of them were shrewd men of business, "practical men."

Our readers should not fail to study one of the best results of Mr. Galton's "composite photography," as shown in *Science* for May 8. Professor Pumpelly describes the mode of taking and the component parts of four typical portraits engraved by "process," and representing the identical elements in the physiognomy of twelve mathematicians, sixteen naturalists, thirty-one members of the National Academy of Sciences, and twenty-six field-geologists.

Dr. Benjamin Ward Richardson's quarterly *Asclepiad* (Philadelphia: P. Blakiston, Son & Co.) seldom fails to contain agreeable reading for laymen as well as for the medical practitioner. In the number for April will be found a very interesting account of Vesalius and the birth of anatomy, together with a portrait of the great Belgian, after John Stephan de Calcar, who was most probably the designer and perhaps the engraver of the plates to 'De Humani Corporis Fabrica' (1543). These receive superlative praise from Dr. Richardson, who copies a large number of them (the copying, he says, has been going on for three centuries), and has put them to the test in his lectures by throwing them upon the screen enlarged to their natural size.

Mr. Fletcher, in a lecture at the Parkes Museum, March 26, claimed to have solved the problem of smokeless house and factory by the use of gas. For two years he has provided in his house for fires, washing, cooking, and bathing with gas at about the same cost as with coal, and with a great saving in servants, dirt, and inconvenience. In his factory, employing 130 hands, he has attained the same end by the use of coke, getting nearly as much work from a pound of coke as from a pound of coal, which costs more and smokes. Great as is, however, the corruption of the atmosphere, which is so acid as to give a plain reaction with litmus-paper, no manufacturer and hardly any householder will take measures to consume his smoke, except so far as the chimney-inspectors compel him. If, however, it can be shown to be distinctly cheaper, England's skies will be soon cleared, and Ruskin will be happy.

The Paris letter in our last number, in which the fall of Ferry was traced to the same cause that produced the fall of Gambetta—the dislike of the place mongering politicians toward a minister who had tried, by establishing the *scrutin de liste*, to free the Ministry from their importunity—could not have surprised any one who had read Gaston Bergeret's 'Dans le Monde Officiel.' In that clever collection of stories, and particularly in the one entitled "Trois Mois de Pouvoir," the extent to which the minister is under the control of the deputy and the deputy is subject to his constituent is very evident, though to show it is not the main object of the narrative. But if statesmen of undoubted ability can be displaced by such causes, the conservative may ask: How is a republic better than the government in which wars were made by the Queen's waiting-woman, and peace by placating the favorite's pug-dog?

Two recent volumes of French short stories help to show that in this department of fiction the French are ahead of the English, and not far behind the Americans. These are the 'Contes du Jour et de la Nuit,' by M. Guy de Maupassant, and the 'Contes de *Figaro*.' In this latter are collected nine short stories originally contributed to the *Figaro* by nine different authors; "Les Pommes Cuites," a tale of theatrical life by M. François Coppée, being easily the best. M. de Maupassant has not put his best work into his last volume. Only two or three of the tales are remarkable or interesting. Both books are injured by rough and feeble illustrations.

One of our correspondents who illustrated the inexactitude of translations from a Boston version of Daudet's 'Rois en Exil,' did not add the true meaning to the false rendering. A reader of *Le Français* (Boston) has asked the editor to help him out, for the passages were difficult, and M. Lévy does so in his May number. He confirms our correspondent's general high opinion of the translations in which, nevertheless, the extraordinary aberrations cited occurred.

As usual the first of the French theatrical annuals to arrive and the most beautiful to behold is the 'Almanach des Spectacles' (Paris: Jouaust; New York: F. W. Christern), now in its eleventh year, and for the first time without an etching. The dramatic data are, as always, given accurately and concisely. We see, for example, that thirteen plays of Molière have furnished forth in all ninety-five performances by the Comédie-Française, and that the operas—exclusive of the novelties of the year—most frequently performed at the Opéra were "Faust," twenty-four times, and "Favorita," twenty-three times. The brief dramatic biography is useful.

The French Geographical Society gave a grand reception on April 7 to M. Victor Giraud, who has just returned from a two years' exploration of the lower African Lake region. He left Zanzibar in December, 1882, with a force of 120 porters, carrying with him a steel canoe. After great hardships and considerable opposition from the natives, he was able to launch his boat on Lake Bangweolo in the following July. A chief, in giving him permission to pass through his country, added that he would surely die, like Livingstone, whose wanderings ceased, it will be remembered, on the southern shore of this lake. By means of his canoe M. Giraud was able to determine the true outlet of the River Luapula, the upper Congo, and to follow its course for three days in a southwesterly direction until further progress was checked by some rapids and a hostile army of natives. After a three days' combat he was taken prisoner. He soon made his escape, however, though with the loss of his canoe, and, after skirting the eastern shore of Lake Moero, reached a missionary station on Lake Tanganyika. His efforts to get to Stanley Pool, on the Congo, were defeated by the desertion of his men, and he was obliged to return, reaching the coast at the mouth of the Zambesi in November last. His account of this adventurous journey is given, with a map, in the last *Compte rendu* of the Société de Géographie.

Dr. Koner's customary classified list of geographical publications for November 1, 1883-84, is printed in No. 114 of the Berlin Society's Journal. In the Proceedings of the same society (vol. xiii, No. 3) a map of the Aaru Archipelago accompanies Herr Riedel's paper on this region and its inhabitants.

Except an article on coast defences, there is little that pertains to the burning questions of the day in Parts 146-150 of 'Brockhaus's Conversations-Lexicon' (New York: L. W. Schmidt). We must mention, however, a useful chart showing the colonial possessions of European nations, the world over. To Leipzig is given the most considerable article, which is accompanied by a fine map of the city and its environs. Welcome, too, is a map of Chili, Patagonia, and the Argentine Republic; and very pretty is the colored plate containing specimens of ceramics.

Bismarck's seventieth birthday furnished an occasion for fresh portraiture and other personal illustration to the German periodicals. *Schorer's Familienblatt* (vol. vi, No. 13) accompanies a number of sketches of the great Chancellor with a pen design, "Bismarck reading the proclamation of Emperor at Versailles," by the painter, Anton von Werner, and sundry less important scenes from his career, not omitting one symbolical presentation of him as a nightmare astride of Napoleon III., and another as opening the mouse-trap of Metz, and finally his desperate autograph. *Vom Fels zum Meer* (F. W. Christern) for May, on the other hand, serves up the hero's career in "five life stations," illustrated at every point of his environment in Varzin, and crowned with a superb folded wood-engraving of Bismarck (well worth framing), after Lenbach's painting. This being in civilian dress, a fine soldier-portrait is added, with separate likenesses also of his wife, his two sons, and his daughter.

—The War papers in the May *Century* are six in number. General Imboden's sketch of the Battle of Manassas, or First Bull Run, is a lively account of incidents in his personal experience as an artillery captain on the Confederate side, and is a worthy companion-piece for Goss's "Recollections of a Private." Gen. Gustavus W. Smith, also from the Confederate standpoint, gives his version of the second day of the battle of Seven Pines or Fair Oaks, in which he commanded the Confederate army after the disabling of General Johnston, and until General Lee assumed control. He seeks to correct the impression given by some historians, that the Confederate movements lacked in vigor and unity of purpose after Johnston fell. General Johnston contributes a series of notes specifically meeting assertions made by Jefferson Davis, in the 'Rise and Fall

of the Confederacy,' relating to the period of Johnston's command of the Army of Northern Virginia, from Manassas to Seven Pines. He also contends that the statement of Beauregard, that in the battle of Manassas the responsible command and direction of the battle was not assumed by Johnston, is an error, and that he was as really the controlling and guiding mind as any commanding officer could be. The paper is avowedly controversial, and is an important contribution to the discussion of the campaign of 1861-62.

—General McClellan's paper has great interest from the fact that it gives us the grounds upon which, after the long debate, he is willing to rest the defence of the military policy pursued by him in 1861, and the strategy of his Peninsular campaign in 1862. We have no room for criticism of this, and can only indicate his points. He attributes to Mr. Stanton, as Secretary of War, a hostile attitude toward his plans, and insincerity in conduct as the means of communication between the President and the General. He intimates that to this influence was due the interference with his plans both before and after the Peninsular campaign began, which he argues was the fatal cause of all the disasters that occurred. The sketch of his purposes, with the reasons for them, is clear and simple, and future discussion must in great measure turn upon it, and upon its accord with the official records and correspondence. Upon the point regarded by most critics as a vital one, viz., the actual strength of the opposing forces in the field at the beginning of the campaign, his silence will be deemed significant by many. General Badeau's sketch of Grant is a warmly eulogistic estimate of his character and achievements. With their abundant illustrations, the articles in this number alone would make a valuable and attractive volume of contributions to War history.

—The construction of the Lick Observatory on the summit of Mount Hamilton, California, has advanced so rapidly during the past two years, under the direction of the Board of Trustees, that the establishment is now practically complete, with the exception of the great telescope. In so far as the Trustees and their work is concerned, the entire institution, great telescope and all, would have been completed at the close of the present year and given over to the management of the Regents of the University of California, had not the opticians been defeated in the prompt fulfilment of their contract by the unfortunate failure of the glass-makers to produce a piece of crown glass of the size and perfection required for the objective of the telescope. It is now reported that the new management of the firm of Feil, of Paris, has already overcome the difficulties incident to the making of the great disc; and if no accident shall happen, it is to be expected that the Clarks of Cambridgeport will have begun their work of figuring it before the end of the coming summer. The length of time which this operation will consume is uncertain, but two years is a reasonable allowance. The dome, meantime, will be built seventy-six feet in exterior diameter, a size certainly large enough to cover the thirty-six-inch telescope. The excavations for this structure in the solid rock of the mountain are already under way, and the director of works expects to complete its main walls during the coming summer, while the season of 1886 will suffice for the addition of the superstructure, or dome proper. Simultaneously with the optician's work upon the glass discs the equally important problem of the most suitable mounting for the telescope will be attacked, and all the intricate mechanism required for its convenient use will be constructed and put in place underneath the dome, so as to receive the great glass and make its use possible as soon as the optician's work is complete. It may confidently be expected that this important event in the history of astronomy, marking the completion of the first mountain observatory, will not be delayed beyond the autumn of 1887.

—In the May number of *Nord und Süd* Carl Vogt has an article on the German universities. He has little to say about the students, but makes one important point, which is new to us, viz.: that their great increase since 1866 is due to the universal introduction of the every-man-must-be-a-soldier system. Formerly, middle-class families devoted their savings to buying substitutes, and the youths whose debt to their country was thus compounded began their careers as tradesmen, or what not, at an early age. Now, every one must "serve," but those who can pass an examination equivalent to that required for admission to the universities, are let off with a single year. The result is, not only that nearly all those who formerly would have had substitutes protract their school time by several years, but the majority of those who thus reach the threshold of the university—impelled partly by fixed habits and partly by social ambition—succeed in inducing their parents to let them pass it. But most of Professor Vogt's remarks are addressed to the professors, who, it is needless to say, come off at his hands rather badly. Their organization is bad alike for themselves, for the students, and for the towns in which they live. To begin with, the whole arrangement is a survival of the mediæval guild, one feature being that the professor is always hoping for preferment, not from within, but from without. In consequence of this, he never regards any place as his home till he is past his prime; has no common associations or sympathies with the townsfolk among whom he lives; has no companions but his students and fellow-professors—association with whom only strengthens professional or corporate prejudices. The second great defect of the system is, that under it a professor's capacity as a teacher is almost never considered. Outside his own university he is known only by his writings, so that a man of extraordinary aptitude for imparting knowledge may remain in obscurity, while one physically and morally entirely incompetent to teach is advanced, because the one publishes a book every year or two and the other does not. The third defect grows out of that feature of the system which makes an able professor depend upon the fees paid by students more than upon his salary. This under-payment has the advantage that it stimulates to greater exertion those who might be content with routine work; but the professor who has once enjoyed a considerable extra income is, of course, unwilling to part with it, so that even when permitted to retire on a full salary he declines the honor with thanks, since, in the majority of cases, the fame of past achievements is certain to secure him "a paying public." The highest places in the universities are consequently filled with these worn-out celebrities, who keep down rising talent by the mere fact of their existence.

—A clever article in the *Revue de Belgique* for April 15 purports to be a translation from the great work of the renowned historian "Dimitri Panslavitch," written in 1985. It seems that after the Afghans had occupied Panjdeh, and the Russians, to neutralize this move, had seized other passes leading to Herat, the British took alarm and made the most extensive preparations for war. But as the Ministry wished for peace, they made an offer to negotiate "on the basis of the *status quo*," which the Russians eagerly accepted. Negotiations dragged on through the winter of 1885-86, during which time, knowing that operations in Asia would not be possible before spring, the British made a final campaign in Egypt, which resulted in the capture of Khartum. But while their attention was engrossed by Egypt and by reforms at home, the Russians had assembled on the frontier an army of 90,000 men, and had built railways, so that while Herat was two months from London, it was only a fortnight from St. Petersburg. At this point the Russians, in consequence of an "accidental" skirmish with the Afghans, seized the last defile before Herat, a proceeding which caused passionate excitement in England, and with it the fall of Gladstone. The most vigorous measures were taken by his successor, but by the time Lord Wolseley had passed Gibraltar the Russian cavalry had entered Herat. Of the subsequent military operations, suffice it to say that General Slowork, though consistently supported by the Amir and, at first, by the natives, was eventually defeated through the treachery of the Amir's chief minister and general, who, in the midst of a battle, joined the Russians. The retreat of the British, pursued by the combined Russian and Afghan forces, resulted in a repetition of the rising of 1857; so that in a short time there was not a Briton beyond the range of the guns of the various fleets. The Ministry now resolved on a heroic remedy—to reconquer India in Europe. Enormous reinforcements were already half way to India, but they were stopped, and Europe was electrified by the news of the British occupation of southern Russia. To arrest their progress, Poland had to be stripped of its garrisons, and at once rose, while the Russian fleet was annihilated, and all the troops which could be gathered were defeated, successively, at Kiev and Smolensk. The only hope of the Russians was now in the intervention of Germany; but when they made proposals to this effect, Bismarck told them that Great Britain had got ahead of them by offering the Baltic provinces. Bismarck added that he had indignantly refused the offer, but that if it should become known in Germany—which, in view of the habitual indiscretion of English diplomacy, was very likely to happen—the popular feeling would not allow him to neglect the opportunity to recover a long-lost branch of the German family. In view of this, he suggested that the popular demand should be anticipated by a temporary occupation. Though Bismarck's intentions were obvious, Russia could not refuse these terms—Germany, in its turn, engaging to offer its mediation. If this were refused by Great Britain, Germany was to send an army to the aid of Russia, as a guarantee for whose expenses it was to retain the Baltic provinces. Great Britain, flushed with victory, did refuse Bismarck's mediation, of course greatly to the grief and surprise of that simple-minded statesman. The British force occupying the Baltic provinces was instantly overwhelmed, and in a short time Ireland was occupied by a Bavarian army. The British fleets being elsewhere engaged, a descent upon the English coast was easily made, and London occupied without difficulty. The Government retired to Edinburgh, whence peace was made, the treaty being signed at Windsor on October 7, 1887, and one condition being that England was to be occupied by the allies until an enormous indemnity had been paid.

—The history of Israel as unfolded in the Hebrew Scriptures, owing to the unique character both of the events and the narratives, admirably lends itself to the pen of the popular writer. The literature of every Christian country abounds in compends of this kind. The Jewish history of the earlier post-Biblical periods, too—the almost exclusive sources of which are the books of Maccabees and the annals of Josephus—is so full of heroic, thrilling, and tragic events that it requires little skill to make a summary of it popu-

larly attractive, or even fascinating. But with the destruction of Jewish independence by the Romans, and the suppression of the last attempts to recover it, the history of the people changes suddenly and completely. It becomes dark, painful, almost forbidding—a bewildering picture of harrowing oppression, attempts at extermination, and passive invincibility. To depict this life of the Jewish people in the dispersion in a connected sketch of moderate dimensions, not a mere maze of names—Talmudical, rabbinical, Gentile—penetrable only to the student, nor a work devoid of unity, chronological order, and symmetry, is a task demanding great literary ability. It has, however, been admirably executed by a young French writer, M. Théodore Reinach, in his 'Histoire des Israélites depuis l'époque de leur dispersion jusqu'à nos jours' (Paris, 1885). With uncommon tact and true historical insight, he has selected out of the mass of matter worked up by Basnage, Jost, Graetz, and some minor writers, all that is most characteristic and salient in the social, religious, and literary life of the Jews, and—braving the reproach of incompleteness—has made the chosen portions intelligible, harmonious, and, despite the intrinsic gloominess of the whole, attractive. His main guide is, of course, Graetz, but he borrows freely from Derenbourg and other French writers. He displays less familiarity with Hebrew literature than with the general history of the eighteen centuries through which he leads his reader, but the whole tenor of the book evinces Israelitish sentiments, which give warmth and color to its pages without noticeably impairing their objective truthfulness.

—The controversy about the authorship of the 'De Imitatione Christi' still rages. Last August a monument was raised at Verceil in honor of Jean Gersen, with great rejoicings. On the other hand, Father Denifle, a learned Dominican employed in the Archives of the Vatican, has, according to the Abbé Delvigne, "completely demolished the legend of Gersen, the mythical abbot of Saint-Étienne at Verceil." Father Santini, general of the regular canons of the Lateran, has published a volume of some 500 pages in favor of the claim of Thomas à Kempis; and one of the canons, Father Lolli, has written two pamphlets to the same effect. Finally, the Abbé Delvigne has protested, in a little pamphlet published at Brussels, against the monument at Verceil. It is now a contest of paper against stone. Future generations can see whether the pen is mightier than the chisel. In England the doubt as to the authorship of another famous piece of practical theology, 'The Whole Duty of Man,' is not indeed removed, but diminished. The question has come so far toward an answer as this, that a great library, the Bodleian, by admitting the book to its catalogue under a definite name, shows that Bodley's librarian at least is convinced by the arguments of Mr. C. E. Doble, who advocated the claims of Doctor Richard Allestree.

—Scotchmen and Chinamen are not commonly associated in our thoughts, yet they have one thing in common—the pentatonic scale in their music, in which are omitted the fourth and seventh notes of the diatonic scale on which the music we listen to every day is based. In all other respects, however, Scotch music appears to us normal and pleasing, while Chinese music is described by Occidental tourists as noisy, monotonous, discordant, and chaotic. In a brochure published at Shanghai (London: P. S. King & Son), Mr. J. A. Van Aalst, of the Chinese Imperial Customs Service, attempts to explain the mysteries of the divine art in the Celestial Kingdom. The explanations given are concise and intelligible, and there are numerous illustrations of musical groups and curious instruments, of dancers and temples, and examples of songs both in Chinese and European notation. The chief reasons, we are told, why Chinese music makes a disagreeable impression on foreigners are that their intervals are not tempered; the intonation is often faulty; the melodies are neither definitely major nor minor, and are always in unison and unchangeable in key, loudness, and movement, which produces a sense of monotony. But the Chinese like this music, as is proved by "the numerous bands parading the streets and offering their services; by the strict attention with which they listen to the ballad singers—now exhibiting emotion at an affecting picture of suffering, now breaking into hearty laughter when the subject is of an amusing kind; and finally by the large variety of instruments, which, although often played without taste and feeling, are nevertheless remarkable for their beautiful simp icity of form, and their extreme cheapness." Harmony, as we understand it, is unknown to them. In singing, "the sounds seem to proceed from the nose; the tongue, the teeth, and the lips have very little to do, except for the enunciation of some labial words." The singing is always in unison, and generally accompanied on the guitar. A delightful effect must be produced in the Buddhistic service, where we are told that, although all the chanters utter the same words and follow the same rhythm, still each sings in the key most convenient to his own voice. The Chinese are not unacquainted with our method of dividing an octave into twelve semitones, and transposing, yet this method is rarely applied in their melodies. In æsthetics, it seems, the Chinese hold to the old notion, combated by Hanslick, that music is the expression of the feelings.

SELECT ORATIONS.

Representative American Orations, to Illustrate American Political History. Edited, with Introductions, by Alexander Johnston, Professor of Jurisprudence and Political Economy in the College of New Jersey. G. P. Putnam's Sons.

Representative British Orations, with Introductions and Explanatory Notes. By Charles Kendall Adams, Professor of History in the University of Michigan. G. P. Putnam's Sons.

THESE companion sets of volumes are designed to bring together, within easy reach, a number of the most important political speeches, English and American, for use in historical study. The idea was a decidedly happy one. It would be difficult to overrate the value of a good political speech as a source of history for later generations. The more fully it answers its immediate purpose of gaining the support of the people, the more valuable it becomes for later study, as evidence of the public thought and prevailing sentiment at the date of its delivery. Unfortunately, good reporting is a very recent accomplishment. It was only when political oratory was far gone in decline that it became possible to preserve more than a bald outline of a speech. What passes as a "full report" was usually, as is well known, the product of some fertile brain in Grub Street.

The speeches before us are mainly confined to the present century; and they have been selected from the great mass rather with a view to their historical value than for oratorical excellence. The American set comprises fifty-five speeches, more or less complete. They are grouped under seven different heads: Colonialism, Constitutional Government, the Rise of Democracy, the Rise of Nationality, the Anti-Slavery Struggle, Secession and Reconstruction, and Free Trade and Protection. These divisions, except the last, correspond to periods in the history of the nation. The speeches of each group are prefaced by a sketch of the period to which they belong, and a statement of the questions to which they relate. These sketches are admirably clear and effective. The selections also seem to have been made with skill and good judgment. Of course it was not possible to give more than a small part of what was said on each side of every question. We think Professor Johnston may be congratulated on having selected from the whole mass those speeches and parts of speeches that were most characteristic and influential. The anti-slavery struggle and the questions that grew out of it having occupied so large a place in the national life, it was natural that they should furnish the most numerous and striking selections. Accordingly, the whole of the second volume and almost the whole of the third are occupied with speeches relating to slavery and the troubles between North and South to which slavery gave rise. Calhoun, Webster, Phillips, Sumner, Clay, Douglas, Lincoln, Seward, Toombs, Vallandigham, Breckinridge, Davis, Stephens, Schurz, Sherman, Beecher, Garfield, and a number of others are represented by at least one speech, some of them by two or three. It may safely be maintained that the student who peruses these speeches with care, will obtain a clearer and more adequate conception of the "irrepressible conflict" than any set narrative can possibly convey. For the earlier periods the speeches selected are: under Colonialism, two by Patrick Henry, one by Hamilton, and Washington's inaugural address; under Constitutional Government, Ames on the Jay treaty, and John Nicholas on the Sedition Law; under the Rise of Democracy, Jefferson's inaugural address, Nott on the death of Hamilton, Randolph on the Militia Bill (1811), Josiah Quincy on the admission of Louisiana, and Henry Clay on the War of 1812; under the Rise of Nationality, Calhoun, Hayne, and Webster on nullification and the questions connected with it. On Free Trade and Protection, a speech by Henry Clay in 1832 and one by Frank H. Hurd in 1881 are the only selections given.

In the 'British Orations' there is less of an attempt to cover the whole ground by topics and periods. The selections are longer, and consequently fewer in number—only sixteen in all. At the beginning are placed a speech by Sir John Eliot, against the Duke of Buckingham, and one by Pym, on the misgovernment of Charles I. Then there is a long gap to the days of the Stamp Act. Four speeches are given relating to the troubles with the Colonies, two by Chatham, one by Mansfield, and one by Burke. These occupy the first volume. In the second volume are given Pitt's defence of his refusal to negotiate with Napoleon, and Fox's reply; Sir James Mackintosh's defence of Peltier, and Erskine's address in prosecuting the publisher of Paine's 'Age of Reason.' The third volume contains Canning's defence of his aid to Portugal, Macaulay on the Reform Bill, Cobden on the Corn Laws, Bright on England's foreign policy, Beaconsfield on the Conservative party, and one of Gladstone's Midlothian speeches. A short biographical sketch is prefixed to each speech, and illustrative notes are appended to each volume.

The selections seem to be, on the whole, less happy and effective than in the American set. The difficulty may no doubt be due to the nature of the materials. England's history is more complicated, her interests more multifarious, than ours. The rule adopted by Professor Adams, of giving speeches entire, made it impossible to offer a wide range of selections. The result is, that many questions which have agitated England deeply, and many men whose speeches and personality have had a powerful influence on English history, are not represented at all. We need only mention Wilberforce, Lord Grenville,

Romilly, Grattan, Castlereagh, Brougham, Wellington, Peel, O'Connell, Earl Grey, Stanley, Russell, and Palmerston, in order to suggest the extent and importance of the omissions. We cannot but believe that the collection would have gained in interest and value if the editor had cut out the less important parts of the longest speeches, and had omitted entirely Mackintosh's hopeless defence of Peltier and Erskine's uncharacteristic prosecution of Williams, and had used the space so gained to insert some speeches or parts of speeches on the slave trade, the abolition of slavery, the Catholic disabilities, the Chartist agitation, the disestablishment of the Irish Church, the Irish land question, the Factory Acts, or the reform of the criminal laws, or some other of the characteristic reforms of the last fifty years.

The introductions and illustrative notes are copious and instructive. The editor turns his wide acquaintance with historical literature to good account for his readers. It is a pity that he should have allowed a considerable number of misprints and some erroneous statements to mar somewhat the quality of his work. Sir John Eliot is represented as suffering his long imprisonment on account of the speech against Buckingham in 1628; whereas the immediate cause was his action in the session of 1629, and the same penalty was inflicted on eight others, two of whom remained in prison till 1640. It is stated (i, 29) that the revival of monopolies by Charles I. was "in direct and open violation of the Petition of Right"; also (i, 306), that the Petition of Right forbade interference with the erection of buildings in London. The Petition of Right says nothing about monopolies and nothing about the erection of buildings. The Dean of Edinburgh is stated (i, p. 31) to have been felled to the ground by a stool flung by one of the congregation in the "Service Book" troubles of 1637; but the story of Jenny Geddes and her stool is now regarded as mythical. At p. 269, vol. ii, we are told that "when, in 1806, Grenville and Fox came into power, Erskine received the highest award to which an English attorney can aspire. But he had not long to enjoy his new honors as Lord Chancellor, for Pitt soon came once more into power." This passage contains two errors. Pitt was dead even before Erskine became Lord Chancellor; secondly, no English attorney ever held the office of Lord Chancellor, or dreamed of aspiring to it. Professor Adams has overlooked the important distinction between the attorney and the barrister in England. At p. 10, vol. iii, it is stated that the Test Act excluded the Catholics from seats in Parliament and from the privilege of voting at elections. The Test Act did not touch on either of these matters. At p. 282, vol. iii, it is stated that Mr. Gladstone secured the passage in 1871 of the "Abolition of Purchase in the Army Act"; but no such act was ever passed —the purchase system was abolished by a royal warrant.

These and some other slips can easily be remedied in a new edition. We shall be glad if it shall be found possible at the same time to extend somewhat the range and variety of the selections. The work, even as it stands, will be found very helpful and inspiring for classes in English history. But the vein is a rich one, and will repay a second and more comprehensive working.

RECENT NOVELS.

The What-To-Do Club. By Helen Campbell. Boston: Roberts Bros.

The Open Door. The Portrait. Two Stories of the Seen and the Unseen. By the author of 'A Little Pilgrim.' Boston: Roberts Bros.

The Wane of an Ideal. By La Marchesa Colombi. From the Italian, by Clara Bell. William S. Gottsberger.

The Same. Translated by Clara Bell. William S. Gottsberger.

Miss Bretherton. By Mrs. Humphry Ward. Macmillan & Co.

Mark Rutherford's Deliverance: being the Second Part of his Autobiography. Edited by his friend, Reuben Shapcott. London: Trübner & Co.

'THE WHAT-TO-DO CLUB' is a work of collaboration by Mrs. Campbell and Mrs. Poole, the former telling a pleasant, if not very original, story of New England life, the latter writing the letters in which the doings of the "Busy-Bodies," a New Jersey club, are related for the instruction of the "What-To-Do's." Both clubs are in search of employment that shall be at once interesting and profitable. The assurance of the writers that each experiment is an actual one, truthfully described, makes the book a valuable storehouse of information. The tone of it is admirable, sweet, and healthful, making gentle household things and home affections of the first importance, and then trying to show what occupations are not incompatible with them, either in fact or in spirit. Indeed, the most novel suggestion of the whole is found in the work of the girl who takes up the cabinet-making which failing health compels her father to leave. Mrs. Campbell might have laid more stress than she has done on the advantage gained by making the most of the opportunity nearest at hand. Women who are suddenly compelled to earn their own living are too apt to try to save their pride by going among strangers. All that is little as compared with the help, even if it be only the moral support, of a few tried friends, to say nothing of the advantage of not having to establish a character. There is no need of reminding us of unhonored prophets. The question here is how, in a serious emergency, to make the most of what has already been gained from life. Not a little of that is invested in one's surroundings.

The two short stories 'The Open Door' and 'The Portrait,' which Roberts Brothers have put into a dainty volume, are very like 'Old Lady Mary.' They have the same quiet tone, the same completeness of setting; but Mrs. Oliphant has somehow contrived that they take a stronger hold of the imagination, and that they come closer to our hearts. Mother love—despair for the wilful loss of it, the yearning for it as a blessing never known—makes the turning-point of each story, though in so different a way that the contrast cannot have been in the author's intention. There is an exquisite finish about the work, while some of it is very strong. Mrs. Oliphant has nowhere written anything more dramatic than the scene of the prayer of the old Scotch minister. Any reader who cares to keep himself sensitive to the unseen will wish for no explanation of the first story, while frequent experience will verify the last, so far as concerns the effect of a sudden coincidence upon excited nerves and an awakened conscience.

We have not examined the original of 'The Wane of an Ideal,' but the translation is either roughly done, with not a little cutting out from the sentences, or the author herself has not been at the pains to give fine shading to her picture. Any addition, however, to the scant knowledge of modern Italian life is welcome, even were it less interesting than this vigorous sketch. Agreeable it cannot be called. The history of the rise of a very poor village boy to a brilliant position at the bar shows many phases of society and many types of character, in rather a conventional manner. The hero grows selfish, and the heroine, once far above him, grows homely with home-keeping. His ideal fades completely as he sinks to lower moral levels, so that the lady's fidelity and the devotion of an old servant present the only ennobling sentiments in the whole book.

Ebers is at a disadvantage before an English public with his present subject, for it must come after 'Hypatia' to every one old enough to have read that book. To less thoughtful minds he will be supposed to present a clearer picture than Kingsley, but this is only an apparent superiority, not a real one. Ebers almost never goes below the surface. He deals with things, with a few well-defined incidents. Kingsley deals with souls and with their innermost struggles. Moreover, a single generation has been enough to render intricate and perplexing, thought and doctrine which seemed simple enough when concentrated in the one alternative—heathen or Christian. Ebers has chosen for illustration perhaps the most portentous event in the history of the official establishment of Christianity, the destruction of the splendid temple of Serapis at Alexandria by the order of the Emperor Theodosius. His story is confined within the limits of a few days before and after this event. He has introduced, with fine dramatic force and contrast, the different elements of that extraordinary life, not, as we have already said, with the intimacy, the passionate enthusiasm of Kingsley, but still with a scholar's learning so infused and illumined with human sympathy that his characters seem real.

It is not needful to say that Ebers is an acknowledged master in his own tongue and among his own people, but it is needful to say with emphasis that no writer ever had greater injustice done him than he has suffered in the present translation. His own style is so clear, so free and flowing, as to give him marked preëminence among his countrymen. His short, direct sentence is as crisp and pointed as French in comparison with the long, tortuous labyrinth through which Spielhagen so deftly winds his thought. His descriptions are at once accurate and poetic. He is sparing of adjective or epithet, and has that happy faculty of so choosing and grouping his nouns and verbs that they carry full force without need of help, and the picture is given by the effect of the whole paragraph, not by the filling up of modifying words. In conversation the rapid give and take is heightened by his preference for short words.

The faults of the translation are so general and so uniform throughout the book as to give the impression of a manner of its own which the reader, unwarned, might well mistake for the author's style. The original is at once inflated and weakened, exaggerated and degraded by meaningless expansion. The simple *Er liebt uns!* becomes "He is fondly attached to us." *Du bist ein braves Ding! Treu zu den Seinen halten, das lieben die Götter*, is rendered: "You are a good, brave girl. Fidelity to your friends is pleasing in the sight of the gods." Adjectives are put in or left out almost at discretion, and there seems not the smallest attempt at exactness. Opening the book, we find, without turning a leaf: *in die Hände schlug*, "clasping his hands in horror"; *kurz und streng*, "severely"; *vornehmer Würde*, "supreme dignity"; *widriges Thier*, "horrible animal." Two more taken at random are: *feurig*, "with fervid enthusiasm"; *das Mutterherz* (mourning for an only son), "the poor soul." In the descriptions there are gross mistakes in matters so obvious as architectural terms of the most general kind. It will hardly be believed that, in what is above all else a story of Christian faith, the passages from the Bible are not only not given as from our version, but are not faithful to the German. How could any one make *seines Vaters Hause*, "his Father's kingdom"? Fortunately such a rendering as "The Lord has no

joy in the strength of a horse, neither taketh he pleasure in any man's legs," is only laughable; but there are places where one shrinks as at the sight of careless feet on holy ground. We turn with pleasure for a last word concerning the original, which the publishers have made unusually attractive in form and type. It is to be strongly recommended not exactly to beginners in German, but to those seeking something for rapid sight reading. Except for a few pages of philosophy, it reads itself.

Mrs. Ward's book was sure of a kind of early popularity based on the personal element, so to speak, which the public would read into it, whether the author intended it or no. Miss Bretherton is said to be Miss So-and-so. The American man of letters is such an one; the hero, another veritable personage. The world of fashion will thus be content; but this first wave of success will meanwhile have carried the book within reach of eyes that will see the inadequacy of this surface comment, and will appreciate its depth and its fineness. Though the heroine is an actress, it is not in the least a story of the stage. The *motif* underlying the plot and action is the insufficiency of natural gifts, and the mistake of the world's easy acceptance of them. True of all the arts, it is most true, most evident, in that of the stage; above all, if the actor be a woman. In a few incidents so briefly told as sometimes to be broken, we have a concrete presentation of the problem, How shall an exceptional natural endowment of physical perfection, with no inheritance of cultivation from the past, no accumulation of personal thought and experience, reach the heights of artistic excellence? Will Undine find a soul?

The heroine is first presented to us in the flush of a great London triumph. All the world is at her feet, and nightly crowds the theatre where she is like some beautiful, high-spirited child playing a game she only half understands. Little the audiences care for the play in which she appears, except as the opportunity for a display of her grace and loveliness. She is herself a romance, and should always be acting a kind of glorified and poetical pantomime. Action and movement are her natural forms of expression, while in all the arts of speech she is a mere crude novice. Flattered by a public that cares only for her beauty and her personal prestige, popularity can only stereotype her faults; and if she be only what she seems, the attempt at training as imposed from outside would be fatal. Then comes the facile argument, Why ask for more? What does art or cultivation or training matter so long as Nature will only condescend once in a hundred years to produce for us a creature so perfect, so finely fashioned to all beautiful uses? Beauty and charm and sex have in all ages been too much for the clever people who try to reckon without them. But then comes the other side, which will assert itself to those whom wider experience has made critical. Are the men and women who have labored and struggled and died in the effort to reach a higher and higher perfection in one single art, to be outdone, eclipsed in one moment, by something which is a mere freak of nature, something which, like the lilies of the field, has neither toiled nor spun? Beauty has power enough; let us defend against her that store of human sympathy which is the proper reward of labor and intelligence, of all that is complex and tenacious in the workings of the human spirit.

There is no room in this short sketch, for which we have borrowed somewhat Mrs. Ward's own words, to trace the steps of Miss Bretherton's development. Sometimes they are given rather by hints or in flashes than in full detail, but the story affords manifold suggestions as to training in art, not for the stage only, but in any perfected skill. The love of Eustace Kendal for Isabel makes no part of her artist life, though he is most vitally connected with it. To her, till the very last, he is only a judge, an authority, an embodied standard. In the relation between them Mrs. Ward has attempted, and, it seems to us, worked out with rare and delicate insight, a situation of great difficulty. Blankly put, it is, How can a man, with only himself and a moderate fortune to offer, address a woman on the very heights of fame? Over and over again novelists have evaded the question by bringing the man to help or to rescue at the moment of failure. In that guise comes Kendal's first vision of his hitherto unsuspected love—a dying fame, a forsaken and discrowned beauty, finding in his affection a fresh glory and an all-sufficient consolation. Her triumph leaves him no hope. He watches her on the night of her reappearance in London, conscious that the moment is so vital, so desperate, that life on the other side will bear the mark of it forever. When it is over, he knows that in the halo of her great success she stands afar off from him, divided by an impassable gulf from the love which cries to her, unheard and hopeless, across the darkness. Yet by chances of life so simple, so inevitable, as to seem only daily human experience, these two, so wide apart, are brought to the common ground where neither wealth nor fame can separate, where only the heart's need and the heart's love can ask and give.

It is many a long day since we have had so beautiful a book. The descriptions of society are rather glimpses than formal pictures, given with the ease and grace that come only from being thoroughly at home. The French side of the book, with its high-mindedness, its refined ideals, its distinction, will be nothing short of a revelation to those whose knowledge of French literature and life is drawn only from novels, even though they are of the best.

No reader of the 'Autobiography of Mark Rutherford' (see the *Nation*, Vol. xxxii, No. 831), can have forgotten the last words of the editor: "I can only hope that it may be my good fortune to find the materials which will present him in a somewhat different light to that in which he appears now." So strong is the abiding sense that the life was an actual one that we open the sequel, 'Mark Rutherford's Deliverance,' with the involuntary exclamation—"The hope has been realized!" But we are no better able than before to settle the question whether the book is a purely imaginative creation, or a fearlessly candid and exact self-portraiture. The writer has not lost one bit of his skill, whether it comes from an elaborate training or is a gift of inspiration. The brief story is resumed at the point where Mark finds a slender occupation as correspondent for a country paper. The one fortunate chance of his life throws in his way again the lady to whom he was early engaged, and from his marriage to her come the few happy hours of his life. "If a man wants to know what the potency of love is, he must be a menial; he must be despised. . . . I cannot write poetry, but if I could, no theme would tempt me like that of love to such a person as I was—not love, as I say again, to the hero, but love to the Helot." He had called himself commonplace, truly enough, so far as education, opportunities, circumstances go; but the impulse of honesty, the clear-sightedness, and the fidelity to awakened conscience which nerved him to close against himself the one narrow opening offered him to the world's comforts, are above commonplace. Call it motive, fibre of nature, or grace from above—whatever one may—the same superiority of nature which carried him out of the darkness of his early Dissenting surroundings, survived in the hard, joyless round in which the remainder of his life was spent. It manifested itself in the effort of which not one in a thousand of his class among working people would have been capable, to do good to the suffering souls about him. His own personal problem was no longer how to escape from a false position, from insincerity, but how to keep for his own soul some vision of the invisible, while toiling to utter weariness for bare existence. Mark Rutherford kept it by trying to bring some knowledge of it to his fellow-men. For this reason the later part of the life will appeal to the sympathy of a wider circle of readers than the first. However much the opinions of some of our sects may resemble those of the English Dissenters of forty years ago, their homes and their ways are very remote from us. On the other hand, the poor—not the starving, but the poor who have only the narrowest bit of the day for living their own lives when work is done—these offer the most urgent problem of the moment. Their hearts Mark Rutherford knew, for he was one of them. The history of his efforts to reach and comfort those worse off than himself ought to be closely and humbly studied by all those who are now thinking about help for the working classes.

There is no more place for a set moral in this sequel than in the earlier book. For himself, to the last, he had only to endure. Every faithful life, however, speaks its word. Commonplace to abjectness it may be, but the eye that never loses sight of the truth, the unselfishness that will share the faintest hope, will lead to deliverance at last. The volume also contains some remarkable pages, ostensibly from the pen of Rutherford. The notes on the book of Job form a lucid and eloquent exposition of the whole argument:

"Inexpressibly touching is the last verse but one. It is a revelation of the inmost heart striving to be at peace with death. Not one grain of comfort is sought outside, and it is this which makes it so precious. There is not even a hint of a hope. All is drawn from within, and is solid and real. To this we can come when religion, dreams, metaphysics, all fail. The clods of the valley shall be sweet even to us. Why should we complain? Why should we be in mortal fear? We do but go the path which the poorest, the weakest, the most timid have all trodden; which the poorest, the weakest, the most timid for millions of years will still tread. Every man draws after us, and innumerable have drawn thither before us. None who have passed have ever rebelled or repented, nor shall we. Job, in building on rest and on community, has struck the adamant which cannot be shaken."

RECENT LAW BOOKS.

Mr. Philemon Bliss is a teacher of jurisprudence in the University of Missouri, and is also known to lawyers as the author of a work on 'Code Pleading.' His present work, 'Of Sovereignty' (Boston: Little, Brown & Co.), is dedicated to the President of the University, and seems to have grown out of a difference of opinion between them as to the "nature of the American Union." The volume is, however, a treatise on sovereignty in general, in which the author combats vigorously the views of Austin as to law, gives his own, and deduces from these some general considerations as to the Federal system of the United States which, we are glad to see, are fatal to the right of secession. When we find that abstract views lead to correct results we are always prone to believe the foundations well laid; but in this case there is a certain vagueness in Mr. Bliss's views of law which renders it difficult to be certain that he "floors" Austin as completely as he evidently feels that he does. He denies, in the first place, that all law is a command and is the expressed will of the sovereign. He says, on the contrary, that law originates in notions of right, and has an "ethical source." He seems to be a believer in the law of reason, or of nature, the law "coming directly from our Maker," which is founded upon "our family, so-

cial, and property instincts, as well as upon our moral sense." "Concrete rules spring from them and form the law proper; and, whether shown in legislation or in judicial holding, their object is to secure justice, to prevent wrong. . . . That rule is declared to be legal which best secures honesty and fidelity, and which protects from fraud." The last part of this would seem to confound law with morality, the first with morality supplemented by a sort of divinely inspired legal instinct. It is curious that the author, who has certainly devoted a great deal of pains to his subject, does not see that what Austin undertook to do was merely to analyze what the metaphysicians call the content of the idea Law. In it he insisted that the notion of command was always to be found, and that behind the command was force. The fact that law is founded on reason, or guided by a perception of justice, or has its origin in custom, does not affect this at all. Nor can there be much doubt that in all consciously made law the idea of command is to be found. Most of what Mr. Bliss says with regard to this, so far as it is accurate, seems to be irrelevant. The book will, however, be found of considerable interest, especially in the South and Southwest, to the student of the Federal system.

Mr. Charles Howard Shinn's 'Mining Camps: A Study in Frontier Government' (Scribners, 1885), is one of the interesting results of the impulse given to the study of political and social phenomena at the Johns Hopkins University. The advanced students and young instructors at that institution are encouraged to publish the results of their investigations; and a good deal of very suggestive material has thus been made accessible. If it is sometimes a little crude, or heralded with a little too lofty a note of the trumpet, yet these are venial faults where the interest is so hearty, and the results so useful, and the promise so excellent. Mr. Shinn modestly and justly calls his book 'A Study in American Frontier Government'; it is exactly that—a "study"; and, so regarded, it is one of the best of the class of books to which we have just referred. The free, instinctive methods which the early Californian miners followed are illustrated by graphic accounts of their proceedings; and they are connected with the mining usages of earlier times by a thread of information which, although slight, is enough to make these later usages significant, and to stimulate the reader's curiosity to know more. We heartily commend this book as having much curious material for students of early institutions, collected and illustrated by a fresh, enthusiastic, and highly intelligent mind. Indeed, for almost any thoughtful reader it will be full of interest.

The subject of 'Communication by Telegraph' (Boston: Little, Brown & Co.), as Mr. Morris Gray says in his preface, "fully justifies, in its importance and in the unsettled condition of its law," the publication of a text-book. The only other treatise, we believe, dealing exclusively with this subject is that of Messrs. Scott and Jarnagin, published in 1868. In the seventeen years which have since elapsed, the courts have rendered numerous decisions settling many points then in dispute, and adding a great volume of cases to those then in existence. That telegraph companies are not common carriers—that is, that they are not insurers against loss, but are only responsible for due care—and that telegraphic messages are not privileged communications, but stand on the same footing in courts of justice as other written documents, Mr. Gray is able to lay down positively. His résumé of the discussion of the latter point is very valuable, and his views agree substantially with those heretofore expressed in these columns. Inasmuch as the administration of justice is supposed to make it necessary that all private writings shall be producible in court as testimony when relevant (except, of course, in the case of certain privileged relations, like that of husband and wife), a copy of a telegraphic message in the hands of the company stands on the same footing with a copy of a letter retained by the sender himself. If the letter has any bearing on a question at issue in a court of justice, no one ever imagined that, the original not being producible, the copy was privileged. The courts in the United States have almost universally taken this view of telegrams. The inviolability of the mails means the inviolability of private letters while in process of transmission by the Government which undertakes to transport them. A letter once received is no more sacred, where the interests of justice between man and man, or of the criminal law, are concerned, than a book of account. The feeling which has been aroused on this subject has been caused by a dread of the abuse of the power, which, as Mr. Gray points out, may be made the instrument of tyranny as great as that to which general search-warrants once led.

There is only one point that Mr. Gray does not touch upon. The danger of abuse in the case of telegraph companies may be so much greater than in any other case (owing to the enormous mass of information contained in their records, and the consequent temptation to unscrupulous judges, or legislative committees carrying on investigations), that it may prove wiser in the end to make despatches privileged even against judicial writs. The question will become more important still if the Government should assume the functions of the telegraph companies. Mr. Gray's work is fully and conscientiously done, and he has had the assistance in some portions of it of one of the most learned lawyers and lucid writers in Massachusetts, Mr. J. C. Gray.

Mr. Henry F. Buswell's treatise on 'The Law of Insanity' (Little, Brown & Co.) is embraced in thirteen chapters (followed by an appendix containing the English Lunacy Acts), treating of legal definitions of insanity; jurisdictions over insane persons and their estates; inquisitions; guardians; management of estates of insane persons; suits by or against the insane or their guardians; rules applied in deciding the issue of insanity; evidence to prove insanity; capacity of the insane to do valid civil acts, to testify, etc.; testamentary capacity; conveyances by the insane; and their criminal liability. As a collection of cases and rules, the work is well done. In another edition we shall hope to find more definite expressions of the author's own views on the many curious questions which are presented in the course of litigation by the issue of insanity. The presumption of sanity and innocence in criminal cases, and the presumption of sanity in will cases, have led to the production of a variety of conflicting theories by the courts, all of which are fully and fairly stated by the author, as if to pave the way for such further discussion. The modern law of insanity is a most interesting branch of jurisprudence, and has kept pace with the development of the knowledge of mental disease. From the barbarous period when the mind was regarded as what the author calls "an integer," and when even so enlightened a judge as Sir Matthew Hale laid down the rule that the test of criminal capacity was having an understanding such as that of a child of fourteen, we have made an immense stride. The law at the present day recognizes the general principle to be that capacity or responsibility is a question dependent on circumstances, and that persons may be responsible in some directions and not in others; that when the doer of the act is able to reasonably comprehend the nature, relations, effects, and legal consequences of the act, he is not as a matter of law insane, no matter how strange or eccentric his actions and the operations of his mind in other respects.

Mr. Willis Paine first came prominently before the public in this State some half-dozen years since as receiver of several of the savings banks ruined by the panic of 1873. The period of speculation which preceded that crisis had produced a most curious effect upon the minds of trustees of savings institutions. Although bound by their charters to invest money intrusted to them only in specified classes of securities, they wantonly violated the law, and placed their funds in all sorts of loans insufficiently secured and illegal in their character. Crazed with the speculative fever, many of them almost ceased to act as trustees, and managed their banks much as if they had been stock firms carried on for private profit. The result was the collapse and insolvency of the banks, and the first question which presented itself to the receivers charged with the duty of collecting and returning to the depositors the assets of these ruined institutions was, whether they could not force the trustees to pay damages for their negligence and waste of the property intrusted to them. Acting under the advice of skilful counsel, Mr. Paine and other receivers resorted to the courts, and insisted on their right to hold the trustees for damages. The right was sustained, and heavy verdicts were rendered in some of the lower courts, and we believe the cases were in most instances compromised by the payment of large sums of money to the receivers. Mr. Paine, at least, by these means succeeded in recovering a large amount of misappropriated funds for one of the banks, and was enabled to wind up that institution in a manner which must have been an agreeable surprise to most of the depositors.

It was owing to his services in connection with these cases that he was afterward appointed one of the Commission to revise and compile the laws affecting banks, banking, and trust companies, and subsequently placed in charge of the Banking Department at Albany. His work on 'The Laws of New York relating to Banks, Banking, and Trust Companies' (Albany: Weed, Parsons & Co.) contains not only the banking laws, but a great quantity of decided cases which have arisen under them, and will be found to be of value to lawyers quite as much as to bankers. A novel subject, which the title-page hardly suggests, is also embraced, viz., the Laws relating to Safe Deposit Companies. Very few cases appear to have arisen under these. Indeed, the only one of general interest cited is a decision that a safe of the Mercantile Trust Company, and a tin box containing property and securities on deposit, are not within the protection which the law affords to a debtor's dwelling house against an officer acting under civil process. Why it should have been supposed that they were is rather hard to see, but it may be of interest to failing debtors to know that there is a decision of the Supreme Court which will effectually prevent them from turning all their property into stocks and bonds, putting them in a tin box in a safe-deposit vault, and defying their creditors (U. S. v. Graff, 67 Barb., 304, 310). A point of some interest to deposit companies was also decided in the same case—that should it become necessary to open one of these safes in the presence of the Sheriff, to ascertain what property of the debtor it contains, an order directing the exclusion of the counsel and agents of each party is a proper exercise of the discretion of the court.

Judge Drake's treatise on 'Attachment' (Little, Brown & Co.) is so well known to the profession that it is hardly necessary to do more than call attention to the fact that a new edition of it has appeared. The learned author has been, ever since the appearance of the first edition, thirty years ago, the authority on this important

branch of law. In the sixth edition, although five hundred and fifty new cases have been added, several passages rewritten, and new topics introduced and treated, the total number of pages is only eighteen more than those of the fifth edition—a specimen of condensation as rare in new editions of legal text-books as it is creditable to the author. The title-page of the book, by the way, has never seemed to us to give a fair idea of the contents, as the book includes trustee and garnishee process, as well as ordinary attachment suits.

Studies, Literary and Historical, on the Odes of Horace. By A. W. Verrall, M.A., Fellow of Trinity College, Cambridge. Macmillan & Co.

Mr. Verrall is one of the most enthusiastic and accomplished classical scholars among the younger members of King Henry VIII.'s glorious college. He has made for us, out of his college lectures, a delightful book. It has brought back days of boyhood, days of college, days at Mr. Verrall's own Trinity, days of teaching, through every one of which Horace's odes rang as the very music to whose tunes "day was pushed on by day, and the new moons hastened to perish." It consists of a series of essays on individual points, some historical and some purely philological: difficulties which can be solved only by studying Horace's odes as a whole—or rather as two wholes, the first consisting of Odes I, II, III, the second of Ode IV—and not as a series of comparatively detached songs. All of these essays are extremely interesting and acute, though of very different degrees of merit. The one on Lamia is perhaps too subtle. The vindication of Horace as a friend and respecter of lawful matrimonial love, instead of the impudent and untiring eulogist of immoral connections, is excellent, and well deserves to be studied. The essay on the structure of Horace's Odes (called "Euterpe") is also acute; but we protest against accepting the curious mosaic from Bergk's 'Poetæ Lyrici' as a correct exhibition of Sappho's immortal Aphrodite.

The main force of Mr. Verrall's scholarship is seen in the essays entitled "Melpomene" and "Murena." In the first he discusses the question why Horace selects the Muse of Tragedy as the patroness of his Odes; and he answers it in the second by saying that the first three books have really running through them a common thread of interest, which makes a great part of them a connected threnody, a kind of *In Memoriam*, on the rise and fall of Murena, the senatorial conspirator against Augustus in B. C. 23. He has worked out this thesis with Teutonic subtlety, yet at the same time with English common sense. He lays down one proposition which is very often lost sight of in the study of Latin and Greek poetry, viz.: that we must read between the lines; that countless allusions to persons and events are absolutely unknown to us, which to the poet's contemporaries made his works tingle and ring. This is most singularly true; and if we would begin to understand the real meaning of scores of passages in all the ancient writers from Pindar down, we must be prepared to read Olympus and Arcadia directly into Athens and Rome. Sometimes this fact is neglected even when our scholiasts explicitly inform us of it, and we fail to make the proper use of the allusions revealed to us. Thus the reading δίκαιος is defended in Æschylus, 'Sept.' 592, on the ground that Plutarch tells us the audience interpreted it of Aristides the Just. It is strange commentators do not see that this very fact requires ἄριστος, in order that Ἀριστείδης may be read in δοκεῖν ἄριστος. The utterly uncertain date of Sophocles's 'Electra' may almost be fixed to B. C. 406, if we consider that lines 62-64 refer to the triumphant return of Alcibiades at the Plynteria of 407. In Cicero, 'De Senectute' xii, there is a probable allusion to Alcibiades as far as Archytas's speech goes, with a deeper one to Catiline and Cicero in Cicero's own times.

Mr. Verrall, we do not hesitate to say, has had amazing success in detecting hidden political and social allusions in the Odes. That *lunæ novæ* in ii, 18, and in iii, 21, can bear the meanings he would have them, is, as he confesses, a strong demand on faith. But his view that the attack of the Titans on Olympus, as mentioned in iii, 4, means Murena's conspiracy, is excellent, the gods being the royal household. But then who is the Bacchus of ii, 19? Who is the demi-god who, more fit for jests and dances, developed an equal (or intermediate) excellence for peace or war, and hurled back Rhætus with the claws and dreadful maw of the lion? Can it be Mæcenas, who is directly addressed in ii, 17, and ii, 20? Or is this theory inconsistent with the idea that the only connection of Mæcenas with the conspiracy was to divulge it to his wife? That Murena was the heir of the great scholar, Varro, is Mr. Verrall's theory; and it is confirmed by the allusions to Romulus and Cato in ii, 15, which are exactly the names that would be suggested by the perusal of Varro's 'Origines,' a book whose subject was Romulus, and whose name was first used by Cato.

It does not seem to us that Mr. Verrall has done justice to the poetical inspiration of Book IV. It may be very true that it was written to order; but, intimate as Horace and Augustus were, it is eminently likely that the wish outran the order. Mr. Verrall, we think, fails to understand, what his Merivale should have taught him, that the peace established by Augustus was in itself an inspiration to poetry. It was the direct answer to the prayer which opens the 'De Rerum Natura'; and Horace bursts into an ecstasy of rejoicing over it worthy of him who called on the "renowned lady to beg peace for the Romans from the god who sways the fierce concerns of warfare." Since Tiberius Gracchus was murdered, the streets of Rome had not seen twenty continuous years free from civil bloodshed in a period of more than five times twenty years. Augustus had achieved what had been beyond his uncle's power or Pompey's, or Cicero's, or Sulla's, or that of Drusus or Marius, not to name all the other statesmen, second-rates in Rome in that age, but first-rates in almost any other age or place. No wonder he was held a present deity. No wonder he was ranked with Hercules and Castor. Shall we provoke Mr. Verrall's undying contempt when we say, in the teeth of his essay "Euterpe," that the metres of Book IV show us a freer touch and a more truly Melic ring than those of I to III? that we believe the Sapphics of "Dive quem proles" and the "Carmen Sæculare" may outrank even his favorite "Mercuri nam te"? that "Ne forte credas" surpasses "Justum ac tenacem," and that "Descende cælo" may not be named in the same day with "Qualem ministrum"?

We would renew the thanks of American scholars to Mr. Verrall for his charming contribution to Horatian literature.

Pictures from Pennsylvania German History [Bilder aus der Deutsch-Pennsylvanischen Geschichte]. By Prof. Oswald Seidensticker. E. Steiger.

This is the second volume of a series of local histories, edited by Mr. Carl Schurz. The first volume is a reprint, with some revision, of the earlier editions of the 'History of the Germans in New York in the 18th Century,' a work which appeared originally in 1867 and 1868, and which has taken its proper place with the other useful contributions of the late Dr. Friedrich Kapp to German-American history. The Germans in Pennsylvania made their settlement under much more favorable auspices than did those of New York, and the result (whether for good or not is still an open question) naturally showed itself in the longer and more persistent maintenance of their nationality—if the Germans of the eighteenth century can be said to have been a nation—of their language, their customs, their religious faiths and forms of worship, and of some special characteristics. At one time there was a strong disposition to speak contemptuously of the "Pennsylvania Dutch," and among their English-speaking neighbors it was hard to think well of a people who persisted in their own language and their own literature, in their frugal habits, their successful industry, their strong local attachments, their indifference to political agitation, and their hostility to universal education. Now, thanks to the pious labors of some of their own number and of some Germans like Seidensticker, with a real love of antiquarian research, it is clear that the early German immigrants were men of a fair amount of culture; the leader, Pastorius, being much more of a scholar than was often found at the head of a colony of settlers in a new country, and writing poetry in Latin, English, German, French, Dutch, and Italian. Even among the Mystics, the Pietists, the Hermits, the Ascetics, and the other curious relics of mediæval Germany transferred to Pennsylvania, there was a good deal of literary activity worth preserving. William Penn himself, in his early missions on the Continent, had made acquaintance with the Germans, dissenters from the churches recognized by the state, Lutherans, Calvinists, and Catholics, who shared and sympathized in his religious tenets and practices, and his visits to Germany undoubtedly led finally to the large emigration which contributed so much to the success of his infant colony. The freedom, too, from all hostile constraint that marked their settlement no doubt made its rapid growth uneventful. Pastorius governed his little colony at Germantown with a strict but kindly hand, and the record of his literary, political, and religious life is still preserved in the voluminous original MS.

Among those, however, who disliked even the mild discipline of the little community, there were some whose peculiar religious theories led them to still more secluded lives. John Kelpius, the Hermit of the Wissahickon, was a typical example, and the story of his life is well told in the volume before us. Of more general interest is the account of the early Germantown printers, the Saurs, whose imprints have recently acquired a greatly increased money value, from the growing interest in American typography and bibliography. The founder of the family was at once printer, apothecary, surgeon, botanist, watch and clock-maker, cabinet-maker, bookbinder, type-founder, paper-maker, editor, author. He was thus eminently fitted to be the first newspaper publisher of the little German community, the printer of the first Bible printed in this country (the German Bible of 1743), and of the long series of works that give his name a place of honor in our early bibliographical history. It is somewhat curious to find that Saur himself contended stoutly for the very simplest elements of education for the people, joining the Dunkers and other German inner-light religious sects in their declaration that the highest Christian virtues were rather lessened than heightened by any great amount of school learning: morality, piety, fear of God, were the only requirements for life here and hereafter. The younger Saur printed the second and third editions of the Germantown Bible, established his own type foundry and paper mill, and helped in

1760 to found the Germantown Academy, still in active existence; but, being a Non-Resistant, he was unjustly charged with taking the side of the Crown in the Revolution, saw his property swept away by confiscation, and spent his last years in poverty, preaching, however, to the Dunkers. One of his sons established the German press in Baltimore, but other sons and grandsons carried on the hereditary business in and near Philadelphia, and the name is found on title-pages published recently.

Still more curious is the story of the Ephrata Cloisters, the monkish life established by some of the early German religious zealots, whose buildings still stand, in use for the every-day needs of the little community that represents the original settlers. Dr. Seidensticker traces their history down from the German Mystics in their native country, through Beissel, the founder of the Ephrata settlement, and on to the end of its strangely checkered career. The books printed by these pious and industrious recluses still remain an evidence of their zeal, not only in number, but in point of size, for the 'Märtyrer-Spiegel' of 1748 is a folio which, for weight and excellence of the home-made paper and hand-press typography, still excites admiration. The Seventh-Day Dunkers, who now own the Ephrata Cloisters, use them as homes for poor men and women, but the mysticism that once ruled within their walls has long since ceased to have any place in their religious faith.

The rest of Professor Seidensticker's book is devoted to an account of the part taken by the Pennsylvania Germans in the colonial struggles, in the wars with the French, and in the successful establishment of American independence. Some of the representative Germans of Pennsylvania were the very men who had been driven out of New York, notably Weiser in colonial days, and Muhlenberg at the time of the British occupation of New York during the Revolutionary war; and to-day both names are honorably represented in a long succession of soldiers, preachers, and legislators, and fairly typify the best elements of the Germans in Pennsylvania. Though moulded and modified by long years of training, they exhibit many characteristics of their original nationality, not the least among them being a strong love for their ancestry, and a pious reverence for all they did and said and wrote.

Passages in the Early Military Life of General Sir George T. Napier, K.C.B. Written by himself. Edited by his son, Gen. W. C. E. Napier. London: Murray. 1884.

THIS story was not written for publication. It was drawn up by Sir George Napier, after he had left the army, because his children desired to know the part which he personally had taken in the great struggle with Napoleon, with which the present century opened. It is written in simple, unstudied language, such as a father would naturally employ when speaking to his children. There is no attempt at book-making, no effort after "style"; and perhaps on this account the narrative becomes a kind of transparent medium through which we clearly discover the character of the writer.

The three Napier brothers were, as all the world knows, a remarkable trio. George did not attain to the same intellectual eminence as his brothers Charles and William, but in courage, in high-mindedness, in chivalrous feeling, he was their equal; and it is quite possible that he was not so subject to the blind and passionate prejudices which caused his more distinguished brothers to do such cruel wrong to a man like Sir James Outram, cast in their own heroic mould. But what renders this book especially interesting is the fact that it is not merely a picture of Sir George Napier—it represents a type of character which was to be found in remarkable abundance in the British army and navy at the beginning of this century. Whether or not it was the magnitude of the struggle in which the nation was involved that evoked a corresponding spirit of patriotism and heroism, there can be no question about the fact itself. The soldiers and sailors of that day appear to have realized their country as a living and personal being, for whom it was a glory and a delight to sacrifice themselves, with an intensity not inferior to the feelings with which an antique Roman regarded the "Sacred City." And this feeling nerved them to feats of courage and endurance, without the knowledge that what they did was anything remarkable at all.

Like so many of the most distinguished of Wellington's officers, Sir George Napier gained his lofty ideal of the soldier's character under the command and from the example of Sir John Moore. Lord Lynedoch, Sir John Colborne, the Napiers, and others were men whose excellence Moore was the first to discover. George Napier was General Moore's aide-de-camp in the campaign of Corunna, and the following passage reveals the feelings with which the general had inspired the young soldier. He had been searching fruitlessly for the body of his brother Charles, who was said to have been killed in the battle:

"With a heavy heart I turned my sorrowful steps to the headquarter house. On entering I saw no light; I heard no sound, no movement—all was silent as the grave. A cold dread chill struck upon my heart as I ascended the gloomy stairs and opened the opposite door from whence I imagined I heard the half-stifled sob of grief. Oh God! what was my horror, my misery, my agony! Sir John Moore lay stretched on a mattress; a dreadful wound bared the cavity of his chest; he had just breathed his last. The lofty spirit which so lately animated that beautiful, though now cold and bleeding form, had taken its flight to the regions of the great and good.

. . . . . .

"Never shall I forget the scene that room displayed on that fatal night. Colonel Anderson, who had been from youth the tried friend and companion of his general, was kneeling, with his arm supporting Sir John Moore's head, with blanched cheeks, half-parted colorless lips, and his eyes intently fixed on that face whose smile of approbation and affection had been his pride and delight for years; but the look of keen anguish that Anderson's countenance expressed is far beyond my powers of description. Next in this group stood Colborne, whose firm and manly countenance was relaxed and overcast with thoughtful grief, as though he pondered more on his country's than on private sorrow, for he felt and deeply mourned the amount of England's loss; keen, high-spirited, guileless Harry Percy, pouring forth in convulsive sobs the overflowings of his warm and generous heart; and poor James Stanhope, completely struck down and overwhelmed by the double loss of his brother and his friend. . . . Such was the scene which presented itself to my view on entering that sorrowful chamber of death. And although now twenty years have passed, the whole is perfectly fresh in my memory, and I do not think I have forgotten one of the melancholy and heart-rending circumstances that accompanied Sir John Moore's death."

Very real and picturesque are the descriptions which General Napier gives of the perilous, romantic, and amusing incidents in his experience during the Peninsular campaigns. He belonged to the celebrated Light Brigade, commanded by Crawford, and took an active part in the retreat to the lines of Torres Vedras, the battle of Busaco, and the pursuit of Massena. During the last series of operations he was severely wounded. He commanded the storming party when Ciudad Rodrigo was taken, and had his arm shattered by a grape shot. He was sent to England to recover his strength—the wounded arm having been amputated—but returned in time to accompany Wellington in his victorious advance through the Pyrenees, being present at the battle of Orthes, and commanding a regiment in the crowning victory at Toulouse. About this last battle he relates a little anecdote which shows with what respect for their fighting qualities the British infantry had by this time inspired the French commanders. Two British divisions had crossed the Garonne, and the rest of the army was intending to follow them, when a sudden storm carried away the pontoon bridge, and for three days these two divisions were left isolated and might have been destroyed by the French army.

"All (Soult's) generals begged and prayed him to attack, and, as they said, annihilate this small force; but he would not run the risk, and (as I have understood from many French officers) said: 'You do not know what stuff two British divisions are made of; they would not be conquered so long as there was a man of them left to stand, and I cannot afford to lose men now.'"

Librarianship as a Profession: a Paper Read at the Cambridge Meeting of the Library Association, September, 1882. By Henry R. Tedder, F.S.A., Librarian of the Athenæum. London: Chiswick Press. 1884. Pp. 30, 16mo.

MR. TEDDER, who has done much to win for his occupation in England the respect which it deserves, would have the librarian "a man of refinement, of liberal education, and especially endowed with sympathy with books and reading." The old writers on this subject used to amuse themselves and their readers with long lists of various things a librarian must know—all languages, of course, and everything else so far as that is possible to man. Mr. Tedder contents himself with demanding general culture and extensive knowledge of ancient and modern literatures, for the unprofessional qualifications, and a knowledge of bibliography, including palæography, and the theory and practice of library management, for the professional accomplishments. It is always best that the work should be learned by experience, but, wanting that, the librarian needs a decided faculty of learning by others' experience. Good business habits and a knack of administration are indispensable. Thus provided, he is to give his whole strength to his work. Parodying Mr. Winter Jones, Mr. Tedder declares that "the librarian who *writes* is lost"; he cannot know too much, but he should leave it for others to bring his knowledge before the public. This will be a hard saying for those who were first writers by inclination and afterward librarians by accident. Perhaps the precept would have more chance of attention if librarians were oftener, as Mr. Tedder wishes them to be, trained for the office. Mr. Tedder has been the chief advocate of this training, and the leading mover in instituting the examinations of library assistants which are proposed to be held under the auspices of the Library Association. We have already expressed our opinion of this matter and of the School of Librarians which Columbia College is to give us next year. Theoretically, the project is promising; what the ultimate result will be must depend in large measure on the encouragement which is given to the pupils of the school by those who are choosing assistants, or, in England, on the commercial value of the examiners' certificate. No occupation will long find people willing to give much time and labor to preparation for it if it does not offer a reasonable remuneration.

Mr. Tedder thinks that librarians' salaries are higher in America than in England. Nominally they are; but we doubt if practically there is much difference, when account is taken of the cost of living in the two countries. Rents, for instance, are little more than half as much in London as in some of our American cities. But perhaps the chief reason for doubt in regard to the success of examinations and schools is not so

much the low salaries as the hopelessness of promotion, arising from the absence of any attention to the leading ideas of civil-service reform. There is no encouragement to a man to enter the lower grades and work hard to learn the duties of an occupation in which there are few prizes, and no certainty or even likelihood that what prizes there are will be given within the profession. Libraries are administered—necessarily—by boards of men who, when chosen, know nothing of libraries in general, and little of the institutions which they are to govern (except how to read some of the books). One would suppose that in this ignorance they would choose for librarian a man who could enlighten them. Not always. They often do not know enough to be aware that there is anything to be known. They take, half the time, a man who has made his reputation, if he has any, as an author, a clergyman, a lawyer, a bookkeeper, a clerk. We are not now asserting that this is a poor way of selecting chief librarians; but there can be no doubt that it has a bad effect upon the inferior branches of the profession. It perhaps keeps out some who might choose that career; it certainly discourages those who are in, and either makes them indifferent or turns their attention to other occupations. This is not at all a satisfactory state of affairs, but it is a state which is likely to last. We must confess that we do not see any remedy for it, unless, indeed, in addition to the proposed School of Librarians there could be established a School for Library Trustees.

La Chanson de Roland, translated from the seventh edition of Léon Gauthier, Professor at the École des Chartes, Paris, by Léonce Rabillon, Licencié en droit, Paris University, French Lecturer at Johns Hopkins University. New York: Henry Holt & Co.

The general reading public is little familiar with that wonderful composition of an unknown Norman bard of the eleventh century—'La Chanson de Roland.' Time, which works so great a change in the ideas of man, changes also the words in which those ideas were wont to find expression. Hence it is more difficult to reproduce faithfully thoughts that were expressed in a now forgotten dialect than to translate from one modern language into another. Especially must it be so if the work is poetry. Regarded from the modern standpoint, the old language is incomplete, and to understand the beauty of the composition the translator must put himself in the place of the original writer, and retain of his own modern vocabulary only what will serve him to render truthfully the latter's ideas in all their simplicity, terseness, or force. Any attempt to improve upon the text is sure to disfigure.

None better than Mr. Rabillon was fitted for this task, which must have been to him a labor of love. A Frenchman, acquainted with all the resources of the English language, a lecturer who had made this very poem the subject of a series of interesting discourses, and was, therefore, thoroughly imbued with it, he had advantages seldom possessed by a translator. Avoiding the temptation to paraphrase, he has closely followed the original, and has succeeded admirably in rendering its quaint turns and naïve expressions, thereby marring none of its beauties, but, on the contrary, making them more evident even to one acquainted with the old Norman dialect. The rhythm of his blank verse lends itself marvellously to the description of the legendary prowess of the ill-fated knight and his companions. It caresses the ear with a martial cadence that echoes the tramp of the war-steed, the defiant challenges of the combatants, the cries of woe and rage of the vanquished. Certain passages in 'Roland's Song' are even more inspiriting than the famous *Marseillaise* whose strains so often led the French armies to victory, seven centuries later. Roland and his brother-in-arms, Olivier, bold Archbishop Turpin and their peers, teach Frenchmen not only how to fight for glory, but how to die for "sweet France"—to die as patriots, as heroes, as Christians. The field is strewn with the dead bodies of Roland's companions; he alone survives, bleeding from many wounds, but the Saracens are in flight, for Charlemagne is coming to the rescue:

> "The Count Rolland feels through his limbs the grasp
> Of death, and from his head ev'n to his heart
> A mortal chill descends. Unto a pine
> He hastens, and falls stretched upon the grass.
> Beneath him lie his sword and olifant,
> And toward the Heathen land he turns his head,
> That Carle and all his knightly host may say:
> 'The gentle Count a conqueror has died. . . .'
> Then, asking pardon for his sins, or great
> Or small, he offers up his glove to God.
> Aol."

The return of Charlemagne, called back by the mournful sound of Roland's olifant—blown too late for rescue, alas!—the old Emperor's despair on discovering his nephew's dead body, his solemn prayer on the dead-strewn battle-field, and the grief and rage of the French knights, are dramatic passages of the highest order, which our limited space will not permit us to quote.

Mr. Rabillon's version should have its place in every scholar's library.

Afghanistan and the Anglo-Russian Dispute. By Theo. F. Rodenbough, Brevet Brig.-Gen., U. S. A. G. P. Putnam's Sons.

In the author's words, "the purpose of this volume has been to give as much reliable information upon the cause of the Anglo-Russian dispute, the nature of the probable theatre of operations in case of war, and of the armies of the Powers concerned, as could be obtained and printed within a single fortnight." In order to write, in so short a time, a book that shall have any value upon a subject covering so wide a range, it is necessary that an author either should have a knowledge gained from his own experience, or should have made a special study of it during a number of years. Judged by either of these tests, General Rodenbough is not qualified for his task. Apparently he has never visited India, Afghanistan, Central Asia, or Russia; and that he has not made himself an expert by study is evident from his stating, either through carelessness or through ignorance, that Afghanistan covers an area of only 12,000 square miles. General Rodenbough is Secretary of the Military Service Institution of the United States, and in charge of its library, which includes the files of the Journal of the Royal United Service Institution (London), and of the United Service Institution of India (Simla). From these periodicals he has drawn his inspiration, and has given us a summary of what British and Indian officers have written on the subject in the last few years. The "list of authorities," published at the end of the book, comprises more than sixty names, nearly all of them British officers, and, with the exception of General Hamley, entirely unknown to the general public. The standard authorities, like Vámbéry, Rawlinson, Schuyler, Marvin, and others, are not mentioned in it.

The work contains three excellent maps and a number of very graphic illustrations, but the text is of poor quality. Its style may be judged from the following extracts:

"Afghanistan is a genuine society of different nations, although the greater part are of Persian descent. The strongholds of the German self-protecting federations are here produced on a large scale."

"It is apparent that the Russians near Herat stand practically at the 'forks of the road'; it is a three-pronged fork—one branch running due south to the sea and two branches due east to India. The first-named requires but passing comment, and only as it relates to Herat, planted on a route which cannot be controlled without its possession, for military and commercial reasons well understood."

In discussing the military features of the present situation the author is not more fortunate. He tells us that in the matter of cavalry Russia is "before all other nations, not excepting Germany"; whereas it is notorious that during the last war the Russian cavalry was very inefficient, with the single exception of that which accompanied Gourko in the first passage of the Balkans. We are further told that "the best Russian cavalry can travel seventy miles a day, continuously, without injury"; but the authority for this wonderful information is not given. A more serious mistake on a military question is the discussion concerning the forwarding of the troops via the Black Sea. A moment's reflection will show that when war breaks out, England will push her ironclads and cruisers into the Black Sea, either with or without Turkey's consent; and the route from Odessa to Batum will be closed. The troops will be transported down the Volga, and on the railroad leading through Vladikavkas to the vicinity of the Caspian. These are the routes upon which information would be very interesting, but they are not mentioned at all.

In short, the author labors under all the difficulties which are natural to one who has no well-grounded knowledge concerning the subject he is discussing. He has collected a certain amount of data, some of it useful and some of it irrelevant and without value; and has strung it together in a fragmentary and disjointed manner, entirely devoid of clearness of diction or brilliancy of style, which, if they existed, might serve to hide and gloss over the lack of judgment displayed in the selection of his materials.

An Outline of the Future Religion of the World, with a consideration of the Facts and Doctrines on which it will probably be based. By T. Lloyd Stanley. G. P. Putnam's Sons. 1884. 8vo.

To a certain class of minds there is something irresistibly attractive in the results of modern research into the ancient forms of Oriental belief. The discovery that so much of what we have been fondly accustomed to regard as distinctive of our own creeds and speculations was anticipated thousands of years ago; that in some of the oldest records of the human intellect men thought and reasoned as clearly and profoundly about the Unknowable and Unconditioned as they do to-day in all the light of modern science; that the great ethical truths were discovered and expounded as resolutely then as they have since been at any time—all this exercises on many men a fascination as deadly as that of the candle to the moth. To the eager searcher after unattainable truths, to the earnest believer in the perfectibility of man, there is an inexpressible and unfailing stimulus in the endeavor to coördinate the whole recorded experience of the human race and all its collective wisdom, and from this to work out in ultimate analysis some formula that shall serve to render life what it ought to be in this world, and shall fitly prepare us for a brighter existence hereafter. The attempt is a noble one and is always to be treated with respect, even though by the very nature of the case it be foredoomed to failure.

In fact, to the dispassionate thinker the revelations of ancient and forgotten wisdom, so far from being an encouragement for the future, are disheartening. So long as our retrospect was confined to classic times and the Christian ages, we could see, or think that we saw, a progressive, though interrupted, elevation in human thought and rule of action which might justify hopes that in the slow evolution of the future the re-

ligion of love might become paramount, that at least preventable evil might be banished from the world, and that man might realize all the possibilities of the better side of his nature. When we learn, however, how noble were the conceptions and the teachings of the Maharshis, of Zarathustra, and of Buddha, and how many generations of serene and lofty intellects in the forgotten past bequeathed their rich inheritance to those who only squandered or defiled it, the probabilities seem to be that human progress moves in cycles, and that we may be on the upward turn of a revolution which, in its mighty and unswerving course, may carry us again to the bottom, only to commence afresh the painful ascent. It was not without profound meaning that a phase of Mazdeism represented Zeruana Akarene, or Limitless Time, as the one supreme God, from whom sprang both Hormazd and Ahriman

Viewed thus in the sober light of historical experience, the speculations of scholars like Mr. Stanley can be regarded only as day-dreams—illusions born of desire rather than of reason. To look, as he does, for their realization within the next century argues an enviable capacity of hope, and one can only regret that he should not have devoted to some thesis more capable of demonstration the untiring industry and wide range of reading of which his volume gives evidence.

Musikalische Dynamik und Agogik. Lehrbuch der musikalischen Phrasirung auf Grund einer Revision der Lehre von der musikalischen Metrik und Rhythmik. Von Dr. Hugo Riemann. Hamburg: D. Rahter; New York: Westermann.

THIS new work by Doctor Riemann, the author of the best musical lexicon accessible to German readers, is one of the most important musical treatises of the century; and no student or teacher of music can read it without immense profit. Its aim is nothing less than to establish a new musical discipline, and to introduce a much-needed improvement in our system of notation. The words *Dynamik* and *Agogik*, used in the title, refer respectively to the gradations in the loudness and in the time of a musical phrase. In a general, vague way such gradations are indicated in music as now printed; but Doctor Riemann insists that they should be more definitely indicated, for on them depends the art of phrasing and playing with expression. Those who believe that a pupil cannot be taught to play with the proper accents and expression, or phrase correctly, without "having it in him," will be surprised on reading this book to see how much could be done in facilitating the acquisition of these arts. "As a matter of fact," the author says (p. 267), "the indicating of the phrases and motives is nothing else than musical punctuation, just as musical execution is nothing else than musical declamation"; but in our present system of notation there are no definite signs whatever to indicate the articulation of motives, and the proper mode of phrasing. Bülow, Lebert, Klindworth, and others have made attempts to remedy this matter by the use of extended *legato* signs, without accomplishing the desired reform. Doctor Riemann has, therefore, prepared an edition of the pianoforte works of some of the classical masters, in which the modes of dealing with rhythm, metre, and tempo, as explained in the present treatise, are applied practically. They are published at Berlin by Simrock. Doctor Hans von Bülow, in a letter to the author, expresses his regrets at "not having been instructed on such a rational method, which would have saved me many years of amateurish groping about (*Irrlichtelirerei*)"; and he attests that Riemann is a full quarter of a century in advance of his predecessors. "I had, indeed," he adds, "expected an important, mature work of the author, as of one of the few musical pedagogues who can boast of being equipped with all the culture of their period; but I had not expected the union of so much thoroughness, precision, and general excellence with a minute subtlety in the presentation and solution of every imaginable problem in the art of playing the pianoforte."

The details of Doctor Riemann's innovations cannot very well be explained without the use of illustrations in musical type; but if the *Musical Courier* or some other periodical would summarize the results of his treatise, a very great service would be done to students who do not read German.

BOOKS OF THE WEEK.

Architecture Simplified; or, How to Build a House. Chicago: George W. Ogilvie.
Bamford, J. M. Elias Power, of Ease-in-Zion. Phillips & Hunt. 80 cents.
Benson, L. S. Philosophic Thought in all Ages; or, the Bible Defended from the Standpoint of Science. Introduction by Dr. Howard Crosby. The Author.
Black, C. F. Essays and Speeches of Jeremiah S. Black. With a Biographical Sketch. D. Appleton & Co.
Bower, F. O., and Vines, S. H. A Course of Practical Instruction in Botany. Part I. Macmillan & Co. $1.50.
Brown, Susan Anna. The Invalid's Tea-Tray. Boston: J. R. Osgood & Co. 50 cents.
Caird, Prof. E. The Social Philosophy and Religion of Comte. Macmillan & Co. $1.75.
Century Illustrated Monthly Magazine. November, 1884, to April, 1885. Vol. XXIX. The Century Co.
Cervantes. The Ingenious Gentleman Don Quixote of La Mancha. Introduction and Notes by John Ormsby. In 4 vols. Vol. I. Macmillan & Co. $3.50.
Channing, Eva. Pestalozzi's Leonard and Gertrude. Boston: Ginn, Heath & Co. 60 cents.
Dodge, T. A. Patroclus and Penelope. A Chat in the Saddle. Boston: Houghton, Mifflin & Co. $3.
Douglas, Prof. R. K. China. Illustrated. Boston: D. Lothrop & Co. $1.50.

Henry Holt & Co.'s New Books.

MORE NEW ARABIAN NIGHTS, by ROBERT LOUIS STEVENSON, containing "The Dynamiter," etc., are now ready in the Leisure Hour Series, $1, and the Leisure Moment Series, 30 cents.

KINLEY HOLLOW, a tale of Early Connecticut, by G. H. HOLLISTER, is ready in the Leisure Moment Series, 30 cents.

THE COMPLETION OF TAINE'S FRENCH REVOLUTION has just been effected by the issue of the third volume. 12mo, cloth, $2.50.

COL. GEORGE E. WARING'S 'HOW TO DRAIN A HOUSE,' in city or country, brief, plain, and practical, is in great and increasing demand. 16mo, $1.25.

DOBSON'S 'AT THE SIGN OF THE LYRE,' a new volume of poems in the same vein with his Favorite 'Vignettes in Rhyme,' is sharing the favor of that volume. 12mo, $2.

FARRAR'S MILITARY MANNERS AND CUSTOMS consists of information on such subjects as the numbers slain in modern and earlier warfare, poison in war, destruction of crops and fruit trees, murder and starving of prisoners and surrendered garrisons, torture of non-combatants, employment of barbarian troops, massacres, mutilations, curious vows of knights, robbery as an object of war, fortunes made by privateering, unlawful methods of war, barbarous reprisals, fairness of stratagems, bloodhounds, infected clothes, influence of the press and of the writers on international law, and of the church, military discipline, punishment, armies raised by contractors, and the soldier's moral responsibility. 12mo, $1.50.

NEARLY READY:

LETTERS OF THE CHEVALIER DE BACOURT, French Minister to the United States about 1840.

TURGENIEFF'S MEMOIRS OF A SPORTSMAN.

MRS. ALEXANDER'S 'A SECOND LIFE.'

PROF. WM. G. SUMNER'S POLITICAL ESSAYS.

PROF. ALEXANDER JOHNSTON'S STUDENTS' HISTORY OF THE UNITED STATES.

PROF. WM. D. WHITNEY'S BRIEFER GERMAN GRAMMAR.

*MIND READING AND BE*yond, by William A. Hovey (price $1.25), says the *Boston Advertiser*, "will be regarded as a valuable and welcome addition to the recent literature of the subject."

*THE COÖPERATIVE COMMON*wealth in its Outlines. An Exposition of Modern Socialism. By Laurence Gronlund. Cheap edition, paper, 25 cents.

"The best expose of the subject ever written," says the *N. Y. Sun.*

NEW ILLUSTRATED EDITION.

SELECT POEMS. By Harvey Rice. Price $1.

"The brain of a poet conceived these verses," says the *Commercial Advertiser, New York.*

NEW EDITION. Paper, 50 Cents; Cloth, $1.

THAT HUSBAND OF MINE.

*** One of the most famous books ever published on this continent.

Sold by all booksellers; or mailed, postpaid, to any address, on receipt of price.

The Nation.

NEW YORK, THURSDAY, MAY 21, 1885.

The Week.

MR. VILAS has sent a circular out to the Democratic members of Congress from Ohio, Indiana, and Virginia, touching the removal of those postmasters who hold office under his appointment. There are about 49,000 of them, and their salaries range all the way from $1 up to $1,000. They are all or almost all Republicans, and a considerable number of them "offensive partisans." The Postmaster-General thinks, and most people will agree with him, that their all being Republicans is a gross abuse, and all politicians are of opinion that country postmasters are very valuable electioneering agents for the party to which they belong. This all means, of course, that the 49,000 stand greatly in need of reform. In what manner they should be reformed—that is, in what manner they should be weeded out, so as to divide the post-offices among members of both parties with some degree of fairness—it is very difficult to say. The Postmaster-General has considered it a good deal. We take it for granted that he has no such thing as a "clean sweep" in his mind—that is, he does not contemplate doing away with a gross Republican abuse for the purpose of putting a Democratic abuse in its place. The circular in question simply intimates his intention to go to work now, and as soon as possible remove "the offensive partisans" in every Congressional district, and asks the members of Congress to assist him in singling them out and filling their places with Democrats.

There are, it seems to us, two mistakes in the circular. One is in marking it "Confidential." It is absurd to suppose that a document of this kind, touching an important piece of public business all over the country, could be kept private. Accordingly it is in all the newspapers a fortnight after its date. Moreover, marking it "Confidential" made it look as if there was something in it which it was desirable to conceal, which is not true. There is nothing in it which ought not to be known far and wide. The views of the Postmaster-General concerning the manner in which he means to rid the service of offensive Republican partisans and fill their places, deserve the widest publicity. It is a process which ought to be performed under everybody's eye, and which everybody ought to understand. The second mistake is sending the circular to members of Congress, and supposing that any efficient aid in any process of purification can be obtained from them, or any trustworthy advice touching the merits of local office-holders. As a rule, they are the very worst counsellors an appointing officer can have, because ninety out of every hundred of them are far more interested in building up some kind of local machine of their own than in making an efficient service. Mr. Vilas has called on them to furnish proof of partisanship against local postmasters, such as the active editorship or proprietorship of a party newspaper, stump speaking, or "work" in campaigns, or the use of the post-office as a political headquarters. These are are all good reasons for removal, and possibly Mr. Vilas may get them in a trustworthy shape from Senators and Representatives, but the notion that these will recommend substitutes who will not be partisan, or who have special fitness for the office, will, we think, be found chimerical. Moreover, this formal and systematic handing over of the post-offices to the members of Congress will, we fear, strengthen and spread that popular belief in the superiority of "influence" over all other agencies in getting public offices, which is the greatest difficulty with which any reforming Administration has to contend.

The President has set an excellent standard for Southern appointments in his selection of a Postmaster at Richmond, Va. Three active Democratic politicians organized campaigns for the capture of this office in the usual way, with delegations to push their claims. Mr. Cleveland gave them a hearing, and then appointed another man who, while a good Democrat, has never been a professional politician, but who was heartily endorsed by the larger portion of the business men on the ground of his superior fitness. Of course there can be no question that the public interests will be better subserved by the choice of such a man than by giving the place to a mere spoils-seeker. There is as little question that the advantage of the Democratic party is equally consulted. The preference of any one of the three politicians over the other two would inevitably have created dissensions, while all hands are prepared to accept a first-class outsider as a happy compromise. There are abundant signs that many Southern Democrats have mastered this lesson. Representative newspapers frankly say, to quote the Wilmington (N. C.) *Star*, that "the South does not desire or ask that Democratic partisans who will make their offices political machines shall be put in power"; or, as the Savannah (Ga.) *News* puts it, "We do not want extreme partisans in the offices." It is rather odd that the Bourbons who champion the spoils theory of politics should be more numerous among Northern than among Southern Democrats; but the evidence seems conclusive that "the New South" is ready to embrace the new theory of politics.

There could not be a more impressive proof of the growing strength of civil-service reform than the action of the Democratic party in Ohio regarding appointments to State offices during the past year. The Legislature which recently adjourned has been severely criticised for sundry of its acts. Indeed, there seems reason to believe that it has incurred a somewhat worse reputation than it really deserves. However this may be, there is no doubt about its having been a representative Democratic body, and as little about its having no special fondness for reform doctrines. Yet the upper branch of this Legislature, in which the Democrats had more than a three-fifths majority, unanimously approved the appointment by Governor Hoadly of an excellent man as State Geologist, despite the fact that he was a Blaine Republican, as well as the selection of a Mugwump for State Librarian. Moreover, the Governor has adhered from the beginning of his Administration to the policy of giving the Republicans two out of five members of every board of officials which he has appointed, and he has done this with the approval of his party. There is perhaps no State where both parties have been so slow to recognize the public demand for a business-like conduct of the Government as in Ohio, and the late Legislature showed its lack of sympathy with this reform by making Mr. Pendleton's connection with the movement a chief reason for refusing him a reëlection to the Senate. Yet so strong is the force of public opinion, that this body has been constrained to support a liberal-minded Democratic Governor in making appointments based upon non-partisan principles of administration.

The *Tribune* of Sunday gave publication to a very remarkable theory for the great popularity of the "war papers" which have been running for several months in the *Century* magazine. It is that Mr. Cleveland and his Cabinet have been "fanning the flame of excitement" by their appointments, the reappearance of so many Rebel brigadiers at the front arousing the old Union sentiment to a very high pitch. "The feeling excited by their acts," says the *Tribune*, "has had this effect, and the *Century* has had the greatest benefit from their blunders. Perhaps next autumn we shall see how much benefit the Republican party has received." The profound wisdom of these observations becomes apparent when it is remembered that more than half the war articles in the *Century* have been written by ex-Confederates, and that a large part of the increased circulation which they have secured for the magazine is in the Southern States. If the President and his Cabinet are "fanning the old Union flame" in this way, they are doing a great and patriotic thing; but we do not see how it is going to benefit the Republican party next autumn—that is, the *Tribune's* variety of Republican party.

Scarcely a week passes which does not bring some new sign of a growing liberality of feeling among Southern whites in their attitude toward the blacks. The fact that a colored bishop of the Methodist Church delivered a sermon in the white Methodist church in Minden, La., on Sunday, which "was pronounced an excellent one by all," is such a sign, for it is only a few years since white men in Louisiana would indignantly have refused to sit under the ministrations of a "nigger." A more important manifestation of broader views was the action of the Episcopal Diocesan Convention at Columbia, S. C., last week. When this body met, two colored clergymen, who have been well educated and are successfully engaged in

church work in the State, took seats. Some old fogies among the laity promptly objected to their presence, and insisted that the term "clergyman," as used in the Constitution of the body, does not cover a man with a black skin. As one typical Bourbon put it, "the question was whether this was a white man's convention or not." After an exhaustive discussion, which covered the better part of two days, the negroes were allowed to retain their seats. This is the first time that black men have been admitted to such a convention in South Carolina, and their admission marks a distinct advance in public sentiment. It is worthy of note that the growth of more liberal views regarding the social treatment of the negro was never before so rapid as it has been since the Civil Rights Bill was declared unconstitutional by the Supreme Court. The attempt to enforce social equality by law was a dismal failure, which it is now easy to see postponed, instead of hastening, the day when an educated public sentiment would secure fair treatment for the black man.

The meeting of the National Commercial Convention at Atlanta this week is noteworthy for the fact that such a gathering is held in a Southern city. Nothing can do more to promote a general acceptance of sound business principles than such discussions as are announced for this convention by representative men from all parts of the country. There is still too strong a tendency toward the maintenance of sectional lines in what are essentially non-political matters. For example, Southern men, as a rule, oppose a national bankrupt law, while the North —or, at least, the eastern portion of the North— favors such a system. Much of the Southern opposition grows out of ignorance, prejudice, and provincialism, arising from the somewhat isolated attitude which the South has long occupied. No better way to secure the acceptance of progressive policies could be devised than the meeting of business men from both North and South in a Southern city, and a frank interchange of views upon subjects like the question of a bankruptcy law and the continued coinage of silver, regarding which they disagree. Atlanta is the ideal spot for such a convention, since it is beyond question the most enterprising place in the whole South.

The tide of immigration continues to ebb. The arrivals at the chief ports during the ten months ending with April aggregate but 275,468, as against 371,625 during the ten months ending with April, 1884. At this rate the total for the fiscal year which closes on June 30 will be only about 385,000, or scarcely half the aggregate for the twelvemonth ending with June, 1882. The influence of business prosperity and depression is always plainly visible in the statistics of immigration. During the flush times which followed the war, the total kept rising until it had reached 459,803 in the year ending on June 30, 1873. The panic arrested this movement, and the aggregate kept sinking year by year until it had fallen to only 138,469 in the fiscal year of 1878. As business improved, the pendulum began swinging the other way, and this time it went further than ever before, the number of immigrants during the twelve months which closed with June, 1882, reaching the enormous total of 788,992. From this lofty mark it fell in the next year to 603,322, and in the following one to 518,592, with the prospect of coming this year well within 400,000. So vast, however, has been the influx during the five years since the last national census that, even if the growth of the country by immigration during the remaining half of the decade should be very slight, the increase of our population from this source between 1880 and 1890 will still be larger than for the previous ten years.

That a marked change has come over the drinking habits of the American people during the past generation, no observant person who has passed middle life is likely to deny, but few people have any just conception of the transformation which has been effected. Some statistics recently published put the thing in a nutshell. In 1860 the United States contained, in round numbers, 31,000,000 people, who consumed over 86,000,000 gallons of spirituous liquors, while in 1884, with a population of 55,000,000, the manufacture and excess of imports over exports were only 73,000,000 gallons —that is to say, while the number of people in the country has increased more than 75 per cent. since 1860, they use 15 per cent. less of spirits. On the other hand, the consumption of malt liquors has risen from 100,000,000 gallons in 1860 to 590,000,000 gallons last year, and that of native wines from 1,800,000 gallons to over 17,000,000 gallons. It should be explained that the amount of spirits manufactured last year fell much below the average, by reason of previous overproduction of whiskey and the consequent depression in the trade. But even if the figures of manufacture during the years of such overproduction, when 20,000,000 gallons more were distilled than in 1884, with a reasonable allowance for illicit production, be taken as the rate of consumption, they still leave the proportion to each person far below what it was twenty-five years ago. The substitution of the lighter for the heavier drinks which these figures demonstrate to have been made during the past quarter of a century, is a social fact of great significance.

The absurdity of our present diplomatic system could not be more forcibly illustrated than in the experience which the State Department is having with an Indiana politician. B. W. Hanna is a typical Western Democrat of the old school, who is well versed in the art of running caucuses and fixing conventions, but is wholly provincial in all his ways. He is the sort of man to applaud heartily the famous inquiry which Stanley Matthews propounded in a speech on the silver question a few years ago: "What have we to do with abroad?" and belongs to a class whose narrow vision and lack of cosmopolitan ideas peculiarly disqualify them for efficiently representing this Government in a foreign land. But Mr. Hanna concluded that he would stand a better chance for getting an office outside this country than at home, and so put in an early application for a place in the foreign service. His original demand reached as high as the important Mexican mission, but his first, his second, and his third choices went to other applicants. Finally the Administration offered the persistent Hoosier the position of United States representative at Teheran. This office is now creditably filled by one of the very few men in the Western world who have made a thorough study of Persia, Mr. S. G. W. Benjamin, and there was something very ludicrous about the notion of sending as his successor a wild Western politician, who had but the vaguest idea in what part of the globe Teheran is. However, Hanna consulted atlases, studied gazetteers, and investigated routes and cost of travel, with the result of finding that he could not possibly take his wife and children over there and support them on the salary. So he has applied for a change from Persia to the Argentine Republic, the latter country being more easily reached, and the salary of the Minister at Buenos Ayres being $2,500 a year more. Hanna knows no more about the Argentine Republic than he does about Persia, and is the last man whom an enterprising American business firm desiring to cultivate closer relations with a South American country would send thither. It will not be strange if he gets the place— there are plenty of precedents in past Administrations for such appointments—but the fact that such persons are likely to be sent to Persia or South America shows what a farce our diplomatic system has become.

Our old friend, the Tory Squire, who writes to the *Tribune* from London, is much troubled by one of those things which now most occupy his "mind," namely, "the order of diplomatic precedence." The Squire himself doubtless suffers a good deal at the great houses at which he is occasionally allowed to eat, by what he calls "an uninterrupted view of the backs" of his fellow-guests when going in to dinner. That is, he is doubtless almost always the last man allowed to enter the dining-room at English dinner parties, or, as he also expresses it, he "forms the bob to the kite." This does not wound him, perhaps, but it makes him envy people who take precedence of him, and long to be able himself to take precedence of somebody, when John Thomas announces dinner, and makes him awfully sorry for anybody who is likely to be no better off when he comes to London than he is himself. He accordingly put into his letter on Sunday half a column of lamentation over the condition in which Mr. Phelps will find himself in London in the matter of precedence. He says that Mr. Phelps will be "entitled to an uninterrupted view of the backs of twenty-three ministers and seven ambassadors at court and elsewhere. When he calls upon Lord Granville at the Foreign Office seven ambassadors and twenty-three ministers will have the right to go in before him." This scene of horror, however, we must remind the Squire, as a matter of fact, will never be witnessed. The seven ambassadors and twenty-three ministers will never collect at the Foreign Office on the same day and hour, just to show Mr. Phelps their "backs." Most of the ministers never have any business to transact with the Foreign Office, and Mr. Phelps can always get

rid of the others by asking for an appointment. Consequently we do not think it would be worth while, as the Squire suggests, to make Mr. Phelps a full ambassador, or, as he expresses it in his fine language, "to enlarge the legation into an embassy." It might make the Squire's tittle-tattle seem a little more valuable if he picked it up at the "American Embassy" than when, as now, he picked it up at a plain "Legation," but he must not expect legislation to dignify his calling.

The truth is, that no inconvenience has ever resulted from the failure to make ambassadors of our foreign envoys. The distinction between ambassadors and ministers-resident established by the Congress of Vienna is a ridiculous one, which ought to be abolished, as a great deal of the old frippery in the way of display which used to surround ambassadors has been abolished. It means nothing except that the ambassador is supposed to represent in a greater degree than the Minister "the person of his sovereign." But there is no reason why he should. Each is a diplomatic agent sent abroad to transact any business that may come up between the nation he represents and the one to which he is accredited, and this is a business age. What the United States ought to insist on, if the matter be worth taking up at all, is the substitution of a real distinction between ministers, based on the rank of the nations they represent, for the present one between ambassadors and ministers. The European Powers recognize this distinction at all conferences and congresses, by admitting delegates only from the "great Powers"—that is, by deciding that nations rank according to their wealth and population. Americans abroad, who are in pursuit of "society" at European capitals, no doubt are often pained at seeing their Minister in a secondary position at court dinners and receptions; but the Squire's remedy is not the true one.

The *World* knows its own affairs best, and probably finds that the manful stand it now makes against aristocracy on this continent, in all forms, is a remunerative business. But the boldest democrat of us all lives under the general law of humanity, that you must never be ignorant or silly when you can help it. Of this great law the *World's* comment on Mr. Lowell's dining at Windsor by "the Queen's command" is a distinct violation. It holds that when he received "the Queen's command," he ought to have behaved like a common blackguard, by sending her word that he had no "commands" to receive from the likes of her, and have left her "to put somebody else before his plate." The term "command," we beg to inform the *World*, is the name the English give to a royal invitation, just as "her Majesty" is the name they give to the Queen's person, about which there is no more "majesty" than about that of any other well-bred and elderly widow. But a royal invitation to dinner is not a command in form. It is an invitation which the Lord Chamberlain or Comptroller of the Household says he is "commanded" to send, and such as any gentleman receives from a friend. These things are perhaps hardly worth knowing by democrats in general, but it is the duty of every democrat who proposes to write blatherskite about them in the newspapers to get himself up in them.

Censuses taken by the police are never to be implicitly accepted, and the enumeration of the District of Columbia just made through this agency may very likely stretch the facts a little in placing the total number of inhabitants at about 204,000. At the same time this does not involve a more rapid rate of growth since 1880 than that which held during the previous ten years, so that there is nothing improbable in the figures reported. No city in the country has undergone a more complete transformation during the last quarter of a century than the national capital. In 1860 it had only 75,000 people, and was nothing but a straggling, unkempt, overgrown village. In 1885 its population exceeds 200,000, and it has become a beautiful, well-kept city, with the promise of constantly developing fresh attractions in the future. Its agreeable climate draws each year a larger number of winter residents, and people of leisure find it growing all the while more pleasant as a place for spending the cooler months. As the city increases, the wisdom and beauty of the elaborate plan upon which it was laid out become manifest, and admiration grows for the mind which, amid the struggling beginnings of a new government, could devise the scheme of a capital which should forever be worthy of a great nation. Time was when people used to talk about a removal of the seat of government to some other place; but that day has gone by.

The revised version of the Old Testament, which has just been published in London, has not been awaited by the religious world with any such eager interest as that which attended the appearance of the new version of the remainder of the Bible four years ago. A mild curiosity has been felt as to the character of the changes which the revisers would introduce in the common version, and the summary which is cabled justifies this attitude. Such a summary, of course, furnishes no basis for careful criticism. The impression which it makes is, that the revisers have done their work with a proper respect for the great achievement of those men who nearly three centuries ago made a translation which has stood the test of time better than any other like literary achievement. Some familiar passages take on a new face. "Thou shalt not kill" is transformed into "Thou shalt do no murder"; the oft-quoted desire of Job, "that mine adversary had written a book," conveys a very different idea when made to read, "that I had the indictment which my adversary hath written"; while the expression "vanity and vexation of spirit" loses its old significance when changed to "vanity and a striving after wind." The "friends of eternal punishment," as somebody has described the champions of the Calvinistic theology, will hardly relish the replacing of "hell" by "sheol," "the grave," and "the pit." The form of arrangement has been much changed and distinctly improved, by a more rational division into paragraphs; by the use, when desirable, of the dialogue form, and by the printing of the Psalms and kindred portions of the volume in poetical form.

The capture of Riel by General Middleton puts an end to the Northwest rebellion. There may be a little further trouble with the Indians, but it will be easily overcome. They have not joined the revolt in large numbers, the greater portion of them having remained quietly on their reserves, resisting all appeals from Riel to make an alliance with him. What the Government should do with its prisoner will be a perplexing problem. He himself said only a short time ago that if the Government caught him this time they would not let him go alive, as they did after his former rebellion; but it is difficult to see what could be gained by executing him. His life would be no recompense for the loss of the lives of the brave Canadian militiamen whom his followers have shot, and the taking of it would so infuriate the already hostile French Canadian element that a serious internal trouble might be precipitated in the Dominion. At the same time, it will be useless to banish Riel, for he can get back into the Northwest territory without the slightest difficulty whenever he chooses.

Alexander Karageorgevitch, the ex-Prince of Servia, is dead, and his son Peter, as Hungarian papers report, has gone to St. Petersburg to seek support for his claims to the now royal throne of that country. There is no doubt that the Czar would prefer having a Karageorgevitch on that throne to the present occupant, King Milan, of the House of Obrenovitch, though Russian intrigues were active in causing the deposition and banishment of Prince Alexander in 1858, and Russian military aid raised Milan to the degree of power which enabled him to assume in 1882 the title of King. Russia has almost always been on the side of the pretending party, as against the one in possession, in the perennial feuds between the two dynastic houses of Servia, both of which owe their elevation to liberators of the country from the Turkish yoke—the one to Kara (or Czerny) George, and the other to Milosh Obrenovitch; for the holders of power have almost always been driven by the pressure of circumstances to lean upon their neighbor, Austria. Moreover, none has done so more unreservedly than Milan Obrenovitch, though far from owing any patriotic gratitude to the rulers of Austria-Hungary. Prince Peter is, besides, the son-in-law of the Prince of Montenegro, Russia's stanchest ally in the Balkan Peninsula. In spite of all this, the claimant of the House of Karageorge has very slim chances of being effectively encouraged at St. Petersburg, for Servia occupies now in the Balkan Peninsula, diplomatically, between Russia and Austria-Hungary, the same position which was assigned some years ago to Afghanistan, in Asia, between Russia and Great Britain—that is to say, she has been practically acknowledged to be outside of Russia's sphere of political influence. And as Austria-Hungary is backed by all the diplomatic potency of Bismarck, the Czar and his advisers will be more careful not to infringe upon the *modus vivendi* established there than they show themselves in regard to the arrangements concerning Afghanistan.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 13, to TUESDAY, May 19, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday appointed Ferdinand F. Dufais, of New York, to be United States Consul at Havre.

Several days ago a delegation from the Order of Good Templars of the District of Columbia left with President Cleveland a written address, urging him to make diligent inquiry into the personal habits and associations of the persons he should appoint to offices in the District, and to see that the statutes enacted for the government of the District, especially those relating to the regulation of the liquor traffic and the suppression of intemperance, be properly enforced. In reply to the address the President writes: "I read your address late last night with great interest. It is something tangible, and if all men would come to me as you have, my labor would be greatly lessened. The temperance people are good people and friends of law and order. Before I left New York I determined to give the District a good government, but there are so many conflicting claims that I am sometimes at a loss to know what to do; but you come with clear statements, of which I will take further notice."

S. S. Cox has finally decided to go to Turkey as United States Minister. President Cleveland on Thursday told a New York delegation that "the more resolutions you pass calling Mr. Cox a good man, the more I will hold on to him."

Admiral Jouett informed the Navy Department from Panama on Monday that, the rebels having been forced to retreat from Carthagena, Barranquilla is the only point on the Colombian coast where they now hold possession.

William R. Morrison, the Democratic caucus nominee, withdrew from the Illinois Senatorsh p contest on Thursday, after receiving the full vote of his party (101) on several ballots. The long deadlock in the Illinois Legislature was accordingly broken on Tuesday, when John A. Logan was elected, receiving the full Republican vote (103), a majority of the joint session.

Governor Hill on Wednesday sent a message to the State Legislature, recommending the passage of a bill to hasten the legal proceedings in cases where the death penalty is involved. Under the present law, intervals of one or two years between conviction and punishment are the rule and not the exception. The law recommended by Governor Hill makes an appeal direct from the Court of Oyer and Terminer to the Court of Appeals when judgment is death. The judgment roll and stenographer's minutes are made a case and exceptions, and the expense of printing is made a county charge. The Legislature, however, failed to pass the bill.

The last days of the Legislature at Albany were marked by the usual haste and inconsiderate action. On Wednesday the Senate passed the Arcade Railroad Bill. The Assembly on Thursday passed the bill limiting the height of buildings in New York city to seventy-five feet. The Supplemental Niagara Park Bill was also passed.

The Assembly on Thursday afternoon passed a bill fixing the Dock Commissioners' salary at $5,000, and their term at six years. The Underground Telegraph Bill was passed, so amended as to give to the Mayor, Comptroller, and Superintendent of Public Works the power of appointing the three commissioners who are to superintend the laying of the wires underground.

Friday was the closing day of the session. In the confusion of the last hours the Assembly passed the Brooklyn Bridge Extension and the Broadway Arcade Underground Railroad bills. The Senate also passed the Brooklyn Bridge Bill. An unsuccessful attempt was made to pass a State census bill. Both houses adjourned at noon with the usual ceremonies. Before the members had left the Capitol, a proclamation from Governor Hill was read calling an extra session of the Legislature to meet at 4 P. M. on that day, May 15, to consider such legislation as was necessary to carry into effect the provision of the Constitution providing for a State census.

When the Legislature met in extra session Governor Hill sent in a brief message saying: "The Constitution does not require a census; it does require an enumeration of the inhabitants. The bill providing for such an enumeration can be perfected and passed in a few hours if the Legislature is so disposed." In the Senate Mr. Jacobs introduced his bill providing for an enumeration, and it was ordered printed. The Assembly adjourned after adopting rules.

Twenty-seven boomers' wagons, each partly loaded with Indian supplies from Arkansas City, have gone into the Indian Territory, delivered their goods, and then moved on into the Oklahoma district, where they have located claims and begun farming operations. The boomers are exultant, and boast that they have outwitted the authorities. They number about fifty. A tornado struck the boomers' camp on Friday night and did great damage.

Judge Van Brunt, in the Court of Oyer and Terminer on Friday, gave his decision in the case of Harvey M. Munsell. He ordered that the juror should go to the county jail for thirty days and be fined $250, for contempt of court in going to the office of O'Donovan Rossa during the progress of the Short-Phelan trial.

Mr. Munsell was brought before the General Term of the Supreme Court on Tuesday on a writ of habeas corpus. Decision was reserved.

The appraisers of the late Wendell Phillips's estate report its value at $8,362.05. It include 45,000 shares of mining stock, now almost worthless, which had cost him a large amount.

Commodore Jonathan Young, Commandant of the New London, Conn., Navy-yard, died in New London on Sunday, aged fifty-eight years. He went around the world in the *Columbus* in 1845–6, and forced an entrance into Yeddo, Japan, to deliver a letter from the President to the Emperor. He took an active part in the war of the Rebellion, and in 1867 was recommended for promotion by the Board of Admirals on account of gallant and meritorious service.

Mr. Charles Welford, of the book-importing firm of Scribner & Welford, died in London on Monday at the age of seventy. He has represented the English interests of the firm since 1865. His literary judgment and knowledge were remarkable.

FOREIGN.

The Consolidated Fund Bill (the $55,000,000 credit) passed its third reading in the House of Commons on Wednesday afternoon.

Earl Kimberley, Secretary for India, has announced in the House of Lords that a plan has been officially sanctioned, involving an outlay of five millions, for railways and military roads, including a line to Quetta, for the defence of India.

The House of Commons on Thursday voted an annuity of £6,000 to Princess Beatrice in view of her approaching marriage.

It was reported in London on Thursday that Russia, though not formally rejecting the Afghan agreement, had demanded a reconsideration. M. de Giers wanted the boundary line fixed at the entrance to Zulfikar Pass, and to include Andkhui, and he agreed to sign the convention when the details were settled. Much irritation was felt over this in the British Foreign Office, but the rectification demanded was not considered of sufficient importance to lead to a rupture of the negotiations.

The British Cabinet have agreed on a new Coercion Act for Ireland. It involves the abandonment of the clauses empowering the suppression of meetings, the censorship of the press, the search of domicile, and the trial by judges without a jury. What will be retained of the old Crimes Act will be the power to change the venue of trials and to appoint special juries in certain cases; also, the right of examination and investigation in criminal cases wherein no persons are charged. This decision was reached after much discussion. A majority of the Cabinet was opposed to any renewal of the act, but Spencer and Harcourt compelled the present compromise by a threat to resign. Chamberlain and Childers headed the opposition to any renewal, Mr. Gladstone supporting their view.

Mr. Gladstone announced on Friday that the Government intended to deal during the present session with the Scotch Crofters' Bill, the Scottish Secretary Bill, and the Irish Crimes Act. He said he regretted that during the present session it would be impossible to deal with the Local Government of Ireland Bill and the bill relating to the purchase of land in Ireland. Referring to the Crimes Act, he said he would state, without entering into details, that the Government intended to embody various provisions in that act which they deemed to be both valuable and equitable. It is feared that the Cabinet may be beaten on the Crimes Act by a coalition of Radicals, Parnellites, and those of the Conservatives who follow the lead of Lord Randolph Churchill.

The Scotch Crofters' Bill, introduced in the House of Commons on Monday night, provides for security of tenure, means for the fixing of rent by agreement or by an official valuer, liberal compensation for improvements, and public loans for stocking holdings.

The House of Commons on Monday night entered into Committee of Supply on a vote of £3,360,500 on account of the vote of credit. Lord Randolph Churchill moved a reduction of £2,000,000 for the purpose of calling attention to Saturday's Blue Book on the Panjdeh incident. He said that the indignation aroused by a perusal of the despatches was not confined to the Tory party, but was shared by the country at large, and even by the Liberal newspapers. Lord Randolph maintained that M. de Giers had said nothing to justify Mr. Gladstone's statement in Parliament that it had been agreed that no further advance should be made on either side. Mr. Gladstone's reply was delivered amid continuous noisy Conservative interruptions. He stopped for several minutes, and in a breaking voice said that this new kind of political warfare was of little consequence to him whose personal presence was a matter of weeks rather than months. Lord Randolph's motion was rejected by 74 to 11.

The final instalment of the Granville-Giers despatches on the Afghan dispute will be issued during the Whitsuntide recess of Parliament. The Conservatives will postpone Parliamentary action until all the papers are presented. When Parliament reassembles, the Conservatives will move another vote of censure on the Government. This debate will be the last party demonstration before the final dissolution of Parliament.

The St. Petersburg *Official Messenger* on Friday published a report from General Komaroff to the effect that the Saryks are opposed to the new frontier line proposed by Lessar, claiming that it is an infringement upon their rights, and gives the best land in the disputed territory to the Afghans. A council of ministers was held, and it was decided to support the claims of the Saryks.

It is authoritatively stated in London that Russia demands Merutchak and Zulfikar Pass, the possession of which points the Amir considers vital to the integrity of the Afghan frontier. The *Morning Post* on Tuesday asserted that Lord Dufferin had written an alarming letter describing the disastrous effects in India of England's yielding to Russia.

In the House of Commons on Monday afternoon Lord Edmund Fitzmaurice, Under Foreign Secretary, announced that the negotiations which had been carried on with Spain for a

commercial treaty had terminated unsatisfactorily. The Government could only consider the recent action of Spain as a refusal to fulfil the fundamental conclusions of the declaration of the 21st of December, 1884, and Sir R. D. Morier, the British Minister to Madrid, had, therefore, been instructed to inform Spain that under the circumstances the negotiations were at an end. The object of the negotiations was to obtain for England the most-favored-nation treatment.

A riot occurred around the Nelson Monument in Trafalgar Square, London, on Wednesday afternoon. Ten thousand men had assembled to protest against the Government's proposal to increase the duties on spirits and beer. The crowd was very unruly, and the police found themselves unable to maintain order. The orators of the day attempted to speak from the monument, but could not be heard on account of the uproar. The police intervened to secure order, but were finally obliged, with the promoters of the meeting, to retire, leaving the crowd singing in triumph "Rule Britannia." About 9 o'clock the police, largely reinforced, charged the mob a number of times and made several arrests.

There is considerable indignation in Egypt over the proposed withdrawal of the British troops from the Sudan.

Negotiations are proceeding with Turkey for the latter's occupation of Suakim and the Sudan on the following basis: The Porte engages to assist in suppressing the slave trade and in developing external commercial relations. Besides the formal proposals made through Fehmi Pasha, if the Porte accepts, an English company will obtain the option of securing a concession to construct a railway to Berber, and will receive other trading rights. Earl Granville is also negotiating with the Italian Government concerning an alternative scheme for the occupation of the Red Sea littoral in the event of a failure to come to an agreement with the Porte.

General Wolseley has issued a farewell address in which he announces the withdrawal of the British troops from the Sudan, and highly praises the conduct of all the departments of the service during the campaign. Senaar has been cleared of rebels, and all reports show that El Mahdi is in the greatest straits.

Mr. John Bright, in answer to a letter from an American friend asking if England would return to the policy of protection, writes as follows: "Not until the United States return to slavery. England's present danger is in its foreign policy. The Tories and Liberals are equally blamable for the lunatic policy of adding millions to the military expenses of the nation while trade is depressed and the poor are badly housed."

Mr. Lowell and Mr. Phelps visited Windsor by special train on Tuesday. Mr. Lowell presented his letters of recall, and introduced his successor to the Queen.

Mr. Merritt, the retiring United States Consul-General at London, gave a farewell dinner on Thursday evening, welcoming his successor, Mr. Waller. Mr. Lowell and suite, Mr. Seligman, Bret Harte, and other Americans, together with numerous well-known commercial and literary gentlemen, were present. Mr. Lowell in his speech made a complimentary reference to President Cleveland. He urged all Americans to regard all Presidents as national, not as Presidents of any party.

Cunningham and Burton, the London dynamiters implicated in the Tower explosion, were found guilty on Monday. They were sentenced to penal servitude for life.

Pettit, the American, defeated Lambert, the Englishman, in a series of court-tennis games, for the international championship at Hampton Court, London. The playing ended on Friday, with a score of 7 sets to 5, in Pettit's favor.

F. J. Fargus, "Hugh Conway," the author of 'Called Back' and 'Dark Days,' of which several hundred thousand copies have been sold in this country and England, died on Friday at Monaco, where he has been ill for some time of typhoid fever. He was thirty-seven years of age. He was an auctioneer at Bristol, England, until the phenomenal success of 'Called Back' led him to devote his entire time to literature. He followed it with 'Dark Days,' a novel in a similar vein, and collected a number of his short stories in a volume, under the title 'Bound Together.' It was his intention after a short Continental tour to leave Bristol and settle near London.

Copies of the revised version of the Old Testament were distributed to the press of London on Friday midnight. The *Standard* calls it "a good, useful, learned work." The *Times* says: "The revisers have shown wide learning, scrupulous fidelity, and reverent caution, and the general impression is that the work will raise the Old Testament to its proper place as literature apart from dogma." The *Daily News* says: "The revisers have erred, if they have erred at all, on the side of obstinate conservatism rather than on the side of rash innovation." The *Athenæum* says: "The revision is a literary success. There are no pretensions to scholarly completeness, and practically no alterations in the text."

Minister Morton presented his letters of recall to President Grévy on Thursday. The latter expressed regret at his departure. Mr. McLane presented his credentials, and was cordially received. In the evening a dinner in honor of Mr. Morton was given at the Hôtel Continental, Paris. Two hundred prominent Americans and Frenchmen were present.

The reduced copy of Bartholdi's statue of "Liberty Enlightening the World" was on Wednesday formally presented by the American residents of the French capital to the Municipality of Paris. The ceremonies took place on the site of the statue, the Place des États-Unis. Mr. Levi P. Morton, on behalf of the American donors, made the speech of presentation.

Victor Hugo was on Monday reported alarmingly ill.

The German Reichstag has passed the Customs Tariff Bill. The duty on oxen imported for farming purposes was fixed at 20 marks for those under five years old, and at 30 marks for those over that age. The duty on fat cattle was made 30 marks. It levies a duty of 3 marks on rye. It will operate directly against Austria-Hungary, which has hitherto occupied the position of a favored nation like Spain. The Vienna newspapers are indignant, and express the belief that Prince Bismarck intends to make things so unpleasant as to drive Austria into a customs union with Germany. The Cabinet has resolved to reintroduce the Austrian Customs Bill.

Garibaldi's memoirs have been arranged and edited. At a family council it was decided to accede to the request of the Italian Government to delay the publication of the memoirs until ten years after the date of Garibaldi's death.

General Lew Wallace has declined an offer from the Sultan of a high position in the Turkish service.

News was received on Wednesday from Batoche, dated May 12, that Riel had suffered a disastrous defeat at the hands of General Middleton's forces. The despatch said: "Batoche was captured this afternoon after a short but desperate fight, in which many of our brave volunteers were killed and wounded. At half-past two o'clock the orders were passed round and all were in readiness. Soon after a rapid advance was made down into Batoche, the rebel stronghold. When within range of the rifle pits, the order to charge was given and it was made with tremendous British cheers. The rebels, who had reserved their fire, poured a volley into our forces. Without flinching, however, the brave fellows dashed in among the rebel pits, captured them, and drove the rebels down before them into the ravine. Desperate resistance was made from the cover of the brushwood. The blood of the volunteers was up, however, and after a sharp struggle they succeeded in clearing the rebels out. The rebels withdrew hastily to their final positions in the village. Elated by their success, our forces dashed down into Batoche. The rebels had hardly time to turn and make resistance before the troops were upon them, and in a short time they withdrew. The houses were all captured one after another, and all the prisoners held by Riel, seven in number, were found safe and were released." The Canadian loss was five killed and fifteen wounded.

Riel and his lieutenant, Dumont, deserted their men soon after the recent defeat at Batoche. The rebel troops thereupon became discouraged. Many of them came into Middleton's camp and surrendered. Colonel Otter will not attack Poundmaker's force until joined by General Middleton. News has reached Winnipeg that the Indians under Poundmaker have captured a train of thirty-one teams and twenty-one teamsters near Battleford. Ten teamsters escaped. A detachment of mounted police pursued the Indians and had a skirmish with them, but failed to recover any of the stores or prisoners.

Riel was captured on Friday by three of Middleton's scouts several miles north of Batoche. He said that he was coming to give himself up. He feared that he might be shot by his captors, and begged for a civil trial. Immediately he was taken to General Middleton's camp. The soldiers made no hostile demonstration. It is now believed that the rebellion is ended. There may be some trouble with Poundmaker's Indians.

Soon after the capture of Riel, Maxime Le Pine gave himself up. Good progress is being made with the preparations for marching to Prince Albert and afterward to Battleford. The latest statement of losses at Batoche is: Troops, 9 killed and 42 wounded; rebels, 81 killed, 173 wounded.

Major Boulton and 200 men have been scouring the country around Batoche in search of Dumont, Riel's lieutenant, but so far without success. He will probably escape to the British Hills.

A despatch published on Tuesday alleged that Colonel Otter on Sunday made an attack on Poundmaker, and, after a severe battle, captured him and took 129 prisoners. The battle was fought in Eagle Hills, and Colonel Otter made the assault against orders. Twenty-one Canadians and nineteen Englishmen were killed. The story is doubted in Winnipeg.

A treaty of peace and alliance was entered into between Honduras, San Salvador, Costa Rica, and Nicaragua, April 12. Two days later President Zaldivar, of San Salvador, issued a circular stating that as he only wished for peace and harmony, he had accepted, through the mediation of the several Central American States, a proposition proclaiming in Guatemala, as well as in San Salvador, a decree of general amnesty to all involved in the late revolution. President Zaldivar, besides exacting a war indemnity of $10,000,000, said that to maintain peace in future it would be necessary to dismember Guatemala, leaving to that country only sufficient land to equalize her strength and wealth with that of the other Central American States, and asked the other States to aid him in this project.

Subsequently to this President Zaldivar resigned and left the country. General Figuerda fills his place. This grew out of an unsuccessful effort on the part of Zaldivar to effect a Central American Union similar to that projected by Barrios. Before he left, however, General Menendez, who had taken part with Barrios in trying to establish the Central American Union, and who is a Salvadorian, had got up a revolution in the province of Santa Anna. He took Santa Anna on May 15, and Sansaria on Sunday.

THE MUNSELL CASE.

THE extraordinary proceedings in court on Friday before Judge Van Brunt must not pass without comment. To call the statement which the Judge read to the audience before sentencing Mr. Munsell an "opinion," in any judicial sense, would be an abuse of language. He was evidently laboring under great excitement when he read it, and it was, in both substance and form, nothing more than an expression by an audacious and angry man of his contempt for the newspapers and for public opinion. He treated the community last week—for the first time, we think, in the judicial annals of any civilized country—to the spectacle of a judge attacking a jury in a newspaper for not finding a verdict in accordance with his own opinion in a criminal case; and in doing so cast aspersions on men whose character in the community stands higher than his own. This done, of course he became nothing more than a party in a row in which the jurors were fully his match. But he was determined to get the better of them somehow, so he went back to the bench and had one of them dragged before him on a charge which, in its original shape, it is not speaking too strongly to say, was trumped up. It made Mr. Munsell (an American of the best standing) a strong sympathizer with Short, and so anxious to procure his acquittal that he visited him openly in the Tombs to arrange about procuring it, and went to O'Donovan Rossa's office to hold a consultation with him for the same purpose. Of this precious concoction, of which Mr. Martine, the District Attorney, seems to have been the author, not a shred remained on examination, except the fact that Mr. Munsell did visit Rossa's office, and looked in for a moment, holding the door-knob in his hand. There was not the shadow of evidence, however, that Mr. Munsell knew then that this was forbidden by law, or that his motives in doing it were not good. Judge Van Brunt thinks that he knew that he was doing wrong, because he admits in his affidavit that "he was particular not to shut the door, but held the door open, so that he could be seen from the hall during the whole time." To anybody but an angry controversialist this would seem, if true, complete proof of the man's innocence. He knew, as any one of common sense would know, that it would be improper to shut himself up in a room with Short's friends, and he was probably afraid, as any decent man would be, of being shut up in any room with the cutthroats who frequent O'Donovan Rossa's den.

The Judge's remarks on Mr. Munsell's going to Rossa's office were, however, evidently *obiter dicta*. His real charge was that on going out with the jury he argued in favor of acquittal. To prove that Mr. Munsell ought to be punished for this, Judge Van Brunt actually tried the case over again, and read an argument showing the untrustworthiness of Short's witnesses and the improbability of their story. Then came the following extraordinary passage:

"In view of this unparalleled credulity upon the part of this juror, and the interest which he evidently took, upon the retirement of the jury, in the acquittal of Short, it is but fair to assume that his visit to Rossa's office had been in some way the cause of a gross perversion of his judgment. It is fair to assume further—in view of the earnestness with which the juror adopted the prisoner's cause after he had obtained the information from Rossa's office, and of which the other jurors were ignorant, and which had operated so strongly in the clarification of his mind—that he made the most of his supposed superior knowledge, and that he became in the jury-room, not only a juror, but a witness testifying before his fellow-jurors, no one having an opportunity to hear his testimony or to contradict his evidence if untrue. He was thus enabled to impose with impunity upon his fellows, and from the result it seems to be safe to assert that he did so."

The meaning of this, in so far as such rant can have a meaning, is that a juror's disagreement with the judge about the evidence was proof of "unparalleled credulity"; and that to argue in defence of this view in the jury-room with his fellow-jurors was a crime. Technically, it was of course wrong for Mr. Munsell, during the progress of the trial, to put himself in possession of evidence which was not obtainable by the other jurors; but that the use of this superior knowledge, to influence the others, was "imposition on his fellows," is something which it is disgraceful for a man in Judge Van Brunt's position to assert. If Mr. Munsell had a store next to O'Donovan's office, and had become thoroughly familiar with the premises before the trial, there would have been not only nothing wrong in his instructing his fellows about them, but it would have been his duty to do so. Any knowledge a juror has of the facts of a case he is sworn to try, he is bound to use in consultation. What the law forbids is certain modes of acquiring knowledge during the trial. It does not forbid the possession, or use of it, when acquired. If a murder is committed in the hallway of a hotel, it does not silence a man because he has lived in the hotel and is perfectly familiar with the scene of the crime, when the other jurors are not.

In fact, it is plain from the Judge's own showing that Munsell's real offence was not his having gone to Rossa's office; this he would probably have punished as an indiscretion with a small fine. What has brought down on the juror the disgraceful and malignant sentence pronounced on Friday was his having gone back to the jury-room to argue for an acquittal. The Judge's speech leads irresistibly to the conclusion that, had he gone back to argue for conviction, no fault would have been found with him. His crime thus consists in his disagreeing with Judge Van Brunt. We doubt if there is a lawyer of standing and character in this city to-day, either on or off the bench, whom the Judge's performances in this case have not made ashamed or indignant. If there be no remedy for his abuse of his power, it shows there is a great defect in the law, which we trust will be cured. No man, whether judge or not, who has engaged in a newspaper controversy and lost his temper, is fit to sit in judgment on his antagonists afterward and deal out fine and imprisonment on them. Had Judge Van Brunt had a stronger sense of propriety, he would have seen this himself, and refrained from any action toward Mr. Munsell which could possibly bear the appearance of revenging himself on a man for not agreeing with him. His utterances, as well as his judicial action, in fact, constitute an attack on the independence of jurors which richly deserves punishment of some kind, stronger even than that which he is receiving in the reprobation of his own profession and of the intelligent public.

The Bar, of course, are the proper critics and accusers of corrupt judges. It is the lawyers only who practise before them who know the facts and can bring them out. They are often, we admit, quite willing to furnish the facts to the newspapers, but always with the injunction that "my name is not to be mentioned"—that is, they are quite prepared to enjoy the spectacle of a fight between an editor and a judge, but have no disposition whatever to take a hand in it themselves. We do not greatly blame them for this, human nature in New York being what it is. Most lawyers have very hard work to earn a living, and to quarrel with a judge is a pretty sure way of having the difficulty increased, particularly when a man's professional brethren are sure not to stand by him. If the Bar were here, as it is in England and France, a real corporation, in which every lawyer standing for his rights had the whole body at his back, the function of supplying the public opinion which keeps the Bench pure and decorous would be better performed by the legal profession than it is. In fact, as matters stand, it can hardly be said to be performed at all. Such escapades as Judge Van Brunt's last Friday show it.

We are, however, by no means disposed to hold the press blameless in this matter. Its influence, like the influence of the Bar, is greatly neutralized by the fact that it is primarily a money-making calling, in which the competition is very keen, and in which it is almost a rule of business that you must not agree with a rival, or adopt any of his opinions. If, therefore, one newspaper denounces an abuse, the others are very apt to be silent about it, or deny its existence. If one criticises a judge, the others—all in the way of trade—are very apt to maintain that he did just the right thing in the right way. The New York Ring had its newspaper defenders or apologists, almost up to the day when the members began to run away, largely because one newspaper was making a specialty of exposing it. On this state of things, of course, all abuses thrive, and the public suffers dumbly, and does not well see how it can help itself, except by the process called "a popular uprising"—that is, a brief outburst of fury when things have become so bad as to be absolutely unbearable.

THE WORKINGMEN AND THE CHURCHES.

THE *Independent*, the other day, undertook to answer a recent article of ours on the relations of the workingmen to the churches. This answer contained a good deal of irrelevant matter, and some theological scolding which it is hardly worth while to notice. What concerns us is its method of disproving our assertions. To make its task all the easier, it proposed to limit inquiry to the city of New York. Now, the alienation between the working classes and the churches in this city has gone to great lengths, but it is greatly exceeded by that in other cities, as Cincinnati, St. Louis, and Chicago. It is far from being accurate to assert, as does our contemporary, that if it can prove that

there is no great separation between the churches and the lower classes in New York, the case is settled for the whole country. But we will not press this, being content to meet our critic on his chosen ground, only insisting that we be held accountable for what we actually said, not for what it may be alleged that we said.

The method adopted by the *Independent* to procure evidence for our refutation, in our judgment, leaves much to be desired. Letters of inquiry were sent to all the Protestant pastors of New York. We are not told what the exact questions were which were put to them. From the specimen answers given we conclude, however, that each pastor was asked how large a part of his church was composed of workingmen; if it would be possible for a poorly-dressed man to force his way into any service, and how much "hostility" to Christianity he had observed among the lower classes. This was the best way, we are assured, to get at "the exact facts." But we must submit that the questions were only in small part directed to the point at issue—that being, not whether workingmen were "hostile" to the churches, nor whether the churches would welcome the poor who might come to their services, but simply whether, as a matter of fact, the working classes as a whole were not separated, and growingly so, from the churches. Nor can we agree with our contemporary that the evidence which it has collected in the way indicated may safely be made the premises for the most rigid argument. It seems to us to be clear that an indispensable part of a full investigation of the relations of the poor to the churches would be an effort to get the poor man's side of the question; that one desiring complete knowledge would have gone to the quarters of the city which furnish homes to the poor, and would have counted the number and observed the kind of Protestant churches to be found in those localities. In the absence of any such endeavor to get full and impartial evidence, we cannot share the confidence of the *Independent* that the answers to its letters have put an end to controversy.

Of course we do not know what was the full evidence collected, as it has been printed only in epitome. Several of the answers sent in are from the so-called pastors of mission chapels. Naturally their congregations are almost wholly made up of people in the lower walks of life. But it is surely pressing a mere technicality to identify this handful of mission chapels, which are not self-supporting, which are better described as charitable institutions than churches, with the distinctive Protestant churches of New York. In any case, it is to be remembered that they make up but a small percentage of the whole. Aside from them, and looking to the answers returned by the men who are the pastors of what is generally understood by the Protestant churches of this city, the result of the *Independent's* inquiry seems to us to confirm strikingly that sentence of ours which has drawn all this fire. Thus, many of the pastors directly admit that they have "none" or "very few" of the working classes in their churches. Others do all they can to help out their friend, the editor, by stretching the definition of a workingman so as to include clerks and servant girls, and replying that they have "as many as could be expected" of those classes. Still others boldly meet the case by affirming that it is an entire mistake to suppose that there are no workingmen in their churches, since they make it a rule to tolerate no distinction of classes, and they would gladly welcome working people to their services if any would come.

We are not willing to leave this subject without calling attention to evidence, bearing upon this matter, which seems to us much more full and pertinent than anything the *Independent* has published. We refer to the series of articles which have appeared during the last few weeks in the *Christian Union* on "The Home Heathen" of our cities. It can scarcely be that the facts arrayed in those articles have not fallen under the eye of our critic, though he has made no reference to them, so far as we have seen. We should think there would be a great deal in them very attractive to a person of his statistical turn. Especially significant, as bearing on the case of New York, is the paper of the Rev. A. F. Schauffler, which was published in the *Christian Union* of March 12, under the title "Godless New York." This writer is well known to the *Independent*, having its full endorsement, in fact, as one of the "men at the front," for he appears among its chosen witnesses to remark that he *did* find "hostility" to Christianity among certain classes of artisans. We have room to extract from the article referred to only the following evidence, which we hope will appear in the next reference which our contemporary makes to this matter:

> "We find," says Mr. Schauffler, "that the churches constantly tend to crowd their way into certain favored localities where, for various reasons, they can easily maintain themselves, and abandon utterly other and less favorable quarters of the city. For example, we can mark out south of Broome Street a locality in which 68,000 people live, where for twelve years there have been only two small English Protestant churches, one German church, and two small chapels. The Seventh Ward, on the east side, has 50,066 people and five churches and chapels, or one to every 10,000: the Fifth Ward, 15,845 population and two churches and chapels; the Fourteenth Ward, 30,071 population and two churches and chapels, equal to one for each 15,035 souls."

After these figures have been disposed of, we should be glad to see attention given to certain editorial utterances of the *Christian Union*, summing up the whole question. In its issue of April 23 it said:

> "These poorer classes, herded together in huge tenement houses, have been for the most part left alone by the Christian community. The population has been growing, and the church accommodations have been diminishing. In the city of New York, in 1840, one church to every 1,800; in 1880, one church to every 2,400. . . . These are the solemn, urgent facts. While we are sending missionaries abroad—and we are sending all too few—heathenism is making gains on our own shores and under the shadow of our own church steeples. These are the facts, the indubitable and unquestionable facts."

This would go to show that the *Christian Union*, together with the several clergymen who contributed to its columns the startling facts in regard to the religious destitution of the poorer classes in Boston, Cincinnati, St. Louis, Chicago, Philadelphia, and New York, is as badly informed as even we are, and is possessed of an amount of petty malice against Christianity that rivals our own.

CHAUCER AND BALZAC.

THE passage in the Prologue to the 'Canterbury Tales' in which Chaucer declares his intention with regard to the personages of his narrative—

> "Me thinketh it accordaunt to resoun
> To telle you al the condicioun
> Of eche of hem so as it semede me,
> And whiche they weren and of what degre;
> And eke in what array that they were inne"—

might well have been taken by Balzac as a motto for the forty volumes of his "Comédie Humaine." The purpose Chaucer entertained about his nine and twenty companions was the same that Balzac so marvellously carried out in his nine hundred and twenty—or, as he himself asserted, two thousand — portraits. And consequently in Chaucer's pages and in Balzac's volumes we find not only poetry and romance, but history as authentic and as vivid as in the sacrosanct Saint Simon himself. Finding that, we find too, what lies beneath all history—records of the essential qualities of human nature. But this human nature is painted by each artist under the lineaments of his own age, and the comparison of their respective portraits of the same character is instructive.

The thirty personages through whom Chaucer presents his world, display to us almost as large a range of natures, influences, positions, and relations as we study on Balzac's crowded canvas—as wide a range of *natures*, indeed, when we look from the Clerk to the Cook, from the Parson to the Wife of Bath, but a more limited range of *relations*, of the drama of life. The pseudo-civilization which Balzac, to use Mr. Arnold's words, "delineated with splendid ability," consists in great measure of the personal interchange of influences; and this was but a latent force in mediæval life.

The fact that they have both in many instances studied and drawn the same characters, as we just now implied, brings before us the differences between the England of the fourteenth century and the France of the nineteenth most strikingly. Whole categories of philosophic investigations and results become visible when we place opposite to the "young man," Balzac's perpetual hero, represented by him over and over again in infinite varieties of light and coloring, but always the "joli jeune homme," coming poor and "able" from the provinces to conquer the world in Paris or to be slain by it—when we place opposite to this multiform figure "the lover and the lusty bacheler" of Chaucer, who

> "Singing he was or fluting all the day;
> He was as fresh as is the month of May."

Much, too, is summed up in observing that the admirable figure of the Knight has no counterpart in Balzac. Never did his eyes rest on a representative of "knightly" qualities, of the love of "chyvalrie, trouthe and honour, fredome and curtesie"; or, at the best, on none better than the unhappy Colonel Chabert, whose nobleness is degraded by treachery and misfortune to the most pitiful destiny; or than the Marquis d'Espard, who, with all his lofty excellence, was far removed by his circumstances from one "ever honoured for his worthinesse."

On the other hand, one of Balzac's most conspicuous and often-repeated figures, "la grande dame," was either unknown to Chaucer or did not come within the scope of his plan. (The pretty Prioress, Balzac knew as Mademoiselle Ursule Mirouet.) And we have not in Chaucer the "soudard" and "viveur" Philippe Bridaud (one of Balzac's *chefs-d'œuvre*), nor Joseph Bridaud, his brother, the artist, nor any of Joseph's several confrères of different arts and professions, nor the old reprobate the Baron Hulot, nor the miser Grandet; nor, in return, among all Balzac's "avoués," and "justices de paix," and "présidents de la cour," is there precisely Chaucer's

"sergeant of the law," and among all his "gens de l'église" there is no abbot-like, hunting monk.

Nevertheless, the parallels are numerous, and are chiefly in that class of subordinate characters where some of Balzac's greatest successes were achieved. To enter into them in detail would require a volume. We can here only slightly indicate the points of most interest, merely suggesting them to those who care to study the two authors, and discover for themselves the deep meaning of the difference in their works.

The "poure persoun of a toun" may be compared with the "Curé de village," who equally was diligent

> "In siknesse and in meschief to visite
> The ferreste in his parische moche and lite";

but how alien is the whole tone of the English portrait to such relations of factitious authority and excitement as the French priest maintains with his guilty parishioner Jean-François Tascheron, and his noble penitent Madame Graslin.

The ruddy Frankeleyn who

> "At sessiouns ther was he lord and sire,
> Ful efte tyme he was knight of the schire,"

was in Balzac's day named Philéas Beauvisage, and was M. le Maire (of Arcis-sur-Aube), "whose face was like a full moon, but a jolly moon." "He liked good cheer and the things of an easy life; his wife provided for him the most exquisite wines, a table worthy of a bishop, and the best cook in all the neighborhood."

> "A bettre envyned [stocked with wine] man was no wher non."
>
> "Hit snewede in his hous of mete and drynke,
> Of alle deyntees that men cowde thynke."

César Birotteau, as "a business man," may stand for Chaucer's Merchant:

> "His resons he spak full solempnely."

We have the Clerk

> "Who lokede holwe and therto soberly"

in Athanase Granson, who "was a thin and pale young man of middle size, and with a hollow face, in which his black eyes, sparkling with thought, were like two coals. . . . His soul was contemplative: he lived more by thought than action. . . . His studies, carried on at the library of the city, escaped attention, and he buried in his soul his dreams of glory, as they might be prejudicial to him."

> "And he hadde geten him yit no benefice:
> Ne was so worldly for to have office."

The "doctour of phisik"—

> "In al this world ne was ther non him lyk
> To speke of phisik and of surgerye"—

is "l'illustre Desplein," the hero of 'La Messe de l'Athée,' where it is duly insisted on that

> "His studie was but litel on the Bible."

He is also Horace Bianchon, a frequently recurring figure in Balzac's pages, who was equally a "verrey parfit practisour."

The *commis-voyageur!* "a personage unknown in old times," declares Balzac himself. Unknown by such name, or precisely in such business, but "l'illustre Gaudissart," is he not in nature and modes of life twin brother to "the Lymytour"?

> "Ful wel beloved and famulier was he
> With frankeleyns over-al in his cuntre,
> And eek with worthi wommen of the toun.
> . . . . . .
> And overal, ther as profyt schulde arise,
> Curteys he was, and lowely of servyse.
> . . . . . .
> For though a widow hadde noght oo shoo
> (So plesaunt was his *In principio*),
> Yet wold he have a farthing or he wente."

"Would you know," says Balzac, "the power of the tongue, and the forcible pressure of phrases on the most rebellious pockets, listen to the speechifying of one of these great dignitaries of Parisian trade." And again, "Is he not the ring which connects the village with the capital, he himself being neither Parisian nor provincial? He is essentially a traveller."

> "He knew the tavernes wel in every toun."

All the first pages of 'L'Illustre Gaudessart' read like a mere amplification of Chaucer, and modernization. Balzac himself likens the *commis-voyageur* to "an unbelieving priest who talks only the better of his mysteries and his dogmas."

As a companion figure to "the Reeve" we must accept (in the person of Maître Chesnel) the intendant, the notary devoted to the interests of a family. Instead of

> "His lordes scheep, his neet and his dayerie,
> His swyn, his hors, his stor, and his pultrie,"

which

> "Were holly in this reeves governynge,"

it is more strictly money matters with which the intendant is concerned. But equally,

> "He by his covenaunt gave the rekenynge,
> Syn that his lord was twentl yeer of age:
> Ther coulde no man bringe him in arrerage";

and those who deceived and despoiled the Marquis d'Esgrignon,

> "They were adrad of him, as of the deth";

and of him most truly can it be said:

> "Ful riche he was astored prively.
> His lord wel coulde he plese subtilly
> To yeve and lend him of his owne good"—

"In two years Victurnien had received about eighty thousand francs from the poor notary." It is only the positions, not the characters of these two personages which are alike; and, curiously enough, that quality of attachment of inferior to superior which Balzac, in this very instance, speaks of as "feudal," and as something belonging only to the past (yet of which the many devoted servants he has drawn are, in some sort, other illustrations), is nowhere, either in the Prologue or the Tales, described or referred to by Chaucer.

We have no Miller from Balzac's brush; but he has painted the miller's dwelling in one of the most careful of his infrequent sketches direct from nature:

"A house adjoining a mill placed on an arm of the river showed between the tops of the trees its thatched roof decorated with house-leek. This simple structure had for its sole adorning some bushes of jasmine, honeysuckle, and hops, and all about were the bright flowers of phlox and of the most showy fertile plants. On the stonework which, held in place by clumsy piles, raised the roadway above even the greatest floods, were to be seen nets drying in the sun. Ducks swam in the clear basin which lay beyond the mill, between the two currents of water roaring in the sluices; and one could hear the teasing noise of the mill."

All this would seem very familiar to Chaucer.

For the Yeoman, the young squire's servant, Balzac gives us Michaud, the "garde-bois" of 'Les Paysans':

> "A forster was he sothly as I guess."

And the Ploughman—

> "A trewe swynker and a good was he
> Lyvyng in pees and parfit charitee"—

finds his mate in the old vine-dresser Niseron, (also in 'Les Paysans'): "As hard as iron, as pure as gold."

> "God loved he beste with al his hoole hearte
> At alle tymes, though him gamede or smerte"—

and sacrificed his only son on the altar of his Jacobin beliefs.

> "And thanne [he loved] his neighebour right as himselve,"

accepting poverty in place of a heritage to which he was entitled.

It is much to be lamented that Balzac, with his own practical proficiency in the culinary art, never painted a *Cook*. It would have been a great figure!

We have said that the ladies of high birth, and, in *his* eyes, high breeding, in whose portraiture Balzac delighted, and whom he prided himself on seeing and revealing *au fond*, have no counterparts in Chaucer, while Balzac's detailed descriptions of their minds and bodies, their natures and their circumstances, their thinkings and their doings, their sensibilities and their refinements, form a very large part of the "Comédie Humaine." But to Sainte-Beuve's inexplicable approval of his "delicious rendering" of them, the best critics of to-day are far from assenting, and find in his equally elaborate portraits of women of coarse natures and degraded life much more truth and power. And here he and Chaucer can be again compared together. The "fayre yonge wif" of the "Miller's Tale" is touched in with lines and colors curiously analogous to those constantly employed by Balzac; and lengthy quotations, if they could be made use of, would establish indubitably this point. But it needs no quotations to recall the figures of the Wife of Bath and of Madame Schontz, and it cannot be denied that they are of one family: they belong, if we may so say, to that family of "vermes" which, through all ages, repeat themselves by fissiparous generation.

Close as it has been seen some of these resemblances of conception are, it is evident that the differences are infinite. Balzac's volumes are among the few one can fancy "ordered" in the Elysian Fields, and sent out from the celestial "Mudie's"; and if Chaucer amuses himself with them, what strange reading he must find them! One imagines Sir Walter Scott, too, looking up from a page of 'Le Père Goriot,' and saying: "This isn't my world, and not yours, I think," and with what a laugh Chaucer echoes his words! M. Taine has said, "*Parvenir!* this word, unknown a century ago, is to-day the sovereign master of all lives." Balzac's ninety-seven tales are ninety-seven illustrations of this. They, one and all, with the exception of the 'Études Philosophiques,' describe lives engaged in a form of *striving*—the struggle, the scramble (half strength, half cunning) for a higher position—which was quite unknown to Chaucer.

ÉLÉONORE D'OLBREUZE.

PARIS, May 5, 1885.

THE history of Éléonore d'Olbreuze has recently been written, by Viscount Horric de Beaucaire, from new documents found in the French Foreign Office, in the library of the Swedish University of Lund, and in the archives of Berlin, Wolfenbüttel, and Hanover. In 1879 Schaumann wrote in Hanover his 'Sophie Dorothea, Prinzessin von Ahlden und Kurfürstin Sophie von Hannover,' and Dr. Koecher published the 'Memoiren aus Herzogin Sophie nachmals Kurfüstin von Hannover.' M. de Beaucaire has used these valuable materials and tried to complete a final biography of Éléonore d'Olbreuze. It is well known how this lady, attached as maid of honor to the Princess of Tarente, became acquainted with George William of Brunswick, and finally married him; and how their daughter, Sophie Dorothea, married her cousin the Duke George of Hanover, who became King of England.

M. de Beaucaire has taken much pains in writing the history of the Desmier family, to which he is himself related. Éléonore Desmier d'Olbreuze was born in 1639 at Olbreuze, between Niort and La Rochelle. The province of Poitou was, at the time of the wars of religion, one of the strongholds of the Protestant faith; the Desmiers were among the best families of this province. One of them followed Henri IV. in all his wars, and separated from him only when he "jumped the ditch." In vain did Henri IV., who was fond of him, ask him to stay near him and not go and "eat nuts in Angoumois." The branch of D'Olbreuze remained Protestant to the end. The father of Éléonore was a Huguenot, and brought up his children in the Protestant faith. There is a general belief that Éléonore d'Olbreuze was of humble origin; in reality, the Desmiers were related to the best families of the west of France. "This Duchess," wrote the

Duchess of Orleans to her German relations (when Éléonore became Duchess of Zell), "is of very low extraction; it would have been an honor for her to marry Colin, the first valet-de-chambre of Monsieur." This word was repeated in all the courts of Europe. But the Duchess of Orleans knew but little about the genealogy of the proud Huguenot families of Poitou, which were poor, lived on their estates, and were never seen at court.

The Electress Sophia, as well as the Duchess of Orleans, credited the opinion that young Éléonore d'Olbreuze entered the house of the Princess of Tarente in a very humble position. The title of Tarente belongs to the La Trémoilles, and the La Trémoilles were, with the Rohans, the greatest people in Brittany and in the west of France. They knew all about the Desmiers d'Olbreuze. They had an almost royal position, and it was usual for ladies of such families to take poor noblewomen as ladies in waiting, as queens and princesses do in our time. Éléonore d'Olbreuze stayed first in that capacity with the Dowager Duchess of La Trémoille, and we read in the memoirs of Charlotte-Amélie de la Trémoille that after the marriage of Marie-Charlotte with Bernard de Saxe (July 18, 1661), "Madame my grandmother resolved to go no more to Paris nor to court, but to end her days in the provinces, at Vitré or Thouars. This is why she separated from her two *demoiselles d'honneur:* she gave Maranville, who was the first, to Madame de Weymar; and she gave Olbreuze, who was the second, to Madame my mother." (These memoirs were published in 1876 at Geneva, by M. Édouard de Barthélemy.)

The Prince and Princess of Tarente were Protestants, and the Prince found some military occupation in Holland. Éléonore accompanied her princess to this country, and became acquainted with the princes of the House of Nassau and with many German princes. Grammont, when speaking of Mlle. d'Olbreuze, once said, "When we are tired of them at our court, they are still good enough for a German prince"; but Grammont was never very charitable. Éléonore's reputation was perfectly intact when she left France, and her conduct was irreproachable in Holland.

George William met the Princess of Tarente and Éléonore d'Olbreuze at the court of the Landgrave of Hesse in the winter of 1663-64. The wit and liveliness of the young Frenchwoman made a great impression on him; she inspired at the same time a passion in John Frederick, his brother. She was certainly a *grande coquette;* she could have played *Célimène.* On her return to Holland she began a correspondence with John Frederick, who had gone to Venice, and she wrote only letters "toutes pleines de cérémonie." George William had gone to Holland and had been very attentive to Éléonore. The two brothers were always quarrelling; they were jealous of each other, and it is not impossible that this jealousy may have had something to do with their love for the young Frenchwoman. Mme. de Tarente was severe, Éléonore was clever, and kept her lover at a distance. This resistance only increased his passion, and he began to speak of a morganatic marriage. All was arranged, when Christian Louis of Brunswick died, and George William was obliged to leave Holland to settle his difficulties with his younger brother, who had taken possession of the Duchy of Brunswick. The Duchess of La Trémoille having died in France, the Princess of Tarente was obliged to leave for Brittany. She left Éléonore behind at Bois-le-Duc. A treaty was signed in 1665 between the brothers, by the terms of which the lover of D'Olbreuze, who was the eldest, became Duke of Zell, and kept Zell for his residence; John Frederick took Hanover and Goettingen.

The Duke of Zell asked Éléonore to leave Holland, and she left Bois-le-Duc for Germany with two companions of her sex. She stopped at Iburg, where she was received by the Duchess Sophia. The latter was at first favorably impressed with Éléonore, but she would not hear of a marriage, not even of a morganatic marriage. The Duke of Zell, who had arrived, himself rejected the idea of a marriage, under the influence of his brother and of his sister-in-law. He offered, in a special act, to promise to live always with her; to leave her, in case he should die, in an honorable position, and never to marry. This promise (the text of it is given in the 'Memoiren der Herzogin Sophie') was signed by George William, Éléonore, Ernest-August (who was Bishop of Osnabrück), and Sophia. It was the only assurance given to Éléonore. In fact, no marriage ceremony took place. Éléonore took at court the name of Mme. d'Harburg, the name of a town in the Duchy of Lüneburg. She was only half satisfied, and for years afterward she worked in order to obtain the favor of a religious marriage. In a letter to a friend of her family, she writes on March 14, 1666: "I am the happiest woman in the world. . . . Whatever people may say of the fact that I did not appear in church before a priest, I cannot repent of what I have done. It is faith which makes marriage. His Highness pledged himself before all his relations who signed the contract: he promised never to have any wife but myself. . . . You would like to see our *ménage:* it is the happiest in the world." So she wrote, but she had not in reality the assurance which she professed to have. She was not satisfied with her position.

On the 15th of September, 1666, Éléonore was confined of a daughter, who received the name of Sophia Dorothea. The happiness of her union with George William and the birth of this daughter improved her position gradually. She was clever, intelligent, she became indispensable. Nothing was done without her. She looked after the furniture, the table, the linen, the servants; she was one of those persons who, wherever they are, are everything. George could no longer live without her, he was the most constant and devoted of lovers. Such a transformation put the Duchess Sophia beside herself, and she became the enemy of her former ally.

Young Sophia Dorothea was betrothed to the Duke Anton-Ulric of Brunswick-Wolfenbüttel when she was only six years old; in 1671 George allotted, by an act signed by himself and approved by his brother, the revenues of two districts of his states to the payment of the dower of Mme. d'Harburg; in the same year he left the revenues of two cities and districts to her and to her young daughter. The alliance of the Brunswicks was important to the Emperor, and, on the request of George William, the Emperor gave the title of Countess of Wilhelmsburg to Éléonore and her children. The Empress at the same time sent to her the order of Virtue, which was only given to princesses. Soon afterward Sophia Dorothea was given permission to bear the name and the arms of the house of Brunswick in case she should marry a prince. Finally, in 1675, a marriage was agreed to in order that the child might be legitimate. Some difficulties were thrown in the way by the Duchess Sophia and the Bishop of Osnabrück, but George William was determined to have his way, and in the midst of war, between the sieges of two Swedish towns of the Bishopric of Bremen, the religious ceremony was celebrated in presence of the Duke Anton-Ulric. A month afterward it was made public; and the name of Éléonore was added to that of her husband in the prayers of the Church. The lady-in-waiting had become a real princess.

Let us do her justice. Her court of Zell became one of the most brilliant in Germany, and one of the most virtuous and orderly. Éléonore took a lively interest in the politics of the day, especially as it affected the position of her husband. Louis XIV. paid special attentions to the Duke of Zell, whose armies had taken an important part in the war against Sweden. He began negotiations with him through Marshal d'Estrades, Ambassador of France at the Congress of Nimeguen, and a relation of Éléonore. D'Estrades entered into a direct correspondence with Éléonore on the subject of the House of Brunswick. When the peace was signed, Louis XIV. sent the Duke and Duchess magnificent presents. The Duchess Sophia was so angry that she said that "a ring worth two thousand florins would have been enough for a demoiselle du Poitou." When George William saw the diamonds sent by Louis XIV. to his wife, he said to the French envoy: "The King has given me more pleasure by this mark of friendship to my wife than if he had left me all the land of Bremen."

The court of Zell was then at the height of its brilliancy: it was almost a French court, as Éléonore had surrounded herself with French relations and friends. The grand marshal of the court was a Frenchman, Armand de Lescours; all her ladies of honor were French, as well as all her gentlemen in waiting. The court was enlivened by balls, by ballets, by concerts. The Duke had French comedians and Italian singers. The pleasures of Zell were decent, and Éléonore did not tolerate the coarse masquerades of Hanover. In summer the Duke and Duchess went to Pyrmont, to Wiesbaden, with all their attendants. The Duke was fond of hunting, and kept as many as four hundred dogs. The master of the staghounds was a Frenchman. He preserved pheasants, which were at the time quite a royal luxury. Éléonore remained very French till the time of the Revocation of the Edict of Nantes; she made of Zell a little Versailles. But the fatal Edict sent to her many refugees, and all the enemies of France began to work on the religious feelings of the Duke. His agent in Paris, M. de Rosemont de Boncœur, was of French nationality and a Protestant, and for some infraction of the Edict he was sent to the Bastile. George William was very angry; he abandoned the cause of France, and declared war on Louis XIV. in January, 1689. He had so many Huguenot refugees at his court that a gay Frenchman once told him at table, "Why, sir, it seems to me you are the only foreigner here.' Among these refugees we find some distinguished names, as, Chappuzeau, father and son.

Meanwhile, Sophia Dorothea was coming of age, and we must see what additions M de Beaucaire has made to the biography of this unfortunate Princess.

Correspondence.

THE STUDY OF ENGLISH AT THE SOUTH.

To the Editor of The Nation:

Sir: In his letter to you published in the *Nation* of April 23d, Professor Shepherd, of the College of Charleston, S. C., while accurately describing the want of instruction in English in the colleges of the South before the war, does not do justice to the great improvement made in this respect since that time. In fact, in no other department of study has equal improvement been made, not only in Virginia but in the "States south of Virginia"; and no other indication marks more decisively the *renaissance* of education in the South than the general progress in the advanced study of English, and in the rank and estimation assigned to it in Southern

collegiate work. I hesitate to give you a partial list of the colleges, or "universities falsely so called," which in "States south of Virginia" have made more or less ample provision for collegiate instruction in English, lest I should omit some that most deserve to be named. But Vanderbilt University, the Tennessee University, the Southwestern University, of Tennessee; the University of Georgia, and Emory College, Georgia; the University of Alabama; the University of Mississippi; the Tulane University, Louisiana; the University of Texas, the Southwestern University, Texas; the College of Charleston, Wofford College, the South Carolina College, S. C., are only some of these, of which an expert, who has given the subject a careful inquiry, writes to me that "they are doing as good work in English as in any other study." It is true that some of these institutions have not a "specific chair of English" (though some of them have had for many years); but that is only for the same reason that some of them have not a specific chair of Latin or Greek—namely, the want of means to make the requisite subdivision. At any rate, English holds in these colleges the same rank as those languages, is equally required in the courses of study, and is taught—it may be presumed with equal care and ability—by professors of equal rank. And I may add, it is growing everywhere in favor and in recognized importance more rapidly, perhaps, than any other branch of study in Southern colleges. Mr. Shepherd's phrase "adequate provision" is, of course, relative; and it should be construed here not with reference to any mere ideal, but to all the surrounding conditions.

But it is with reference to "Carolina colleges" that Mr. Shepherd's judgments, and, stranger still, his facts, too, are most at fault and most likely to do injustice, as has been shown already by Professor Woodward in the case of Wofford College. He instances Randolph Macon and Washington and Lee (both Virginia colleges) as examples of "perceptible improvement since 1870"—and this stinted praise is in both cases more than deserved—while he cites the South Carolina College at Columbia, on the other hand, as an example of "neglect," because "one professor gives instruction in *three* languages, English, French, and German." Yet the same is true of both Randolph Macon and Washington and Lee. Nor is it true, as Mr. Shepherd implies, that this is the only teaching of English in the South Carolina College. Another professor teaches, distinctively, English literature (as also at Washington and Lee), and the two are aided by a tutor (at Washington and Lee, where the same department includes modern history also, there are two assistants, and at Randolph Macon, one). It may be added, also, that this distribution is only temporary, the "specific chair of English" having been established at the first reorganization of this college in 1880, and only awaiting the means, as in so many other Southern colleges, of calling a distinct professor.

So, too, with regard to the University of North Carolina at Chapel Hill, which is also charged with "neglect." Upon examining the catalogue of that institution for the last year I find that the subjects assigned by Professor Shepherd to "*one* gentleman" are really divided between two, and that while the first is "Professor of Moral Philosophy, History, and English Literature," the second is specifically "Instructor in English," and, it is to be presumed, devotes his entire time to this work. So that this University presents by no means so "deplorable a condition of affairs" as Professor Shepherd seems to imply. The fact that a "specific chair of English" is now called for there shows that there has been no *neglect* under the present instructors, but that they have at least succeeded in creating a felt demand for larger and higher study in English—no small achievement under all the circumstances.

It is thus seen how far partial statements, true as far as they go, may by obvious implication do the greatest injustice, because they do not tell the whole truth. On the other hand, in the claim made for the College of Charleston as "a marked exception among Carolina colleges," it would seem to be implied by contrast that the entire teaching of its "specific chair of English" is given to instruction in English "during the four years of the collegiate course." As that college has published no catalogue nor any recent announcement from which its courses of study can be ascertained, I am unable to speak by authority; yet I am credibly informed that such is not the case—nor is it easy to see how it could be when the entire instruction is divided among five professors only. Indeed, a comparison might show that not more actual time is given to such instruction under the specific chair at Charleston than under the distributed work at Washington and Lee or Randolph Macon, which are credited only with "perceptible improvement," or in the colleges at Columbia and Chapel Hill, which are charged with "neglect." But "comparisons are odious"; and I can only regret that Professor Shepherd's have compelled this reply.

In truth, Mr. Editor, the progress of education in the South is to be judged fairly, not so much by what has been accomplished as by what is conceived, recognized, attempted under the new order of things. In nothing is the new birth of the South more evident than in the efforts of its colleges and schools. And in no department are these efforts more general, more earnest, or more hopeful than in the study of English.

Very respectfully, EDWARD S. JOYNES.

SOUTH CAROLINA COLLEGE,
COLUMBIA, S. C., May 11, 1885.

CABINET RESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: The proposal of "G. B." to put the Cabinet officers into Congress in order to enforce responsibility for bad appointments, suggests the old remedy for toothache by cutting off the patient's head, instead of simply pulling out the unsound tooth.

If the President were to let his Cabinet officers understand that they would be held responsible for bad appointments *unrevoked*, and were to enforce his warning when occasion arose, the trouble would be at an end very soon.

Considering that Mr. Cleveland is the first President since John Quincy Adams who has seemed to be really concerned in applying the test of fitness to appointments to office, it is not surprising that all of us (Cabinet officers included) are uncertain of the best means of applying the test; but it would be a public misfortune to create a belief that Presidential and Cabinet responsibility cannot be fixed without action by Congress. B.

WASHINGTON, May 16, 1885.

THE RHODE ISLAND COLLECTORSHIP.

TO THE EDITOR OF THE NATION:

SIR: Every believer in civil-service reform and every such well-wisher of the present Administration must regret the displacement, announced in this morning's despatches, of the Collector of Internal Revenue for this District, and the appointment of his Democratic successor.

The ex-Collector has held his position for years, and his office stands at Washington in the highest rank for efficiency and honor. He is a Republican, but, while Collector, has taken no part in political management. The most fertile imagination cannot make him out an "offensive partisan." His office has been managed solely on business principles. Many Republicans have in the past objected to him on the sole ground that he would not be a political "worker." He was a gallant officer during the Civil War, and is a gentleman of the highest character and exceptional ability. No cause is assigned for his removal.

His successor is of good family and clean repute. He is a Democrat and an old friend of the President, and is greatly surprised at his appointment. These are his "claims."

I do not hesitate to say that no intelligent man in Rhode Island, Republican, Democrat, or Independent, looks or can look on this change as anything else than a conspicuous illustration of the doctrine—"To the victors belong the spoils." Most fair-minded men among us believed the President sincere in his professions of opposition to this doctrine, and our prominent Democrats expected no change in so highly honored an officer. If Rhode Island needs "cleaning out," as perhaps in spots it does, this was a strange place to begin.

The growing number of such cases as the above is weakening confidence in many friends of the Administration, and leading to the fear that genuine reform is far ahead. Is the President to fly in the face of his own professions, and *slowly* make a "clean sweep"? We fear he is.

AN OBSERVER.

PROVIDENCE, R. I., May 18, 1885.

[We have no means of judging how the ex-Collector's office stands at Washington, or what motives prompted the removal; but the circumstances, as related by our correspondent, seem to us to make the case anything but an exemplification of the spoils system.—ED. NATION.]

Notes.

HOUGHTON, MIFFLIN & Co. announce 'A Marsh Island,' by Sarah Orne Jewett (from the *Atlantic's* pages); and 'Talks Afield,' an illustrated volume on botany, by L. H. Bailey, of the Agricultural College of Michigan. They will also publish simultaneously with Kegan Paul & Co., London, Gen. Gordon's Diaries, edited by A. Egmont Hake.

Cupples, Upham & Co., Boston, have offered to act as treasurers of America's contribution to a memorial tablet in marble, a portrait of Carlyle by his friend C. F. Annesley Voysey, to be set on the front of the house in Cheyne Row where Carlyle lived. The sum is $60, and sums of from ten cents to a dollar will be acceptable.

By arrangement with Mr. Longfellow's publishers, E. P. Dutton & Co. will issue for the coming season an illustrated edition of "The Village Blacksmith."

The second volume of Mr. Henry Cabot Lodge's sumptuous edition of the works of Alexander Hamilton (G. P. Putnam's Sons) consists of reports, articles, and letters on taxation and finance, which have by no means lost either value or interest. We might instance the article in the *National Gazette*, given on p. 320, discussing the theme once made popular by Mr. Jay Cooke—"A Public Debt is a Public Blessing." He quotes from his own reports as Secretary of the Treasury his doctrine that "there ought to be in every Government a perpetual, anxious, and unceasing effort to reduce that [debt] which at any time exists, as far as shall be practicable consistently with integrity and good faith." This defence of himself he published anonymously in September, 1792, not having the resource which "G. B." advocates, of taking the floor in Congress.

Dodd, Mead & Co. have published two volumes of 'Tales from Many Sources,' the tales being short and the sources (so far) all foreign. Mr. Anstey's "Black Poodle" is one of the six in volume i, and Thomas Hardy, R. L. Stevenson, W. E. Norris, Julian Sturgis, and *Blackwood* furnish the rest. In the second volume, Ouida, Charles Reade, and Hesba Stretton figure with other less-known writers. The typography is excellent and the form handy.

In 'Men of Invention and Industry' (Harpers), Dr. Smiles has returned to the field in which he won his literary reputation. A considerable part of this book has already appeared in various periodicals, while much of the remainder is occupied with accounts of persons comparatively well known. The freshest portion is that devoted to some self-taught astronomers in humble life, the most interesting of whom were a railway porter in a country town in the north of Scotland, and a man employed in counting slates in a Welsh quarry. Mr. E. T. Harland, the civil engineer, contributes a chapter on "Shipbuilding in Belfast." We have noticed several errors, as Geneva for Genoa, Spanish for French, and 11,000 for 1,100, which somewhat mar this reprint.

Scribner & Welford send us several volumes recently added to the Bohn Library—the third of the five volumes of Gibbs's edition of Goldsmith's Works; Grimm's 'Household Tales,' in two volumes; and Walton's 'Lives.' The Goldsmith contains the 'Citizen of the World,' after the latest edition that Goldsmith could have had an oversight of, but annotated very usefully with dates for the several letters and the varying readings; the 'Enquiry into the Present State of Polite Learning,' from the second edition of 1774, plus the omitted portions of the first edition; and two timely essays attributed to Goldsmith, on "The Bravery of the English Common Soldiers" and "The Character of English Officers." "The English spirit continues amongst officers as well as soldiers still the same, and requires only to be awakened," says the writer. A. H. Bullen has revised Walton's 'Lives,' and William Dowling has prefixed a memoir; and numerous steel portraits and old-style woodcuts embellish this edition very pleasantly. Mr. Andrew Lang furnishes an introduction on folk-lore to Margaret Hunt's new version of Grimm's 'Tales,' of which the main features are fidelity to the original (with the least possible softening of coarsenesses), and preservation of the author's notes, never before Englished. In other words, adult readers have been kept in mind rather than children. Mr. Lang continues his assault on the sun-myth. This edition can but meet with great favor.

To enhance the value of the display of American woods which the American Museum of Natural History makes, thanks to the liberality of Mr. Morris K. Jesup, Professor C. S. Sargent has condensed from his census volume a catalogue of the trees of this country, making a convenient octavo (D. Appleton & Co.).

Messrs. Aulme & Hornblower, authors of the plan for the National Library and Museum at Dublin, which obtained a second prize, have devised, it would appear, a new method of keeping books in order, which, if found upon trial to be successful, would greatly diminish the number of attendants necessary in a large library. "The heating pipes," they say, in their description of the plan in the *Building News*, "are all fixed in the basement, and the hot air ascending through the floors keeps the books in order." It is strange that such a remarkable, one might almost say astounding, invention should not have won them the first prize.

It is characteristic of the highest flight of the noble art of interviewing and reporting to hear the Paris correspondent of the London *Times* talk thus in a letter dated April 22: "I have already had occasion to refer to the remark which Prince Bismarck made to me while the Berlin Congress was sitting. . . . It may also be remembered that the Sultan Abdul-Hamid, in the audience which he granted me in October, 1884, . . . asked more than once when I believed the English troops would leave Egypt. In a conversation which I had at the same time with Said Pasha he complained sharply that the Powers had imposed on Turkey the execution of onerous conditions. . . ."

Not long since we called attention to the good fortune of the University of Michigan in receiving the Lewis Art Gallery. The same institution is now about to acquire the original models in plaster of all the works of Mr. Randolph Rogers, the well-known American sculptor at Rome. Within the past fortnight a letter has been received by the Curator of the Museum at Ann Arbor, announcing that the work of packing the entire collection has begun, and that it will be conveyed as soon as practicable to the University. It consists of sixty-eight numbers, and includes models not only of the bronze doors of the Capitol at Washington, but also of the several soldiers' monuments designed by this artist, together with the monuments of Lincoln, Seward, John Adams, and others. Of the allegorical pieces, the "Lost Pleiad," the "Nydia," "Somnambula," "Victory," "Justice," "Revolution," and "Finance," are perhaps the best known. Many of the figures are of colossal size, and evidently very large space will be required for the proper display of the collection. In giving the collection to the University, Mr. Rogers is but carrying out a purpose he has long entertained.

A public document certain to be in request for its novel features is No. 345 of the Massachusetts House, touching the question of the Great Seal of the Commonwealth. The marrow of it is an essay by Mr. Wm. H. Whitmore, on the various seals of the Colony, Province, and State, accompanied by delineations of each. In its last form, the seal failed to receive the technical sanction of the Legislature, and it is now proposed to fix it by law with precise heraldic indications. So the document ends with an act, out of which the Indian of the State arms emerges in gold on a blue field, in his shirt and moccasins simply, his peaceful arrow pointing downward; the rest as in the common representations of the device, not omitting the grand old motto from Algernon Sidney.

Dante students in this country will be interested to learn that the *Harvard University Bulletin*, No. 31, contains the beginning of a list of the Dante collections at Harvard and in the Boston Public Library, with additional titles from the private collections of Professor C. E. Norton and the late George Ticknor. The present instalment ends with No. 242. Special attention is given to portraits.

No issue without a novelty appears to be the present motto of *Science*. The current number (May 15) contains a map of the territory to be reserved about Niagara Falls by the new Commissioners. Appropriate articles on the Falls accompany the map.

The inventive editors of *Mélusine*, whose task seems like that of professional fun-makers, open a new department in their issues of May 5, 20: "Béotiana." The stupidities narrated in short stories are duly labelled with the names of the places to which they are attributed, though several localities often contest the honor, showing that we are dealing with "old Joes." So it may or may not have been an inhabitant of Bourg-Saint-Andéol in the Ardèche who, when the enemy approached, crept into his oven with his spurs on. As these pricked him from behind, he cried out: "Don't kill me; I tell you I surrender."

An illustrated lexicon of Africa about to be published in Leipzig is another proof of the German interest in that continent. It will aim to give an account of all the more important works on Africa, both ancient and modern, together with the various explorations of the country, as well as the character of the climate, the soil, the fauna and flora, the productions and commerce of the different sections.

The mystery which for several months hung over the fate of the German exploring expedition in east-central Africa, under the lead of Doctor Böhm and Paul Reichard, has been dispelled by a telegram from the traveller Rohlfs, now German Imperial Consul-General at Zanzibar. It refers to Reichard, to whose relatives in Wiesbaden it was sent: "Everything lost; narrowly escaped death; Böhm dead; credit Zanzibar 9,000 marks, comes June, authorizes Rohlfs." The presumption is that the expedition, on its return to the coast, was attacked and overpowered by savage tribes, Reichard alone saving himself by flight, and now waiting in Zanzibar for the necessary means to effect his return to Germany.

The recent acquisitions of the French in West Africa have led the Spanish Government to enlarge its own possessions in those regions. The new territory includes the Sahara border from Cape Bogador on the north to Cape Blanco, a strip of nearly 600 miles of coast-line. On this they have already established six trading stations, and propose to occupy all the points accessible to ships. They have also acquired on the Gulf of Guinea the coast for nearly 150 miles northward from the French possessions on the Gaboon to the Campo, the southern limit of the Cameroons country recently occupied by Germany.

A large folding map of Afghanistan, edited by Gustave Freytag (Vienna: Hartleben; New York: Westermann), is to be recommended as displaying very clearly the disputed territory on the northern border. Moreover, the paper covers have been utilized for giving very pleasing woodcut views of Kabul, Kandahar, the Bolan Pass, the Soliman Mountains, etc.

The firm of Velhagen & Klasing (Bielefeld and Leipzig) have put their imprint on many popular atlases. The latest that falls under our notice is Prof. G. Droysen's 'Allgemeiner Historischer Handatlas,' of which Part 1 comes to us from the American publishers, B. Westermann & Co. There are to be ten of these parts at 75 cents each, cheap enough when we reckon ninety-six maps to the series. The form is a small folio, allowing in a double page an exceptional scale—24 miles to an inch in the case of Greece, for example, 12 in that of Bœotia and Attica, 54 in the case of Germany in the fourteenth century. This insures an admirable clearness in the lettering, and indeed the execution of these maps is altogether praiseworthy. Numerous specialists have made themselves answerable for their accuracy. Finally, there is an accompanying historical text. Among the numerous side maps are three showing respectively the distribution of Europeans, Chinese, and negroes—the three races, apparently, which are to inherit the earth. A shading of dots in each shows the density of these populations very effectively.

Another of those remarkable pictorial works which have made the house of Grote in Berlin famous, is just beginning to be issued in the usual form of parts. The 'Geschichte der Deutschen Kunst' (New York: Westermann) is offered as one more strand in the revived feeling of German nationality. The subdivisions in the history are German Architecture, by Dr. Robert Dohme; Sculpture, by Dr. Wilhelm Bode; Painting, by Prof. Dr. Hubert Janitschek; Copper and Wood Engraving, by Dr. Friedrich Lippmann; Art Industry, by Prof. Dr. Julius Lessing. Part 1 gives

a good idea of the wealth of illustration—full-page and in the text; wood-engraving and chromolithograph; facsimile, etc. Of all these modes the quality is the very best, the color work being especially noticeable. The typography is, as usual in German works of this character, faultless.

At a recent Church conference in Paris a very suggestive paper was read on "The Selection of Continental Schools," which the *Guardian* for April 22 publishes in full. The author, an English clergyman of Paris, spoke particularly of the schools of that city for girls, giving as his reason that "where one boy is sent, there are ten or fifteen girls." After saying that if parents would but take proper precautions, they need have no fear about sending their daughters there, he pointed out the dangers to be encountered under the four heads, physical, educational, moral, and spiritual. In the matter of education he admitted there was less risk than in England. "Indeed, the requirements of French law are such that the existence of an utterly sham school is impossible. For instance, no teacher who does not hold a *brevet* can be employed in a school in Paris, whether public or private. The most strict and careful inquiries are made every term, by duly appointed inspectors, into the statistics of every school." On the other points he could not speak so favorably. "The moral tone of a French school is not usually on a level with that of an English school," and the dangers of proselytism in the convent schools, where "the terms are low, the discipline good, opportunities for acquiring a refined French pronunciation excellent, and the Protestant pupils are treated with especial and extreme kindness by the Sisters," are very great.

The *Revue Critique* directs attention to a work shortly to be published at Brussels, which is said to promise most piquant revelations. The title is 'Les Dessous de l'histoire: curiosités judiciaires administratives, politiques et littéraires, recueillies et annotées par J. Horyn de Tranchère.' It is to comprise two volumes of about 450 pages each. The manuscript collections of the Imperial Library of St. Petersburg, in which that institution is especially rich as regards documents relating to the political and literary history of France, have provided the author with a large part of the material contained in the two volumes. Most of the papers are inedited, and the others are very scarce.

The seventeenth annual session of the American Philological Association, to be held in New Haven, will begin on Tuesday, July 7, and not on July 14, as previously announced.

—A correspondent writes us from Arizona:

"Permit me to call your attention to an instance of literary piracy. The story entitled 'The Knight of the Black Forest,' recently concluded in the *Century*, contains an incident—the purchase of pictures by the courier—which has been stolen bodily from a work extensively read some twenty years ago, 'Roba di Roma,' by the sculptor Story."

—As we go to press we learn with sincere regret of the death in London of Mr. Charles Welford, of the firm of Scribner & Welford, of this city. Few members of the American book-trade have been better known — personally in former years, while his home was in this country, and then and since by his letters to the *Bookbuyer*. In the first year of the *Nation's* existence (Nos. 1-37), Mr. Welford conducted the department of "Literary Notes." He was saturated with the love of books and with the knowledge of them, and was one of the most genial and accessible of men. His last visit to this country was, we think, in the summer or early autumn of 1884. His health was then precarious, and warranted fears now realized. He will be greatly missed.

—The second volume is just issued of the eight-volume octavo edition of the complete works of Gustave Flaubert, now in course of publication by Quantin—"édition définitive, revue sur les manuscrits originaux." The publication naturally follows the chronological order of the works: the first volume was 'Madame Bovary' and this is 'Salammbô.' There are a hundred readers of 'Madame Bovary' for one of 'Salammbô,' and as for the succeeding works it is hardly too much to say they will not be read by any one. But these eight handsome volumes are a suitable memorial monument to poor Flaubert, though a just judgment of him must regretfully take into account the futility, so to speak, of his latest writings. His reputation rests on 'Madame Bovary' and 'Salammbô'; the two works are almost equally remarkable, but strongly contrasted in character. In 'Madame Bovary' he drew from his observation and imagination, the book was a part of himself, and he was a part of the book—he was himself physically poisoned, he told M. Taine, by the arsenic Emma Bovary killed herself with, and he forces his reader to taste it too. In 'Salammbô' he drew from his learning and his inventiveness; and the book, the writer, and the reader stand entirely aloof from one another. It is an archæological novel—a forerunner of Ebers—the scene being laid in Carthage in the time of the father of Hannibal. It needs, and is supplied with, five pages of glossary. Sainte-Beuve's long and careful but unsympathetic, though respectful criticism of it is in some measure the final word about it; but it should not be forgotten that, writing to Flaubert just afterward in answer to a letter from him in defence of the book, Sainte-Beuve says: "What I appreciate especially, and what every one will feel, is that elevation of mind and character which makes you take my criticism so simply, and which forces me to esteem you the more. M. Lebrun (of the Academy), a just man, said to me the other day in regard to you, 'Après tout, il sort de là un plus gros monsieur qu'auparavant.' This will be the general and final impression."

—*Multum in parvo* is the motto merited by Schröer's edition of Goethe's Dramatic Works, of which the first two volumes have appeared in Kürschner's German National Library (Stuttgart: Spemann). These are to be followed by four others, also under Schröer's charge. The seventh and final volume is to be "Faust," edited by Düntzer. When we consider the accuracy and profuseness of explanation, and the cheapness of these volumes (only two marks and a half apiece), we congratulate the present generation of readers. How hard it was only twenty years ago to read Goethe understandingly! And now perhaps there is too much of a good thing—texts with line-numbering and foot-notes, long and searching introductions that leave no dark corner in the relations between the author and his works. The first volume contains what the editor calls "confession pieces," viz.: "Die Laune des Verliebten," "Die Mitschuldigen," "Stella," etc.; also, the group of puppet-pieces and satires, *e. g.*, "Satyros," "Götter, Helden, und Wieland," etc. Volume second contains the group of *Singspiele*, operettes, etc., etc. It will be seen, of course, that Schröer's best work is yet to come, with the volumes that will contain "Iphigenie," "Egmont," "Tasso," etc. Each of the two before us has a general introduction and an alphabetical list of words, names, and passages annotated, and each piece has its own introduction. The editor has been at great pains to keep abreast of the rushing tide of Goethe literature, notably in the *Jahrbuch*, and the impression which he makes upon us is that of a very safe guide. The only point in his treatment to which we would seriously object is his sharply-drawn line of division between Romance and Teutonic conceptions of love, in the introduction to "Stella." To Anglo-Americans the line is much less clear than it appears to Schröer. Quite a novelty is the Tiefurt picture (by Krause) illustrating the characters in "Das Neueste von Plundersweilern." The text of the several pieces has been carefully prepared after a collation of the best editions. The spelling is normalized, as far as normalization would not affect pronunciation. In "Stella" the fifth act has both endings, the tragic and the non-tragic, according to the change made by Goethe himself in 1816. In the interpretation of "Satyros," the editor holds with Scherer—but not without considerable qualification—that Herder must have furnished the primary *motif*.

—Despondent classicists need to be reminded at times of the vast amount of capital that is yearly invested in Latin and Greek—of the enormous circulation of the more popular classical authors. Whole libraries are still projected, and, as we write, volume after volume of the Schenkl "Bibliotheca" is coming out in handsome type, and you can have Keller's Horace for a mark. Some years ago an editor of Sallust died, and it was recorded of him that of his popular edition of Sallust several hundred thousands were sold. What if one had the copyright of Cæsar's 'Gallic War'? Think of a corner in Ariovistus! To be sure, men have been found to grumble at the predominance of these military memoirs, but grumbling is in vain. One may make epigrams like the Gauls, but one submits as the Gauls submitted. To the pedant mind Cæsar has one great recommendation, and even those who cannot understand the real point of his narrative can appreciate this one great virtue. Cæsar deserves the praise which he himself bestowed on Terence—he is conspicuously a *puri sermonis amator;* and while few normally constructed schoolboys ever turn back to Cæsar in after years for pleasure, the importance of his diction as the basis of normal Latin is emphasized more and more. We have to wait scores of years for a decent dictionary of a great modern classic, whereas, besides the many respectable dictionaries of Cæsar that we have already, in the last twelvemonth no less than three exhaustive Lexica Cæsariana have been announced—Merguet's, Meusel's, and Menge's. The 'Lexicon Cæsarianum' of Menge and Preuss, the first fascicle of which has reached us (Leipzig: B. G. Teubner; New York: F. W. Christern), is worked out with especial regard to economy of space, and we find in a comparatively small compass a marvellously full statement of phraseological and grammatical usage, of the readings of MSS. and the conjectures of scholars. The mechanical side is up to the highest standard of modern lexicography. It is delightfully easy to find what you want; delightfully easy to refer to it when found. The columns are counted, not the pages, and the lines are all numbered. The minuteness of the statistics may be judged of by the fact that the number of occurrences of all words except the more common particles is registered. For instance, we learn that *animadverto* in one sense occurs only once, in another sense forty-two times. The varying forms, sequences, combinations of the particles are noted in such a way as to catch the eye; and generally the compactness of the arrangement enables the student to see at a glance the class of phenomena he is investigating, whereas greater fulness of quotation might delay the survey of the whole, which is so important. Of etymological disquisition, of antiquarian research, of synonymical discrimination there is nothing, or next to nothing. The book is intended for the grammatical and phraseological specialist.

MARLOWE.—I.

The English Dramatists: The Works of Christopher Marlowe. Edited by A. H. Bullen, M.A. Boston: Houghton, Mifflin & Co. 1885. 3 vols.

Mr. Bullen is to give us, in handsome print and paper, and well and wisely seen to for the readings, all our dramatists, of about Shakspere's time, who have earned of their after-comers the work and cost of printing. These will not be very many, and all of them will be well worth the having. "Kit" Marlowe, who may with truth be called the first of these, comes first from Mr. Bullen, and is set forth by him with gentle and tender hands. Dramatic poetry, higher up than his, had been but a worthless ooze, or a soiled and muddy trickle. He gave it a new beginning, unlike what had been before, and on another scale.

To come upon a starting-place, or a turning-place, in the life of the race of men, or of our English branch of it, is a great thing. Such a thing it is to find at Hissarlik hauberk, or helm, or shield—"exesa . . . scabra rubigine"—or at Bannockburn some little, crooked, earth-eaten bit of one of the iron calthrops that tumbled the English Edward's horses and horsemen on Scottish soil. So, too, it would be if we could come in upon unfinished work—work on its way to perfectness—of any one such mastering man as Pheidias or Zeuxis. It startles us, this day, to see, in that painting left by one of our American masters but half done, the later and larger figure coming forth, as it were, of its former self. Now, is it not much to find, in its very making, our ten-syllable blank verse—the verse of Shakspere and Milton? This we shall find in Marlowe's plays; and these plays we shall find not unworthy of being read by those even who can feel and understand the sharpness of insight, and strength, and grace, and manifoldness that are in Shakspere and Goethe, and the mirthfulness—rather unkindly, grim, ghastly—of the one; and of the other, frolic, neighborly and of good-fellowship.

Two little lines, most musical, and with a dainty picture in each word, have for generations drawn men's hearts toward Marlowe:

> "By shallow rivers, to whose falls
> Melodious birds sing madrigals."

They are in themselves a full and rounded poem. Shakspere, a little Marlowe's younger, borrowed these, and more, in one of his plays, and Izaak Walton, in his 'Angler,' takes in the whole piece from which they come. Poor Marlowe! Disreputable in life, and worse in death; loathed by all men professing godliness; yet must we think that his heart was not all bad, and we know that he did for our great English tongue good work, and in our tongue did good work too, and that both these works are great and lasting. Until we have well read his plays, and weighed him well, we are looking to find even more in him and them than can be found; and this because we find so much. He was the first English writer of true plays; and as Lucretius, first of Roman writers, made great poetry for his own use, to give philosophy through it to his countrymen, much in the same way, though less, did Marlowe. Besides this work—besides his plays and the verse in which he wrote them, and his easy ten-syllable rhyme, and that one melodious madrigal which all readers of English have loved from boyhood, and besides, through all, his strong and swift imagination—if all this be not enough, there is nothing worthy in the man, or in what he did, to give him hold upon the memory of men. Yet when we say "Poor Marlowe!" as men used to say "Poor Burns!" (and for all the self-same reasons, and for others too), we say it with the assured feeling that Marlowe, though nothing like so great as Burns, is great enough to take and stand by what belongs to him in fair and equal weighing, though his bad weigh heavily. He has, at the same time, as one feels sure, enough of manhood to need and crave, if he could speak, some good and kindly thought from fellow-men, and has, as poet—and even as man—good right to it.

Marlowe could never claim, like Burns, to have held fast to, and carried safely through whatever filthiness of drinking and debauchery, a great deal of the best manliness of this human nature that we all are made in, and in which we feel each other, and take from one another the push of thought and feeling. He cannot claim, like Burns, to have used whatever he had of that best manliness for the good of the rest of men, and to have given to it melodious utterance for all coming time. Marlowe had not so large possession in the great faculties and great feelings of humanity. Then that true pitch of our frame, in which fun of the higher and finer sort, or of the broader and heartier sort, but, in whatever sort, true fun (that merriness of the happy fitting together of our being) shows itself so readily in liking and in kindly laughter, and in which, as readily, fellow-feeling, sorrow-sharing, shows itself in loving tears and tears of hurt and wrong—was almost wanting in him. From Burns the fun and fellow-feeling were running over on all sides, and at all times almost—sad, serious, and merry, all at once.

Yet feeling, strong and fine, was not wanting in Marlowe. This his "Tragicall History of Doctor Faustus" shows, in *Faustus* and in the scholars and others, beyond all gainsaying. So, too, the episode of *Olympia*, in "Tamburlaine," and *Zenocrate*, and better (though there is too little of her) *Abigail*, the Jew's daughter—these all show the respect which he could understand and, we may hope, feel for what in woman is lovely and becoming; and nothing witnesses more strongly than this that the finer and better nature was somewhere in this poet, at least at some times. If he has few women in his plays, and if his writing is very far from free from a bad taint, which the times unhappily allowed, he does not riot in the befouling of that better sex whose goodness is our best possession and whose badness is the deadliest bane to men.

Of Marlowe's plays, "Tamburlaine the Great" must have come in upon the English stage as a new thing; and, in spite of faults of its author and in spite of its own faults, it must have come as something wonderful. The play-goers wondered and applauded much, laughed a little, and the play was called for, and crowds went to it, for a hundred nights, before they had had enough of it. So the author wrote a Second Part, very much of a piece with the First. That was the earliest English play that, for the character, and for what was said, and for the way of saying it, was worth the being recalled to the stage, or being remembered; and that play was the first work in which our English blank verse, living, and strong, and large, was used—as noble, sometimes, as any that came later.

When Marlowe was stirred with the great thought of giving to his English fellow-countrymen plays lofty as the old Greek plays, and in becoming language, the huge shape of Timour Lenk—Timour the Limper—stalking over some thousand leagues of the world, this way and that, and overcoming all the Eastern lands, almost, caught the player-poet's eye. That Timour had been, in his flesh and blood and whatever else helped to his making, a man of boundless ambition, of very great power over men, of wondrous quickness in gathering hosts, and strength in holding them together, of most uncommon skill in planning, and downright might in doing in leaguer and field of battle. Killing, breaking-down, laying waste—the man was, for hardness of head, hard-heartedness, hardness and heaviness of hand, worse, if anything, and on a vastly larger scale, than Horace's Achilles, in ruthless wrong and cruelty: "Impiger, iracundus, inexorabilis, acer, Jura neg[a]t sibi nata, nihil non arrog[a]t armis." Timour Lenk, therefore—to Englishmen, "Tamburlaine"—such as he was, and with crowds of kings becrowned and bedizened with purple and crimson and satin and velvet, and fettered, withal, walking before and behind him, and sometimes harnessed, by relays, and under the whip, to his triumphal car, Marlowe took. This was an heroic figure for a great play of five acts, for speech of a new sort, on a new scale; and gave chances for shows upon the stage, to catch and refresh those who wearied of much speech better than their wonted talk. His hope and plan the poet sets forth thus, in the Prologue:

> "We'll lead you to the stately tent of war,
> Where you shall hear the Scythian Tamburlaine
> Threatening the world in high astounding terms";

and he meant to lead away

> "From jigging strains of rhyming mother-wits
> And such conceits as clownage keeps in pay."

In this he succeeded, and so well as to make all those of our own tongue who love work of imagination and verse, good and fitting, from that time downward, debtors to him.

In these two plays—the First and Second Parts of "Tamburlaine the Great"—the love in our hearts, it is true, is scarcely touched: the higher and finer feelings are seldom, if they are ever, called out; it would be hard to find a lofty, noble, or kindly sentiment from the beginning to the end of them. If one is interested, it is not that one likes the hero or any single one of the other men in them. By way of relief to the throng of men, and those mostly Scythians, Persians, Turks, doing nothing else than quarrelling, fighting, and bragging, one woman, *Zenocrate*, is carried through a play and a-half, and, though not strongly drawn, lightens the action and makes all less unkindly. *Olympia*, taken suddenly into the Second Part, after *Zenocrate's* death, and not too suddenly killed off out of it, is well drawn, though not new, and helps to the same end. Plautus's "Captivi," without a woman in it, is interesting throughout, for there is nobleness and faith and trustiness even to death, and the plot unfolds itself with beautiful exactness. In neither part of "Tamburlaine" is there anything that we can call plot, and the heroic barbarians would be insufferably tiresome to us, without at least so much of a gentler element brought in as these women bring.

For others, such as they are (not much to our liking), *Tamburlaine* is strongly drawn, for what the author meant him, and is kept to his level always; and the generals, emperors, kings, and the rest are of the same stuff, cut to slightly different patterns, and of somewhat different sizes. The tongue that they speak is much the same for all, and all are so filled, to their very tongue-tips, with classical mythology (of all things in the world) that we cannot but wonder after the methods of the schools where these stalking barbarian slaughterers were made so glib in this smattering of scholarship. Acheron and Phlegethon and Styx and Erebus and Tartarus and Tantalus and the ugly Ferryman, and the Fatal Sisters and Jove and Janus and Cupid, Apollo, Cynthia, Juno, Bellona, Troy, Tenedos, Phœbus, Corinna, Lesbia, Boreas, Boötes, Hermes, prolocutor of the gods, come out of the mouths of any of them as readily as day and night and rain and sunshine. Marlowe, if not a very accurately learned man, had taken his bachelor's and master's degrees in arts, at Cambridge, and knew enough to put into English, out of Latin, a great deal that he might better have left where it was when he found it.

The "Tragicall History of Doctor Faustus," of

which Goethe, who owed it nothing, spoke highly, has certainly not a little in it that ought to live; and *Faustus*, though steadily kept down to the level of the vulgar, legendary, and though not so strong or interesting as Goethe's *Faust*, is less hard to like or to forgive than *Faust*. The upheaving, wrenching, twisting, squeezing strength of Goethe in "Faust," the uncouthness, or the rugged homeliness of words; the loftiness, the floating grace, the witchery of melody; the pitiable weakness, the hopeless sadness, the flash of wit, the human heart set down bare before us, and showing all its working to our eyes; the never-wearying changefulness of the measure—of all these, little in the same kind, perhaps, is to be found in Marlowe's "Faustus"; but there is what will touch the heart and leave it better. There is enough to show that this author was not all bad, or always bad.

"Edward the Second" might have been called "The Tragedie of Piers Gaveston," and has several characters—as *Gaveston*, the *Queen*, and the *King*—well discriminated and well kept up (although the last is often over-drawn); but as the chief character is one that we do not like to think of or know about, and there is not one noble scene or person in the play, it could not be great, nor could it hold a good place in our liking or our memory. The better kingliness that comes upon *Edward* in wretchedness, and in meeting death, is well done, being done by one who had a real share of the true insight.

"The Jew of Malta" has some strong character-drawing and good scenes, and it has, unhappily, some absurd and preposterous character-drawing and scenes. The Turkish *Admiral* and *Abigail*, the Jew's daughter, are admirable, as far as they go, but are each cut clean out of the play after a short life in it. "The Massacre of Paris" has some pretty sharp and clever work to have gone with stronger and better, but was never filled out to full proportions of a play. "The Tragedy of Dido, Queen of Carthage," shows some beautiful passages and some very bad things—bad even for pagans. It cannot, for a moment, stand, as a poem, beside Virgil's account of Dido's tragedy, and wants a good deal to make it into a substantial play. The bad parts do not in any way help, nor were they in any way needed. Not one of all these that we have run over is without strength or beauty, more or less.

RECENT NOVELS.

Trajan. By Henry F. Keenan. Cassell & Co.

Miss Brown. By Vernon Lee. Harper's Franklin Square Library.

Matt: a Tale of a Caravan. By Robert Buchanan. D. Appleton & Co.

Pilot Fortune. By M. C. L. Reeves and Emily Read. Boston: Houghton, Mifflin & Co.

A Carpet Knight. By Harford Flemming. Boston: Houghton, Mifflin & Co.

Roslyn's Fortune. By Christian Reid. D. Appleton & Co.

Stories by American Authors. Vol. X. Charles Scribner's Sons.

Die Sebalds. Roman aus der Gegenwart. Von Wilhelm Jordan. Stuttgart: Deutsche Verlags-Anstalt; New York: B. Westermann & Co. 1885.

"She'll vish there was more, and that's the great art o' letter writin'," replied Sam to the elder Weller's objection to the "raythersudden pull-up" of the valentine. It is a pity that the author of 'Trajan' should not have made Sam's maxim his own, and extended its application to the art of novel-writing. Not that all exhaustive novels are bad, nor all brief novels good, but here is a very fair one almost buried out of sight by an accumulation of worthless superfluity. Most conspicuously destructive of the narrative are the moral, social, and philosophical asides, elaborately Latinized commonplaces. Next, and more actively disagreeable, is the running accompaniment of criticism, favorable, disparaging, explanatory. It is as if the author were always saying, as he often does say in substance: "Ladies and gentlemen, here you may think my hero a fool: I have not so drawn him unaware; here you probably do not appreciate the splendor of his achievements: let me make it plain to your dull wits." Apropos of similar interruptions of narrative, Fielding announced: "I intend to digress throughout this whole history as often as I see occasion, of which I am a better judge than any pitiful critic whatever." Thackeray, too, was prone to such diversions. There can be no sort of doubt that Mr. Keenan has studied these authors to his advantage; but, in the matter of permissible digression, they have led him into error. One may speculate, if a person of endless leisure, whether Fielding and Thackeray would have been greater as novelists had they preached and criticised less; but there is no question about Mr. Keenan. He has a talent for writing romantic fiction; he can construct a plot, conceive rather brilliant and original characters, and carry them successfully through severe trials; he commands a wealth of picturesque and poetical expression. But his reflections only serve to annoy the average reader, who could reflect just as profoundly, if he wanted to, without assistance; his criticisms, as it is seen, only deprive the critics of the luxury of praise and force them to the ungracious task of censure.

There are other reasons still which check our desire for more from the author of 'Trajan.' Everything is in excess—incident, characterization, dialogue. For such extravagance, the scene, Paris, the time, the last year of the Second Empire, offer temptation, if not excuse. In life there and then a man may have been thrust into an exciting situation every day; he may have experienced wild and novel emotions every hour; but it is the business of the novelist to select those which develop his characters and lead up to his climax, and to reject all others. Mr. Keenan's disregard of this elementary canon amounts to contempt. He exhausts ingenuity and bewilders the reader in providing occasions for the display of his sentimental hero's daring and chivalry in love and war. Not content with a dozen situations, strong, effective, and dramatic, he persists in upsetting gravity by such overwrought melodrama as Trajan's adventure with two damsels, one coward knight, and a millionaire's bull. He is not satisfied with what portrays Trajan as a clever and ardent young man, with much spirit, tenderness, and courage; he converts him at times into a travesty of Galahad. In the same way he overweights the portraiture of Miss Theo Carnot, who is the most distinctly and consistently drawn of any of the host marshalled through the pages. It is perhaps not possible that a woman so brilliant and unscrupulous could have stopped short of depravity. But even if it be at the expense of actuality, it is to be scored to the author's credit that he has excited the liveliest contempt for this person, without resorting to the conventional and popular method of holding a woman up to contumely. And though he exposes unsparingly the rottenness beneath the glitter of Napoleon's court, the book is clean and healthy from first to last; it is quite free from the offensiveness of a mind that confounds knowledge of the world with knowledge of its sin alone.

By contrast the novel 'Miss Brown' seems to be founded on this common misapprehension of the phrase, "to know the world." Vernon Lee is a clever, bold, and brilliant writer, who has successfully rid herself of the trammels of sex in literature. Unfortunately she has not the taste and discretion which command her to stop. She is a trifle too bold; like many of her characters, whom, professing to scorn, she drains the language to describe, she is just a little too advanced and fleshly. We are inclined to believe that her study of mediæval and seventeenth-century manners has led her to exaggerate the importance and interest of the personal debauchery of a limited class, and that eventually she will rise to a clear perception of its relative position in the history of human life and of the value of higher things. We have to do, however, with what she now is, and not with what she may be. Her novel is for the most part an elaborate and mirthless caricature of a phase of social life which, as far as it exists or ever has existed, is itself a caricature of an idea. The notoriety of that inconsiderable portion of London society denominated æsthetic has been won by its intellectual affectation, frivolity, and uncleanness. Whatever may be the reason, none but a profound and gentle humorist can write of such a group without making the uncleanness most prominent. Vernon Lee is not profound, she is not gentle, she is before all things not a humorist. She is hard, cold, clear-headed. The contaminating influence upon her mind of the group she has chosen to write about is shown by her minute analysis of its puerilities and viciousness, by the absence in her novel of one touch of tenderness or pathos or heartfelt sympathy with simple, kindly impulses.

Anne Brown unquestionably embodies her ideas of moral strength and beauty in woman, and there is no fault to be found with the strength at least of the presentation until we come to the last act in the drama. She is of the people, the child of a Scotch father and an Italian mother. She is introduced as nursery-maid in the shiftless household of an English artist living in Italy. Here she is informally adopted by another artist, Hamlin. His immediate intention is to educate the girl; his remote dream, to marry her. Hamlin is at this period an attractive though jaded person, and Anne accepts his guardianship in preference to that of an unmannerly but upright Scotch cousin. Her voluntary choice is important, since it destroys the argument that she was indebted to Hamlin for her only chance to rise from servitude, "to gain a soul." Education develops in her much shrewdness and positiveness as well as soul, and very soon she comes to despise the soft-sighing, lying artist and poet spirits by whom she is in due time surrounded. Concomitant with the process of her elevation is that of Hamlin's degradation. The change in him is unexpected and arbitrary, since he is subjected to no influences novel enough or powerful enough to convert a sufficiently lovable young man into a detestable one. Yet, when the author has circumstantially proved him to be a monster, when Anne has got so far as to recognize that he is "wholly without moral nerves or moral muscle," the girl is permitted to marry him on the plea of gratitude for past favors.

This silly and hackneyed dénouement has more significance than when employed by the unemancipated woman novelist. It is utterly trivial to say, as has been said, that the author has meant only to present a debatable question. No discussion is possible, nor is it probable that the author had any design beyond finishing her story in the way seeming to her most fitting. There is nothing to comment on but her weakness and blindness in finding it most fitting. Every novelist worthy of the name is felt to be writing up to some strong conception of beauty and excellence. The standards in social ethics erected

by able novelists perceptibly influence the standards which many people, especially women, think they erect for themselves. Therefore, when so convincing a writer creates such an intolerable situation and condones if she does not admire it, she does a very foolish thing, bad in itself, worse in its possible indirect effect. It is a little ludicrous, too, when we recall in her 'Countess of Albany' the emphatic disapproval of the law which may bind an ignorant young girl for life to a "drunken brute," her pet synonym for the Young Pretender. In language she truckles to propriety even less than in much of her sentiment, and seems to fear that literature and life must suffer disaster should she in any doubtful case prefer the language of the drawing-room to that of the slums. Much of the fiction of the last century was coarse, more of this is vulgar. Heaven forbid that Vernon Lee should have initiated an era of combined coarseness and vulgarity.

'Matt' is a very bright and amusing bit of narrative. It has none of the extravagant scenes and descriptions which are scattered through Mr. Buchanan's longer stories. The pleasant personality of the young artist who goes gipsying in a caravan shines through all his erratic behavior, and Matt, whenever she appears, manages to conduct herself with the cool independence which may naturally belong to a girl who "wasn't born at all, but come ashore." The events of the last chapter are hurried, and the reader has to give up trying to reconcile the very unprincipled Mr. Monk's knowledge that Matt was true heir to all his acres with his ignorance of the existence of the fatal prayer-book and the marriage lines. The puzzle, however, is not so annoying as to detract from the pleasure of a story told directly and frankly for the story's sake.

Another pretty but more ambitious and less self-contained story than 'Matt' is 'Pilot Fortune.' The scene is laid on Bryer Island, which is little more than a sea-beaten rock near the entrance to the Bay of Fundy. The scenery of the Nova Scotian shore, and the morning, noon, and night aspects of ocean and sky are overwritten; but, nevertheless, there are descriptive passages of marked freshness and spirit. The people of the history, excepting the hero, are not natives of the island. He does not talk dialect, or chew tobacco perpetually, or live in his weather-worn sou'wester, or indeed indulge in any of the unpleasant habits which story-tellers would have us believe are inseparable from a native of a fishing village. Stephen Ferguson's English, manners, and clothes are good; he is manly, honest, and refined, and we wish the author had told us how he came to Bryer Island, and still further why he stayed there. If it is hardly probable that a New York man of leisure should desire to marry a girl whose face was her fortune, whose only visible relative was a cross old woman living alone on a windy hill, and should ask not a question about her antecedents, it is not too improbable for purposes of romance. But such rashness is not consistent with his conventional dismay when accident reveals the history of Milicent's father. His unhappy certainty that she will be recognized in the world as a notorious criminal's daughter, and scorned and flouted because of forgery committed by her father nearly a score of years gone by, is very weak and a little droll. It implies in the author an exaggeration of the world's stern virtues and a depreciation of its generosity. The character of Milicent, like that of Urquhart, is not a logical conception, but it has abundant grace, and the scene in which she sends away her half-hearted lover is strikingly delicate and expressive. Miss Ursula's recognition of her old lover in Urquhart's guardian, Raymond, is a disfiguring episode. It is not necessary to the plot, and is a cheap trick, marring the general effect of sincerity and simplicity.

It is very easy for a critic to say decidedly, "half the novels that are printed have absolutely no reason for existence"; but if he be honest and patient, he must generally concede that the author worked with some definite end in view. In two novels, 'The Carpet Knight' and 'Roslyn's Fortune,' not a trace of rational purpose is discoverable. They are not alike at all, except in their inanity. 'The Carpet Knight' is made up of chatter: to call it conversation were profanity. This chatter is pretty evenly distributed among a dozen or so of people who live in Philadelphia, and one or two who go over there occasionally from Boston and New Rochelle, whence they were doubtless temporarily exiled by neighbors having a share of that irascibility which accompanies moderate intelligence. It is barely possible that the author had an inspiring idea—no other than to sing again the joys and splendors of the "Assembly," a sacred institution for which, as is well known in polite circles, Philadelphia exists. When will that bard arise bold enough and strong enough to recite the woes of the Philadelphian Peri against whom the gates of the Philadelphian Paradise must ever remain closed?

For 'Roslyn's Fortune' no such plausible excuse can be raked up. It is a Southern story with a lame plot, which might end any way, or might just as well not end at all. The characters and descriptions would fit into several of the author's former novels, or indeed into almost any of the volumes of sentimental, diffuse fiction which have appeared in the last quarter of a century. They are the work of benevolent, half-awake women, prone to piety and twaddle. If they could be suppressed, it would be an act of mercy to the weak girls who read them, and whose light mental equipment is damaged by the false notions derived from them of any kind or condition of life.

The tenth volume of "Scribner's Short Stories" completes the series. "Young Moll's Peevy," by C. A. Stephens, and "A Daring Fiction," by H. H. Boyesen, are the best of the number, and among the best of the whole collection. The first is a swift, vividly told tragedy, and in the second Mr. Boyesen makes the most of a farcical situation. "The Ablest Man in the World," by E. P. Mitchell, is cleverly written, but the impossibility of the incident is so obtrusive as to detract from thorough enjoyment. If there is any reason for preserving such a composition as "Manmat'ha," it must be to show what may be done in the way of combining sentences, quite intelligible in themselves, so as to make a chapter of meaningless nonsense. If that is the object, it could not have been more successfully accomplished.

Just why an elderly poet and antiquarian, who had won a fair reputation in both these fields, should take it into his head to write a contemporary novel, it would be hard to guess. Yet this is what Mr. W. Jordan has done, with such results as his worst enemy could hardly have wished. The book has no plot, and the incidents are either preposterous or of threadbare familiarity. Such defects, indeed, are not fatal, for many novels are entertaining in spite of them, but Mr. Jordan's novel is like the "jumping frog"—however lively it *might* have been, so many religious and anti-religious discussions have been crammed into it as to overpower the sprightliest legs. Yet the plan of the book is so curious as to excite a certain interest, in spite of its absurdity and the terrible amount of extraneous matter in the way of its development. The hero is a Protestant clergyman, and that the reader may understand how intense is his sectarian feeling, the family history is given in detail from the time of the ancestor who stood by Luther's side when he nailed his thesis on the church door, since which date the head of the family had always been a clergyman. At the time of the Thirty Years' War, however, a branch had acquired wealth and rank by apostasy to the true Church, a change involving a social breach which had never healed. To emphasize the contrast, the only child of the head of the Catholic branch is made as bigoted and superstitious as a woman can be. The ingredients for the first experiment having been thus prepared, they are brought together by a meeting of the young people in a wild part of Switzerland, where the lady opportunely falls into the crevasse of a glacier, to be rescued, of course, by her heretic kinsman, and at the same time to be possessed by a semi-religious passion for him. But after exchanging vows they separate, and the girl goes with her father on a business journey to the United States.

Here she falls in with the first lover's brother, who is an astronomer and geologist of great profundity, but at the same time a prudent accumulator of dollars, of which he has already acquired a large store. His opinions are as much in advance of the parson's as the latter's were ahead of the young lady's, he being, in fact, an evolutionary materialist. Her admiration for him is naturally in proportion to the heterodoxy of his views, and as he is able to match the glacier scene with a rescue from a sinking steamer, the honors are easy. The clergyman, meantime, is rapidly catching up with his brother's opinions, and a beautiful and enormously rich Jewess is converted by his eloquence, while his professional career is ruined by an intrigue in which oily Jesuits and clumsy pietists have an equal share. The absurdity of the closing chapters is so great that were it not that there has hitherto been not a sign of humor in the book, one would suppose the author had intended the whole as a burlesque. Thus, the relatives of the two young women accept their changed views without the least hesitation; but as no priest will bless their union, they marry themselves after the manner of the ancient Germans.

BERLIOZ.

Autobiography of Hector Berlioz, from 1803 to 1865. Comprising his Travels in Italy, Germany, Russia, and England. Translated by Rachel Holmes and Eleanor Holmes. 2 vols. Macmillan.

For amateurs of music, Berlioz's Autobiography is beyond question the most fascinating book ever written; and even those who have but a vague notion of this art, may read it with keen interest. Vivid descriptions of travels and romantic adventures, spicy dialogues, incisive criticisms, an irony as subtle and charming as Heine's, suggestive remarks on musical æsthetics and on the art of instrumentation, reminiscences of contemporary artists and men of letters, glimpses of Bohemian life and the thoughts and emotions of an impulsive genius—all this and much more may be found in these memoirs. Indeed, it seems unquestionable at the present date that in the estimation of posterity Berlioz will rank much higher as a writer than as a composer. While no one can help admiring the brilliantly colored garb in which he has clothed his musical scores, it is now generally admitted that his ideas are too few and that he lacked the gift of spontaneous conception. His criticism, rather than his musical works, helped to secure for instrumental music in France a general attention which was not previously accorded it. His services in France in promoting the understanding of Gluck, Weber, and especially Beethoven were great; and by his tirades against the sensuous and flimsy Italian music of the day, and the exclusive prima-donna

worship (at the expense of the composer and his ideals) based upon it, he achieved for France what Wagner did for Germany, though not so effectively, as he had not the advantage of Wagner's creative powers to enforce his views. His boldness, both literary and musical, provoked much hostile criticism among his colleagues; and, though he made it a rule never to answer adverse criticism, every sting he received served as an electric shock, stimulating his wit, sarcasm, and eloquence. The verbatim accounts he gives of his critical duels with Cherubini, Boieldieu, and others are exquisite specimens of repartee and stratagem. He was especially severe on old fogies, like Fétis, who allowed themselves to mutilate the scores of Beethoven and other masters in order to bring them into harmony with their own notions of the theory of music. As long as leading composers indulged in such vicious practices, it was not to be wondered at that orchestral players and opera singers embellished the simple melodies of the composers in a way which often drove Berlioz to the verge of insanity.

The most puzzling fact concerning Berlioz's literary labors is that by his own testimony they were exceedingly irksome to him. "I have to return to the charge eight or ten times before I can finish an article for the *Journal des Débats*," he says, "and it takes me quite two days to write one, even when I like the subject and am interested by it. And then, what erasures and what scrawls! You should see my first copy. Musical composition comes natural to me, and is a delight; but prose-writing is a labor." Yet it is a psychological axiom that an author can give pleasure only by what he writes with pleasure; why, then, do we enjoy reading Berlioz's articles? Perhaps the puzzle can be solved in this way. The labor which he found so irksome was the writing of fugitive critical notices, in which he was compelled to veil his real opinions under vague eulogistic phrases, when he felt more like raving against the commonplaces and imbecilities he was compelled to listen to. This view is borne out by the confessions he makes in volume i, page 300: "And yet what wretched circumspection am I not forced to use! What circumlocution to evade the expression of the truth! What concessions to social relations and even to public opinion, what suppressed rage, what gulps of shame." And again, volume ii, p. 155: "But everlastingly to write *feuilletons* for one's bread—to write nothings about nothings—to bestow lukewarm praises on insupportable insipidities—to speak one day of a great master and the next of an idiot, with the same gravity, in the same language!" etc.

Whatever may have been true regarding his *feuilletons*, his Autobiography certainly was written *con amore*; for here he takes no pains to hide his opinions, and often "writes with a dagger instead of a pen." He had a passion for travelling which is not common to his countrymen; and having secured the Grand Prix de Rome, he was enabled to gratify this passion at an early age. The story of his adventures and experiences in Italy constitutes the most interesting part of the memoirs; but his remarks on music in Italy are calculated to astonish those who still cling to the peculiar notion that the Italians are the most musical nation in the world. Berlioz, on the contrary, says:

"I am much inclined to regard them as more inaccessible to the poetical side of art, and to any conception at all above the common, than any other European nation. . . . Now, we French, mean and contemptible musicians as we are, although we are no better than the Italians when we furiously applaud a trill or a chromatic scale by the last new singer, and miss altogether the beauty of some grand recitative or animated chorus, yet at least we can listen, and if we do not take in a composer's ideas it is not our fault. Beyond the Alps, on the contrary, people behave in a manner so humiliating, both to art and to artists, whenever any representation is going on, that I confess I would as soon sell pepper and spice at a grocer's in the Rue St.-Denis as write an opera for the Italians—nay, I would sooner do it."

At Milan he went to hear Donizetti's "L'Elisir d'Amore," and found the theatre full of people talking at the top of their voices, with their backs to the stage; the singers all the while shouting and gesticulating in eager rivalry. He speaks of the "anti-musical atmosphere" of Rome; and found that instrumental music had hardly any existence, the words symphony and overture being used in Rome "to designate *a certain noise* which the orchestra makes before the curtain rises, and to which no one ever listens." Finally, we may cite his clever hit at church and dramatic music: "I have often heard the overture of the 'Barbiere,' 'Cenerentola,' and 'Otello' in church. They seemed to be special favorites with the organists, and formed an agreeable seasoning to the service. The music in the theatres is in much the same glorious condition, and is as *dramatic* as that of the churches is *religious*." Matters have not greatly altered in these respects since Berlioz wrote these words, although a breath of fresh air is at present coming down from the north.

The criticisms just quoted show that, although it may be incorrect to speak of a "Wagner-Berlioz school" in a musical sense, the phrase is correct in a polemic sense. With Schumann they both abhorred the "self-evident" character of Italian melody, the monotony of its rhythms, and the worship of mechanical, ignorant, applause-seeking vocalists. Two other points of resemblance between Berlioz and Wagner are that both had a great power of literary expression, and that Berlioz, like Wagner, wrote some of his own texts. In their instrumentation they approach each other rather in the great command of technics each exhibits than by any similarity of results. Berlioz gives some interesting hints as to how he acquired his great skill in treating the orchestra. He carefully studied the scores of Beethoven, Weber, Spontini; when he went to the opera, he took along the score, and read it during the performance, and he used to ask artists at the Opéra to make experiments for him when he was in doubt. It was thus that he was led to perceive the "subtle connection which exists between musical expression and the special art of instrumentation; but no one ever pointed this out to me." It is curious to note here a difference of opinion between the two greatest masters of instrumentation the world has seen, regarding the relative value of vocal and instrumental sounds for securing variety of effect. Berlioz asserts (volume ii, 116) "that one wearies of this fine sonorousness [of vocal bodies] far more quickly than of that of the orchestra, the *timbre* of voices being less varied than that of instruments. This is easily understood: there are only four kinds of voices, while the number of instruments is upward of thirty." Wagner, on the other hand, asserts ('Gesammelte Schriften,' vol. iv, p. 209) that the vocal organ is capable of assuming an infinite variety of tone qualities, in comparison with which "the utmost possible variety in the mixtures of orchestral clang-tints must seem paltry."

The translation of the present volumes is on the whole clear and readable. The footnotes and comments which the translators have taken the liberty to insert, are generally silly and always uncalled for. They should be omitted in subsequent editions, and a good index introduced in their place.

West African Islands. By A. B. Ellis. London: Chapman & Hall. 1885. Pp. viii, 352. 8vo.

Major Ellis has taken advantage of the new interest in West Africa which the colonization schemes of the various European Powers has awakened, to describe the principal islands that lie along the coast. He writes from a personal knowledge gained through numerous voyages, and gives, together with a few of the important historical events connected with each island visited, an account of its physical features, its inhabitants, and the chief points of interest to the traveller. His opening chapter is devoted to St. Helena, of which he has little new to say, and from thence he follows the coast northward as far as Madeira. Ascension, the island lying nearest to St. Helena, by a peculiar fiction of the British Admiralty, to whom it belongs, "is called a ship, and is enrolled in the list of ships in commission under the title of 'the tender to H. M. S. *Flora*.'" It is, in fact, simply a sanitarium for seamen, though why it should have been chosen for such a purpose it is hard to say, since it is utterly barren, producing nothing but turtles, with no water supply and without a safe harbor. It seems to have a more prosperous future, however, before it, as the volcanic rock of which it is composed is rapidly decaying and a rich soil is being formed, the cultivation of which will completely change the whole aspect of the island. Curiously enough, while this process of decomposition is going on, the limestone rock is being formed on the sandy beaches so rapidly that turtles' eggs are cemented into it, according to the popular belief, "before the sun has time to hatch them." Much more attractive than this desolate spot is the island of Fernando Po, which lies just off the delta of the Niger. Clothed with magnificent forests, and having a soil so wonderfully fertile that "the cocoa is said to pay here a year sooner than elsewhere," its great natural and commercial resources remain undeveloped under the rule of the Spaniards, who seem to use it "principally as a place of exile for political prisoners." The island is crowned by Clarence Peak, 10,190 feet high, while from the water's edge on the mainland, nineteen miles distant, the Cameroons Peak rises 13,760 feet, making for one who sails between them a scene of unrivalled beauty. There is little of interest in the next group of islands described, the Isles de Los, and the author takes advantage of this to give at length his views on the missionary work among the Africans, which in his opinion is worse than useless. For a similar reason, his chapters on the Cape Verde Islands are chiefly filled with personal adventures, which we have not found entertaining.

A mile from the promontory of Cape Verde is a black basaltic rock, 300 feet high, three-quarters of a mile long, and a quarter of a mile broad in the widest part, every available portion of which is covered with houses and fortifications. These are inhabited by a motley throng of 3,000 Europeans, Arabs, Mandingos, "tall and stately Jolloffs (the only really black race in West Africa)," and negroes from Sierra Leone. This island, Goree, was originally occupied by the Dutch as a trading station when it was dangerous to form a settlement on the mainland, but has now been held for many years by the French for the same purpose. With the more pacific attitude of the natives, however, the reason for its maintenance has disappeared, and the new settlement of Dacar on the opposite shore will probably soon absorb the business of Goree, especially as the latter possesses neither harbor nor safe anchorage. At this point Major Ellis utters a note of warning in regard to the great increase of French influence in these parts within the last few years. He be-

lieves, and certainly recent facts would seem to justify his conviction, that their object is "to form a vast African colony extending from Algeria on the north to the peninsula of Sierra Leone on the south." With their advance the British influence and trade decline. This may have very serious consequences to English industries, for this part of West Africa is an open country, penetrated by numerous navigable rivers, and inhabited by intelligent tribes who can read and write Arabic and work in metals, and with whom trade will probably prove very profitable.

The Canary Islands have a greater interest than any of the others on this coast. Their history contains more striking and romantic episodes. The chief town, Las Palmas, possesses some good buildings, including a fine cathedral, a theatre, and a Palace of Justice. The inhabitants, too, are industrious, and under any other rule than the Spanish, except the Portuguese, would probably greatly increase the productions of the islands, as "the climate is so equable that both the fruits of the temperate and torrid zones arrive at great perfection, the oranges of Grand Canary being particularly good." On Teneriffe the prickly pear is cultivated for the sake of the cochineal insect, and in the spring of the year each leaf has to be swathed in linen to prevent the insect from being blown off by the wind or washed off by the rain. Terrace gardens are numerous, the soil being brought on the backs of camels from the interior. A chapter is devoted to an account of the ascent of the Peak of Teneriffe, a climb not unattended with danger, and, of course, the miraculous island, St. Brandan, has due attention. Major Ellis quotes from the affidavits of the islanders who have been privileged to see it. A Franciscan monk, for instance, deposes that the outline "appeared to him to be marvellously like unto the head and shoulders of the blessed St. Anthony, playing upon a dulcimer." But a fisherman who saw it at the same time says, that "to his more carnal eyes the island assumed the appearance of the head of a mule, playing upon a flute." The closing chapters are upon Madeira, but contain nothing of especial note.

Major Ellis writes easily and pleasantly, and his book is fairly entertaining. We are bound to say, however, that one finds in it a few passages and stories better suited to the mess-table than to the miscellaneous readers of a book of travels. Its value as a book of reference to the numerous places described is seriously diminished by the want of an index.

Russia under the Tzars. By Stepniak, author of 'Underground Russia'; formerly editor of *Zemlia i Volia.* Authorized edition. Charles Scribner's Sons. 1885. Also, Harper's Franklin Square Library.

"THE reader who peruses 'Stepniak's' book without partisan bias, is often tempted to doubt the faithfulness of the picture," we said in our review of 'Underground Russia' (*Nation*, No. 945). That temptation is even stronger in reading the book before us. There was "exaggeration and legendary embellishment" in the author's portraits of the heroes and heroines of revolutionary destruction to whose glorification his earlier work was mainly devoted; but such glorification has its natural limits, and the number of the glorified is small. But a tableau of horrors and heartless oppression, the subject of which is as vast as Russia under the heel of autocracy, offers an incomparably wider scope to partisan coloring, and the bias of hatred is more powerful and seductive than the partiality of admiration. And "Stepniak" is a thorough hater. Besides, the new book seems to have been prepared or completed in haste, as if on the demand of a publisher who found the moment particularly favorable for a publication of this character. Under a like stimulus, Marvin's 'The Russians at the Gates of Herat,' as he says, was "written and got out in eight days." To haste in finishing, expanding to fit, translating, and revising may charitably be attributed a good deal of diffuse talk, of unpruned rhetoric, of unpleasant sameness, in "Stepniak's" new sketches —not to speak of the shocking transliterations of Russian names or of the countless misprints.

But exaggeration, pardonable in a combatant; looseness of statement where accuracy would be very desirable, but can unfortunately not be attained; minuteness of detail, on the other hand, in accounts of things and proceedings hidden in the darkness of dungeons and torture-chambers, of Siberian recesses, hyperborean wastes, and penal hulks; unquestioning reliance on the clandestine communications and vague recollections of conspirators and victims, whose scraps of political martyrology are here reshaped and spun out in the style of a novel—these are the features of the book which weaken our estimate of the author's fidelity to historical truth. But, as on the former occasion, we detect "nothing that is much worse"—no intentional perversion of facts, no malicious invention, no inclination to reproduce shocking gossip, no vindictive assaults on individuals. "Stepniak" detests all official Russia alike, and paints everything that partakes of it equally black. He knows no exceptions, no extenuating circumstances. His retrospect over and beyond the whole Romanoff period is as distressingly dismal as his picture of the present. Only in centuries long gone by does he find in Russian history or legend a happy popular life and communal freedom. Of mediæval Novgorod and similar communities, with their supreme *vetches* (popular assemblies) and subordinate princeships, he talks with uncritical fondness. That, he thinks, was Russia indeed—as the freedom-loving nature of its people made it. Czardom, as ultimately developed, is a terrible incident and anomaly, "imposed on the nation by outward and accidental causes." Among these he seems to reckon "the clergy, whose bigotry was only exceeded by their ignorance, . . . soiling all they touched, and petrifying everything they pretended to bless"; a nobility that could tolerate all the butcheries and infamies of an Ivan IV.—all his unparalleled "orgies of cruelty, murder, and lust," which "went on for forty years without surcease"—without raising "a single hand . . . either to hinder or avenge"; the absence of a middle class, and the boundless ignorance and superstition of the masses of the people. Add Nihilism, and Russia has in our day reached a stage of helplessness under Czarish repression of which blood-curdling narratives without number can be written without appearing fabulous, and which to a degree justifies outbursts of despondency like the following:

"The despotism of Nicholas crushed full-grown men. The despotism of the two Alexanders did not give them time to grow up. They threw themselves on immature generations, on the grass hardly out of the ground, to devour it all in its tenderness. To what other cause can we look for the desperate sterility of modern Russia in every branch of intellectual work? Our contemporary literature, it is true, boasts of great writers. . . . But these are all men whose active work dates from the period of 1840. . . . The new generation produces nothing, absolutely nothing. Despotism has stricken with sterility the high hopes to which the splendid awakening of the first half of the century gave birth. Mediocrity reigns supreme. We have not a single genius. . . . As it is in letters, so it is in public life. All the leaders of our Zemstvo, modest as are their functions, belong to an older generation. The living forces of later generations have been buried by the Government in Siberian snows and Esquimaux villages. It is worse than the pest. The pest comes and goes; the Government has oppressed the country for twenty years, and may go on oppressing it for who knows how many years longer. The pest kills indiscriminately, but the present *régime* chooses its victims from the flower of the nation, taking all on whom depend its future and its glory. It is not a political party whom they crush, it is a nation of a hundred millions whom they stifle."

Literary Landmarks of London. By Laurence Hutton. Boston: James R. Osgood & Co. 1885.

THIS is a work unlike, so far as we know, any other that has ever been written, and its production is a striking proof of the ever increasing interest that is felt in the commonest details of the lives of illustrious men. It is an effort to fix, with the utmost possible precision, the site of the dwellings in London which have been inhabited by English authors during their residence in that city, or at which they have stayed while making there a temporary sojourn. The names are put down in alphabetical order, the list beginning with Addison and ending with Wycherley. Under each his London residence is given, and its number and condition now; or, if it has disappeared, what has taken its place.

The excellence of such a work as this depends of course mainly upon its completeness and accuracy. The difficulty of securing these cannot well be overestimated. Many of the houses have been pulled down and other buildings put up in their stead. Some streets have been swept away by the ravages of fire or the more dreadful ravages of improvement. Others have changed their names, others still their numbers. This last constitutes the most formidable difficulty in the way of exact identification. "It is easier today," writes Mr. Hutton, with some justifiable asperity, "to discover the house of a man who died two hundred years ago, before streets were numbered at all, than to identify the houses of men who have died within a few years, and since the mania for changing the names and numbers of streets began."

He would be a venturesome critic who, on this side of the Atlantic, should dare dispute an author's statement of facts which have been largely made from personal examination of the places described. The work, indeed, bears throughout abundant evidences of the most conscientious and painstaking labor. Wherever we have been able to test its accuracy on the matters which it professes to treat, it has invariably stood the trial, and it is crowded full of details which will be new to all students interested in the homes and haunts of great men. One or two slight errors we have noted, but as they are not connected with the matter of residence it is unnecessary to mention them. The work will be an invaluable one to all those who visit the English metropolis, and seek to find there the spots which are associated in their minds with the memories of the great writers of our tongue.

Every-Day Life and Every-Day Morals. By George Leonard Chaney. Boston: Roberts Brothers. 1885.

THE papers which make up this volume were read last winter, the author tells us, on Sunday evenings, in the Church of Our Father, in Atlanta, Ga. They had their origin in a local difficulty (we believe that since the South was opened to communication with the rest of the world there have been a good many such) over some publicly-exposed pictures, which, as Mr. Chaney says, were considered by some excellent people to be "more injurious to the people's morals than helpful to the people's taste." What these pictures were is not stated, but the consideration of the relation of art to morals led naturally to the consideration of the relations of trade, the press, the stage, the pulpit respectively to morals; and discourses on these topics "fol-

lowed as quickly as a flock of birds settles where one has alighted."

Mr. Chaney's discourses are, like most clerical work of the sort, full of a rhetoric abounding in illustration, trope, and metaphor, used, if we may say so, somewhat too expansively. For instance, to illustrate the truth that "what we see depends on what we are," he first says, "Take the Washington Elm at Cambridge," and then shows what different things the patriot, the antiquarian, the artist, the naturalist, the traveller, the woodman, the butcher, the bird, the cattle, the insects, and the "visiting stranger" see in it. Not content, however, with this, he passes on to consider the similitude between the "heart of man" and a mirror. Let the surface of it, he says, be only a little out of level, or broken by cracks or flaws, and straightway its reflection will be distorted or broken. "A swelling convex surface will make the most beautiful face monstrous. Contrariwise, a retreating concave surface will make the same face petty and ridiculous."

The love of illustration occasionally leads even the best men into error, and, on the whole, it is rather surprising that Mr. Chaney should not, with his exuberant imagination, have more often been led astray. He seldom really wanders from the paths of common sense, but the discourse on "The Stage and Morals" seems to need some revision. "The first actor," says this preacher, "was Satan"—a belief which he rests, not, as some old stagers might, on the general badness of acting at the present day, but simply on the fact that Satan "played the part of the serpent in the Garden of Eden." But this really is a confusion of the boundaries of art and morals against which we must protest. If Satan had given out that at a certain time he would appear in his celebrated rôle of a "practicable" serpent in the garden, his behavior would have been that of an actor; but he did nothing of the kind, and to saddle the stage with the father of evil is not fair. This was a case of wilful and deliberate deception, and has always been treated as such by writers down to Mr. Chaney. The stage he does not quite understand, and he is by no means accurate in describing the plots of "Camille" and "Frou-Frou," neither of which plays he admires.

From Home to Home. Autumn Wanderings in the Northwest in the years 1881, 1882, 1883, 1884. By Alexander Staveley Hill, D. C. L., Q. C., M. P. Orange Judd Co. 1885.

It was only ten years ago that Captain Butler was describing the country along the Saskatchewan and Assiniboine Rivers and their tributaries as the "Great Lone Land" and the "Wild North Land," through which he travelled with dog sledges, and of which he gave us descriptions as of an uninhabited *terra incognita*. To-day Mr. Staveley Hill runs over from England for his autumn vacations, travels by rail almost to the foot of the Rocky Mountains, and then drives about in a wagon, picking out the best ground for a cattle range. Nothing could more strikingly illustrate the progress of the country in this short decade. Butler was nothing if not an explorer, and his books aimed above all to be records of adventure and hardship. Staveley Hill, in four journeys, had no adventure more remarkable than once losing his way in a snow storm; and only once did he see a few retreating buffaloes, sole survivors, apparently, of the mighty herds which in Butler's time blackened the earth as far as the eye could reach. The picturesque features of northwestern travel may therefore be said to have disappeared. It is a pity that Mr. Staveley Hill does not recognize this fact, and spare us the endless pages of tame incidents of his quite uneventful trips—how the whippletrees of his wagon broke; how he caught sight of a wolf, or a deer, or an antelope, and, after a long tramp, returned to camp without getting a shot; how his buggy nearly upset in fording a stream, and so on. In place of this we should like to hear how the emigrants are getting on in their new homes, what the character of the land is, what his views are concerning irrigation and tree planting, and other problems of prairie cultivation. What he has to say on these subjects is very interesting, but makes only a small portion of his book.

His opinion is, that the boom of 1881-'82, followed by the bad harvest of 1883 and the succeeding commercial depression, were very nearly fatal to Manitoba. While its soil is fertile and is offered by the Dominion Government to the settler on equitable terms, yet a certain amount of capital and a great deal of hard work are necessary to insure success to the farmer. For cattle raising he thinks the hills along the base of the mountains, where the cattle can obtain shelter from the blizzards of winter, are well adapted; and he gives a decided preference to the Canadian system of leasing large tracts for cattle ranges, over the American system of "free ranging," which "is producing ruinous consequences in Montana and the other grazing Territories and States of the Union." He gives an entertaining account of the cowboys, and of the annual "round-up" of the cattle; and he makes some very amusing blunders, as in saying that the Falls of St. Anthony are "better known to readers of Longfellow as the Minnehaha"; that Chief Joseph and the Nez-Percés fought in 1878 against "Captain Howard"; and that at an early date the run on the railroad from Winnipeg to Calgary (840 miles) will be made "between sunrise and sunset."

Dictionnaire Historique et Pittoresque du Théâtre et des Arts qui s'y rattachent. Par Arthur Pougin. Paris: Firmin-Didot; New York: F. W. Christern. 1885. 4to, pp. xv.-775.

M. Pougin takes up alphabetically all the technical words of the theatre, and explains them at length with the aid of cuts and diagrams. He describes historically all the institutions of the French stage—the Opéra, the Opéra-Comique, the Comédie-Française, the Conservatoire, and their fellows. The organization and technology of the drama of the Greeks and Romans, and of their sports of the arena, and public shows in general, are considered in detail. Under the appropriate heads—"Bateleur," "Clercs de la Basoche," "Hotel de Bourgogne," "Jongleurs," etc.—are traced the growth and gradual development of the theatre in France. Special attention is given to books about the stage and to the bibliography of dramatic music. M. Pougin abounds in neatly told anecdotes of theatrical life. He dwells upon stage-devices of all kinds and on the details of costuming, scene-painting, stage-machinery, and stage-management. Much space is devoted to a consideration of the collateral side of show-life—to the circus, the menagerie, puppet-shows, ballet-dancing, public processions, cavalcades, and the like. The accumulation of all these subjects into one volume, not unduly cumbrous, is a boon to the student of the stage.

This dictionary, nevertheless, is not without its defects. Its chief limitation—that it is calculated too exclusively for the meridian of Paris—is common to French books of reference. We must next complain of the illustrations. Though these are fine and very numerous, only a few have been made for the present work, and they are often forced into the text. For example, the dictionary does not give any biographies, and yet portraits of renowned actors and actresses are included by means of all sorts of transparent devices. A nine-line paragraph, setting forth that formerly the first tragic actress was entitled to play all queens, is adorned with a half-page portrait of Mlle. Duchesnois as *Mary Queen of Scots*. Moreover, the artistic quality of the borrowed portraits, mainly well-engraved woodcuts, is unfortunately far higher than that of the illustrations which have been prepared specially for this book, most of which are vague and ill-drawn process-blocks. Exceptionally commendable is a series showing all the separate pieces of scenery used at the Paris Opéra in setting the second act of "Hamlet," followed by a view of the scene as it is set, uniting all these separate pieces and giving any one unfamiliar with the pleasant country behind the scenes, a very good idea of the means of producing a given scenic effect and of the care and elaboration it requires. Among the more amusing illustrations are those reproducing the advertising posters.

In defining two English words, *burlesque* and *clown*, Mr. Pougin apparently confounds the former with the English Christmas pantomime, and gives to the latter the usual French significance of acrobat. For the curious in such things one may draw attention to the ballet-score (p. 167), where the steps of the ballet-dancer are set down in detail, according to a chorographic alphabet given in full.

The Dictionary of English History. Edited by Sidney J. Low, B.A., Lecturer on Modern History in King's College, London; and F. S. Pulling, M.A., late Professor of History in Yorkshire College, Leeds. Cassell & Co.

This volume will undoubtedly be a favorite with historical students. Its aim is to supply, for the ordinary reader of English history, the place of the gazetteer, the dictionary of biography, the law dictionary, and the other books of ready reference that have hitherto been necessary. It is, therefore, highly miscellaneous in character. But the topics are so well selected, and the articles so clear and compact, that the student who keeps the work at his elbow will seldom fail of finding in it help sufficient for his need. Of course it would be idle to expect in one volume an account of every person, every institution, and every event mentioned in English history—together with explanations of all legal and constitutional terms. Many things had to be omitted. In deciding what to insert and what to omit, the editors kept solely in view the probable needs of modern readers—an arbitrary rule, no doubt, but the only one possible in the case. Many matters not thought worthy of separate articles are incidentally treated under other heads. A very fair index of reference for these matters makes it possible to find them readily. Experience will no doubt reveal omissions that had better not have been made. On finer points, and for rare terms, it will always be necessary to consult the larger or special works. But we see no reason why any technical term or the name of any institution mentioned in Hallam should be omitted from a dictionary intended for the general reader. A few—fortunately only a few—are omitted. Also we must regret that no attempt has been made to indicate the pronunciation of proper names, at least in those cases (so unhappily numerous in England) where the spelling is apt to mislead the unwary.

A valuable feature of the work is a very comprehensive list of authorities, contemporary and modern, for each period of British history. In addition to this general list the most important authorities for each topic are named at the end of each article. Lists (with dates) are given of the Archbishops and Lord Chancellors; also a

convenient table of the regnal years of the Kings of England, beginning with William the Conqueror. The work as a whole is characterized by great accuracy.

Selections from Berkeley. By Alexander Campbell Fraser. [Clarendon Press Series.] Oxford.

THESE selections have been prepared for the use of students in the English universities, but there is no reason why they should not be used by many others who are in want of an intellectual gymnastic. There is an admirable introduction which rapidly but successfully sums up the history of philosophy from Bacon to Locke, sets forth the relation of Locke to Berkeley and of both to Hume. There are also many useful notes. The selections are in three principal sets, the first upon "Matter Necessarily Dependent on Mind," the second upon "Visual Phenomena Significant of Mind," and the third upon "The Universe and the Universal Mind." One does not have to read very far into the first series of selections to appreciate how little Dr. Johnson, when he stubbed his toe by way of refuting Berkeley's theory of matter, hurt anything but his toe, or how inevitable it was that Professor Huxley should say that between the idealism of Berkeley and the materialism of Büchner he should be obliged to choose the former. Indeed, the later manifestations of both philosophy and science have gone far in the direction of Berkeley, though they have inclined to posit "a sort of a something" as the basis of our apprehension of the external world. The old answer to the question, "What is matter?" "Never mind," receives but little confirmation from our later thought. But the thought of Berkeley has an interest apart from its relation to our present speculation. There is a vigor in it which makes it bracing to the reader's mind, and an exaltation that is purifying to the imagination and the heart.

HAVE JUST PUBLISHED:

COLLECTED ESSAYS IN POLITICAL AND SOCIAL SCIENCE. By William Graham Sumner, Professor of Political and Social Science in Yale College. 8vo, $1.50.

CONTENTS:

Bimetalism.
Wages.
The Argument Against Protective Taxes.
Sociology.
Theory and Practice of Elections.
Presidential Elections and Civil-Service Reform.
Our Colleges before the Country.

The Nature of the Mind AND HUMAN AUTOMATISM.

By DR. MORTON PRINCE.

12mo. *Extra Cloth.* $1.50.

"This work is on a subject which ought to commend it strongly to the general reading public. The mind is a mystery, which perhaps defies solution, but it affords a field of study not altogether unprofitable, and the results of labor in this field have been of practical value in the treatment of diseased minds."—*St. Louis Republican.*

"Dr. Prince has evidently brought to the preparation of this work a thoroughly cultivated mind, well stored with a knowledge of the studies of the best writers on such subjects, and presents his views clearly and logically. All thoughtful readers must admit that it is a book well worth a careful perusal."—*Baltimore Eve. News.*

"Dr. Prince has something original to say upon the questions contained in this subject, and, undeterred by the *argumentum ad verecundiam* which gains so much of the influence of great names, states his conclusions confidently and boldly. And here it may be added that what he has written indicates hard study of authorities and a mind exceptionally well trained in the faculties employed. There is fine thought and ability in the development of the argument, that entitle the work to the serious study of those interested in its subjects."—*Boston Globe.*

*** *For sale by all booksellers; or will be sent by mail, postage prepaid, on receipt of price.*

J. B. LIPPINCOTT COMPANY, PUBLISHERS, 715 and 717 Market Street, Philadelphia.

GERMAN SIMPLIFIED.

An easy method for learning the German language by self-instruction or in classes. In 12 numbers; No 7 just published. 10 cents a number (postpaid), or stamp for prospectus. Prof. A. KNOFLACH, P. O. Box 1550, New York.

"To any one desiring to learn the German language with as little hard work as possible this publication will be a welcome friend."—*American Garden.*

"The simplicity of method is admirable."—*Norristown Herald.*

CRITICAL AND SOCIAL ESSAYS.—Reprinted from the *Nation*, and in some measure supplying the place of the first two volumes of the paper, now very scarce. Cloth, 12mo, price $1.50. Sent, postpaid, on receipt of price.

Scribner & Welford's

NEW BOOKS.

Old Times.

A Picture of Social Life at the End of the Eighteenth Century. Collected and Illustrated from the Satirical and other Sketches of the Day. By John Ashton, author of 'Social Life in the Reign of Queen Anne.'

One volume, fine paper, medium 8vo, handsome binding. Eighty Illustrations. Price, $6.00.

This book is a compendium of the Social Life in England at the end of the last century, corresponding with Mr. Ashton's 'Social Life in the Reign of Queen Anne.' Avoiding history, except in so far as to make the work intelligible, it deals purely with the daily life of our great-grandfathers. Nothing is taken from diaries or lives of the upper classes; it aims solely to give a fair account of the life of the majority of people then living, or, as we now term it, of the middle class. This could best be done by taking the daily notices in the press, which would naturally be a perfect record of each passing folly of fashion, or even of the markets; so that by this means we get a glimpse of the inner life of that time, unattainable by any other method. The *Times*, which commenced 1st January, 1788, is taken by preference; but when that authority is unavailing, other contemporaneous newspapers have been consulted.

Profusely illustrated from the satirical and other sketches of the day, it forms a volume of reliable authority, such as, up to the present time, has been looked for in vain.

BURMA AND THE BURMANS; or, "THE BEST UNOPENED MARKET IN THE WORLD." By A. R. Colquhoun, author of 'Amongst the Shans,' 'Across Chryse,' etc. With map of the country. 16mo, paper. 50 cts.

THE BARS TO BRITISH UNITY; or, A PLEA FOR NATIONAL SENTIMENT. By T. D. Wanliss. Crown 8vo, cloth.....$1 50

The Nation.

NEW YORK, THURSDAY, MAY 28, 1885.

The Week.

THE sessions of the National Commercial Convention at Atlanta last week demonstrated the fact that the South has made most encouraging progress toward the acceptance of sound financial views during the past few years. Though formerly it has been the stronghold of opposition to a national bankrupt law and of support for silver coinage, yet on Wednesday, when the question was taken whether the public interests require the enactment of a general bankrupt law, 105 delegates from Southern States voted in the affirmative, as against 127 the other way; while on Thursday, the suspension of silver coinage received the large majority of 133 to 89 votes from the Southern delegates alone. On each question the Northern representatives voted overwhelmingly on the right side, but that was to be expected. The expression of Southern opinion, however, is as surprising as it is gratifying. It is the more striking in the case of the silver question because the Colorado delegates made a peculiarly strong and cunning attempt to secure a coalition of the South and the extreme West; Mr. Symes, the Republican Congressman-elect from that State, going so far as to declare his readiness to defy the party lash at Washington, and support liberal appropriations for the Mississippi River improvement and other Southern schemes, in return for Southern silver votes. The spokesman of South Carolina expressed the feeling of his constituency when he replied that a radical change had taken place since the Bland bill was passed by the aid of Representatives from that State, and that her bankers were now all but unanimous in favor of suspending the coinage. Nothing can arrest this swelling tide of Southern sentiment in favor of sound business policies; and since this decisive vote of the Atlanta Convention, there is an excellent prospect that Congress will pass an act suspending silver coinage early in the next session.

In the Convention on Wednesday Mr. S. Dana Horton, of Ohio, spoke on the silver question from the standpoint of a bi-metallist, in favor of the Senate Finance Committee's bill of last session, which provided for the calling of a new monetary conference, and, in the event of its failure to secure an international agreement for free coinage on a common basis before the 1st of August, 1886, required the Secretary of the Treasury to discontinue the coinage of standard silver dollars. Mr. Horton was a delegate to the Paris conferences of 1878 and 1881, and has sacrificed a great deal of time to the cause of bi-metallism during the past nine years. Mr. Horton and Mr. Francis A. Walker are the leaders of a small but persevering band of economists who believe in the double or alternate standard, and who hold that it is possible to yoke the two metals, gold and silver, together by law, provided a sufficient number of nations join together for the purpose, so that their relative market values shall remain fixed and unchangeable. They are as much opposed to the single silver standard as to the single gold standard. If, in default of a suitable international agreement, a single standard is necessary for the United States, they would prefer the gold standard because it is the standard of other civilized countries. They have nothing whatever in common with Mr. Bland and his followers. They opposed the Bland bill in the beginning. They accepted the Allison bill, which was substituted in place of Mr. Bland's measure, because it contemplated international bi-metallism and made provision for the Paris Conference of 1878, to which both Mr. Horton and Mr. Walker were sent as delegates. When the Conference failed, they urged the immediate suspension of silver coinage by the United States for the purpose of "putting a pressure" upon Europe, and especially upon England, through the decline in the price of silver, which they believed would be the inevitable consequence. They have since advocated the same policy, and have been supported by Cernuschi, De Laveleye, and most of the bi-metallic theorists of Europe.

The story told by Secretary Whitney in his letter to the Commandant of the Mare Island Navy-yard touching the repairs of the *Mohican* has all the charm of a romance. The *Mohican* is a small wooden ship of about 1,900 tons displacement. As a man-of-war, we need hardly say, she is now worthless. She might, as a cruiser, catch an enemy's sailing vessels in a calm or if the wind were light; but from the fighting ships of any other maritime Power she would have to seek safety in flight. She was taken out of commission in 1872, and instead of being sold or broken up, they set to work to "repair" her. During the thirteen years which have since elapsed, the "repairs" have steadily continued, until now their cost has reached "three times," says Mr. Whitney, "what a new ship of the same character and class could have been built for"—or $900,000. More extraordinary still, two-thirds of this amount has been spent on her within the last three years, under the administration of Secretary "Bill" Chandler, as true and faithful a Republican as ever trod a deck. Moreover, there was, when the present Administration came into power, no sign that the repairs were near an end. There was apparently no limit to the amount of repairing the *Mohican* could stand. She was evidently a Republican ship, and would bear repairing as long as the party remained in power. Mr. Whitney's letter seems to call for some answer from our old friend "Bill," who is now up in New Hampshire; but we notice from the speeches he has lately been making that what occupies his mind is the condition of the negroes at the South in the matter of the suffrage. It is impossible that under these circumstances he can stop to explain why he repaired the *Mohican* so much. Wait till there is no "solid South," till there are no Rebel brigadiers, and, our word for it, he will clear it all up.

Secretary Whitney evidently meant what he said when he wrote his letter of last month to the commandant of the Mare Island Navy-yard about the abuses in the conduct of that establishment. After directing the summary discharge of certain foremen, who were proved to have openly forced their employees to vote the straight party ticket, Mr. Whitney gave notice that "if any similar proceeding, or anything like it, or any attempt to coerce the vote of the employees of the yard by foremen or superior officers should take place hereafter, whether in the interest of the dominant party or otherwise, I will apply a similar remedy." The first enforcement of this order is made at Norfolk, Va. Charges having been made that the recently appointed foreman of shipsmiths and foreman of laborers in the Navy-yard at that point were engaged in running the Democratic City Convention the other day, the commandant of the yard has called upon them to deny the allegation under their signatures or be discharged. He has also prohibited political discussions in the yard, and says that any employee who takes a conspicuous part in politics will lose his position. This is so obviously the correct rule of conduct for a Government establishment that its promulgation should occasion no remark; and yet the adoption of such a rule involves a reform of the greatest importance. The navy-yards have hitherto been run primarily as party machines, and to make them business institutions is to effect a radical transformation in their character. It is most gratifying to find that Secretary Whitney, at least, is in earnest in enforcing the rule laid down in Mr. Cleveland's civil-service reform letter, that not only "offensive partisans" but "their successors" "should be taught that efficiency, fitness, and devotion to public duty are the conditions of their continuance in public place, and that the quiet and unobtrusive exercise of individual political rights is the reasonable measure of their party service."

The good effects of a change in the national Administration are already visible in the management of the New York Custom-house. One of Secretary Manning's first acts, after he took charge of the Treasury Department, was to direct all collectors to cut down the expenses of their establishments as much as should be possible without impairing the efficiency of the service. The result is, that Mr. Robertson finds only $227,000 needed for the pay-roll of the New York Custom-house in May, although he demanded $256,000 on this account for the month preceding the Presidential election. In other words, the Collector confesses that a reduction of a full ninth can be made in the running expenses without harm to the public interests, humiliating as such an admission of extravagant management must necessarily be to him. If Mr. Robertson, with the natural motive to conceal reckless expenditures, has to own

up to the fact that $29,000 a month can be saved as well as not, there is no question that a thorough overhauling of the establishment by a new chief committed to a businesslike administration would show the feasibility of much more thorough retrenchment. These disclosures regarding the Custom-house, when contrasted with the showing for the Post-office, illustrate the difference between the management of a public office on business principles and its conduct by a professional politician.

Mr. Vilas and every other Democrat who thinks there should be a change made in postmasterships for any other reason than "offensive partisanship" or want of efficiency, should explain to the public in what way Democratic policy differs from Republican policy with regard to post-offices. The business of a post-office is the receipt, despatch, and distribution of letters, the sale of postage stamps, and the giving and cashing of money-orders. Now, in what does the Democratic way of doing these things differ from the Republican way? If it does differ seriously, we ought to have a general change, but we have as yet received no explanation on this point. Have the Democrats a different mode of sorting letters? Would they despatch mails at greater or at less intervals, or by different routes? Are they opposed to free delivery in cities, and would they recur to the old box system? Do they think there is too much letter writing, and that the postage ought to be higher? Are they opposed to postal conventions with monarchical countries or to the admission of letters from European paupers? In a word, what is it in the Democratic view of post-offices which makes it desirable that when a Democratic Administration comes into power, the postmasters should be Democrats? If there be a Democratic way of managing post-offices, the country ought to know what it is, and it ought to be an issue at the elections.

No friend of honest government has any tears to shed over the announcement that the new Administration has begun the removal of the Mahone postmasters in Virginia, and intends to make thorough work of the job. The nonchalance with which the last Administration turned over the Federal patronage in the Old Dominion to a most odious political boss for his personal aggrandizement, marked the lowest depth which the spoils theory of office has touched in this country. Scarcely anything which has happened in the South since the war has done so much to bring the Federal Government into contempt as this ostentatious support by the Republican party of the worst sort of Machine rule in combination with open and avowed repudiation. The cause of public honesty and political morals cannot be better served than by the dislodging of the whole gang of Mahonites now in office.

The nomination of Edmund G. Ross as Governor of New Mexico recalls an interesting period in our political history. Ross is a Wisconsin man, who drifted out to Kansas in the stormy days of its early existence, and became prominent enough in State politics to receive first an appointment by the Governor in 1866 to fill a vacancy in the United States Senate, and subsequently an election by the Legislature for the unexpired term of more than four years. He cut no great figure at the capital, and was generally counted only as one of the then overwhelming Republican majority in the Senate. When the party managers conceived the scheme of supplanting Andrew Johnson with Ben Wade by the device of an impeachment trial, they never thought of such a thing as the Kansas Senator's taking any other part in the proceedings than to record his answer of "guilty" when he should be asked his judgment as to the President. The rumors of his wavering were a startling surprise, and when his vote, joined with that of the half-dozen other Republican dissentients, served to defeat the carefully worked-up project, the indignation of the Republican leaders knew no bounds. Ross had less reserve of reputation and character to draw upon than Fessenden, Trumbull, and the rest, and he was accused of having been bought to vote for acquittal, though no evidence to sustain the charge was ever produced. When his term expired, he sank into obscurity beneath the storm of obloquy which his course had aroused, and he had hard work for a while to get a chance to make a bare living at his old trade of type-setting. Some years ago he moved to New Mexico and began life over again, and the revolution of last fall has now resulted in giving him a fresh start in politics. He will probably make a good enough Governor of the Territory, but he can never again render the public such signal service as fell to his lot in 1868, when he helped to save the country from a terrible blunder.

The spoilsmen everywhere are indefatigable in their efforts to break down the reform policy. Hardly have the friends of the merit system succeeded in defeating the assault of the politicians in this State, who sought to get in their entering wedge by exempting soldiers from the operation of the Civil-Service Law, when they are called upon to oppose a similar onset in Massachusetts. A member of the Senate the other day introduced a bill authorizing the appointment to office of honorably discharged soldiers and sailors without passing an examination, and it has been rushed through the body almost before the public was aware that it was being considered. The measure was strongly fought by an ex-soldier member, who declared that not a quarter of his old associates wanted any change, since they were perfectly satisfied with the preference which the present law gives them over other applicants who pass examinations with them. The real motive of the other side was frankly confessed by one Senator, who declared that he favored the bill because he was opposed to the whole civil-service reform scheme, which—with the "intense Americanism" that the *Sun* used to admire so much in Mr. Blaine—he denounced as having been "borrowed from China." The close vote of 19 to 16 by which the bill was passed leaves a hope that time to secure an expression of public opinion, and especially of soldier opinion, may secure its defeat in the other branch, as happened in this State; but in any case the incident will serve to show the friends of civil-service reform the necessity for being constantly on their guard against insidious attempts at its overthrow.

The demoralization in which the Blaine campaign left the Republican party has never before been so forcibly and disgracefully manifested as in the action of the Massachusetts Legislature last week. The lower branch recently passed, by a vote of almost 2 to 1, a so-called Dynamite Bill, which proposed new safeguards against the use of the explosive for the unlawful destruction of life or property, "within or without the commonwealth." The measure appears to have been a reasonable and proper one, such as would have been adopted without question before the days of "Blaine Irishmen." But one of these men was a member of the Legislature, and under his leadership the large Republican majority recanted its previous action and defeated the bill by an overwhelming majority. There were no concealments about the business. The "Blaine Irishman" boldly declared that the Republicans must choose between the friendship of the Irish voters who, like him self, "were convinced by Republican arguments and voted for Mr. Blaine last year," and the duty of denying them the right of making Massachusetts their base of operations with dynamite against Great Britain. In short, they must abandon the attempt to do their duty as civilized men, or lose the support of the dynamiters. This was the naked issue, and when the House, with 166 out of its 240 members Republicans, was called to meet it, it declared three to one in favor of the dynamiters on a viva-voce vote, while the small minority shrank from going on record when a demand was made for the yeas and nays. The Republican party in Massachusetts is thus fairly started on its new line of policy, and it will be interesting to compare the results achieved under the control of its dynamiters with those which followed the somewhat different leadership of its John A. Andrews.

The sale of $1,740,000 of Connecticut State 3 per cent. bonds at a price slightly above par is a new and striking illustration of the plethora of capital seeking investment on the highest security. Hitherto no borrowers in this country, except the United States Government, have been able to obtain money at as low a rate as 3 per cent., except on the pledge of property in hand sufficient to realize the debt. The sale of Connecticut bonds establishes in one sense the rate of interest on time loans where the risk is at the minimum. The credit of the State of Connecticut is at the present time superior to that of Great Britain, France, Germany, Russia, Austria, or Italy, and inferior only to that of the United States.

Bishop Littlejohn, of the Protestant Episcopal Church, is a witness the weight of whose testimony cannot easily be impugned by the religious press when he gives his evidence regarding the relations of the Protestant denominations to the masses in our great cities. The facts bearing on this question which he presented in his annual address before the Convention of his church in Brooklyn last week are most impressive. He shows, in the first place, that the ancient title, "City of Churches," has become a most absurd misnomer for Brooklyn, since

it now has only one place of worship to each 2,624 people, which is a less proportion than is found in any other city in the country. He estimates that nearly a third of the population is not touched, directly or indirectly, by any form of evangelical work, and he confesses that this ratio is annually growing. He reports that the most populous ward in the city, with over 50,000 souls, has but eleven places of worship, "mostly small," while a recent visitation of one portion of this region disclosed the fact that, of 600 families, 450 were without Bibles or any other Christian reading. He closes his address with a vigorous plea for religious work in the city of Brooklyn, whose "uncared-for, unvisited, unchristianized masses appeal to us with a cry more piercing than that from the heart of Asia or Africa, or from the frontiers and Territories of our own land." No more forcible presentation of the growing alienation between the churches and the working classes has ever been made than the confession of this eminent Bishop.

The surrender of Poundmaker, one of Riel's leading Indian allies, with his force of over 2,000 men, leaves only the chief Big Bear with a few hundred followers still in rebellion, and the final collapse of the movement cannot be long postponed. But the embarrassments of the Canadian Government over this matter are by no means ended. The proper disposition of Riel is an exceedingly ugly question. There seems to be little doubt that the fellow is a "crank," and yet there has been too much method in his madness for his performances to be excused as the antics of a lunatic. Moreover, there is no question that some of his grievances were real ones. The issue of land patents, for example, which is the most important exercise of authority in a new country, has been sadly mismanaged, the officials too often playing directly into the hands of the speculators and permitting gross wrongs upon honest settlers. The French element of the population is so thoroughly convinced that Riel had much justification that it will bitterly resent any severity in his treatment. It is also clear that Riel would not have been able to secure the help of the Indians if they had not been exasperated by a long series of frauds perpetrated upon them by the Indian agents of the Government, who have in many cases stolen the larger part of the funds appropriated for the maintenance of their wards.

The Russian budget for the current year has been published. It shows an excess of expenditures over receipts. It is proposed to cover the deficit by a tax on business profits, the equivalent of an income tax of three or four per cent., and by increased customs duties. The estimates are on a peace basis, no allowance being made for the contingency of a war on the frontier of Afghanistan. The embarrassments of the Treasury are increasing from year to year, and there is now a threatened deficiency in the winter-wheat crop from lack of rain.

There is a growing opinion in England that the proper line of defence for India is India itself and not Afghanistan. This conception is opposed to the notions of the pamphleteers and the greater part of the press, but is supported with force by the Duke of Argyll, by Lord Salisbury, Lord Kimberly, Lord Cranbrook, and by the *Economist* newspaper, which undoubtedly represents in this particular the conservative business interests of the United Kingdom. Since the abatement of the war fever, people have begun to ask themselves what security they have against a fresh advance on the part of Russia, which everybody believes will take place whenever her later conquests shall be secured and her lines of communication perfected. The more this question is agitated, the plainer it appears that Afghanistan cannot serve as a buffer against Russian aggression unless England occupies and fortifies the country. This is exactly what the Afghans will not permit. They have fought for their independence against England in two considerable wars, in both of which they were successful. They are willing to have English help to fight against Russia, but not at the expense of surrendering their fortresses and the command of their armies, nor will they as yet consent to the building of a railroad from Quetta to Herat, which will be an indispensable condition to the defence of the latter whenever the Russian railway shall have been pushed forward to Sarakhs. There is, therefore, says the Duke of Argyll, no logic in a defensive line at a place where the defenders are not allowed to dispose of their forces in their own way and to the best advantage. India, he contends, must rely, as other countries do, upon her own resources and military strength. She has a population exceeding that of Russia, while her financial resources when supplemented by those of England are vastly greater than those of her antagonist. She has the advantage in a war on her northern frontier of proximity to her base, while Russia is weakened for offensive war by every step she takes toward the Suliman range. This range can be rendered practically impregnable by fortifications at an estimated cost of $25,000,000, or less than half the sum voted to Mr. Gladstone for the military and naval service a few weeks ago. A feeling of security has grown up in London grounded upon these considerations, but it would not be safe for Russia to draw the inference that England will submit to any amount of bullying on the outer line of defence merely because she has an inner line which she considers safe.

There is, even before the general election, which will probably take place in November, some chance of a split in the British Cabinet over the Irish Coercion Act between the Whigs and the Radicals. That is to say, Sir Charles Dilke and Mr. Chamberlain, who represent the Radical element in the Cabinet, are reported to be resolutely opposed to a renewal of the Act and ready to retire if the renewal be proposed; while Sir William Harcourt, and Lord Spencer, who is specially charged with the Irish affairs, are just as strenuous in insisting on the renewal in some shape. The act was passed originally for three years, which are on the point of expiring. Ever since the passage of the Land Act, crime and outrage have been rapidly diminishing, and the country is now on the whole very peaceable. The Radicals say that this is the result of remedial legislation; but the Whigs, including Lord Spencer, are satisfied that if the Executive were no longer armed with the powers given by the Coercion Act, outrages would rapidly revive, and life and property in some districts become just as insecure as ever. They point in support of this view to the large number of persons all over the country who now live under special police protection, and who do not believe that if the Act expired they would continue to live at all for many days. The Radicals maintain that as long as the island is ruled by an Englishman who has no relation to the country, and is armed with arbitrary police power, there never will be any permanent restoration of order; that his presence acts, will act, and has always acted as a constant provocation to disorder; that in view of the intense national feeling, which now plays so prominent a part in the Irish problem, the whole machinery of coercion in English hands has on the Irish the effect of a standing insult, the more particularly as there is nothing novel about it, this being the fiftieth Coercion Act passed since the union. Moreover, they believe that the experiment of governing Ireland nominally as part of England under the Constitution, but in reality as a Crown Colony, has totally failed after eighty years of trial, and that its continuance on the eve of an election, which will powerfully reinforce the Nationalist party in the House of Commons, and produce most disastrous effects in bringing into the House a large body of furious partisans, in a revolutionary temper, and bent on mischief.

Denmark, being a small country, is trying to be revolutionary on a small scale. The Folkething, or Lower House, has always had a great animosity to the army, and has repeatedly refused to vote the money required for its support. Now, it has resolved upon a still more radical course, and in order to emphasize its disapproval of the Estrup Ministry, has cut down the official budget by some nine million kroner. The Government has endeavored to persuade the House to pass a provisional budget, but this request has naturally been refused. A complete deadlock is the result. The King is afraid of the leaders of the Left or Liberal party, and does not dare to intrust the reins of government to any one who questions the divine right of monarchs. So he prefers to keep in power a ministry which has but seventeen followers in the Folkething (even some of these being uncertain) and which is detested by the great majority of the people. To account for this singular situation, it must be remembered that the Danish Left, since it made common cause with the extreme radicals, with socialistic proclivities, has lost the confidence of the more conservative middle class; and it is possibly this consciousness on the part of the party leaders (Berg and Boisen) that they have lost more than they have gained by the coalition, which has occasioned the recent split of the Left into two camps, the Danish party and the Europeans. The former constitute the more conservative wing, and adhere to national methods and a progressive national development, while the latter have declared war against the whole existing social order. The two Jews, George and Edward Brandes (the former a well-known man of letters), are the most conspicuous men of this ultra-radical faction.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 20, to TUESDAY, May 26, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Thursday appointed D. V. O'Leary to be Postmaster at Albany, N. Y. R. M. T. Hunter was appointed Collector of Customs for the District of Tappahannock, Va. Forty years ago he was Speaker of the House of Representatives, and was subsequently elected to the United States Senate, where he served for fourteen years, until July, 1861, when he was expelled on the ground of participation in the Rebellion. He was Secretary of State of the Confederacy and a member of the Confederate Senate.

On Saturday the President appointed Walter H. Bunn to be Marshal for the Northern District of New York.

Colonel Frank H. Pierce, a nephew of President Pierce, has been appointed Consul to Matanzas, Cuba.

Mr. G. V. N. Lothrop, recently appointed Minister to Russia, has published a satisfactory reply to the *Tribune's* recent attack upon his integrity as a lawyer. On Friday the House of Representatives of Michigan, ignoring all party lines, passed a resolution unanimously, bearing testimony to his high personal and professional worth, and approving his appointment by President Cleveland.

The bar of Detroit, Mich., at a meeting on Monday, passed resolutions eulogistic of Mr. Lothrop, one of which was as follows: "That the recent republication of an opinion of Justice Potter, of the New York Court of Appeals, concerning the professional conduct of the Hon. G. V. N. Lothrop in the Phœnix Bank case, in a transaction which occurred more than thirty years ago, brings to the attention of this bar nothing which it has not long known, nothing which it has not fully considered, and nothing which has ever shaken or diminished in the smallest degree our unquestioning confidence in Mr. Lothrop as a man and a lawyer of the highest integrity, our esteem for his professional and personal character, and our admiration for his unstained professional life of more than forty years."

Captain George E. Belknap has been ordered to duty as Superintendent of the Naval Observatory in Washington, June 1, to succeed Rear-Admiral Samuel R. Franklin.

Zachariah Montgomery, of California, was on Monday formally appointed Assistant Attorney-General for the Interior Department.

The Postmaster-General has awarded to the American Bank Note Company, of this city, the contract for furnishing postage stamps for the next four years at $101,516 82 per annum for the ordinary stamps, and $2,442 79 for postage-due and other issues of stamps, making a total of $103,959 61 per annum.

The Agricultural Department has $38 to its credit. Commissioner Colman is in a very great embarrassment. He can do practically nothing until the end of the fiscal year.

An interesting discovery, said to have been made by Appointment-Clerk Higgins in the Treasury Department, is that the records of the departments contain many cases in which Government employees seek to retain their positions on the strength of false claims to military service in the late war.

Geronimo and fifty Chiricahua bucks broke away from the San Carlos Reservation on May 17, and headed for the Sierra Madre Mountains, in Mexico. General Crook ordered all the available troops from Forts Apache, Bowie, Grant, and Thomas in the field, and a company of cavalry from Fort Apache went in hot pursuit. The Indians have massacred a number of people in their flight.

Captain Smith, of the Fourth Cavalry, had a fight last Friday with the Apaches in the Mogollon Mountains, twenty miles west of Alma, N. M. The Indians were routed. On Monday, the soldiers attacked the Indians on the Blue River, Arizona, but were compelled to retreat with three of their number wounded.

By order of the Secretary of War the following telegram was on Monday sent to the commanding generals of the divisions of the Pacific and of the Missouri: "Use every exertion possible, and call for all assistance of Federal troops you may require, to suppress Indian outbreak in Arizona and New Mexico. These outrages must be stopped in the shortest time possible, and every precaution taken to prevent their occurrence in the future."

Judge Bond, of the United States Circuit Court, rendered a decision on Monday at Richmond, Va., concerning the public debt of that State, which gives practical effect to the recent decision of the United States Supreme Court and virtually wipes out everything done by the Virginia Legislature in that direction. He decreed that when a taxpayer tenders coupons for his taxes, he has thereby paid his taxes; that he may deposit his coupons in court, and the clerk thereof shall give him a receipt certifying that by order of Court his tax is paid; that the collector of taxes is forever enjoined from levying upon the taxpayer's property, and that the collector shall pay the costs of each suit he forces the taxpayer to bring.

It is believed that ex-Congressman John Wise will be the Readjuster candidate for Governor of Virginia.

Senator Sherman, of Ohio, has formally announced himself as a candidate for reëlection.

The Commercial Convention at Atlanta, Ga., on Wednesday voted 263 to 153 in favor of a national bankrupt law. On Thursday a resolution offered by Mr. Hankey, of Colorado, that the interests of the country require the continued coinage of silver, was defeated by an overwhelming vote. Fully one-half of the Southern delegates voted in the negative. The President and the Treasury officials learned with much satisfaction of this action. President Cleveland has expressed the opinion that the South has in the last few months taken an active interest in the silver question.

The Legislature in extra session at Albany, on Friday, passed a State census bill similar to the one recently vetoed by Governor Hill, and then adjourned sine die. The measure was carried through by the Republicans. Governor Hill says the bill is even worse than the first one. The Democratic members of the Legislature have issued an address to the people on the subject of the State census.

Governor Hill has signed the "Life and Limb" Bill (for protecting employees against rickety scaffolds), the bill to prevent private bankers from holding themselves out as a bank, and two amendments to the Military Code.

The Niagara Park Commissioners at a meeting on Saturday appointed V. Welch assistant secretary, with power to look after the interests of the State until a superintendent is appointed. The Comptroller expects to be at the Falls between July 10 and 15 to pay for land taken. The expectation now is that the park will be opened to the public about July 15 with appropriate services.

Severe tornadoes visited Alton, Ill., and Concord, O., on Sunday, doing considerable damage to property and to the crops in the neighborhood

Fourteen girls and one young man perished in a fire at a printing establishment in Cincinnati on Thursday afternoon. The fire was checked in fifteen minutes, and caused a pecuniary loss of only $5,000. There was no fire escape.

Frederick T. Frelinghuysen, Secretary of State under President Arthur, died at his residence in Newark on Wednesday after a long illness. Mr. Frelinghuysen was a member of a distinguished New Jersey family. He was born in 1817, and was graduated at Rutgers College and became a successful lawyer. During the war he was Attorney-General of New Jersey. In 1866 he was appointed to succeed United States Senator Wright, and was afterward elected by the Legislature to fill the remainder of Mr. Wright's term. He was reëlected in 1871. The year previous he had declined President Grant's offer of the English Mission. He was one of the members of the Electoral Commission of 1877. As Secretary of State, Mr. Frelinghuysen's last active work was the negotiation of the numerous commercial treaties which marked the close of President Arthur's Administration. Mr. Frelinghuysen was regarded by New Jersey as one of her ablest and most upright public men.

Professor Oren Root, for nearly fifty years professor of mathematics at Hamilton College, Clinton, died on Friday night.

Mr. Samuel Jones, Professor Emeritus of Physics and Chemistry of the Washington and Jefferson College, Washington, Pa., died on Friday.

Mother Josephine Charles, founder of the Roman Catholic Order of the Sisters of the Holy Family, died in New Orleans on Wednesday at the age of sixty-nine. She was the daughter of a German father and a free mulatto woman. Her good works were well known throughout the South.

FOREIGN.

A sensation was caused in the lobbies of Parliament on Wednesday when it became known that the Guards had been stopped at Alexandria when on their way home from Suakim. It was interpreted as meaning more complications with Russia.

The London *Times*, on Thursday, reviewing the Egyptian question, said: "There is too much reason to fear that a hostile combination against British influence and interests in Egypt has been organized by the European Powers. Their action in respect to the Egyptian convention and in forcing the Khedive by their protests to refund the five percentage which had been deducted from the amount of the coupons, has been clearly intended to show that they are determined to insist upon every point against England."

In the House of Commons on Thursday afternoon the Marquis of Hartington, in reply to a question by Sir Stafford Northcote, stated that it was not thought advisable by the Government to give the reasons for the detention of the Guards at Alexandria. "It was stated by the Government some time ago," added Lord Hartington, "that it was desirable to concentrate the British troops then in the Sudan for possible service elsewhere. That operation is not yet suspended." Mr. Gladstone said that England had had communication with the Porte in regard to the occupation of Suakim, but none with any other Power. "Nothing is yet settled," said Mr. Gladstone, "in regard to arbitration between England and Russia, nor has it been absolutely settled who shall be the arbitrator." It is stated in St. Petersburg that Mr. Gladstone has refused to refer the Afghan dispute to the King of Denmark, and has asked Russia to choose some other arbitrator.

The London *News* (Liberal) on Thursday denied the report that Russia demands to have an agent at Cabul and the complete neutrality of Afghanistan. The *Standard* confirmed the report that the negotiations with Russia hinge upon the question of the possession of Merutchak, which is claimed by Afghanistan and demanded by Russia.

The London stock market was very much depressed on Thursday by the reports of delay in the settlement of the Afghan dispute.

A London despatch on Monday said: "Orders have been sent to Aldershot for a fresh

squadron of Hussars to embark for Egypt at the earliest possible moment. This order, when it becomes generally known, is certain to cause quite as great a sensation as the detention of the Guards at Alexandria and the Australians at Aden. Orders have also been sent to the royal arsenal at Woolwich to resume overtime and night work in hastening the manufacture of ordnance and ammunition."

The Turkish Council of Ministers on Sunday discussed Earl Granville's note to the Turkish Ambassador in London in regard to the proposed occupation by Turkey of Suakim and other Red Sea ports in Egypt. Earl Granville declares that if Turkey refuses to agree to this proposition, England will be compelled to make arrangements for the occupation of the places by some civilized Power. The note adds that as soon as order and a stable government shall have been established, the British troops will be withdrawn from Egypt.

The armored train on Sunday surprised a body of Arab rebels tearing up the rails of the Suakim-Berber Railway. About one hundred of the rebels were killed.

The natives of Dongola, fearing massacre at the hands of El Mahdi after the evacuation of the Sudan by the British, are flocking down the Nile in large numbers. The Mudir's absence contributes to the fright.

All the British and Egyptian troops have evacuated Meraweh. The natives are paralyzed with fears of an attack and massacre by the followers of the Mahdi. The Guards have gone into quarters at Alexandria, pending further orders.

General Sir Charles Wilson, who succeeded General Sir Herbert Stewart in the command of the advance corps of the Khartum relief expedition, after the latter was wounded at the zereba battle, has sent in his official report in response to the charge that General Gordon might have been rescued alive if the troops under command of Sir Charles had not been unnecessarily halted at Gubat for three days. The report explains this three days' delay by the necessity of securing the small force at Gubat against an attack then threatened from Berber on the north, and from Umderman on the south. The report further states that, after the arrival of the troops at Gubat, it required a great deal of time to select crews and prepare the steamers for the advance to Khartum.

Lord Rosebery went to Berlin on Friday. He has had an interview with Bismarck. It is stated that his mission is a twofold one—to ask Emperor William to act as arbitrator in the Afghan frontier dispute, and to enlist his support to secure the execution of the Egyptian financial convention.

It was stated in Berlin on Tuesday that the tendency of the conferences between Lord Rosebery, Prince Bismarck, Sir Edward Malet, Count Shuvaloff, and Count von Hatzfeldt is toward a peaceful result. The statement comes from Russian sources that Russia has abandoned her claim to Zulfikar and Merutchak, but that the negotiations are likely to be prolonged in order that a complete and final treaty may be concluded.

Mr. Gladstone, in the House of Commons on Wednesday afternoon, gave notice that he would introduce a Land Purchase Bill for Ireland after Whitsuntide. The House of Lords on Wednesday passed the Registration Bills. The royal assent was given to them on Thursday, as well as to the vote of credit. This completes the legislation for the extension of the franchise.

A great deal of comment was caused by the absence from their places, at the opening of the House of Commons on Friday afternoon, of three members of the Cabinet, Mr. Chamberlain, President of the Board of Trade, Mr. Trevelyan, Chancellor of the Duchy of Lancaster, and Sir Charles Dilke, President of the Local Government Board. There were rumors of their resignation on account of the proposed renewal of the Crimes Act. Parliament adjourned on Friday until June 4, and the Cabinet crisis was staved off until after the Whitsuntide recess. The Cabinet situation now probably means either a renewal of the truncated Crimes Act for one year only, or else that Chamberlain and Dilke will resign, and probably also Shaw-Lefevre, the Postmaster-General.

Victor Hugo died at his home in Paris at 1:30 o'clock on Friday afternoon. His last words were "Adieu, Jeanne, adieu," addressed to his granddaughter. He declined the services of a priest in his last hours. The French Government immediately decided on a civil funeral for M. Hugo at the expense of the State. Eulogies upon him were delivered in the Senate and Chamber of Deputies. The signs of mourning were general throughout France. A few of the most important of the dates in Victor Hugo's life are as follows. He was born February 26, 1802, at Besançon, France, his father being General Hugo. When a mere schoolboy he wrote odes, satires, tragedies, etc., in great abundance. At the age of fifteen he wrote a poem on the "Advantages of Study," which received an "honorable mention" at the annual competition of the French Academy. When he was twenty years of age he had published a volume of poems, and was soon after married to Adèle Foucher. He was recognized as the chief of the Romantic school before he was twenty-five. His dramas "Cromwell" and "Hernani" excited the wrath of the Classicists. "Lucretia Borgia," in 1833, was his first popular success as a dramatist. 'Notre Dame de Paris,' published in 1831, excited the admiration of France, and to it was chiefly due his admission into the French Academy ten years later. In 1848 Hugo was elected to the French Assembly, where he advocated the abolition of capital punishment. He soon came under Republican influences, and the Coup d'Etat sent him into exile in the Island of Jersey. During this time he produced many books of poems, and in 1862 'Les Misérables,' which had been translated into nine languages before publication. The downfall of the Empire brought Hugo back to Paris in 1870. During the excesses of the Commune he retired to Belgium, but has lived in Paris since 1873. He was a life Senator of the Republic. His most important prose work of the last twelve years was 'Ninety-three,' published in 1874; his most important verse, 'La Légende des Siècles.' On the 25th of February, 1880, the fiftieth anniversary of the first production of "Hernani" was celebrated with great pomp at the Théâtre-Français.

The body of Victor Hugo was conveyed to the Arc de Triomphe in Paris on Sunday, and laid in state on a catafalque. His funeral will take place on May 31.

Sunday being the anniversary of the fall of the Commune, the Communists of Paris attempted to hold a demonstration at the tombs of their comrades in the Père-la-Chaise Cemetery. The police interfered. A serious conflict ensued. The police drew their swords and drove the rabble against a heap of stones. The rioters used the stones as missiles, and one of the policemen was knocked senseless and another's jaw was broken. The Republican Guards, with fixed bayonets, charged the mob. It was said that five persons were killed and eighty wounded. The police, however, assert that nobody was killed, and only thirty wounded. The Communists became greatly excited and vowed vengeance.

Late on Monday afternoon the Communist troubles broke out afresh in Paris. A number of Communists were interring the body of a comrade at Père-la-Chaise Cemetery. The speeches made over the grave were of such a violent character that the crowd became excited, and, led by M. Rochefort, they started in a body to sally out through the gates of the cemetery, shouting and waving red flags. The police interfered and made a rush to disperse the rioters and capture the red flags. A desperate encounter was the result, the Communists having armed themselves with knives. Several of the combatants on both sides were wounded, but none, it is thought, fatally. The police finally dispersed the rioters and made many arrests. It is asserted that the interference of the police was brutal and unnecessary. There are apprehensions in Paris that a dangerous Communist outbreak is imminent.

M. Amouroux, the French Communist, is dead at the age of forty-two. In April, 1869, he was condemned to four months' imprisonment for exciting contempt against the Government. In March, 1870, he fled to Belgium, but returned in September, and became one of the most active agents of the Internationale, violently opposing the Government of the Defence. He was elected a member of the Commune in March, 1871, taking part in the principal discussions of that assembly and generally acting with the most extreme wing of the party. On the entry of the regular troops into Paris he was arrested and taken to Brest, where he was recognized. After trials before councils of war for taking part in the insurrection, he was condemned to transportation for life servitude. On January 19, 1873, he was sent to New Caledonia, the French penal colony.

Prime Minister Depretis of Italy has intimated to King Humbert his desire to retire to private life on account of old age.

Count Terenzio della Rovere Mamiani, the Italian poet, philosopher, and politician, is dead. He was born in Pesaro in 1800. He took part in the revolutionary movements following the accession of Pope Gregory XVI. In 1848 he was made President of the Council when the Constitution was framed. He went to Turin and organized the Society of the Union of Italy. He was made Minister of Foreign Affairs in the Galletti Ministry, but soon resigned, and supported French intervention. In 1861 he was made Ambassador to Greece, and in 1865 represented the Italian Government at Berne. He wrote many popular poems and philosophical and political works.

Major Steele, of the Northwest Mounted Police, had, it was reported on Thursday, a skirmish with the Indians near Fort Pitt. He lost some men and had to retire toward Edmonton.

Poundmaker sent in a flag of truce on Thursday to Battleford asking on what terms he could surrender. He gave up the captured teamsters, two women, and a priest. General Middleton replied that he must surrender unconditionally.

General Middleton and his forces arrived at Battleford in a steamer on Sunday night, and preparations were at once made for an attack on Poundmaker. Just as the troops were ready to begin the march on Monday, the Rev. Father Cochin, Roman Catholic missionary to Poundmaker's band, came to the General with a communication from Poundmaker, stating that he would surrender unconditionally. General Middleton, of course, accepted the terms, and immediately the Indians began coming in and gave up their arms. They were thoroughly scared. Poundmaker's force numbered more than 2,000. Big Bear with 800 well armed men declares he will make a stand at Big Hills, between Frog Lake and Fort Pitt. Dumont is still in the Birch Hills, and defies the Government.

The Canadian Government has decided to hand Riel over to the civil authorities for trial.

The Salvadorian revolutionists under Menendez were recently defeated at Armenia, after a five hours' fight, by the regular army of San Salvador. Four hundred Guatemalan troops on Saturday crossed the border of San Salvador. This invasion will probably result in reopening the whole Central American question.

MR. LOWELL.

Mr. James Russell Lowell is again, after eight years of official life, a private citizen, and will soon be on his way home. His career in London has formed an episode in American diplomacy which, it is safe to say, has had no parallel in effectiveness, except Franklin's mission to Paris and Mr. Charles Francis Adams's in England during and after the war. Mr. Lowell, it is true, has conducted no important negotiation, and, therefore, it may be said, has had no chance to show either his weakness or his excellence as a lawyer or as an international controversialist. The Irish troubles filled one or two years of his career with very vexatious questions, but they were questions which tried his temper rather than his knowledge or his skill. He had to keep the United States from getting into hot water over the claims of a parcel of criminal adventurers on their protection. These claims were rarely well grounded, and, even when good, were made by men whom any civilized country might well blush to own. In dealing with them, he made, as we said at the time, in our opinion, the mistake of admitting that any foreign government could, under any pretext, keep an American citizen in prison indefinitely in time of peace without a trial of some kind, as a mere precautionary measure. But there was, we believe, some foundation for this admission in the ground taken by Mr. Seward during the war, with regard to British subjects in this country. Still, the difficulties with which Mr. Seward was struggling were too great to furnish for one moment a precedent for Earl Granville in dealing even with Irish assassins and boycotters. Mr. Lowell, if we are not mistaken, was acting under instructions from the State Department, or at all events received its approval, its chief at that time not having formed the alliance with the Irish dynamiters which subsequently supplied such a feather for his cap.

As a matter of fact, however, in our day the conduct of direct negotiations is but a small part of a foreign minister's business. Important negotiations are now generally conducted by special agents, or are directed at every step by instructions from home. In the very serious controversy now going on between Russia and England, not only is Baron de Staal assisted in London by a special agent in the person of M. de Lessar, sent over for the express purpose, but he is obliged to refer every proposal of the British Government to the Cabinet at St. Petersburg, and await its answer. So it is and must be with us. No envoy is now allowed to act on his own responsibility in important discussions, when he can consult his own Government every half-hour on every point which comes up.

In fact, American legations abroad, which, owing to our complete separation from Europe, as well as for other reasons, never had the importance of those of the Old World, are fast becoming, if they are not already, simply rewards for politicians of some kind of distinction, for whom the party in power is unable to find places in the Cabinet. Ministers are no longer sent out to negotiate, or even to observe and report. For the latter function most of them, through want of all preparatory knowledge of the manners or languages of foreign countries, are totally unfit. They generally pass lives of great insignificance if not obscurity in foreign capitals, reflecting neither honor nor discredit on their country, and treated as outsiders by their diplomatic brethren.

The London mission has, however, always constituted an exception to this rule. The United States are connected with England by so many ties—ties of blood, of religion, of language, of law, of political traditions and manners—that the American Minister in London, no matter what kind of man he is, must needs be a great personage, much observed and much criticised. It has, for this reason, been, from the very foundation of the Government, a tradition of American diplomacy that the American representative at that point should be a specimen of the best the United States can produce in the way of social and intellectual culture, and should, in some sort, represent the American people in its best clothes and with its company manners. It is casting no reproach or slur on any of Mr. Lowell's predecessors to say that none of them has played this part so well as he. To those who hold the semi-barbarous notion that one of the duties of a foreign minister is to occupy a defiant attitude toward the people to whom he is accredited—that he should stick to his post, to use the popular phrase, "with his back up," and keep the world he lives in constantly in mind that his countrymen are rough, untamable, and above all things quarrelsome, Mr. Lowell has not seemed a success. But to them we must observe, that they know so little of the object of diplomacy that their opinion is of no sort of consequence. The aim of diplomacy is not to provoke war, but to keep the peace; it is not to beget irritation, or keep it alive, but to produce and maintain a pacific temper; not to make disputes hard, but easy, to settle; not to magnify differences of interest or feeling, but to make them seem small; not to win by threats, but by persuasion; not to promote mutual ignorance, but mutual comprehension—to be, in short, the representative of a Christian nation, and not of a savage tribe.

No foreign minister, it is safe to say, has ever done these things so successfully in the same space of time as Mr. Lowell. If it be a service to the United States to inspire Englishmen with respect such as they have never felt before for American wit and eloquence and knowledge, and thus for American civilization itself, nobody has rendered this service so effectively as he has done. They are familiar almost *ad nauseam* with the material growth of the United States, with the immense strides which the country has made and is making in the production of things to eat, drink, and wear. What they know least of, and have had most doubts about, is American progress in acquiring those gifts and graces which are commonly supposed to be the inheritance of countries that have left the ruder beginnings of national life far behind, and have had centuries of leisure for art and literature and science. Well, Mr. Lowell has disabused them. As far as blood and training go, there is no more genuine American than he. He went to England as pure a product of the American soil as has ever landed there, and yet he at once showed English scholars that in the field of English letters they had nothing to teach him. In that higher political philosophy which all Englishmen are now questioning so anxiously, he has spoken not only as a master, but almost as an oracle. In the lighter but still more difficult arts, too, which make social gatherings delightful and exciting to intellectual men, in the talk which stimulates strong brains and loosens eloquent tongues, he has really reduced the best-trained and most loquacious London diners-out to abashed silence. In fact, he has, in captivating English society—harder, perhaps, to captivate, considering the vast variety of talent it contains, than any other society in the world—in making every Englishman who met him wish he were an Englishman too, performed a feat such as no diplomatist, we believe, has ever performed before.

HARMONIZING NEW YORK.

A very amusing rumor comes from Washington that "it is thought that Secretaries Whitney and Manning, during their stay in New York, will endeavor to harmonize the Democratic factions in that city so as to present a solid front of Democracy at the fall elections. New York politicians in Washington say that this is a much more important question now than the selection of a candidate for the Governorship." We have no doubt that this is the view of the New York politicians who are in Washington in search of office, but we take leave to doubt if it is shared by the President, or if the two Secretaries named are here for any such purpose as the rumor given ascribes to them. Those three men are too familiar with New York politics to entertain for a moment the idea that this State can be carried by "harmony" alone. There is, in fact, no State in the Union in which harmony, as the workers understand the term, counts for less.

There have been several notable attempts to carry the State in recent years by what the harmony advocates call a "wise distribution of the offices," and they have all failed. In fact, all the more important successes have been secured by the party and candidate who had no aid whatever from the offices. Mr. Tilden carried New York for Governor in 1874 by 50,000, with all the offices, State and national, in the possession of his opponents. He carried it again for President in 1876 by 32,000 majority, with the Custom-house, Post-office, and all other Federal offices devoting every energy in their power to secure his defeat. In 1879 Mr. Cornell, by the aid of the Federal patronage, was able to get himself nominated as the Republican candidate for Governor. He was one of the most perfect specimens of the harmony candidate—the kind that is nominated "by strengthening the party by means of a wise distribution of the offices"—which the State had seen up to that time. His nomination was denounced by the independent voters, and though John Kelly's separate candidacy enabled him to slip in through a division of the Democratic vote, he lacked nearly 35,000 votes of a majority, poll-

ing 70,000 less votes than Morgan polled for Governor in 1876. The Independent voters had no candidate, but simply contented themselves with "scratching" Cornell.

The memorable Folger campaign is too fresh in the memory of everybody to need extended reference. Mr. Folger, even more absolutely than Mr. Cornell, owed his nomination to the influence of the offices. He was nominated because the President desired his candidacy. A more thoroughly "harmonized" convention than the one which put him in the field was never seen in this State. Personally, a more fit candidate for Governor had not been nominated in many years. The whole machinery of the party had been used to "pick out a good man," but the voters would not accept him. Undoubtedly the Blaine influence in the Republican party had a good deal to do with the enormous majority by which Judge Folger was defeated, but the Independent voters had much more to do with it. They supported Mr. Cleveland with unanimity and enthusiasm, and the result was that, without the help of a single State or national office, and with very little enthusiasm for him among the "workers" of his own party, he was made Governor by 192,000 majority.

Mr. Cleveland's remarkable political success has been won, not by "harmonizing" his party, but by deserving the popular confidence. He has never been a favorite with the politicians. He was nominated and elected Governor without their active sympathy. His administration as Governor never met their approval. He did not deal out the offices at Albany in a way which at all pleased them. They opposed his nomination for the Presidency because of a thorough understanding of his character—a character as diametrically opposed to theirs as could well be imagined. During all the time of his service at Albany there was heard the same complaint which comes from Washington now—that he is serving the people rather than his party; that he cares more for his own reputation as a faithful public servant than he does for the cold toes of the boys; that he is a selfish man and a very poor Democrat. Yet in spite of this hostility he was nominated for the Presidency—nominated, not because the politicians of his party wanted him, but because the shrewdest of them were convinced that his strength with that element of the people which cared nothing for party names but everything for honest government, was great enough in New York State to secure for him its electoral vote.

It was this element, known as the Independent vote, which nominated and elected him President, and it is this element which controls New York politics to-day and will decide the election next November. Nothing is more absurd than to imagine that any process of "harmonizing" or "strengthening" can elect any man Governor without the help of the Independent vote. Everything that "harmony" of all kinds could do was done for Mr. Blaine last year. He had all the machinery of his own party; he had the assistance of 30,000 or more treacherous Tammany votes; he had the indirect aid of Butler's candidacy and the advocacy of it by the *Sun*; he had the mysterious aid of the Catholic influence and the blarney-bought support of the dynamite Irish; but he did not win. The Independent vote was powerful enough to give Mr. Cleveland nearly 28,000 more votes than he received for Governor in 1882, and to elect him President. Every day of his Administration has strengthened him and his party in this State. He not only has the support of all the people who voted for him last fall, but of thousands of others who would have voted for him had they not been frightened by the bugaboos of disaster to business and industry which would result from putting the "Confederacy again in the saddle." These men see now how foolish they were, and it will not be possible to scare them again. The handful of Butler men have probably seen their mistake also, and nobody believes that Tammany can ever again organize so formidable a conspiracy against the Democratic party.

There is one sure way of turning over the State to the Republicans this fall, and that is for the Administration to attempt to harmonize the Democratic factions on the basis proposed by the politicians in Washington—that is, to give one faction the Collectorship, another the Surveyorship, one the Marshalship, another the District Attorneyship, and so on, and then nominate a good, sympathetic working politician for Governor. There would be no doubt whatever of the election of any respectable Republican candidate in that event. But if the Administration will go forward in the way in which it has been going, giving the country good government and allowing the politicians to "harmonize" themselves, it will be doing the Democrats of this State the most valuable service possible. The people of the State will go to the polls in November and elect to the Governorship the candidate who is, in their opinion, best fitted to hold the office. Any attempt to swerve them from that purpose would be as futile as it would be absurd. We have not the slightest idea that the President and his two Secretaries named have studied New York politics to so little purpose as not to know this.

RAILWAY REGULATION.

THE Senate Committee on Inter-State Commerce has within a few days taken the testimony or opinions of Pool Commissioner Fink and Mr. George R. Blanchard, two of the most experienced railway traffic managers in the country, and of Mr. H. V. Poor, the compiler of the 'Railway Manual.' The object of the investigation is to obtain data for the use of the Senate in deciding between the principles of the Reagan (House) bill, which lays down certain fixed rules for the regulation of railroad charges, and those of the Cullom (Senate) bill, which proposes, in lieu of fixed rules, the appointment of a National Railroad Commission, whose duty it shall be to collect information, to hear complaints, to exercise moral influence, and to stand in the same relation toward the public and the railways as the Railway Commissions of England, of Massachusetts, and of New York—a relation rather advisory than compulsory—but with power to enforce its decrees. In the debates on the Reagan bill Mr. Cullom had decidedly the better case, and was supported by arguments which convinced the Senate that the regulation of railways and railway charges by statute ought not to be attempted without a wider examination of the facts, and a more precise generalization from them, than had yet been had under Congressional authority. Hence the present investigation.

Since the period of the Granger legislation ten years ago, there has been a remarkable change in the attitude and direction of public sentiment toward railways. At the time when State Legislatures, the majority of the press, and nearly all the organs of public opinion were demanding severe laws and statutory limitations upon railway managers and railway rates, a few persons not owners of railway property, but entitled by character and intelligence to a public hearing, insisted that the law of competition was ample to correct all the abuses complained of, and that the hasty and crude legislation demanded by public impatience would be productive of more evils than it would cure, and would eventually be repealed by the very men who had secured its enactment. Conspicuous among these unwelcome prophets were Mr. Charles Francis Adams, jr., Mr. Edward Atkinson, and the late Samuel Bowles, of Massachusetts. After the lapse of ten years we find all their predictions fulfilled and more than fulfilled. The Granger laws were passed. They proved worthless and fell into disrepute. The only law which remained in full vigor was the law of competition, which has been working with giant power day and night, year in and year out, to do the very things which the Granger laws attempted but were ineffectual to accomplish. This law has actually reduced railway charges on the most important lines in the country below the cost of carriage. According to a recent analysis, prepared by a well-known civil engineer (Mr. O. Chanute), the cost of carrying freight on the New York Central Railroad, through and local, taking all classes and all distances together, and including terminal expenses and insurance, is as nearly as possible eight and nine-tenths mills per ton per mile. This is the cost to the railway company. The freight charges of the company last year averaged nine and one-tenth mills per ton per mile. At the present time they are believed to be not more than seven mills per ton per mile. The West Shore and Buffalo Road carried in the month of April 190,000 tons of freight at an average rate of six and six-tenths mills per ton per mile.

It is not strange, in view of this state of things, that Mr. Fink and Mr. Blanchard favor legislation to protect the railroads against each other. They ask that the law of competition be throttled in the interest of investors. "The United States Government," says Mr. Blanchard, "owes fully as much protection to the investors in the securities of such roads as to the farmers, shippers, and receivers. Had the same protection been afforded to the investor as to the other classes, the losses of the past few years would have been avoided. I would give this national commission or tribunal a warning power to stop violations of its rules, and an arresting power to prevent any repetition of offences against it. If this system was adopted, and there was no change possible except after five days' public notice, and it was applied to inter-State roads

and water transportation, the effect would be apparent at once. Peace and prosperity would be the rule with the railroads rather than the present existing troubles."

Alas, Mr. Blanchard, there is no way to do it. Mr. Poor, in his blunt way, told the truth and the whole truth when he said, "The Government has nothing whatever to do with the calamity of one road or the prosperity of another." The country is full of suffering industries—bankrupt spinners, weavers, puddlers, rail makers, coal miners, paper manufacturers; all suffering from too much competition. Congress is as powerless to help them, to protect one against another, as it is to make a new world without any law of competition in it. To transfer the Joint Traffic Association to a committee room in Washington would be as futile as to erect a new Tower of Babel. The only fact which the present investigation is likely to disclose is, that railway transportation is cheap enough, that it cannot be made cheaper by statute, and that the wisest thing Congress can do is to keep hands off altogether, or at most to confine itself to the systematic collection and publication of statistics.

THE PEACE PROSPECT.

LONDON, May 14.

THE clouds of threatening war which covered the sky for seven weeks have vanished even more suddenly than they appeared; and men now talk of peace with Russia as assured—assured at least for the present, for in times like ours there is no use in speculating on what may happen more than a year ahead. Your readers have marked the different phases which the question of the Afghan boundary and the "incidents" that befell there have taken, so that it would be superfluous for me to recount the succession of events. I content myself with commenting on the state of the popular mind at the most critical moments, and on the general result so far as it affects the domestic politics of England and the reputation of her present Ministry.

Of these moments, the most critical was Monday, April 27, the day when Mr. Gladstone brought forward the Vote of Credit for eleven millions sterling for war preparations. For a fortnight previously the tension in the public mind had been extreme, although the demeanor of the nation was so calm that a stranger would have found it hard to realize, except by observing the eager curiosity for the slightest particle of news, and the swift and sudden fluctuations on the Stock Exchange, that we were on the eve of a tremendous conflict, which would have been carried on not only in Asia and Europe, but possibly also in our territories in Pacific North America and in Australia. This calmness was chiefly due to the general unity of sentiment—the Tories hating Russia and inclined to welcome a struggle which they have long believed inevitable, and the Liberals relying so implicitly on Mr. Gladstone's love of peace as to hold that any war he undertook must be necessary and rightful. For the few days before this Monday, nearly everybody had expected a diplomatic rupture, and it seemed almost certain that an appeal to arms would follow. Yet the faith in the pacific intentions of the Ministry had still so much strength that the solemnity, not unmixed with menace, of Mr. Gladstone's tone in moving the vote took men by surprise. His wonderful power of rising to the level of a great occasion was never more remarkably displayed. The speech, except in a few sentences toward the close, does not seem, to one who reads it in cold blood, to rise to a high point of eloquence, but the effect of his animated gestures and his wonderfully modulated and awe-inspiring voice was immense. So deep was the impression on the crowded House of Commons that no one rose to follow him, and the vote passed, not merely unanimously, but without a single word of comment. How much this unanimity told upon the country and upon Europe you are all aware. It seemed to express the strenuous resolve of a united nation. Yet it was really an accident. There were several members—some of them conspicuous persons—who had intended to speak, but one or two of them had gone out for the moment, expecting others to keep up the debate; while of those who remained, each waited for some one else to begin, and none ventured to be the first to break the spell which the great orator had laid upon the assembly he has swayed so long. On such accidents, and sometimes on accidents smaller than this, does the history of the world turn.

Before the end of the week which began in this dramatic way, it was felt that the sky was clearing, and when the Report (as it is called) of the Vote of Credit from the Committee of the Whole to the House came up on Monday, May 4th, Russia's acceptance of the English proposal to refer to arbitration the question of the Panjdeh fight between the Russians and Afghans, had become known. (This incident had been the chief point that threatened a rupture, and was chiefly dwelt on in Mr. Gladstone's speech, for it was understood that on the main issue of the delimitation of the frontier there was good prospect of accord.) The temporary harmony of parties disappeared in an instant, and Parliament echoed with angry recriminations, resumed at intervals during the few days following, and culminating in a party debate and division on Monday, the 11th.

The Opposition accused the Government of having obtained the vote of credit on a false pretence, the pretence of announcing a valorous defence of British interests and British honor by arms, when in reality the points in dispute were being surrendered to Russia. They ridiculed the reference to arbitration, which was couched in somewhat vague terms, as being substantially a surrender, a device for evading the question whether the Russian troops had not been the aggressors, and practically letting their aggression pass unpunished. The Ministry, denying this, was met by the demand for full information as to the communications that had passed and were passing between the two Governments; but Mr. Gladstone declared that it was impossible to produce them immediately, as an incomplete statement would be worse than no statement at all. The absence of this information, so necessary before the conduct of the Ministry could be fairly judged, made the debate a somewhat hollow one, nor did it excite much interest in the country. Meanwhile a Blue Book containing the despatches is being printed, and will appear in a day or two, so that the Opposition, should they find matter in it confirming their view as to the cowardice of the Cabinet, will have the opportunity of moving another vote of censure.

It would have been more prudent for the Tory leaders to have waited for these papers before launching their charges, because their hasty action has not only wasted some of their ammunition and taken the edge off any attack they may subsequently deliver, but has exposed them to the reproach of being anxious for war with Russia at all hazards. "They desire war," so say their antagonists, "partly from a blind hatred of Russia and general love of bloodshed, and partly because they believe that the expenditure it must involve will make the Cabinet unpopular, and give them a better chance at that approaching general election which fills every one's thoughts." It would be more just to say that the Opposition are so deeply persuaded of the weakness of the Cabinet and the disposition of its chief to truckle to Russia, so convinced also of Russia's bad faith and determination to extend her borders in Afghanistan, with a view to an ultimate attack on India, that they can scarcely help concluding any arrangement made between Mr. Gladstone and the Czar to be for the benefit of the latter. They had come to believe, as indeed nearly the whole nation believed, that a war was inevitable; and they argue that, as a postponement for two or three years will enable Russia to push forward her railway from the Caspian to the border which is now being settled, while it will not make it any easier for England to garrison Herat—the passage to which from India lies through unfriendly tribes—it is far more to Russia's interest than to England's that this breathing space should be interposed.

How far these arguments will tell on the country, or what verdict it will pass on the behavior of the Cabinet, cannot be determined till the papers with the despatches are produced. For the last few weeks, neither Parliament nor the people have known much more about the negotiations in progress, or had more opportunity of controlling them, than the people or Parliament of Queen Elizabeth had of her dealings with Spain. When foreign affairs become delicate and dangerous, England lapses back from the character of a parliamentary to that of a despotic country, only the despot is not the Crown but a Cabinet chosen by the people, and probably chosen for reasons with which opinions on foreign policy have nothing to do. Nor is it easy to see how the affairs of an empire like England's could be carried on upon any other system.

So far, the Ministerialists throughout the country are pleased at the prospect of a settlement, and applaud the pacific spirit of their leaders. However just a war might have been, they would have found it an unpleasant thing to defend on election platforms to audiences who remembered the declaration of Mr. Gladstone in 1880, and the condemnation of the bellicose and aggressive tendencies of Lord Beaconsfield which then determined the votes of the Nonconformists and the workingmen. Now, unless it should appear that the Ministry have really made England eat humble pie, or have sacrificed some frontier post of substantial importance, the bulk of the people will be glad to have avoided a struggle which must have involved heavy taxation, and might have seriously injured our mercantile marine. Trade is still languishing; we have no friend on the Continent except Italy; Egyptian questions may give as much trouble in the future as they have done in the past; so that we are well out of a war for objects which had not come home to the mind of the ordinary citizen, and which might have proved a long one, because neither of the combatants could easily reach the other to strike a decisive blow.

In one respect these Russo-Afghan troubles have been a godsend to the Ministry. They have turned men's minds away from the lamentable conclusion of the expedition to Khartum. The humiliating announcement that, after all the high language held three months ago as to the necessity of "smashing the Mahdi," the troops are to be withdrawn from the Upper Nile into Egypt as soon as the river has risen sufficiently to let them float down, and that the projected railway from Suakim to Berber will not be made, has been received with comparatively slight attention, because Africa had

ceased some weeks before to be the centre of political interest. Everybody is a little ashamed of the part we have played, yet nearly everybody feels that it would have been a mistake to go on "throwing good money after bad." The Tories will make full use of the death of Gordon and the unfortunate ending of the expedition to rescue him, in their autumnal campaign against the Government, nor can it be denied that these events have damaged the Government's reputation. Yet the mass of the voters care little for such topics; and it is lucky for our present rulers that their retreat from the Sudan should have been in a measure suggested by and covered by Asiatic troubles which were not of their making, and in which they may turn out to have shown more wisdom than has marked their African policy.

Y.

THE RUSSIAN MENACE AND THE DEFENCE OF INDIA.

LONDON, May 14, 1885.

IT is just a month since I wrote to the *Nation* a letter under the above heading. In the interval a marvellous transformation has been accomplished. The war-cloud, when it seemed at its blackest, has suddenly broken up and disappeared. Mr. Gladstone has announced in the House of Commons that all questions in dispute are as good as adjusted, and that nothing remains but for Russia and ourselves to shake hands and swear an eternal friendship.

Perhaps a brief letter in explanation of the cause which has wrought this astonishing change will not be uninteresting to your readers. It is to the bitter hostility of the Afghans that England owes its escape from a war in which it is hard to see how she could have come off victorious. As we have heaped wrongs and injuries upon the Afghans without number, an outsider might not unreasonably argue that this hostility was an element in the situation that might have been reckoned upon beforehand. But to argue thus indicates an imperfect appreciation of the national character. It is impossible for Englishmen to believe that any people can cherish a lasting resentment for injuries which they have endured, if those injuries have been the work of Englishmen. Accordingly, we had no sooner withdrawn our troops from Afghanistan than the belief became current, among the English in India, that the Afghans were convinced that we desired nothing but their welfare and freedom—that they had nothing to fear from us, and everything to dread from the advance of the Russians.

This singular belief was not disturbed by the fact that, when abandoning Kabul, we had rejected the petition of the Afghans to restore to them the son of Shir Ali, whom we held a prisoner; that, instead of this, we had forced upon them an Amir whom they hated, and who had since shown himself eminently worthy of their hate—a perjured and sanguinary tyrant who, but for British subsidies and British rifles, could not maintain his position for a month. All this was forgotten. The affection of the Afghans for us and their terror of the Russians were accepted as matters beyond all doubt, and were the foundations of the high and menacing tone which the Cabinet and the press took up in its relations with Russia. The Indian "experts" (so called) had persuaded themselves and misled the Cabinet into believing that a British column entering Afghanistan to fight Russia would be conducted to the theatre of war, in a sort of triumphal progress, by the applauding tribes along the line of march. The Amir was invited to meet Lord Dufferin at Rawalpindi to frame a plan of operations and make arrangements for the subsistence of the British troops. Nor did the Indian Bureaucracy awake to a consciousness of the truth until the Amir flatly refused to allow a single British regiment to cross the frontier. He stood, he told Lord Dufferin, absolutely alone in Afghanistan; and if an English army were to enter his territory, the Afghans would rise as one man against him and against the invaders—for such they would deem them to be, no matter what protestations to the contrary they might please to make. And as for Panjdeh, he was willing to cede it to the Russians without further ado.

It is hard to imagine a more ludicrous situation than that in which these unlooked-for declarations placed the Indian officials of the "Forward" school. Herat, according to their teaching, was "the key of India," the vital point which it behooved us to defend at all costs. For fifty years the chief aim and purpose of their Afghan policy had been to keep open the road to Herat. And here was the upshot of all their labors. Just when Russia was stretching out her hand to seize "the key of India," just when it was most urgent that a British force should move with all possible speed to Herat, those unreasonable Afghans insisted upon barring the way. Clearly, without the consent and assistance of the Afghans, it was impossible for a British army to march across a difficult waste and waterless country like Afghanistan; and that being so, there was no alternative but to make a complete "surrender" to Russia. This, accordingly, is what has been done. Russia is to get Panjdeh. She is also to get the frontier for which she has all along contended, and which M. Lessar was sent to London to lay before the London Foreign Office. In return for these substantial gains, she, on her side, is not unwilling to provide a golden bridge for a retreating enemy; and the conduct of General Komaroff in fighting the Afghans is to be submitted to an arbitrator. Russia can do this all the more willingly, as there is now little question that the menacing movements of the Afghans amply justified the action of the Russian commander. This result is not gratifying to the *amour propre* of the nation; but in all other respects it should be most fortunate for us, if only all that is involved in it be clearly perceived and established as the basis of our future action.

The first thing, then, that we ought to see and admit is, that Herat is now lost to us forever. The Russian outposts are within twelve days' march of that place; and, with every month that passes, the Russian position in relation to Herat will be rendered stronger. At present, it is true that Merv and the other most recent acquisitions of Russia in Central Asia consist of sparsely peopled, uncultivated wastes. But this want of cultivation is not due to the natural sterility of the soil, but to the insecurity of life and property caused by the forays of the Turcoman horsemen. All accounts agree that the forays cease as soon as the Russian flag is planted in one of these districts. The correspondents who accompanied General Lumsden say that they found unarmed peasants feeding their flocks, and unarmed merchants conveying their goods over tracts of country where, a few years ago, not a human being would have dared to show his face. A continuance of this order and security will, in a short time, cause these waste places to recover the fertility and population for which they were once celebrated; and when they do so, Russia will experience no difficulty in massing a large force of all arms within striking distance of Herat whenever she pleases to do so. Her Asiatic possessions have, moreover, this great advantage over our Indian Empire, that their frontier actually abuts upon the frontier of Russia proper. In the course of a few years, Merv, Sarakhs, and Panjdeh will be connected by railway with the Caspian and the general railway system of the Russian Empire; and when this has been done, it will be easier for Russia to assemble sixty thousand men upon the frontiers of Afghanistan than for us to send from England a similar force to Bombay or Kurrachee. When we add to this that the Heratees look upon their Afghan masters as aliens and oppressors, and that they would certainly rejoice to pass under Russian rule, the conclusion is irresistible that the policy of defending India at Herat, whether wise or unwise, is henceforth impracticable.

The other important fact which has been demonstrated by recent occurrences is, that Afghanistan is, so far as India is concerned, a hostile state. This hostility, so far from being diminished by our alliance with the Amir, is directly caused by it, and will go on increasing so long as the alliance endures. These two facts—the unapproachableness of Herat and the enmity of the Afghans—clearly show what is our only possible policy in the future. It is to withdraw ourselves from all entangling engagements with the Amir of Kabul, and to apply the money hitherto devoted to the maintenance of these futile and dangerous alliances to the strengthening of our defences along the proper frontier of our Indian empire. The alternative policies of the "Forward" and "Masterly Inactivity" schools have been tried by the test of experience, with the result that the "Forward" policy no longer exists as a practicable one. Twice has it tried to conquer Afghanistan, and on both occasions it has failed dismally. Then it had recourse to the expedient of keeping open the road to Herat by means of an alliance with the Amir, and this also has failed. The road is barred and Herat lies at the mercy of Russia. We have, therefore, no alternative except to frankly accept the policy of Sir John Lawrence, Sir Charles Napier, and Sir James Outram.

There is unhappily small chance of this alternative being frankly and fully accepted. And herein lies the danger of the situation. The determination of the policy that the nation shall pursue in Afghanistan and Central Asia does not rest with Cabinets, Parliaments, or the nation, but with the Anglo-Indian Bureaucracy; and there is no delusion too extravagant for this Bureaucracy to entertain as a reasonable conviction. Despite our recent experiences in Afghanistan, when it was found impossible to move large bodies of troops on account of the scarcity of food and the frightful mortality among the transport animals, the military authorities in India anticipated no great difficulty in transporting 50,000 men from Quetta to Herat. And just as they counted upon the cordial coöperation of the Afghans, so did they persuade themselves that an English force appearing in Central Asia would be the signal for a general rising of the Asiatic subjects of Russia. Under the influence of these fantastic dreams they converted Sir Peter Lumsden's mission into a display of military force, and an occasion for bribing the Turcomans wholesale to become the allies of Great Britain in the event of a war. The Indian authorities have, in short, worked for war all along, and are naturally much chagrined that their labors have been unavailing. To abandon our entangling engagements with a puppet Amir and rest contented for the future with the natural frontier of India, would be a confession of error on their part which they have no intention of making. The Amir, on the contrary, is to be more largely subsidized than ever. English officers are, at this moment, in Herat to strengthen the fortifications, and the army of Afghanistan is to be rearmed, at the expense of the Indian ryot, with Sniders and Martini-Henrys. This is precisely the policy that was adopted toward the unfortunate Shir Ali, and it must terminate in the same way. Shir Ali was fed for many years with sub-

sidies which hee xpended, as Abd-ur-Rahman Khan will expend them, in casting a prodigious quantity of artillery, in arming his troops with improved rifles—in making himself, in a word, "strong and independent"; and his country was invaded and he himself chased from his capital because he had become too strong and too independent. A similar fate assuredly awaits Abd-ur-Rahman Khan, and it is probably a fore-feeling of this which has made him so willing to cede Panjdeh to Russia, and so loth to take notice of the battle on the Khushk River. It is well, he thinks, to secure the support of England, but neither is it amiss to keep on good terms with Russia as well. An earthen pitcher between two brass pots must move very circumspectly indeed if it is not to be crushed to atoms. The greater the pressure on the English side, the more will Abd-ur-Rahman Khan bed riven to incline toward Russia—of whom, it must not be forgotten, he was a long time the guest and pensioner; and it is this that renders a third invasion of Afghanistan from India certain to be undertaken by the Indian Bureaucracy at no distant date.

R. D. Osborn, Lieut.-Colonel.

Correspondence.

THE BRITISH MUSEUM CATALOGUE.

To the Editor of The Nation:

Sir: Will you permit me to correct two errors in the notice of the printed catalogue of the British Museum in your number of April 16? The printing of the general catalogue was commenced in 1881, not 1875; so that the 330,000 printed titles represent four years' work instead of ten. The years 1813 and 1819 are not the dates of two distinct editions of the catalogue, but of the publication of the first and last volumes of the catalogue prepared by Sir Henry Ellis and Mr. Baker.—Yours very truly,

R. Garnett.

London, May 12, 1885.

GARBLED "OPINIONS OF THE PRESS."

To the Editor of The Nation:

Sir: I have received this week two copies of a pamphlet published by E. H. Butler & Co., and purporting to contain "Opinions of the Press" on Mr. Scudder's 'History of the United States.' On the inside of the cover is a portion of the notice which I had the honor to write for the *Nation*. The publishers are not content with extracting what I said in praise of Mr. Scudder's book and omitting the rest, as they might, not reprehensibly, have done. They have selected and joined their extracts with improperly skilful ingenuity, so as to make the *Nation* appear to praise Mr. Scudder for one of the very characteristics which I thought, and still think, is a decided fault—a certain air of dreamy, artificial childishness and "writing down." This they have done with no signs of omission, *such as they give in other notices of the same book* when they do not copy entire.

We all know how publishers write all over the country for "opinions" of schoolbooks, which afterward appear in advertisement pages as columns of unmixed eulogy. But it is carrying it a little too far thus to patch, with no signs of omission, the criticisms in a really critical periodical.

The Reviewer.

Quincy, Mass., May 20, 1885.

JURY EVIDENCE.

To the Editor of The Nation:

Sir: While agreeing in the main with your editorial on the Munsell case, can it be correctly said that "any knowledge a juror has of the facts of a case he is sworn to try, he is bound to use in consultation"? I will illustrate my meaning by an actual example: A man was sued here for the conversion of his neighbor's cow. The evidence was all in and the jury retired to their room. Suddenly one of them remembered he had seen this man with this cow, and he told his fellow-jurymen.

Some of them doubted the propriety of this as evidence, and, after discussion, they sent word to the Judge that they wished further instructions. They filed back into the court-room and their foreman explained the matter, and asked the Judge what they should do. The Judge directed them to pay no attention to the recollection of the juror, as it was not in evidence before them, not having been given under oath nor under cross-examination.

The jury disagreed, the case was tried again at the next term of the court, and this juror was summoned as a witness and gave his testimony under oath. But under cross-examination he broke down entirely, and it turned out that it was another cow or another date he testified to, and the jury found for the defendant.

This instance well illustrates the danger of allowing a jury to consider any evidence except such as is given before them under oath and subject to cross-examination.—Yours truly,

A. M. E.

Providence, R. I., May 25, 1885.

[Here the juryman evidently had *not* knowledge. Our position was in regard to one who had.—Ed. Nation.]

THE WORKINGMEN AND THE CHURCHES.

To the Editor of The Nation:

Sir: While I have not seen the article in the *Independent* answering your recent editorial on the alienation of the working classes from the churches, and so cannot claim to have heard both sides of the question, yet there can be little doubt that the general belief as to the facts strongly corroborates your statements. There are many reasons to be given for this condition of affairs, but one of the strongest is made very apparent by placing in juxtaposition two of the sentences you quote in your issue of May 21 from the Rev. Mr. Schauffler: "We find that the churches constantly tend to crowd their way into certain favored localities where, for various reasons, they can easily maintain themselves." "These poorer classes, herded together in huge tenement houses, have been for the most part left alone by the Christian community." In other words, the modern system—what has been well called the club-house system—of building and maintaining churches has been, I contend, one of the most potent causes of the disproportion between the growth of the population and of the church-going part of it.

Briefly, and speaking generally, this system works thus: A new part of a city is built up with "fine" houses; some of the wealthy citizens join together to build a church for themselves to worship in, and then, having had the building dedicated to the service of Him who they profess to believe is no respecter of persons, they perform the extraordinary inconsistency of dividing it up into small portions, called pews, which are rented or sold to those who can best afford to pay for them, leaving those who cannot out in the cold. This is called the business-like way of managing religious affairs, and truly so, if the object of church-building is to provide for one's own comfort; but would not such a system cause considerable astonishment (to say the least of it) to St. Paul or St. James, and their fellow-workers, whose teachings our pewholders profess to reverence? Perhaps, sir, you, whom I may be permitted to call somewhat of a Philistine, will not agree with me; but considerable acquaintance with the working classes leads me to believe this false method of carrying on religious work has quite as much to do with their indifference to church-going as infidelity of any and all kinds put together.—Respectfully,

Free Churchman.

Philadelphia, May 24, 1885.

CLARA BELL'S TRANSLATIONS.

To the Editor of The Nation:

Sir: A question having been raised as to the excellence of Clara Bell's translations, I enclose specimens from 'Uarda' which may do somewhat toward settling the doubt as regards accuracy. For the rest, every one will judge according to his notion of what constitutes a good style. Similar examples of unfaithfulness, if I mistake not, might be adduced from nearly every page. I call your attention to a few (more noteworthy when read in connection with the context than when taken in detached passages), that you may make use of them should it suit you to do so.

Yours truly, T. L. Lee.

Washington, May 22.

Aus der Zeit *von dem Grossvater des regierenden Königsentthronten Königsfamilie.*	the deposed royal race of the reigning king's grandfather.
Hast du ihm wenigstens Schebtifiguren mit ins Grab gegeben?	Did you bury the least bit of an image in his grave?
in die Nähe des Pharao, dem Leben, Heil und Gesundheit blühe.	the neighborhood of the Pharaoh, where life, happiness, and safety flourish.
Die Trennung, sagt das Sprüchwort, *ist der treue Feind.*	is the one enemy.
So ist die Würde des Mohar *erblich* wie die eines Reichsfürsten?	Is the rank of Mohar, then, *as high as* that of a prince of the empire?

der Arzt, welcher *den Vorwurf des Zwerges nicht unberechtigt fand.*	thought the dwarf's reproach uncalled for.

CABINET RESPONSIBILITY.

To the Editor of The Nation:

Sir: As I expected, "B." resorts to the toothache for his counter argument. This being so, it remains to be shown who proposes to cut off

the patient's head, and who to remove the unsound tooth. He says, "It would be a public misfortune to create a belief that Presidential and Cabinet responsibility cannot be fixed without action by Congress." I cannot see the misfortune of leading the public to believe what is true. On the contrary, the real misfortune is that the present working of the Government only serves to disguise the real truth from the people, and to leave them in the condition of not knowing what to believe.

According to "B.'s" own showing, the responsibility for all appointments now comes back to the President. It is he who is to warn the Cabinet against bad appointments, to compel them to revoke any such if made, and to punish them if they do not yield. It is important to understand fully what this means. It means that in many thousands of cases the President has to decide, of his own motion, what *is* a bad appointment. He has to do this, not according to any fixed rules, but according to an arbitrary and indefinite standard of what constitutes good and bad conduct in office—a perfectly undetermined limit, within which party claims are to be considered, with the absolute certainty that, whatever he does, one section of the press will raise a howl. It is useless to say that this is of no consequence, for in fact there is nothing by which the Administration at this time can be judged except the appointments, while the public have no means of judging except by what the papers say. As newspaper controversy for the President is out of the question, no word of explanation or defence is possible, no matter how bitter or how insidious the attacks may be.

Again, how is the President's control over his Cabinet to be exercised? Suppose they take a different view from his of party obligations, and commit offences. He may give them what we used to call in college a "private" (admonition); but if they urge necessity, and are obdurate, he has no means of coercion except dismissal, and if he has selected them for reasons of policy, he will hardly do this on account of an appointment, especially as, unless the parties get into a newspaper controversy, the public will never know or give him credit for any such Spartan virtue.

But suppose the President does keep up such a losing battle, in which he is pretty certain to displease everybody, it is not an improvement of system, but depends only upon the individual. The process may be reversed by his successor, unless the public agitation is kept at a white heat upon the civil-service question, to the exclusion of such subjects as tariff, coinage, bank, Indian, naval, and many other reforms; in other words, unless the whole strength of the country is expended upon keeping the machinery in order, with an utter disregard of the product for which that machinery is supposed to exist.

What is there so terrible, on the other hand, in the idea of Congress enforcing responsibility upon the Cabinet and the President? It seems to me that that is one of the main reasons of the existence of Congress. The enforcement of responsibility would be just as much the other way. Each side would stand guard over the other, the public looking on as arbiter. Then for the first time we should get the true popular judgment, because for the first time the people would know the merits of the case. Let us leave, however, the abstract for the concrete. Suppose the Secretary had to meet Congress face to face next December. The first thing he would encounter would be inquiries, not from a party majority, which, if it were on his side, would by no means take such a course, but from individuals, with their spurs to win, as to his use of the offices. A man who had a clear consciousness that, though he might have made mistakes, he had acted from no motive but the public good, would have an enormous superiority over one who had used the offices for party purposes. The public would be quick to distinguish and support the purer official, while members who had tampered with the departments would be liable to have their intrigues exposed. The whole process would be so vexatious that the Cabinet would demand to have the civil service placed beyond suspicion. And the longer it was kept so, the more difficult it would become for any Administration to return to the old courses. Some years ago Lord Beaconsfield was suspected of having improperly appointed a relative to an office. The Opposition members were after him in a moment. He escaped by one of those skilful evolutions of which he was such a master, but the incident was a warning to all ministers that such a thing was dangerous even for him to repeat. Not the least advantage would be that it would give the President time to devote to matters of policy, instead of having his life-blood drained by these miserable details, though he would still be in a position to warn his Cabinet of rocks ahead.

To allow the tooth to go on to ulcerate, and fester, and gangrene till it becomes fatal—this seems to me the equivalent of cutting off the patient's head; while the remedy proposed is like going to a dentist and having the pain allayed with lotions, and a good gold filling inserted, procuring the restoration of the unsound tooth to its natural function without having it pulled out at all. G. B.

Boston, May 23, 1885.

Notes.

The invaluable 'American Catalogue' initiated and successfully carried through by the late Frederick Leypoldt, included, so far as was possible, every book in print in this market up to July 1, 1876. We now greet with pleasure and with pride a continuation of the same work, on the same general plan, compiled, under the editorial direction of Mr. R. R. Bowker, by Miss A. I. Appleton. The new 'American Catalogue' (New York: Office of the *Publishers' Weekly*) preserves for all time the titles of books that have appeared since the above-mentioned date to July 1, 1884. As before, it embraces many works not strictly American—reprints and the importations of English houses having established branches in this country. The list of Government publications starts from January 1, 1881, and will prolong the list compiled up to March, 1881, by Mr. Ben. Perley Poore, from the beginning of the Republic. The latter, a vast and national undertaking, is now ready to be put in type. Another novel feature of the present Catalogue is a list of "series," and another of "societies" which publish. Finally, we remark that three ladies have borne the burden of this most important and creditable contribution to American bibliography.

We bespeak support for another praiseworthy bibliographical undertaking, 'The Issues of the Press in Pennsylvania: 1685-1784,' in two volumes, by Charles R. Hildeburn, Philadelphia. The work aims "to present full and accurate titles and collations of all the books, pamphlets, and broadsides printed in Pennsylvania during the hundred years following the introduction of printing into the middle colonies." The 4,000 titles already collected will be arranged chronologically and fully indexed.

D. Appleton & Co. announce that the second volume of McMaster's 'History of the United States' (1790-1804) will be ready for delivery about June 1. They also announce 'Colonel Enderby's Wife,' by Mrs. Harrison, daughter of Charles Kingsley and author of 'Mrs. Lorimer'; 'The Tinted Venus: a Farcical Romance,' by F. Anstey; and 'The Common Sense of the Exact Sciences,' by the late William Kingdon Clifford.

Messrs. Macmillan have stated their willingness to publish the MS. of the second part of the late Professor Clifford's 'Elements of Dynamics,' and, after a reëxamination of it, his literary executor, Prof. R. Tucker, intends putting the work into their hands for printing. When this book is got out and other lectures recently come into the hands of Professor Tucker have been published, the mathematical world will be in possession of all that can be now looked for from the hand of this great master.

Porter & Coates, Philadelphia, will publish next month a new 'Elementary Physiology,' with special reference to the effects of alcohol and tobacco, by Richard J. Dunglison, M.D.; a new and revised edition of the 'Children's Book of Poetry,' compiled by Henry T. Coates; and a new edition of Smith's 'Bible Dictionary,' edited by Peloubet.

Fords, Howard & Hulbert will issue the Book of Psalms, according to the preferred version of the American revisers of the Old Testament.

A 'Riverside Parallel Bible,' with old and new versions side by side, is in the press of Houghton, Mifflin & Co. They will also publish shortly a collection of papers on birds and bird-life, called 'Birds in the Bush,' by Bradford Torrey, of Boston.

A new work, chiefly relating to Alaska and the Alaskans, is in preparation by Miss Margaretha Weppner, author of 'The North Star and the Southern Cross.' She has resided among that people for a considerable time.

A paper-cover "Traveller's Series" issued by G. P. Putnam's Sons is introduced by J. J. Jarves's 'Italian Rambles,' Edmondo de Amicis's 'Studies of Paris,' and H. M. Robinson's 'The Great Fur Land.' The last is a timely revival, and Amicis's work hardly less so, considering its long "appreciation" of the late Victor Hugo.

Three more of the dainty volumes of the Riverside Aldine Series have reached our table. Mr. John Burroughs's 'Wake-Robin' makes one, and Mr. Howells's 'Venetian Life' fills the other two.

The New England Historic Genealogical Society (Boston) has done well to reprint in book form the already noteworthy results of Mr. Henry F. Waters's 'Genealogical Gleanings in England.' These gleanings among the probate records of the mother country began to be published in the quarterly organ of the Society, the *Register*, in July, 1883; and the volume before us covers the latest instalment in the number for April, 1885. An index of names has been furnished which makes the volume available to the many—to a multitude, we might say. To this work, which is called part 1 of vol. i, and its successors all seekers after a connection between American and English families of the same name must hereafter turn first of all. It marks a new era in the study of genealogy. Moreover, Mr. Waters's incidental discovery of historical documents has already been worth the whole cost of his maintenance up to this time. The fund which the Society has raised for this purpose ought to be recruited from every purchaser of the present work.

Mr. Fitzgerald Molloy's 'Court Life Below-Stairs; or, London under the Last Georges, 1760-1830' (Scribner & Welford) is in continuation of a former work in which the scandalous lives of the first two Georges were fluently compiled from all sorts of sources. It has the same quality of readableness and substantial authenticity, but the work does not appeal to the student of history. Dates are rare, there are no footnotes, nor any precise references for the quotations; there is no index, nor even a table of contents. The

narrative is as decent as the subject and the author's aim at piquancy permit.

In everything that proceeds from Mr. Hamerton's pen, the literary quality predominates over the technical, even when art is his chosen topic. This is eminently the case with his 'Landscape,' which we recently reviewed at length from the illustrated *édition de luxe*. Hence the work suffers little as a mental delight when reduced to bare simplicity of print, without pictures. It is issued in their familiar form of this author's works by Roberts Bros., Boston, with Mr. Hamerton's consent and approbation. As such, it makes a compact volume of 440 pages, index included.

From the same publishers we have Pascoe's 'London of To-day,' an unconventional guide-book, with humorous illustrations in the text, and several full-page process reproductions of photographs, one of the lions in Trafalgar Square being a favorable example. The orderly arrangement as shown in the table of contents does not quite compensate for the lack of an index.

The 'Ingoldsby Legends' have been brought out by T. Y. Crowell & Co., in a red-line and gilt-edge edition.

A stout volume containing the 'Seven Lamps of Architecture,' 'Lectures on Architecture and Painting,' 'The Queen of the Air,' and 'The Ethics of the Dust,' is issued by John B. Alden as a sample of his illustrated library edition of Ruskin's works. The print is clear, and the illustrations fairly good process-work; but if both were better, they would not reconcile the author to this unauthorized reprint.

Mr. Christern sends us the illustrated catalogue of the Salon for the present year, containing the usual memorandum sketches, some 300 in number out of a total of 4,338 pieces.

We can hardly keep pace with the issues of the several German lexicons now publishing simultaneously. The lesser Brockhaus ('Kleines Conversations-Lexikon,' New York: L W. Schmidt), has reached its sixth part, ending with "George Bancroft," the pronunciation of whose name, by the way, is indicated for the first syllable by "bännk"—not quite accurately. Parts 2-4 of the fourth edition of 'Meyers Konversations-Lexikon' (Westermann), end in *Akkord*, and chance to embrace three burning topics of the day—Egypt, Afghanistan, and Africa, all treated with great fulness, and the first accompanied by a fine general map together with one of Alexandria. Athens, also, is mapped, for the ancient and the modern city. Other important articles are those on the nobility (*Adel*), and on the various learned academies the world over. American biography is well looked after under Adams and Agassiz.

Great pretensions are made by the new *Deutsche Encyklopädie* (Leipzig: F. W. Grunow; New York: Westermann). Its form is larger than the lexicons just noticed, with broad double columns, and each of the hundred parts is sold here for twenty-five cents. Illustrations and maps outside the text are to be discarded. The writers sign their articles. Special attention is paid to the bibliography of the several topics. The traditional scheme of the French encyclopædias is abandoned in favor of a more free and living compilation. Just how much more this means than that the editors will carry out their own ideas of what such a work should contain, it is not easy to determine from Part 1. Still it is clear that the difference as to contents will be considerable, that the work will be cheap, and that the writers—a formidable list—are competent.

The two leading articles in *Le Livre* for April are by G. F. Vidocq fils and L. Derome. Though the former adds "bibliophile" to his signature, it does not surprise one to find his subject to be "La Police par les Policiers"—a bibliographical contribution to a history of the police. Of the Memoirs of Vidocq (1828) he says that they manifest more imagination than literary aptitude. M. Derome, on the other hand, portrays, not very skilfully, the life and character of Lacurne de Sainte-Palaye, a forerunner of Littré, who had the use of the former's great MS. collection lately published under the title, 'Dictionnaire historique du vieux langage françois,' a glossary coming down to the age of Louis XIV. An interesting etched portrait of Sainte-Palaye and his twin brother, from the original painting in the musum, at Auxerre, accompanies M. Derome's narrative.

The "misused H" comes ludicrously to the front in a report of the doings of Parliament in the London *Times* of May 6. Lord Edmund Fitzmaurice is alleged to have made a statement concerning Sir W. *Hay* White, the present British Chargé d'Affaires at Constantinople. William Arthur is the name of this accomplished diplomatist. Whether Lord E. Fitzmaurice or the reporter (by oral transmission) is responsible for the aspiration of Sir W. A. White's middle initial, it is not for us to determine.

Mr. Edmund Gosse's services to Scandinavian literature have been handsomely repaid by a very elaborate bibliography of his writings from the pen of Mr. Thorvald Solberg, printed in the *Literary World* for May 16.

In a recent issue of *Nature*, Professor Ewing, of the University College, Dundee, relates the very interesting circumstances of an unusually great earthquake felt in the region in and about Tokio, Japan, on October 15, 1884. A reduced copy of the autographic record of the disturbance, made with the seismograph of the Observatory of Tokio, presents the prominent features of the earthquake in a most striking manner, as it is shown that in the present case the amplitude of the earth's horizontal movement far exceeds anything that has been recorded since observations of this kind were instituted in 1880. The delicate seismic apparatus indicated a movement of the ground, from one side to the other, of no less than 4.3 centimetres; and while the most violent motions were over in about ten seconds, the oscillations continued for some minutes thereafter, with a very extended amplitude. These being unusually slow, the earthquake was prevented from being excessively destructive. It was felt over an area of about 20,000 square miles.

Rev. Dr. Hyde, of Honolulu, writes that an effort is to be made by educated men there to establish a society for the study of the archæology and philology of Oceanica.

The Proceedings for May of the Royal Geographical Society contain a third paper of "Geographical Notes," by Major Holdich, of the Afghan Boundary Commission, descriptive of the country lying between Herat and Panjdeh. The Russian envoy, M. Lessar, was present, and opened the discussion which followed the paper (written of course before the engagement at Puli-Khisti), with a fuller account of the soil of the country, and an explanation that the changes in the Russian maps were simply owing to the results obtained by recent surveys. Sir Henry Rawlinson, who was Resident at Herat in 1841, spoke of this city and what was necessary for its defence against a European army, and gave his understanding of the boundary line agreed upon in virtue of "a certain political arrangement" in 1872. This statement was corroborated by Sir Richard Temple, who said that "He was a member of the Government of India when that boundary was settled, and nothing could be more explicit than the understanding that it ran from Sarakhs on one side to Khoja-Saleh on the Oxus, and that the line was to be drawn as straight as an arrow." He also strongly commented on the lack of accurate geographical knowledge in the English service, especially as compared with that shown by Russian officers, leading to "political consequences that frequently placed England at a great disadvantage."

In the same number is an elaborate discussion of the purely geographical problem of the outlet of the great Tibetan river, the Sanpo. Mr. Robert Gordon, a civil engineer and author of the valuable 'Report on the Irawadi River,' favors the Irawadi, chiefly on account of its enormous water-discharge. General Walker, late head of the Indian Survey Department, on the other hand, asserts that the Sanpo is the head-waters of the Brahmaputra. In this opinion he is supported by nearly all recent authorities. Each speaker, however, held that the observations made by the last explorer of those regions, the Pandit A——k, supported his view. The difficulty of settling this question lies in the fact that the mountains through which the Sanpo runs after it leaves the central table-land, are held by a savage race who have hitherto successfully prevented the passage by the river from Tibet to India of any traveller, whether European or native.

Wise people when they go to Rome do as the Romans do. The English carry this a step further: when they go to Egypt they do as the Romans did. They establish a camel corps, just as the Romans established the *Ala prima Valeria dromedariorum* and the *Ala Antana dromedariorum*. The French antiquaries have been the first to point it out.

The attention of Anglo-Saxon scholars should be called to a very important bibliography of Anglo-Saxon literature just published by Professor R. Wülker, of Leipzig ('Grundriss zur Geschichte der Angelsächsischen Litteratur,' Leipzig). Volume i, so far as printed, gives exhaustive lists, with comments, of all works hitherto printed on the subject (1) of old English linguistics, (2) aids to the study of both language and literature, (3) bibliography of publications (essays, dissertations, texts) connected with Cædmon and his circle, Bede's death-song, Cynewulf and his circle, and the Exeter Book. These lists, with the discriminating remarks which accompany every important book or essay, are simply invaluable to the historical student of English. Nothing seems to have escaped the vigilant eye of the Leipzig professor. The work of American scholars in this particular field is cordially recognized, and contrasted with the apathy that has long existed in England. Colleges and universities which are making collections for their alcoves of *Anglo-Saxonica* will find this manual—for such it is—indispen able.

—The reviewer of Lenormant's 'Monnaies et Médailles,' in No. 1034 of the *Nation*, sends us from London, on May 15, the following comment on M. Feuardent's remarks about the striking of ancient coins in No. 1035:

"There is no evidence that coins were struck hot, and the appearance of the great majority of Greek coins distinctly negatives the theory. Silver, like bronze, requires to be annealed after drawing, hammering, or striking before it can be struck again, and there are numerous cases which show that the coins were struck more than once before the impression was complete. The striking of either of these metals, and to a certain extent of gold also, at a high heat is impossible, for they fly into fragments. When annealed, they may possibly be struck at a moderate temperature, short of entire cooling, but there is absolutely no evidence whatever of such having been the case in the coins themselves. I have just examined what are known as the 'reticulated' coins in the British Museum, and am entirely convinced that the so-called reticulation (which occurs on the reverse of the incused coins only) is simply the half-effaced indication of the preparation of the flan either by a toothed hammer, which will spread the metal better than a

smooth one, or by the use of something analogous to a file for reducing the weight; but in either case by the producing of a roughened surface, and subsequently striking it with a polished instrument and the incuse punch. For the 'reticulation' is always nearly effaced, and is a rare thing in any state, while no trace of it is seen in the obverse or relief of the coin where, if it were the effect of hot coinage, it should equally appear. Nor are the experienced numismatists of the British Museum, certainly as high authorities on such a matter as any in the world, of the opinion that the coins show any evidence of hot coinage. In striking pure silver, which is of extreme softness, there is no utility in hot striking, as the bronze dies, by heating from the contact with the hot metal, would deteriorate far more than would be compensated by any advantage supposed to be derived from heating the coin metal, while the cold metal gives a better impression even than the moderately hot."

—We regard it as a very hopeful sign that the pastor of a church in Providence, R. I., should have felt moved to institute a public course of lectures on political and economic topics, under the auspices and at the expense of his parish. Observation of the late Presidential campaign naturally led him to reflect on the narrow and unintelligent view of the great questions involved taken by the newest class of voters. It then seemed to him that his church, at least, had a function unfulfilled, so long as the young men whom it could reach went uninstructed in the duties and privileges of citizenship. The result was an unpretentious series of discourses—mostly by citizens of the town—on "The Study of Political Economy," "The Organization and Administration of the Federal Government," "The Relations of the Citizen to the National Government," "The Spirit of the Common Law as seen in its Maxims," "How are Inventors Protected?" "Free Trade," "The Nation's Resources," "Communism and Socialism," "Wages, Strikes, and Labor Unions," "A Protective Tariff," "The Banking System and Monetary Exchange," "A Study of the Constitutional History of Rhode Island," "How the Law is Applied by Lawyers, Judges, and Jurors to the Protection of Private Rights," "City Government." The course, begun in November last, has just closed or is about closing. In order to sustain the interest felt by the auditors, and to stimulate further and original study of the topics discussed, a pamphlet has been prepared for gratuitous distribution, consisting of "References to Political and Economic Topics," in the sequence of the several lectures. These have been prepared, with his accustomed thoroughness, by Mr. William E. Foster, of the Providence Public Library, himself one of the lecturers; and not only are the proper works cited, but the public libraries in which they may be consulted are duly indicated. We have heard a good deal about the coöperation of the common schools and the public library, but less about a similar partnership between the public library and the churches. We commend the Providence experiment in this respect, as well as for its example of intervention by the pulpit in politics, in a perfectly unobjectionable way.

—In a long article entitled "Three Modern Authors," contributed by Helena Nyblom to the January number of *Ny Svensk Tidskrift*, ten pages are devoted to a favorable notice of Henry James as a novelist, more especially reviewing the recent Swedish translation, by Erik G. Folcker, of 'The American.' The rarity with which one meets with a happy book, the writer thinks, is due to the fact that, with mankind as with the individual, it becomes impossible, growing steadily older, to look upon life with the bright hopefulness which belongs only to youth. With years come bitter experiences, and with these the sharpened sight which sees that everything that glitters is not gold. It is therefore natural that the youngest people should be the most cheerful, and hence American authors possess, as yet, the whole charm of youth in their perceptions of life. There is no bitterness in their interpretations of the sorrowful circumstances or misfortunes which they may depict—no hopelessness in their view of life—because they have a belief in the future, as well for the individual as for the race, and because they are, "first and foremost, true men, who neither see double nor half, but, with a pair of strong, clear-seeing eyes, look directly upon nature itself. They possess that freshness which belongs to the Anglo-Saxon race in its best utterances, good nature, a warm, hearty feeling, a large portion of humor, which can change into a noble pathos, but which never becomes sentimental, and is never raw—men who believe in human instincts, and for whom such words as religion, duty, and culture are not entirely old-fashioned, but stand for eternal principles." But Europeans belong to a *blasé* race, an old and tired society, and so, also, are nearly all their authors old and tired, sour or melancholy. It is not *comme il faut* for a Scandinavian writer who wishes to be considered interesting, to exhibit in his books any joy of life.

—To this vitiated taste is to be ascribed the lack of interest manifested by Scandinavians in modern American literary work, the simplicity of which cannot satisfy readers brought up on the highly seasoned literary diet of Europe. The reviewer complains that the Scandinavians, notwithstanding the peculiar interest which they have always taken in things American, have gone to little trouble to acquaint themselves with the modern American authors. When, however, she enumerates the works of Mark Twain, Bret Harte's stories, Howells's 'The Lady of the Aroostook,' and two novels by James ('Roderick Hudson,' and 'The American'), as a complete list of the Scandinavian translations of American works of fiction, she does her countrymen injustice, for to these authors can be added, among others, the names of Longfellow, Poe, Mrs. Stowe, Cooper, Cable, Aldrich, Mrs. Prentiss, Habberton, Boyesen, Miss Phelps, Miss Cummings, and Edward Eggleston. She claims for America two authors of first rank, Henry James, jr., and W. D. Howells, who are declared to be "highly gifted, original artists, who, in powers of observation and style, have not been matched by any European writer since Turgeneff. Which of these two is to be placed first is a matter of taste. They have each great merits and unusual gifts, and are complete masters of their materials." 'The American' is reviewed as a delineation of the strife between new American and old European ideas which will not unite; and the hero, Mr. Newman, is taken as a typical American, and, as such, an admirable specimen of an admired race. The two authors who complete the reviewer's trio, are Henrik Ibsen, whose last drama "Vildanden" (The Wild Duck) is noticed; and Turgeneff, whose novel 'Elena' is reviewed in a late Swedish translation.

—When Mr. Albert M. Palmer passed from the Union Square Theatre to the Madison Square, people were surprised, and it was predicted that he would fail because his success had been obtained with the French style of drama, and the Madison Square audience were accustomed to and cared only for highly moral dramas. Whether that public changed its taste, or a new set of theatre-goers came, the new policy was pecuniarily highly profitable. The man who succeeds is, of course and necessarily, the man who is in harmony with his age; who floats on the world-current; who feels, consciously or unconsciously, what is and what is to be the trend of the public taste. Mr. Palmer is really taking advantage of a universal tendency. To say nothing of England, where it is evident enough, and France, which is the source of all the evil—if evil it is—Germany has entirely revolutionized its theatrical habits. In Berlin, where, thirty years ago, six theatres were half empty, now more than a dozen large theatres and several smaller ones are crowded, especially on Sunday. And the reason is that the theatre no longer attempts to preach morals or to teach politics: it is content to amuse, by story, by scenery, by costume, and in some theatres by want of costume. The idea that the stage can and should have an elevating influence has vanished, say the pessimists. The enthusiastic young men who could share the aspirations of Wilhelm Meister are not to be found nowadays; if any capable of such *Schwärmerei* exist, they are utterly without influence—too few to dare to raise their voices. Indeed, in the present surroundings, it would be impossible that such capacity should be developed. So laments the critic of the *Rundschau* in Germany. In this country the critics are gradually ceasing to lament.

—The Slavs of both the Catholic and Greek persuasions have been celebrating the thousandth anniversary of the death of St. Methodius, "the Apostle to the Slavs," who is believed to have died in 885. Methodius, like his brother and coworker Cyril, who is considered the inventor of one of the Old-Slavic or Church-Slavic alphabets, is a saint of both churches, the two brothers having been Byzantines by birth and education, and Apostles under the direction of the Popes of Rome, at a time when the great religious schism between the East and West was, through the ambition of the Patriarch Photius, rapidly approaching consummation, but not yet consummated. They converted the people of "Great Moravia" and other western Slavs to Christianity, preaching to them in their vernacular, teaching them the art of reading and writing, translating the Gospels, and thus laying the very first foundations of Slavic literature. Hence it is but natural that Russians and Poles, for instance—though their conversion is of later date—should vie with Bulgarians, Czechs, and Serbs in paying honor to their memory. The celebration is, however, far from being carried on in concord. On the contrary, it has assumed a character of rivalry with pronounced antagonism, the dividing line being both religious and political. The Czechs, Poles, Slovenes, Croats—all Catholics—have selected Velehrad, a small town of Moravia, for the centre of their celebration, and turn their gatherings into a demonstration in favor of West-Slavic federation under the auspices of Austria; while the celebration which took place in the latter part of last month at St. Petersburg was intended to be a declaration in favor of Panslavic union under the ægis of the Czars. The St. Petersburg assemblage was an impoisng affair, directed by the Slavic Benevolent Society, and attended by deputations from Bulgaria, Servia, Montenegro, and even Austrian Galicia; but, failing to enlist the sympathies of Catholic Slavs, it failed of its political object. Conspicuous among the foreign visitors were the Servian ex-Premier Ristitch and the Ruthene Naumowicz—both well-known enemies of Austria.

—"Terror ceased, laughter and scepticism began, with Boccaccio," said an Italian epigrammatist—a judgment which partially sums up the beliefs of one school of *Boccaccisti*. On the other hand, there is a rancorous controversy prevailing in this *petit monde* of Boccaccio lovers and students upon the vexed question how far the delightful story-teller really was in advance of his age; how far he believed in the superstitions commonly credited by his contemporaries; and what part of his life and career—if any—showed themselves particularly open to suggestions of the

supernatural, to astrological vagaries, and to belief in dreams and portents. Anton Graf, in a recent number of the *Nuova Antologia*, descends vigorously into the mêlée, and triumphantly vindicates his favorite from the charge of excessive superstitiousness. Körting had tried to prove that Boccaccio was a profound believer in dreams, in the spirit of prophecy as communicated to dying persons, in astrology, in strabism of the eyes as indicative of a perverse disposition, and in apparitions of devils under the disguise of exorcised spirits. He was held, also, to believe that Æneas had really descended into hell, and that Virgil was a constructor of magical machines, etc. Graf shows that these charges are only partially true, and that the 'Decamerone' is a just picture of human life in Italy in the thirteenth century, mirroring all its phases, aspects, and beliefs, without necessarily bringing its author under the compulsion of believing what he simply reflects in his wondrous looking-glass. He shows pretty conclusively, in fact, that Boccaccio, *quoad* superstition, is not only far behind his age in credulity and in appetency for the marvellous, but that one great purpose of his matchless art was to ridicule and smile out of existence the gross follies and absurdities in which monks and burghers of that age alike believed. Boccaccio may stand behind the more enlightened Petrarch in positive denunciation of these things, but he is not far behind him; and it is unjust and unhistorical to place one thinker and artist on the highest summit of sane and illuminated thought, while the other grovels below in the valley of superstition. Neither writer is absolutely new and free: both are bound to the past; both revolve in and around it. Boccaccio, to be sure, grew old and recanted, turned his back on the delicious creations of his prime, and tried to cast the mantle of piety and asceticism over the too luxuriant imagination and humor of the 'Decamerone.' But—Boccaccio was old; that is all. And old people are notoriously prone to "take back" things—"go back on themselves," in modern parlance—and abjure their juvenile follies. In his prime Boccaccio was really an iconoclast, and even an advanced liberal.

BAIRD'S HUGUENOT EMIGRATION.

History of the Huguenot Emigration to America. By Charles W. Baird, D.D. Dodd, Mead & Co. 1885. 2 vols., pp. 354, 448.

The Revocation of the Edict of Nantes will doubtless long remain one of the greatest evidences of national bigotry which English-speaking historians can cite. Although its influence was greatest in France, it may be doubted if even now the full importance of the act is felt by Frenchmen. France is still Catholic, and the ill-timed victory of that faith is naturally passed over as quietly as possible by her historians. But in English literature, on the contrary, an undue prominence is given to the matter, partly from the lack of a parallel case in British history, and partly from the continuance of a genuine sympathy for the sufferers in the cause of Protestantism. It is always impossible to predict the event which will first seize upon the popular mind and memory, but certainly the relative importance or value of the matter seems to have little to do with it. The Covenanters, the Cavaliers, the Huguenots, the Acadians—each group has a prominence in history hard to explain, but undeniable. Despite the enthusiasm of historians, it is impossible to prove that the influx of Huguenots into Great Britain influenced in any degree the affairs of that nation; and it may be added that in the Northern colonies of our own country the effect of the immigration is almost or quite imperceptible. In New England, certainly, the Huguenots disappeared as a distinct element in the second generation, not from any dislike on the part of their English hosts, but because their distinctive points could not be maintained. The very warmth and fulness of their reception extinguished all national peculiarities. Here and there can be traced to-day the distorted signs of French patronymics, but the bearers are apt to be most unmistakably Yankees. Like the Normans in Ireland, more Irish than the Irish themselves, the Huguenot has become a component part of the nation.

Owing to the inexplicable vagaries of fashion, there has recently been a revival of interest in the history of this immigration, and Doctor Baird's handsome volumes not only are a sign thereof, but will be the means, doubtless, of extending the feeling. The family records of many a name will be explored, and many a man will take a new interest in one of his many great-grandmothers. It is a good thing to awake such an interest: the records will be of a community pure, devout, and brave; but we must not be led into an overestimate of its importance. The fact cannot be too plainly set forth that the French immigration was vastly inferior to the English in amount, in quality, and in results. So far as we can judge, had a Huguenot colony been attempted independent of English foundation and preparation, it would have utterly failed. Parkman has shown the limited success of French Catholic colonies, fostered by the Church and the State; deprived of such powerful support, what could the fugitives from Rochelle have established?

In looking through Doctor Baird's volumes, the reader is at once reminded of the great difference between France and England. In the latter country we find a society of infinite gradations, socially, from the highest to the lowest, all connected by ties of blood and community of interest. In France there was a nobility and a peasantry, with hardly a trace of intermediate classes. It is not without reason that history is so taken up with the records of the rich: the individual disappears in the lower ranks. The philosophical student nowadays affects to despise the records of courts and parliaments, and clamors for the history of the people; but the most he attains is a record of the shifting sands that have obliterated villages, of the insatiate waves that have engulfed the seaside cliffs. Results appear, but the instruments are lost. And the more closely the work of nations approximates to that of the mighty powers of nature, so much more scanty and monotonous must be their annals. Circumstances, perhaps, have favored the English race, but it seems to be replete with individuals. Each family becomes a unit, each pedigree a distinct strand in the great web. But a few years ago the historian of England's share in the Crimean War issued his volumes on a scale apparently disproportionate to the subject. Critics remarked with a sneer that every ensign who fell on Russian soil was described as fully as though he were a marshal of France. Yet this insistance on individuality goes far to explain the continuous importance of the race. "Every French soldier carries his marshal's baton in his knapsack"; but if he miss of the supreme end, he falls unrecognized.

In the history of the Huguenots we find mainly the brief annals of the lower classes. Few noblemen remained true to the faith under Louis XIV. The great mass of the Protestants were of the common people. They were brave, honest, and faithful to death, but they were of the class of the Covenanters rather than of the Puritans. Their history should be studied in the mass rather than in detail, so few can be segregated and the differences are so slight. It is but just to Doctor Baird to say that he seems to have done the best possible with the meagre materials in his possession. He has brought out much new information, and he has drawn touching pictures of men who relinquished every worldly blessing at the demand of their religion. But when he tries to give us the details of their history, the wherewithal is lacking. A scanty trace of one or two generations in France can be found in a few cases, but in others all that remains is the mere mention of the place of emigration.

If we were disposed to find any fault with the way in which Doctor Baird has performed his task, it would be in the lack of clearness in his arrangement. His citation of authorities is not sufficiently ample, and his notes are too fragmentary. He treats at one time of the localities whence the emigrants came, at another of their new homes, but under neither heading does he bring together all his information into one focus. These two volumes are a valuable and interesting contribution to our history, but we venture to predict they will be more appreciated by the genealogist than the historian, and for the genealogist they do but indicate the need of further search. It may, however, well be that in treating of those Southern colonies in which the Huguenot element was more important, Doctor Baird will be able to present more valuable results. At least, so little has been done in the way of publishing local histories in those colonies, that the first comer will seem to possess the whole territory.

MARLOWE.—II.

The English Dramatists: The Works of Christopher Marlowe. Edited by A. H. Bullen, M.A. Boston: Houghton, Mifflin & Co. 1885. 3 vols.

In these plays, as might be guessed after what we have said, is no real fun-making of any sort, nor is there a single character in them capable of the making or enjoying of fun, or of knowing it when he sees or hears it. There are, indeed, certain "situations" which perhaps were meant to be funny, and most likely were so to the men of the time, who shouted their lungs out over the kings in harness and *Tamburlaine's* cry to them: "Hola, ye pampered jades of Asia!" Thus—to take an instance out of a stage direction—"*Mycetes*" (whose army is on the ground) "*comes out alone with his crown in his hand, offering to hide it,*" and *Tamburlaine*, with another great army there to fight *Mycetes*, joins him, asking: "Is this your crown?" Of unintended funniness is this, where the hitherto shepherd *Tamburlaine*, at the outset of his great march across the Eastern World, has the Princess *Zenocrate*, daughter of the Soldan of Egypt, a prisoner, beseeching him as a "shepherd" (for by his "seeming" he is "so mean a man") to "pity her distressed plight," and presently, without the slightest stay in their talking, he says:

> "Lie here, ye weeds that I disdain to wear! [his pastoral garments]
> This com'plete armor and this curtle-axe
> Are ad'juncts more befitting Tamburlaine";

as if the intermediate process—whatever it might be with a Scythian shepherd—between the wearing of a garb which betokened him so mean a man as a keeper of sheep, and the appearing in full effulgence of a warrior's armor, had been rehearsed while he stood there talking with the Soldan's daughter. Other things of this sort might be found if looked for.

Now, that the bringing in of fun and frolic to offset sharply the mournful and heart-harrowing of the play brought wondrous life-likeness into our English tragedy, others can see easily besides ourselves; and that a new zest for readers, as well as for seers and hearers, of plays in our tongue has come with that bringing-in. Our thoughtful, all-prodding, all-weighing cousin-Germans were drawn, without a will for it, to

English tragedy, and Frenchmen, too, whose kindred to us and to our tongue is further off a good deal, were drawn to it against their will. And, whatever critics may have said about "unities" and dignity, all the world likes it better, and will keep it in a warmer place in the heart, because its gloom is not all gloomy. Oneness of mood, which must last long unchanged, as of iron or clay, does not belong to men. In the glimmer of darkened rooms from which the dead has been lately borne, will come out a burst of mirthfulness at unawares, and this from no "widows of Ephesus," but from true mourners. Sometimes the merriness is a fitting and most touching element in the action and passion. In that poem truly dramatic, though no drama, and of marvellous beauty and sadness, 'The Bride of Lammermoor,' the mirth made by and through old Caleb Balderstone belongs as truly to the sadness of the tale as the white satin or silken lining, or the work in bullion thread, belongs to the black velvet of the pall.

The Greeks and Latins, as we know, unlike our own greatest writers, held these dark and light things wide apart, one from the other; keeping sad steadily to sad, merry to merry. So Frenchmen of the classic rank, whose tongue is still less than they are either Greek or Roman, have held, with might and main, to the same rule. Their French speech often stumbles in trying to march stately on sublime heights; yet one can never with their leave smile in one of their tragedies. Any funny thing must have slipped in in spite of the author (as there will be sometimes one too sly for him); but can we help smiling when the Cid, who has killed in a duel the father of his betrothed, and is now formally pursued by her as the avenger of blood, makes his way to her in some absence of the never-absent duenna of Spanish maidens, and proclaims that to his true love's champion in the lists (whom she insists upon his doing his best to kill *for his own glory's sake and to prevent her having to marry her victorious champion, who is hateful—poor fellow!*) he, the Cid, her lover, will present not his *vie*, his *âme*, his *tête*, his *cervelle*, his *poitrine*, or his *poumon*, but his "estomac ouvert," "ravished with the thought" that it is for her "honor" that he is thus putting in use his very best knowledge of anatomy?

Frenchmen, beside Molière, can make fun, and even the writers of some of their best tragedies; but never, of their own will, in their tragedies. Marlowe could not, at any time. But one thing stands out steadfast in our minds after his scenes and characters all are gone, and that is the *Verse*. With this the poet sometimes throws a flash of glory upon a mountain-top, sometimes a golden gladness over all the heavens; he pours a torrent, splashing and roaring and glittering, down a cliff's front, or through a winding glen; he shows a wood waving with green, or standing thick with cool shade; within sight of the many-towned shore he makes a sea heaving with broad-sailed, deep-hulled merchantmen, laboring toward some great mart; he draws a throbbing, boding gloom over earth and sky, or makes the spring or summer landscape cheery with bird-song and with the flitting of birds' wings. All comes to us as it went from him: the angle of reflection to the reader's eye, as elsewhere in optics, is the same as the angle of incidence from the author's mind. He can do, in verse, anything that he knows, and we see all done, and wonder at the man's strength of bodying and uttering—as great, when at its best, as in Lucretius, but not so often at its best as in Lucretius. So Marlowe made Blank Verse almost what it was ever afterward.

By the time of Shakspere's best play-writing, and, of course, long before Milton's time, that measure knew itself and was known in the realm of English poetry, and came at call in it; and it wore, always, much the same outward likeness. In Marlowe's plays we find it learning to have a life, and to live its own life; we find it growing, and taking shape and character. With him it is most often dignified, sometimes impressive and even splendid; now and then, indeed, it is fairly sublime. Often, however, Marlowe's verse is awkward and ungainly, and—alas! not seldom—laughable or paltry—coming to the ground with the thought (which it ought to have carried) underneath. This one does not like to say of a man strong and skilful, who has done much good work; but it is only plainer than most plain things that sometimes he himself, as one might do who was ashamed or afraid of having wrought some of his work too well, would with his own hand mar it after the doing. This fear or shame, though not often true of any man, might perhaps have been true of him, for his fellows and comrades were mostly a roystering, reckless, chaffing, scoffing set. Not a few of them were nasty, and slippery, and cold-blooded as fishes, and, like fishes, ready to snatch at and tear, and to gulp down in gobbets, and batten themselves upon, any unlucky one of their own kind who chanced at the time to be swimming weakly or sickly. Among such comrades a man might easily be shamed for having shown too lofty thought or too good feeling, or be afraid of showing them. In most ways Marlowe was not better than the rest: there were sad things enough about his whole life, and they were crowded thick enough about his death, to make him seem almost the worst among them.

The want in Marlowe of that finest fashioning and fitting, together from which spring freely forth, ever fresh, mirth, harmless as happy; sadness needing to be soothed; quick sorrow with those who are hurt; love, through all the blood, for what is great and true—the want of this best making-up, and the want of much growing toward it, or effort after it, as life among men went on, was likely, more than scoffing ways of his comrades, or even the "drink-drowned"-ness of "spright" (spirit) which Hall gives him, to make him mar his better work. The "spright," in that state, "rapt to the threefold loft of heaven-hight," as Hall says, might have one headlong downfall at a time, for it is unsteady, unsafe treading on the clouds, then; but not a soaring high aloft, and tumbling, and soaring, and tumbling, between lines following each other closely. The best genius, from being fully akin to others of man's kind because it has so much of mankind in it, can easily go along one or other of the many channels that lead into its fellows, and look back at itself and its work from that side. This Marlowe could not; and if it be he that tries to make us laugh, as in "Faustus" by a leg coming off the wizard, and elsewhere by such worse than clown's play, it is beyond bearing. The likelihood is that the worst of this is not his; for not only were players and playwriters wont to take and use one another's thoughts and words, much as fellows of some college-clubs borrow, without asking, of one another, and wear, shirtstuds, or neckties, or waistcoats, even, but any of them almost might write any clownery into any one's play that was on the boards, and anywhere in it. That borrowing and using Shakspere did, in a large, free way, and the putting in of what was meant to be witty or droll, to any one else's plays, was often done and known to be done; sometimes *ordered*, of some one or more who happened to have the time and will.

The history of blank verse in English is but short. We had had our ten-syllable verse in plenty—in Chaucer as well as afterward in Dryden or Pope; but everything with our fathers rhymed; for rhyme had got hold of the ear of Christendom. Their Latin measures, even, had been turning into rhyme, for hundreds of years. Happily, just as it was growing early summer to the thought and fancy of the English race, the Earl of Surrey, a gallant, clever, and accomplished knight, and a deft worker in English rhyming verse, of many sorts, found, when in Italy, a measure of another sort than any used in England. Rhythmic it was; dignified, and yet easy; free from all bondage to rhyme, where rhyming might be a bondage. Of this great fault glaring example may be found in plays (as of Racine and Corneille—great writers both) where the life-likeness is hindered very much by the rhyming of the speeches, and where a frequent change of speakers makes the sudden flinging of the rhyme from one to another tiresome and absurd.

Our English poetry, as we find it in Chaucer, is a supple, lively thing, that would bear cutting and bending and pulling, like every young language—like Homer's Greek, where the many vowels, blending sometimes, sometimes sundering; the various alternative endings; the various inflections for the same verb or noun, make it, for sweetness of sound, with freedom and strength, the most perfect vehicle for uttering thought and figure, and telling and pleading and love-speaking, and for fastening upon the memory, that ever was in the world. Our English, though never so free as Greek, and very far less melodious, yet was strong and lively in Chaucer's time, and freer than now, because it had, side by side, old forms and new of the same word; could cut off and put on, now sound a vowel and now keep it still, and had more double endings than we have. The Italian had much the same qualities, one by one, that we have given to the Greek: its verse, therefore, had much the same character as the Greek, and this whether rhyming or unrhyming. All its verse had kept the double ending, which we have so much lost, though with the Germans it is still, and may be forever, easy. In the Italian blank verse the last foot is that of the old Greek and Latin heroic and trochaic measures—a long and a doubtful syllable; its rhyming verse only takes on another grace. It has the double ending always—perhaps too much; certainly too much for any but a speech flowing with vowels. Here is a bit (unrhymed) of about the time of Surrey, taken at first glance:

> "Quindi uscian fuor voci canori e dolci
> E di cigni, e di ninfe, e di sirene;
> Di sirene celesti; e n' uscian suoni
> Soavi e chiari, e tanto altro diletto,
> Ch' attonito, godendo ed ammirando,
> Mi fermai——." —*Tasso, 'Aminta.'*

Even the eye sees the soft melody of these words; but let a gentle voice read them to the ear rightly!

This measure Surrey took, without the double ending but admitting it, and set over, into the first blank verse that ever was used in English, two books of the 'Æneid.' A fair specimen, perhaps, is this:

> "As when Apollo leaveth Lyciã,
> . . . . . .
> When that he walkes upon Mount Cynthus' toppe,
> His sparklĕd tresse represt with garlandes softe
> Of tender leaves, and trussĕd up with golde,
> His quivering darts clattering behind his backe—
> So freshe and lustie did Æneas seme."

Let Surrey, who brought over for us this measure from Italy, have his credit; and that it was a poet who saw the worth of it, the spirit and strength of these few words shall witness: "His quivering darts clattering behind his backe" is Virgil's "tela sonant humeris" (his weapons sound, on his shoulders). Of course, a little bit like this above can give no sufficient acquaintance for a critical analysis: for this a good deal more must be read, and will be pleasant reading.

Marlowe took this verse as it came from Surrey's hand, and what he made of it let our readers see in "Tamburlaine" and elsewhere. A little bit, like that from Surrey, and of exactly corresponding character, we give;

"As when the seaman sees the Hyades
Gather an army of Cimmerian clouds
(Auster and Aquilon, with winged steeds
All-sweating, tilt about the watery heavens,
With shivering spears enforcing thunder-claps,
And from their shields strikes flames of lightening),
All-fearful folds his sails and sounds the main,
Lifting his prayers to the heavens for aid
Against the terror of the winds and waves—
So fares Agydas——."

RECENT SOLAR RESEARCH.

CAROLINE ISLAND is situate in the South Pacific mid-ocean, in latitude 10° south, and in longitude 150° west of Greenwich. Before their arrival there, the island was only known to the astronomers of the American eclipse expedition of 1883 to be "seven to eight miles long and two to three miles wide, well covered with cocoanut and other trees, to consist of many islets encircling a lagoon, with no anchorage, but a landing (not always safe), and to have about thirty inhabitants, including a single European resident." When we recall the fact that total solar eclipses, all-important to the astronomer who would study the sun and its surroundings, occur about once in two years, and that the average duration of the total phase of such eclipses is less than three minutes, never, under the most favorable conditions, being so long as eight minutes, and rarely so long as five or six, there will be no surprise at the enthusiasm which conducted a party of astronomers to so forbidding a spot. For prediction showed them that, if the sky were propitious, they might on May 6, 1883, enjoy the uninterrupted observation of the totally eclipsed sun for a period nearly six minutes in duration. The path of this eclipse, otherwise most favorable, lay entirely upon the waters of the ocean, save only this little island. Unless it could be occupied, the unusual opportunity for solar research must pass by unused.

It is worthy of note that the conservatism of astronomers would without doubt have resulted in the utter neglect of this eclipse, had not Mr. Charles H. Rockwell, of Tarrytown, urged the organization of the expedition. At his suggestion Professor Young brought the subject before the National Academy of Sciences in November, 1882, which body commended the project to the Navy Department for such aid and facilities as could be best afforded. Private subscription failed, and the readiness of the Navy Department to coöperate led to the presentation of a memorial to Congress which gave a grant of $5,000—with such delay, however, that the necessary advance of a considerable portion of this sum had to be made by the trustees of the Bache fund of the National Academy. Prof. Edward S. Holden, Director of the Washburn Observatory of the University of Wisconsin, was appointed the scientific chief of the expedition, and the party left New York on March 2, bound for Callao via Panama. From Callao they were transported in the U. S. S. *Hartford* to Caroline Island, arriving there on April 21. In company with Professor Holden were Doctor Hastings, then of the Johns Hopkins University, Mr. Rockwell, Mr. Upton, then of the Army Signal Office, and others. At Panama they were joined by Mr. Laurance and Mr. Woods, delegates of the Solar Physics Committee of the Royal Society of Great Britain, who were charged with the conduct of special photographic observations. A French expedition, under the command of Doctor Janssen, of Paris, came to the island shortly after the arrival of the English and American observers.

The interesting memoir of the National Academy ('Report of the Eclipse Expedition, etc.') is much more than a technical report on the dry scientific details of the work of eclipse-observers. In connection with his narration of the ocean voyage of 4,300 miles from Callao to the Islands, which occupied twenty-nine days, and during which neither sail nor land excepting the Magdalena Island of the Marquesas group was sighted, Professor Holden aptly cites the entry of Darwin in his 'Journal of a Voyage in the *Beagle*,' under date of December 19, 1835:

"We may now consider that we have nearly crossed the Pacific. It is necessary to sail over this great ocean to comprehend its immensity. Moving quickly onwards for weeks together, we meet with nothing but the same blue, profoundly deep ocean. Even within the archipelagoes the islands are mere specks and far distant one from the other. Accustomed to look at maps drawn on a small scale, where dots, shading, and names are crowded together, we do not rightly judge how infinitely small the proportion of dry land is to the water of this vast expanse."

Professor Holden prefixes to the report a history of the island, necessarily brief, for it was first seen in 1795, by Captain Boughton, and not much is known of it until 1868, when Captain Nares, R. N., made it a part of the British possessions. The present lessee of the island, Mr. Arundell, of New Zealand, has contributed to the Report some drawings of very curious old marais—burying or sacrificial places, which were originally found in the progress of guano operations on the island. The blocks and walls of these graves are built of coral and coral conglomerate, in some of which, when first discovered, were found "stone axes, and highly polished green stones, such as are used by the Maoris of New Zealand, and spears of the same description." These places must have been built by a native population, but no natives were known to inhabit the island at its first occupation by the whites.

Lieutenant Qualtrough's survey and description of the island as it was in 1883 follow, from which we learn that "the atoll consists of a chain of twenty-five little islets, well covered with trees and shrubbery, the whole forming a quiet scene of grove and lake, charmingly set off by the contrasting ocean." A few photographic views are so reproduced as to show the characteristic vegetation and reef-beaches with fine effect. The eclipse party left the island inhabited by seven persons—four men, one woman, and two children—who plant and take care of the young cocoanut trees. The climate of the island was found to be warm, with an equable temperature and occasional sudden showers.

Mr. Upton's contribution to the report is a copious article on the meteorology of Caroline Island during the entire period of the party's sojourn, as well as on the day of the eclipse. The botany of the island received the attention of Doctor Dixon, United States Navy, whose collection of specimens is discussed by Professor Trelease, of Madison. Also, the zoölogy of the atoll is abundantly dwelt upon by a number of members of the expedition, particularly the lepidoptera being well cared for by Doctor Palisa, of Vienna, who accompanied the French expedition, and presented to the American party a nearly complete collection of duplicates.

The physical and astronomical observations of the eclipse are related in about fifty pages—the concluding third of the volume—and the more important results must be summarized in a word. Professor Holden's method of attack closes discussion on the subject of the mythical Vulcans. Doctor Hastings's spectroscopic and polariscopic observations of the eclipse constitute the most valuable feature of the work, and are ably discussed with reference to his diffraction-theory of the corona, which physicists who have heretofore doubted will now be obliged to recognize as replacing to a very wide extent the older theory of an outer solar atmosphere. Doctor Hastings has also supplemented his work with a general review of all the results of previous observations of the corona, of whatever sort—a task which his thorough acquaintance with the subject has enabled him to execute in a satisfactory and permanent form.

The work of Professor Langley in the fields of solar inquiry is now too well known by the casual reader and too fully appreciated by the scientific investigator to call for more than a brief characterization here. The Mount Whitney expedition was the naturally evolved result of specific researches in the absorption of heat in the spectrum, made at Allegheny. These in 1880 had led to conclusions, of interest to astronomy and meteorology, which it was found desirable to verify by experiments on a very elevated mountain. The necessary instrumental outfit had been provided by the liberality of a citizen of Pittsburgh, when, the bearings of this research on the general objects of meteorological inquiry becoming known to the Chief Signal Officer of the Army, the expedition received material assistance from the Signal Service, and proceeded in July of 1881 to Mount Whitney, in Southern California, under the official direction of General Hazen.

We cannot more fitly summarize the bearings of this research on meteorology in its broadest sense than Prof. Langley has himself done in the initial paragraphs of his introduction:

"If the observation of the amount of heat the sun sends the earth is among the most important and difficult in astronomical physics, it may also be termed the fundamental problem of meteorology, nearly all whose phenomena would become predictable if we knew both the original quantity and kind of this heat; how it affects the constituents of the atmosphere on its passage earthward; how much of it reaches the soil; how, through the aid of the atmosphere, it maintains the surface temperature of this planet; and how, in diminished quantity and altered kind, it is finally returned to outer space. Meteorologists have till lately occupied themselves more with the secondary effects of this solar radiation than with the considerations just referred to, though this primary study will at least enable us to survey subordinate and familiar phenomena from a more general point of view, and will correct some errors. The knowledge that the solar heat finds its way in more easily than out, and the inference that our atmosphere acts like the glass of a hot-bed in raising the temperature of the soil—even this knowledge, imperfect and misleading as it may be when thus stated, has been most useful in giving us a key to subsidiary phenomena."

The results of experiments at the Allegheny Observatory in 1880 and 1881 showed that the thermal phenomena on which the existence of organic life depends are due to the selective absorption of the atmosphere, without which the temperature of the soil, even in the tropics at midday under a vertical sun, would fall to some hundreds of degrees below zero; and this would still be true even if the atmosphere were supposed to retain all its present constituents and to transmit all the heat it does now.

The constant of the solar heat was, then, the next thing to be determined, and it could be measured directly if it were possible to ascend above the atmosphere. But since we can only experiment upon the amount received after absorption by that part of the atmosphere above us, the exact determination of this constant presupposes a minute knowledge of the way in which the sun's heat is affected by the earth's atmosphere:

"With whatever pains we measure, however, we remain at the mercy of the fluctuations of our lower air, and are compelled to make assumptions which we would gladly avoid. . . . On many points we know just enough to distrust our own enforced assumptions, without being able to positively verify or disprove them. Besides such difficulties as these, arising from our ignorance, we are met with almost insuperable physical ones, coming from the incessant clouds, mist, and changes of our lower atmosphere, . . . which make it literally true that not one day of unexceptionable conditions is to be found in an average year, while yet daily observations must be commenced with every clear morning, since

we never know which is the day which may prove fair to its close."

Professor Langley's investigations of the heat in the spectrum having proved the best thermo-pile entirely inadequate to measure such delicate thermal conditions, he was soon led to the invention of the bolometer, or force-measurer, an instrument now well known as an adjunct in spectrum research, and so sensitive in its construction that, under an apparently clear sky, it "constantly sees clouds which the eye does not." The capacity of the means of research at low altitudes being soon exhausted, a wholly different method of observation became necessary, viz., that of ascending a very high mountain and comparing observations at its summit with others at its base, thus directly measuring the absorptions which the rays have actually undergone. Clear air, great altitude, a dry climate, and southern latitude were the chief desirable conditions, together with abrupt rise, so that two contiguous stations with very different altitudes might be occupied.

After a number of points had been carefully considered, finally, upon the advice of Mr. Clarence King, and with the concurrently favorable opinion of officers of the Coast Survey and others familiar with the region, Mount Whitney, in the Sierra Nevada range of Southern California, was selected as the most eligible eminence for the prosecution of the research. It was desirable to leave at least one-third of the entire atmosphere beneath the elevated station, implying a height of some fourteen thousand feet, and the summit of Whitney was known to be elevated nearly fifteen thousand feet. Professor Langley, in his report ('Researches on Solar Heat,' etc.), presents, in the form of a diary full of exciting adventure, the events of each day of the ascent of the mountain. Camp was established on an excellent site at an elevation of twelve thousand feet, in a well-watered meadow about two hundred yards in diameter, and surrounded by precipitous cliffs a thousand to fifteen hundred feet high, forming the base and flank of Whitney Peak. Carefully scrutinizing the limb of the sun at this great altitude, Professor Langley's trained eye found the air filled with motes between the place of observation and the diffracting edge of a distant peak, showing that the dust-shell which encircles the earth exists at an altitude of nearly three miles, notwithstanding the favorable conditions for purity of the atmosphere. Professor King has expressed the opinion that this dust above the Sierra Nevadas has been borne across the Pacific, and owes its origin to the "loess" of China.

Owing to a chain of unfortunate circumstances, the 22d of August arrived before Professor Langley found himself able to ascend the peak of Whitney. He found the summit an area of three or four acres, but existence would only be possible there with permanent shelter from the wind and cold; and it was evident that all hope of making regular observations on the peak that season must be foregone, and that operations must be confined to the mountain camp. Attempts were made, with specially constructed apparatus, to observe the solar corona in full sunlight, but a disheartening accident rendered it impossible just as success seemed near. With the other instruments, however, the observations most essential to the purposes of the expedition were secured, in spite of adverse circumstances; and by the 8th of September, the purity of the air being already much impaired by the prevalence of forest fires, immediate descent was decided upon.

The chapters following this introductory portion of the report relate all the observations in detail, and contain the necessary discussion of them together with the results arrived at. For the value of the constant of solar heat, derived from the labors of the expedition, and carefully considered in connection with the work of previous investigators, Professor Langley finds an equivalent of *three calories*, which, expressed in terms of melting ice, implies a solar radiation capable of melting an ice-shell 54.45 metres deep annually over the whole surface of the earth. In conclusion, Professor Langley urges the occupation of the summit of Mount Whitney as a permanent observing station for the derivation of results in this and allied lines of research, which would be of the greatest service in the solution of the intricate problems of meteorology and solar physics. If his noble enthusiasm in this work had done nothing more, it would have been enough to show the falseness of the positions held by previous investigators, and to assure future workers in the same fields that the action of an atmosphere is incomparably more complex than the ordinary theory assumes it to be. He surely has made plain the best of grounds for his own belief that Mount Whitney is the most admirable site on the North American Continent for the conduct of research of this character, and he has no hesitation in asserting that neither the Italian Government, with its observatory on Ætna, the French with the Puy de Dôme, nor any nation at any other occupied station, possesses a site to rival Whitney in its advantages. It is gratifying to observe that Professor Langley's recommendation that it be declared a Government reservation has been favorably considered by the President, and that Mount Whitney is now available for research in this and similar fields of inquiry. It is to be hoped that our Government will speedily take such action as will lead to the thorough development of the extraordinary facilities of the site.

The Religious Aspects of Philosophy: a Critique of the Bases of Conduct and of Faith. By Josiah Royce, Ph.D. Boston: Houghton, Mifflin & Co. 12mo, pp. 484.

THE brilliant lectures on ethical philosophy that attracted so much attention in Cambridge when they were recently delivered there by Professor Royce, were well worth presenting to a larger audience in book form. They were not at all in the line of ordinary college text-books. They were written to set forth a new basis for the moral law, and a new conception of its divine source. The title is too modest. The atmosphere of the best modern thought, both philosophical and poetical, is felt on every page, but there is no attempt at any systematic review or criticism of it, except so far as is necessary to help forward the argument.

Starting from scepticism, Mr. Royce works his way out into an idealist position, though one that is nearer to transcendental theism than to conservative orthodoxy. The first half of the volume takes up the ethical basis of conduct, and is written in an extremely animated and forcible style, and we do not know of any recent essay in ethics at once so incisive and so incomplete. Mr. Royce feels the necessity of connecting rules of conduct with human needs, but he is unwilling to accept the pleasure-and-pain theory on account of its selfish tendencies, taking issue with Spencer here because the egoism which seems so unobjectionable to the English evolutionist is quite intolerable to him. In the same way he feels the necessity for strengthening his ethical system with the strong force of sympathy, which has so much power in modern life in the suppression or decay of the hotter elemental passions; and yet he sees the sentimental weakness in which it is so apt to end, and gives a lively description of several of its worst forms. There is the shallow one in which the tender-hearted avoid the sight of those more serious forms of suffering which it would be difficult to cure, too fond of their own sensitiveness to be anything but "selfish in this world of pain. They must forget that there is suffering. Their pity makes them cruel"; and they feel bound to insist "that the police shall prevent people like Lazarus, covered with sores, from lying in plain sight at the gate." Then there are those whose pity irritates them to selfish hatred at the sight of suffering, and those who love to pose as humane commentators or heroic endurers of sorrows they do not really share. "They rejoice to find some one overwhelmed with woe. The happy man is to them a worthless fellow. High temperature is needed to soften their hearts. They would be miserable in Paradise at the sight of so much tedious contentment; but they would leap for joy if they could but hear of a lost soul to whom a drop of water could be carried."

The end of all this for them is selfishness; and for us the painful scepticism naturally resulting from the failure to harmonize such jarring aims. And yet this very scepticism, urges Mr. Royce, assumes that they should be harmonized, and thus makes way for a new moral principle, which should straightway become the basis of our conduct—namely, to get such a realizing insight into the character of others that we can make their will our will, and aim our acts at their good, whether it involves happiness or not. The duty of acquiring and acting upon this moral insight into the will of others is the theme of the first part of the volume, and Mr. Royce presents it in a very eloquent and forcible way; but it hardly seems solid enough to serve his purpose as a basis for the whole moral code, for it does not escape the difficulties which attach to every attempt to reach altruism from individual instinct. Why should one seek this moral insight, or, having attained it, why should he yield to it, if following the general will is to be at the cost of trouble to himself? If Mr. Royce's sceptic dwelt on the folly of such an unprofitable yielding to sentiment, he would hardly feel his doubts satisfied with the dubious intellectual instinct to harmonize jarring aims; and he would probably go on to say that the lack of authority was not the worst defect in the scheme. The will of other men seems too human, too mediocre, too deficient in the loftier attributes which the Christian finds in the divine will.

Suppose that by this moral insight we have brought ourselves into harmony with a friend whose character is cruel: are we to become so too? Or if we had lived in the sensual days of Imperial Rome, ought we to have adopted that corrupt universal will as a standard? Evidently Mr. Royce's form of the ethics of sympathy would not work much better than the ones he rejects, unless some means can be found of raising it above mediocrity. But he does not seem to see this clearly, apparently because, without his knowing it, there has crept into his conception of that conjoint will which is to result from the merging our neighbor's will with our own, the assumption that the common aim will then be the highest good. As he leaves the subject in his first part, it might be expressed in Pope's well-known couplet, with a few variations:

> "And spite of pride, in erring reason's spite,
> One truth is clear—whate'er all wish is right."

But it should be said that in the latter part there is a short passage referring to the need of exact science to determine the true connection of facts in the divine mind, which indicates that the author passes in some way from the universal human will to the divine will. This faith in the will of collective humanity is an old and a proud one, appearing in many forms—in the deference paid by the Romans to the law of nature, and by the Catholic Church to the council, for instance;

but it is rather out of date, notwithstanding the ingenious and original way in which Mr. Royce treats it. The metaphysical basis has not the strength of the other beliefs—either the religious one, with its divine sanction and divine superiority, or the Positive one, in which morality is treated as the demand of the race to have those rules obeyed which science shows to be necessary for its life and growth. It is not that Mr. Royce's theory is untrue, but that it needs to be supplemented by a profounder guiding principle, either of revelation or science.

In the second part of the work, Mr. Royce pursues much the same method. He gives a clear description of the difficulties that scepticism raises about the existence of evil, and the knowledge of what is right and true. He thinks that the old design argument loses its force in the face of evolution, and that evolution itself, with its long alternations of growth and decay, and its prospect of final dissolution, is as empty of religious significance as the rise and fall of the tide. He sees no care for individual life or even the immortality of the race; but evil surrounds us, and, in the absence of any certainty about the external world, we have no test of truth or falsehood, for we cannot be sure that there is any real relation between our ideas and the objects they refer to.

In these doubts, however, lie the seeds of faith; for under them and implied in them is the conviction that there is a test of truth somewhere, a real connection between our thoughts and their objects. And the thing to which this belief really points, Mr. Royce thinks, is an idealistic conception akin to Bishop Berkeley's, of an infinite divine mind in which all things, both material and immaterial, exist as thoughts, and outside of which there is nothing. To this infinite Intelligence the past, the present, and the future all are one, and the actual and the possible fall together in one truth. Truth is God, and we are to aim at losing our lives in the life divine. The world must be not only good but best, for no unsatisfied desire can exist in the Infinite. Death, pain, and even weakness of character are only seeming evils, which we are to look at with stoical superiority, convinced that they are really part of the universal good. Our own bad wills are the only evils, and their conquest is goodness recognized by God and rewarded by his infinite rest. And as practical life required first of all the moral insight into the universal will of man, so religious life requires first of all a spiritual insight into the divine Intelligence and a realization of the Eternal life.

Certainly, there is much that is fine in this unemotional and scholarly conception of the divine Essence, and it is urged with a Carlylean earnestness of phrase that makes it seem more warm and more alive than our transcript. But, after all, to the common-sense Yankee reader it will all seem very remote and unsubstantial—too sublimated and metaphysical, indeed, for daily use. In this passionless sphere of pure intellect, where God is all and truth depends merely upon his thinking it; where the world of matter, and even our own souls, are only thoughts in that other Intelligence, with no reality corresponding to them; where life is to be the adoption of the will of others, strengthened by stoical indifference to external suffering, and ending at last in the infinite rest—in all this, optimistic and lofty as it is, there is more of a student's dreamland than of satisfaction for the cravings of the human soul.

Papers of the American School of Classical Studies at Athens. Vol. I. 1882-83. Boston: Cupples, Upham & Co. 1885. vii, 262.

THE unbounded enthusiasm of Doctor Schliemann has met with much criticism, and indeed the sober judgment must shear and pare on all sides when approaching his works; but enthusiasm has its value even when carried to excess. It interests and excites by its own fervor, if in nothing but to oppose and find arguments to answer it. It draws attention to the subject, where volumes of calm exposition might sink into the oblivion of the special and narrow field of its followers. The widely increased interest in active archæology within the past ten years is no doubt in part due to the success and enthusiasm of the excavator of Troy, Mycenæ, Orchomenus, and Tiryns. Within that period the Archæological Institute of America has been founded, and its offshoot, the School of Classical Studies, has been established at Athens. How this lodgment was made in the very heart of the classical world was told last year by the facile pen of Professor Goodwin, the founder and first director, in a bulletin of the school. We are now presented with a considerable volume containing the major part of the work accomplished during the first year, comprising five papers of the students and one from the director, under the editorship of Professor Goodwin and Mr. Thomas H. Ludlow. The first paper contains the inscriptions discovered at Assos by the American expedition, twenty-four of which are now in the Boston Museum. These have been edited by Doctor Sterrett with translations and notes, and the most important are given in facsimile. Four have a philological interest, since they are couched in the Æolic dialect. As the editors tell us, "grammarians will rejoice that the Æolic dialect has been enriched by one important verbal form." Not even so much as this can be said of the remainder. One probably warmed the cockles of a Roman emperor's heart, heaping upon Caligula, as it does, the fulsome flattery for which he so much thirsted. We must be pardoned for rating it less highly, knowing his character as we do. The second paper contains a series of inscriptions copied at Tralles by Doctor Sterrett and Professor Ramsay, already published in the *Mittheilungen* of the German Institute of Athens. Many are badly mutilated, and afford opportunity for ingenious restoration. Doctor Sterrett has won an enviable name as a scholar and as an active and efficient explorer.

Next follow three articles, each descriptive of a famous building, the Dionysiac Theatre, by J. R. Wheeler, the temple of Olympian Zeus, by L. Bevier, and the Erechtheium, by H. N. Fowler. These do not lay claim to much originality, but are careful studies of these structures on the spot, and are intended to relate their history and describe their present condition, with some discussion of the varied opinions held in relation to them by those who have preceded them in such work. They are useful contributions to a general knowledge of the subjects, and are well worthy of the space they occupy. Among other points that we miss may be instanced any allusion to the seating capacity of the great theatre. The vague statement of Plato and the loose calculation of Dyer are unsatisfactory. In the bibliography of the subject of the Erechtheium no mention is made of the discussion of it by C. T. Newton in the British Museum Inscriptions, except under the general head of reference to "inscriptions." It deserves more consideration.

Professor Goodwin has attacked a long-standing and much-vexed problem, the relative position of the Greek and Persian forces at the battle of Salamis. The ancient authorities of chief importance on the subject are Æschylus, Herodotus, probably Ephorus in Diodorus, and Plutarch—the first an eye-witness, the second a generation, the third a century later, while Plutarch, appealing also to other authorities, belongs to the second century of our own era. To reconcile these authorities with each other and with the actual geography of the place is the task which many have tried to accomplish, but felt constrained to abandon. Our elder historians, like Thirlwall, describe the Persians as blockading the exits from the Bay of Salamis on the night preceding the battle, after Themistocles had given them the information that the Greeks were planning to slip away and sail for the Isthmus. This manœuvre was effected by despatching a squadron of 200 ships to the western or Megaric strait, and leading up the main body to the eastern exit about the island of Psyttaleia, whence it advanced to the conflict in the straits on the following morning. Leake, however, came to the conclusion that the words of Herodotus must be interpreted differently, and maintained that the Greeks were enclosed the previous night by the Persians pushing forward their fleet along the Attic coast within the straits until their advance guard rested upon the island to the west of the town and their opponents. He accordingly inserted a map in his 'Demi of Attica,' representing the Persians drawn up in this long line on the Attic shore, and the Greeks facing them toward the north, ready for battle in front of the town of Salamis, and within the bay. The tyranny of the pictured thought is even greater than the tyranny of the written word. This map has been repeated with slight variations to the present time, and its positions have been accepted by most of our historians and commentators, notwithstanding its ignoring Diodorus and bringing Herodotus into conflict with Æschylus. Professor Goodwin has studied the matter on the spot, making frequent excursions to Salamis and the opposite Attic shores during the autumn and spring of his residence at Athens, and contends, with a wealth of argument and exact acquaintance with the topography, that the movement of the Persians into the Bay of Salamis could not have taken place the night before the battle. He urges three general objections:

"(1) The channel which is thus made the scene of the battle is so narrow in some places that, if the Persians had taken up the supposed position in the night, the Greeks could not have embarked and formed their line in the morning directly in the face of the enemy (only a few hundred yards distant) without interference. (2) It would have been impossible for the supposed movement to be effected without alarming the Greeks at Salamis, especially as it was almost certainly a moonlight night. And yet they suspected nothing of the movement (and even Themistocles, who had advised Xerxes, knew nothing of it) until Aristides informed them that they were already shut in. But Aristides had come over from Ægina to the west or the southwest side of Salamis, having escaped the Persians on his way with great difficulty; and he knew only of movements in that direction, and nothing of any enemy within the straits. (3) The occupation of Psyttaleia by Xerxes shows that he expected this island to be the centre of the sea-fight; and Plutarch gives his own opinion that it actually was so. Æschylus beyond doubt represents the Persians as *entering* the straits of Salamis *after daybreak* to begin the battle. This is confirmed by Diodorus (*i. e.*, Ephorus) and Plutarch. Their line or 'stream' fell into some confusion in entering the narrows; and they never succeeded in regaining their order of battle, being immediately met by the Greeks as they passed the long point of Salamis."

Although this view is inconsistent with the common interpretation of Herodotus, Professor Goodwin is not content to reject the authority of that writer, like a noted English editor of a recent edition, who pounces upon every opportunity with all the avidity of the pseudo-Plutarch; on the contrary, with the spirit of the true scholar, he queries if the discrepancy be not in ourselves, instead of in the ancient writer. He knows full well that language is a feeble instrument to convey facts, and that indefinite topographical expressions, plain enough to the writer himself, are easily misunderstood by others, especially if they have never studied the localities

themselves. To be convinced of this we have only to compare the commentators of Herodotus upon the passage relating to the Samian aqueduct, with the recent account of it as reopened and fully investigated.

From a minute examination of the original text Professor Goodwin concludes that it is the commentators that are wrong, and not Herodotus; that of the two crucial passages, Hdt. viii. 76, and viii. 85, the first describes the Persians as bringing up their west wing to Salamis, encircling it to the south, and posting a squadron at the Megaric Straits during the night before the battle; while the other calls the Persian right, at the opening of the battle the next day, "the wing toward Eleusis and the west," and their left, "the wing toward the east and Piræus"—the line in which they streamed through the narrows to attack the Greeks who were drawn up across the bay from northwest to southeast. This interpretation, of which the original will fairly and legitimately admit, will, it is hoped, hereafter be accepted.

Patroclus and Penelope: a Chat in the Saddle. By Theodore Ayrault Dodge, Brevet-Lieut.-Col. U. S. A. (retired list), author of 'The Campaign of Chancellorsville,' 'A Bird's-Eye View of Our Civil War,' etc., etc. Boston: Houghton, Mifflin & Co. 1885. Pp. 167.

Colonel Dodge has given the beginner in the art of horsemanship the best possible introduction to his pleasurable task. There are many overlearned books on the subject, which baffle the beginner by their details: they make a serious business of sport, and are about as agreeable reading as a manual of cavalry tactics. The author has avoided this by presenting his teaching in the form of chatty lectures from the saddle. The pages devoted, at the outset, to affectionate praise of the horses whose names give the first title to the book, are well calculated to move the young horseman to that loving relation with his partner which is the basis of all good horsemanship. The author has had a much wider store of practical experience in horsemanship than his predecessors in this field of instruction. He knows the English system well, and is an admirer of the courage and practical skill in rough horsemanship which mark their across-country riding; but he knows the merits of the Continental school too well to treat that form of equitation with the ignorant contempt which it receives in most English writing on the subject. Those who have had anything like his measure of experience in England and on the Continent will probably agree with him in his estimate of the skill shown in the art, which is in substance that the English are bold riders, but on the whole less skilled in the art of horsemanship than the Continental peoples. In sports, even more than in graver matters, experts are apt to become wedded to the system in which they have achieved their success. Our author shows a liberal spirit in his acceptance of the several methods of using the horse in the varied conditions of different peoples. He sees that the cowboy on his broncho has very different conditions to meet from those of the British sportsman on his hunter.

Without going into the details which most writers have thought necessary, Colonel Dodge gives the beginner a sufficient body of clear instructions for all the work which is before him. He has an evident prejudice for the admirable system of Baucher, whom he well terms the "father of fine horsemanship," but he troubles the pupil with little of its minutiæ. Beyond the mere rudiments he finds nothing to commend in riding schools. His rule is, "Learn yourself what a horse should know and how to teach him." The horseman who will follow this advice will have a measure of profit and satisfaction in his work which is denied to those who use horses trained by others. There is something very wholesome in the relations which the rider establishes with a quick-witted saddle-horse if he carefully trains him. If the work is well done, the horseman may feel that union of the animal's strength with his own intelligence which is embodied in the fabled Centaur. The ordinary rider, though he may be well trained in the important business of keeping his seat, has no trace of that keen sympathy with his beast, that quick understanding of his movements, which is the basis of all excellence in horsemanship and the source of the greatest diversion in that occupation. The beginner who will follow the excellent and simple rules of training given by our author will be sure to win success in the art and a great deal of pleasure by the way. The only exception which can be taken to these rules is the omission of the requirement of *bare-back* riding as a means of giving independence of the use of stirrups. It is perhaps too much to expect this part of the practice except on Southern plantations and in military schools.

The fourteen heliotype prints from instantaneous photographs, for illustrations of this nature, are exceedingly well done. Those who are disposed to criticise the attitude of the horseman as shown in these pictures should bear in mind the fact that one of his legs was left at Gettysburg.

Lyrics of the Law. A recital of songs and verses pertinent to the law and the legal profession, selected from various sources. By J. Greenbag Croke. San Francisco: Sumner, Whitney & Co. 1884.

This volume contains a considerable body of humorous legal verse, drawn from a great many different sources, English and American, none of it of much value to any but the professional public, and much of it of little value to that. Professional humor is apt to be involuntarily exclusive, and many of the so-called poems in this collection must necessarily be unintelligible to all but lawyers. The rule in Shelley's case, rich in associations both serious and droll to a lawyer, means nothing to a layman. To be put in the way of enjoying the wit and humor which is involved in it, requires a special education. A great deal of the humor even then comes from the sudden conversion of a specially dry, grave, and musty legal rule into food for human laughter. A simpler kind of joke is that which pursues the profession through all literature, and attributes to it a dishonorable inclination to substitute the motive of private gain for the loftier impulse which the work of administering justice is supposed to imply. From the time of the decision between the rival claimants to the oyster, this jest has been highly relished not only by the laity, but by the profession itself, until in our day it has often become hard to make out whether the laughter it invariably causes is produced by a feeling that it is a good joke, or by a suspicion that plunder has become a general professional "rule of action." A simpler and more innocent sort of humor, which is quite as much relished outside the profession as in its ranks, is that represented by the "Lawyer's Ode to Spring," consisting entirely in the misapplied use of legal phraseology. Who wrote the verses we do not know, but the version here given is in some minor respects inaccurate, at least according to that which we have always followed; and in the interest of accuracy and of a modest and retiring poet, we give what we believe to be the correct reading:

"Whereas on certain boughs and sprays
Now divers birds are heard to sing,
And sundry flowers their heads upraise,
To hail the coming on of spring;

"The songs of these said birds arouse
The memory of our youthful hours,
As green as those said sprays and boughs,
As fresh and sweet as those said flowers.

"The birds aforesaid, happy pairs!
Love 'mid the aforesaid boughs enshrines,
In freehold nest, to them, their heirs,
Administrators, and assigns.

"Oh, busiest term of Cupid's court!
Where tender plaintiffs actions bring,
Season of frolic and of sport,
Hail, as aforesaid, coming spring!"

Jellyfish, Starfish, and Sea-Urchins. By G. J. Romanes. [International Scientific Series, vol. xlix.] 8vo, xii, 323 pp. New York: D. Appleton & Co. 1885.

This volume is devoted to an account of the author's experiments and researches on the primitive nervous systems possessed by the radiated animals mentioned in the title. The work first appeared in the publications of the Royal Society, and this expansion of it is accompanied by the original illustrations. The question whether any nervous tissue is present in the jellyfishes has long been the subject of persistent investigation by many naturalists, on account of its particular importance to the study of biology. Nerve tissue had been clearly shown to be present in all animals of higher structure than jellyfishes, so that it was of much importance to ascertain whether or not the first occurrence of this tissue took place in this group of animals. But, notwithstanding much diligent research, up to the time when the author began his work, there was so little agreement in the results obtained that Huxley, summing up the matter less than twenty years ago, announced that no nervous system had yet been discovered in any of these animals. The result of the author's experiments was to demonstrate the existence of a very low grade of nervous system, differently developed in different groups of genera, and even in different but allied species, the whole forming, as it were, the introductory stages to the more specialized systems existing in higher groups of animals.

The book before us consists entirely of the description of the work performed and the statement of the logical deductions therefrom. This has been prepared with great clearness and comprehensibility. There is nothing that the ordinary reader cannot understand as he proceeds. To the student interested in the general subject it presents a convenient summary of facts not otherwise easily accessible; while the general reader may gain from it not only some knowledge of primitive nervous systems, but also a clearer idea of the manner in which a competent investigator takes up and carries on researches of a scientific kind.

37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

NEW NOVELS. FOR SALE AT ALL BOOKSTORES.

VAIN FOREBODINGS, translated by Mrs. A. L. WISTER, from the German of E. OSWALD. 12mo, Cloth, $1.25.

"The story is of unfailing interest from beginning to end, and the translator's English makes it very agreeable reading. The novelty of the scenes of German life will also be refreshing after a course of English and American novels."—*Philadelphia Evening Bulletin.*

TROUBLED WATERS; A PROBLEM OF TODAY, by BEVERLY ELLISON WARNER. 12mo, Cloth, $1 25.

"A well-written story. Its chief strength lies in the love and romance; the history of the young woman whose husband went to the war and died; who was swindled by a rascal who had a chivalric friend of hers charged with the swindling, and the happy conclusion which is reached after many troubles."—*Philadelphia Evening Bulletin.*

ONE OF THE DUANES, by ALICE KING HAMILTON. 12mo, Cloth, $1.25.

"It is an intensely interesting book, as when did a story of army life, either in time of peace or war, fail to be? A book than which few are more entertaining."—*Boston Globe.*

Philadelphia: J. B. LIPPINCOTT COMPANY.

The Nation.

NEW YORK, THURSDAY, JUNE 4, 1885.

The Week.

THE great strike in the iron and steel (nail, plate, and bar) mills, which has been impending for some months, has now taken place, and 100,000 men are out of work. The strike affects all the mills of this class west of the Alleghany mountains and north of the Ohio River. Its severest effects are felt at Pittsburgh, whose murky atmosphere, the product of thousands of tons of bituminous coal consumed daily in that great domain of Vulcan, has been suddenly cleared by the stoppage of a large proportion of its furnace fires. The immediate consequences of the strike are scarcely more serious than the remoter ones. For every forge and furnace closed, there is a reduction in the output of coal and in the wages of miners of both coal and ore. The demand for labor in the transportation of raw material and finished product is correspondingly lessened. Loss of wages means loss of trade, increase of pauperism, and new demands upon charity. If the end is reached without resort to violence, the outcome will be fortunate to all concerned, and is as much as anybody now hopes for. The strike is ordered by the Amalgamated Association of Iron and Steel Workers in consequence of a reduction of 20 to 25 per cent. in wages decided upon by the Manufacturers' Alliance. There has been no bad temper displayed on either side as yet, and there are grounds for hoping that a solution of the difficulty may be reached without any infraction of law or disturbance of the peace. The strikers are men of unusual intelligence, perfectly organized, and well acquainted with the state of trade. They know that wages are dependent upon the selling price of the product. They are aware that the manufacturers cannot pay more than the iron market enables them to pay. They know that masters and men together cannot make one hair white or black. They realize the truth of the situation as it is, but they believe that a curtailment of production for a few months will result in a fresh demand, an improvement of the market, and a restoration of wages to the old scale, or at all events to a rate less painful to themselves than that which the Manufacturers' Alliance now propose. They are really making a test on a large scale of the public demand for iron, in the same way that the great coal companies make tests by curtailing the output of coal. This they have a perfect right to do, and there is no economic absurdity in their doing it.

It is impossible to say *à priori* that they may not succeed. It is certain that if the demand for iron rises to the scale of wages which they have fixed upon, they will have been justified by the event. If it does not, they will have been the principal, though not the only, sufferers from the experiment. Looking at the depression which extends to all branches of business, and at the savage competition in the iron trade brought about by the abnormal demand of the "boom" years, 1879-1882, and by exorbitant tariff duties, we see little chance of success for the strikers; but we do not doubt that the masters will be as much gratified as the men if the market improves sufficiently to enable them to pay the rate of wages demanded. It would be a great mistake and wholly unjust to suppose that the manufacturers have proceeded arbitrarily and without good reason in the course they have taken. They have everything at risk in such a contest. If they were making any profits at all before the strike, they lose them while it continues. Their property is exposed to deterioration by stoppage. Their men drift away, and their customers drift away. Their trade, hard enough to keep at any time, is quite demoralized by suspension, and when they resume they must begin far down the ladder. The manufacturers, moreover, are human. All of them, without exception, would rather see their operatives prosperous and contented than pinched and unhappy. Nine out of ten would rather forego profits altogether than see their men scowling or scattered, their works closed, and rust eating up their machinery.

The most noteworthy incident of the local elections in Virginia on Thursday is the fact mentioned in a Norfolk despatch that many of the negroes voted the Democratic ticket, which received 335 majority, as against 402 majority for the Republicans last November. While Mahone has received a strong support from the whites of Virginia, especially in the southwestern part of the State, the basis of his power has been the colored vote, which in many places he has controlled almost in bulk. His only hope of maintaining his supremacy rests upon his ability to retain this hold upon the blacks. Such indications as this from Norfolk that the negroes are dividing their votes, and that the Democrats are getting many of them, are therefore full of encouragement for the belief that the reign of this demagogue is nearly over. The fact that the race line in politics is breaking down is also, on general principles, matter for rejoicing. It has been productive only of evil to both races, especially to the weaker one.

The business of conducting a Republican organ continues to be one of difficulties and discouragements. Every few days the Blaine editor is cheered up a little by a fresh hope that he has at last got an "issue," but no sooner has he brought his energies to bear upon it than he finds that he is fighting the wind. For the past week the organs have been in a state of uncommon exaltation over the announcement that the Post-office at Copiah, Miss., had been given to one Meade, who made himself conspicuous as an approver of the brutal political murder of a prominent Republican two years ago. Here at last, they fondly believed, was evidence that "the Confederacy was again in the saddle," and that the Administration did not dare to disobey the dictation of the Rebels. The bloody shirt was again brought forth, and more than one partisan orator was preparing to utilize the Mississippi incident in a Decoration Day address. But just as the organs were fairly started on the new tune, the Postmaster-General suddenly forced them to break off right in the middle, by quietly revoking the appointment of Meade, which had been made in ignorance of the man's character. Mr. Vilas's action was only what everybody who knew anything about the Postmaster-General expected, but it was plainly a very unwelcome surprise to the organs. In their despair they fell back once more upon the familiar old strain about the imminence of the long-advertised "clean sweep." An alleged remark of Senator Voorhees, that Mr. Cleveland had assured him that this often deferred performance was at last really coming off, gave them great joy for two or three days, but, alas for their hopes! the quite unnecessary announcement was quickly made that the President never said anything of the sort, and that the Senator never quoted him to that effect. The Blaine editor may well invoke the compassion of the public at such heartless treatment.

We are hearing just now a great deal of the way in which the President has been deceived by Congressmen and others who recommend persons for office, and of the difficulty there is in finding out the truth about the fitness of candidates for subordinate places, especially at distant points. There is no doubt that the President's confidence has been in many cases grossly abused, and just as little that he will not allow it to be abused twice by the same persons. But it is also to be observed that this difficulty in getting at the truth about applicants for office is a purely artificial creation, and is not encountered in any other civilized country. If vacancies occurred only in the natural or business way, by death, resignation, and dismissals for cause, there would be no difficulty at all in finding proper persons to fill them, because their number would be so small as to make them entirely manageable by the appointing officers. It is the system of dismissing officers simply to make places for others which causes all the trouble. This so multiplies the number of applicants as to make imposition easy, and careful and rigid inquiry next to impossible. If a "clean sweep" were made in the old way, of course any inquiry would be out of the question. The Administration would have to take any rapscallions whom members of Congress chose to present. But even under the modified and careful policy which the President is pursuing, the liability to enormous mistakes is great and inevitable. If the managers of a large bank tried the plan of dismissing all, or most, or one-half of their employees every four years, they would be thought crazy, and would expose themselves to a run, and yet their system would not be nearly as absurd or mischievous as that under which, even now, we conduct our post-office and consular service. In England or Germany, or even France, it would be received with shouts of derision.

One of the amusing tricks in which many of "the offensive partisans" indulge when they know their hour is at hand, is to write a letter

glorying in their shame, and declaring that they believe in the spoils system, and ought to be turned out of office. This is, of course, partly due to simple love of "gas," or what the Old Testament revisers call "a striving after wind," but it is also due to a desire to encourage the unregenerate Democrats in their hostility to any attempts made by the Administration to reform the civil service. The Collector of Customs at Portsmouth, Mr. Howard, a noisy, blatant Republican, who has made during the last twelve years very little return to the taxpayers for his salary, knowing that he must go, has sent in his resignation, attaching to it a bag of wind in which he avows his partisanship, and declares that for twenty years he has been "a firm believer in the old Jacksonian doctrine, 'To the victors belong the spoils,'" and pretending that it is for this reason that he now "quits and delivers up his office." The noisy creature knows well that this is all humbug. He would hold on to the office for twelve years more under any Administration if he could. He "quits and delivers up" because he is well aware he would be quickly and righteously expelled if he did not.

A quasi-judicial hearing is now going on before Deputy Attorney-General Post to determine whether the bonds of the State of Georgia shall be classed among the securities in which New York savings-bank funds may be invested. The bonds of the State of Georgia are in many respects a desirable security. They bear interest at 5 per cent. as against only 3 per cent. obtainable on the best class of Northern State bonds. The finances of Georgia are in a flourishing condition. The State is rich and prosperous, and there is scarcely a doubt that the bonds now offered will be paid, principal and interest, in full. But the State of Georgia repudiated $8,000,000 of bonds in the year 1873, and the New York law expressly prohibits the investment of savings-bank funds in the securities of any State which has defaulted within ten years on the principal or interest of any debt authorized by any of its Legislatures. It would be impossible, of course, to discriminate by law between different degrees of repudiation, or to draw a line between honest and dishonest Legislatures, between carpet-baggers and taxpayers, between Governor Bullock and Governor Colquitt. The only sure line of discrimination is between payment and non-payment. This is the line drawn in New York for the protection of depositors in savings banks, and it is difficult to see how any doubt could have arisen in the present case, or how any question could have been brought before the Attorney-General for his decision. The act of repudiation of the State of Georgia, it should be remembered, relates not only to the so-called carpet-bag bonds, but to the Brunswick and Albany R. R. bonds issued before the war under the State's guarantee. The railway was seized in its unfinished state during the war as the property of alien enemies, in violation of the secession ordinance, which exempted it from confiscation. After the war a compromise was effected with the owners by legislative authority in the year 1869, they agreeing to complete the road, and the State agreeing to pay them a bonus in bonds of $15,000 per mile. In 1872 the Legislature declared the bonds null and void, and a constitutional amendment was adopted two years later prohibiting the payment of either interest or principal. The bonds had meanwhile been sold, partly in Germany and partly in the United States. They stand repudiated to the present day, and the State of Georgia, with its wealth and importance, belongs as clearly to the category of dishonest commonwealths as the State of Mississippi, whose unpaid debt has been one of the foulest blots on the American name since the year 1842.

It is not for the purpose of administering moral reproof that the State of New York prohibits the investment of the money of savings depositors in the bonds of repudiating States, but to protect her own people against loss. The prohibitions of the law extend not merely to the bonds of defaulting States, but to a large variety of investments which are commonly regarded as safe by capitalists. The only securities allowed to be taken by the trustees of such institutions are United States bonds, District of Columbia 3-65s, the bonds of the State of New York, or of the cities, counties, towns, and villages of this State authorized by law, and mortgages on unencumbered real estate situated in this State to the amount of 50 per cent. of its value if improved, or of 40 per cent. if unimproved. Notwithstanding this careful restriction upon the investments, there have been some disgraceful failures of savings banks in this State within recent years, due to the negligence of trustees or to the rascality of managers. These failures, and the misery they have inflicted upon the deserving poor, have led to a movement for the adoption of the system of Post-office savings banks which has attained such high popularity in England. Nothing can be said against this system except that it is likely to be short-lived, since it can hardly exist longer than the national debt in which the Government must necessarily invest the money so deposited. Nevertheless, while the debt continues, the security which it affords ought to be brought within the reach of the humblest depositor. The worst thing that can happen to the working-man who puts his savings into such a trust will be to receive his money back again in full. If the system had been adopted simultaneously with the creation of the national debt, millions of dollars would have been saved to the classes most in need of protection against fraud and mismanagement.

The case of Morgan, the unsavory person lately appointed Consul-General to Melbourne, is recalled to public notice by an elaborate attempt to straighten out his crooked career on the part of his brother-in-law and political sponsor, Mr. Dawson, of the Charleston *News and Courier*. It seems that the South Carolina Democrats have been a good deal stirred up over the developments regarding Morgan. One of the Congressmen has published a letter bitterly condemning the appointment, and a meeting of the Blackville Democratic Club was called the other day to give expression to the prevailing dissatisfaction. Mr. Dawson sought to stay the tide by attending the meeting, and making a personal defence of his own action in the matter and of his brother-in-law's record. He admitted that Morgan published his pamphlet commending Blaine's foreign policy after the canvass opened, and he presented no evidence that Morgan ever favored Cleveland's election. His strongest argument was that the pamphlet "fell flat," and that "no substantial aid was rendered Mr. Blaine by its publication." This is perhaps the most novel plea ever advanced in favor of an aspirant for office, and it merits the attention of sundry able editors who conducted organs ostensibly in the interest of the Republican candidate last year. Mr. Halstead, for instance, could readily procure overwhelming evidence that the New York *Extra* "fell flat," and that "no substantial aid was rendered Mr. Blaine by its publication."

It is said to be probable that the National Bank Examiner for Connecticut and Rhode Island will be retained in office by the Democratic Administration, because he has been an efficient servant of the public, and, though a good Republican, has not been an "offensive partisan." The surest way to prevent the demand for changes in the civil service when a new party comes into power is to develop a class of officials like this bank examiner. Unfortunately such officials have been the exception in the past, because it has been held to be the duty of a place-holder to look after the interests of his party even more faithfully than after those of the public. Human nature being what it is, Democrats cannot be expected to enjoy seeing officials retained in the service who have been "offensive partisans," and it is entirely proper that such officials should pay the penalty of their misconduct. But when a man has confined himself to a discharge of the duty for which he is paid out of the public treasury, every sensible person at once sees the absurdity of discharging him, or not reappointing him, simply because a man of another party has been elected President. The Connecticut Democrats have the reputation of liking the spoils as well as any of their brethren; but even such men as Barnum recognize the folly of turning out an experienced and efficient bank examiner merely to make room for a man who wants a place. Once establish the principle that all servants of the Government are to confine their energies to their proper sphere, and the plea for a general overturning of the service upon the advent of a new Administration will become so ridiculous that nobody will any longer advance it.

Nothing could be more absurd than the choice of a man from the State which raised the cry, "The Chinese must go," as Minister from this country to China, unless it were the selection of an Ultramontanist as the representative of the United States at the Italian court. The obvious impropriety of such a suggestion, however, did not prevent the California Democrats from making an earnest demand for this place in the diplomatic service, and if "pressure" had availed with the President, he would have named somebody from the Pacific Coast as John Russell Young's successor weeks ago. The choice of an Indiana man will doubtless grievously offend the Sinophobists on the other

side of the continent, though there have been of late some signs of returning sense in California, as evidenced by the fact that Judge Wallace of that State recently withdrew his application for the mission, on the ground that the public interests would be better served by the appointment of a man from some other part of the country. Charles Denby, whom the President has just appointed, is not known outside of his State, but the leading Republican organs of Indiana vouch for his high character and his fitness for the post. The California Democrats have been particularly pertinacious in their demands for office ever since Mr. Cleveland was inaugurated, and the rejection of their special request for a foreign mission only emphasizes the attitude which the President had already assumed by his refusal to make other changes purely to give offices to a lot of worthless politicians. In three months the Democratic Administration has made but three appointments of Californians, whereas if Blaine had come in, there is not the slightest doubt that wholesale changes would have been made solely to pay off political obligations.

An interesting and valuable study of the Chinese problem has been made by Joseph A. Chapleau, Secretary of State for Canada, and Judge John Hamilton Gray, of British Columbia, who were appointed last year by the Governor-General of the Dominion to prosecute a thorough investigation of the subject. The question is one of vital interest to the people of British Columbia, as Chinamen have been pouring into that province of late years in large numbers. In the capital, Victoria, there are now about 3,000 of these immigrants to 10,000 other inhabitants, and the number of Chinese in the whole province is estimated as high as 18,000, while the entire population, by the census of four years ago, was not quite 50,000. The Commissioners make separate reports of their observations and conclusions, but there is a general agreement in their views. They find that Chinese labor has been most efficient in promoting the rapid development of the country, and that the sobriety, industry, and frugality of the new-comers are confessed even by their enemies. But the race antipathy is very strong, and it is strengthened by the fact that the Chinese generally adhere to Oriental habits and modes of life. The Kearney type of politicians re-echo the cry of the Californians for absolute exclusion of the intruders, but the wiser opinion among the British Columbians themselves is in favor of a policy of regulating future immigration. The Commissioners concur in this view, and recommend a system of moderate restriction, based upon police, financial, and sanitary principles, sustained and enforced by stringent local regulations for cleanliness and the preservation of health. There is a strong demand for some legislation upon this subject by the Dominion Parliament at the present session, and if it follows the lines of the Commission's suggestions, Canada's disposition of the question will shine by contrast with the savage policy adopted by this country.

Our old friend Keely has had his annual "Spring Opening" with the motor in a new guise, and under the new and remarkable name of "Inter-Etheric Liberator." As usual, the exhibition was so startling and miraculous that the happy few who were permitted to be present are unable to describe what they saw in an intelligible manner. They talk in an incoherent and dazed way about a "tuning fork," a "fiddle-bow," a "disintegrator," "resonators," "wave plates," "electric-conductors," "confined vapor," and the "suction of Mr. Keely's mouth," but nobody is able to tell precisely what happened, or to get any inkling whatever of the mysterious power. As nearly as we are able to understand the accounts, however, Mr. Keely places the Inter-Etheric Liberator upon a solid plate of glass which rests upon a wooden support; then he puts a glass globe, twelve inches in diameter and mounted upon four legs in such a way as to rotate freely, upon his work-bench; then he puts a thick plate of glass upon each side of the globe; then he puts a big tuning fork somewhere in the immediate vicinity; then he clamps a thick tube on the table near the "Liberator"; then by suction with his mouth he establishes a partial vacuum in the tube and closes the valve; then he goes across the room and draws a fiddle-bow across another tuning-fork; this "causes the Liberator to act," and "things begin to hum" at a tremendous rate of speed; the globe turns at the rate of a thousand revolutions a minute; a solid plank placed against its revolving periphery, instead of stopping it, is torn into splinters; small leaden balls are shot out of a cannon; an engine is driven at a terrific rate of speed, and no end of other extraordinary uses is made of the "power" which is generated from the revolving globe. Everybody tries to find out how it is all done, and nobody succeeds. Then resolutions of confidence in Keely and the "Motor" are passed, the gentlemen present congratulate Keely, and the show closes, as usual, with no explanation.

Judge Davis's opinion in the Munsell case raises a question which is very interesting both for the bar and the public. The question is, whether, when a code defines the meaning of a legal term, a judge is at liberty to disregard the definition and substitute one of his own. Judge Daniels in the case held that if Munsell was guilty of a contempt, it was under Sub-division 3, Section 8 of the Code of Civil Procedure, which says that a person is punishable by the Court for a criminal contempt through "a wilful disobedience to its lawful mandate." Judge Daniels then found the legal meaning of the term "mandate," in Section 3,343 of the same code, which defines it as "a writ, process, or other written direction issued pursuant to law by a court or judge, or a person acting as a judicial officer, and commanding a court, board, or other body, or an officer or other person named or otherwise designated therein, to do or refrain from doing an act therein specified." Judge Davis, however, held that this was not a definition of a mandate; that it simply specified some things which are mandates, but left unmentioned others which are also mandates, such as any verbal and lawful order of a judge made in the conduct of a case. In other words, as we have said, Judge Davis substituted for the definition of the Code a definition of his own. Now, if courts can do this with codifiers' definitions, the question is, what is the use of such definitions? Why should they be made at all? It would be extremely interesting to know what the bar thinks about this. Section 3,343 contains a long list of definitions, and prescribes the acceptance of them as "rules." It defines "mandate," "judge," "clerk," "report," "real property," "personal property," "personal injury," "affidavit," and other terms, about twenty in all. Now, can the courts amend these definitions by declaring them not full enough, on grounds of expediency or convenience, or, as Judge Davis says, of "common usage," and putting in other meanings of their own?

The reports from the various New England States, submitted at the annual meeting of the New England Woman Suffrage Association in Boston recently, were not especially encouraging. From Vermont the report was the most encouraging, saying that a society had been in existence for eighteen months, and its membership had during that time increased from 17 to more than 200; that financially the Society was doing well, but no progress had been made in securing legislation, as the bill which provided municipal suffrage for women was defeated by the Legislature. The Rhode Island report said that "movements for suffrage have not been so successful as could be desired, yet they have shown good reason for hoping that much may soon be accomplished. The Legislature has not exhibited that degree of interest which the women had hoped for. Nevertheless, it has shown an inclination to submit to the people the great question of allowing women to say who shall represent them on school committees." In Connecticut, "as in some other places, the women have seemed to have success in their hands, and it has slipped through their fingers. The Legislature doubts the wisdom of granting municipal suffrage, but seems disposed to give women a right to vote for School Committees." Of Massachusetts Mrs. Lucy Stone said she was "sorry that her State, or its law-makers, had not been generous when considering petitions for general suffrage, but the Massachusetts Society had no thought of being discouraged, and had held one hundred meetings and thirteen conventions since October, had circulated thousands of tracts and newspapers, and done much else which was calculated to change public opinion." New Hampshire was the worst of all. The lady who made the report declared that she "had not the courage to write a report. It was impossible to make something out of nothing. Many of the leaders in the movement had removed from the State or had died, and no meetings had been held during the year. Petitions for suffrage had been presented to the Legislature, and that was all which could be said." Probably a good deal of this apparent stagnation in the movement during the past year could be traced directly to the overshadowing importance of a national election; but there seems to be on the part of all our legislatures a growing disposition to treat the question with indifference.

SUMMARY OF THE WEEK'S NEWS

[WEDNESDAY, May 27, to TUESDAY, June 2, 1885, inclusive.]

DOMESTIC.

THE President on Wednesday appointed Edward Campbell, jr., to be United States Marshal for the Southern District of Iowa. He is the candidate whom the Iowa Congressmen selected, and he gets the place for which C. L. Williams was first named.

The President on Monday appointed Isaac R. Maynard, of New York, Second Comptroller of the Treasury. Mr. Maynard holds the office of First Deputy Attorney-General of this State. He was the Democratic candidate for Secretary of State in New York two years ago, and was defeated, it is said, because of his prohibition record. He was not a candidate for the office to which he is now appointed, but was urged to accept it by both the President and Secretary of the Treasury.

Postmaster-General Vilas on Thursday requested the resignation of J. L. Meade, who was recently appointed Postmaster at Hazlehurst, Copiah County, Miss. Since his appointment the Department has learned that just after the November elections in 1883, and subsequently to the killing of Matthews, a Republican Postmaster, by a man named Wheeler, on the election day, Meade presided over a meeting which was held in Hazlehurst, at which the persons participating took sides by resolution with Wheeler.

The Attorney-General, at the request of the Secretary of State, has delivered an opinion as to the eligibility of James M. Morgan to accept a Federal office. He decides, as he did in the Lawton case, that Morgan is under no disabilities, and he says that the matter has ended so far as the Administration is concerned, and Morgan is on his way to his post.

Speaker Carlisle, in a recent interview at Cincinnati, said: "The President is a sensible, honest, and patriotic man, whose highest ambition is to discharge his official duties in strict accordance with the Constitution and the laws, and for the promotion of the public welfare. He is careful and conscientious about everything he undertakes, and if he commits any mistakes in making appoin ments or otherwise, they will, in my opinion, be due to the fact that he is not able in every instance to procure correct information concerning the matters upon which he is compelled to act. The amount of work he performs is remarkable. It is physically impossible for the President and his Cabinet to do more than they are doing. People who think that the entire body of officers and employees who have charge of these vast interests, and who are familiar with them, can be suddenly changed without detriment to the public service are, in my opinion, very much mistaken, and therefore I think the Administration has so far acted wisely in respect to this subject."

There has been a difference of opinion among department officers in Washington as to the point whether the Civil-Service Law applies to chiefs of divisions. Secretary Lamar holds that it does not, and has appointed Robert Hunter, of Winchester, Va., to be Chief of the Division of Accounts of the General Land Office, without a civil-service examination.

Within a few days a $1,000 clerkship in the Pension Bureau having become vacant, Secretary Lamar sent a requisition to the Civil-Service Commission for the certification of a person to fill the position, requesting that the Commission certify the name of a woman clerk from Dakota, as that Territory had no representation in the Bureau. The Commission decline to make the certification as requested, and say in substance that it is the province of the Commission, and not that of the Secretary of the Interior, to name the State or Territory from which selections shall be made for certification upon requisition.

Dr. Neil F. Graham, of Minnesota, Assistant Medical Referee of the Pension Bureau, and Drs. W. H. Gobrecht and John H. Ross, of Indiana, Medical Examiners in the Pension Office, have been removed for "offensive partisanship." Testimony taken before the Warner Committee that they visited their respective States during the last campaign to work for the success of the Republican party, and that their expenses were charged against the Government, was the basis of the charges against them.

A. F. Howard, Collector of Customs at Portsmouth, N. H., has tendered his resignation to the Secretary of the Treasury. In his letter he says he has held the office since December 24, 1873, during which time he has endeavored faithfully to discharge its duties. He adds: "I have also during all that time been a zealous member of the Republican party, and in every way possible contributed to its success. Consequently, my 'offensive partisanship' can be established by many witnesses. For twenty years I have also been a firm believer in the old Jacksonian doctrine, 'To the victors belong the spoils.' Consistency, therefore, compels me firmly to adhere to these principles and convictions in defeat as well as in victory."

President Cleveland was present at the Decoration Day ceremonies in New York.

After a full Cabinet meeting on Thursday the following telegram was sent by the President to Senator Gibson: "The question of reopening the New Orleans Exposition has been considered by the Cabinet, and they are unanimously of opinion that there is no warrant of law for it, and that it would be inexpedient on other grounds."

United States Minister Foster and the Spanish Cabinet are negotiating a commercial treaty between the United States and Spain, which includes Cuba, Porto Rico, the Philippine Islands, and other Spanish colonies.

The public debt showed a decrease of $3,350,833 in May.

A small detachment of the Tenth Cavalry encountered on Wednesday Chief Geronimo and his band of Apaches in Cook's Cañon, through which the Indians were endeavoring to escape to Mexico. The hostiles were driven back with a loss of four killed and eight wounded. Two soldiers were killed and eight wounded. Owing to the small number of troops, the Indians were not pursued. This detachment is trying to effect a junction with two companies of the Fourth Cavalry, when an active pursuit will be made. The Apaches have been joined by a number of Utes and Navajos, and the band is composed of nearly 200 warriors. More than thirty citizens are reported to have been killed. Many of the bodies were mangled beyond recognition.

The people of New Mexico have issued an urgent appeal (among others, to the press of New York city), stating that about 100 of their neighbors had been massacred, and that 5,000 troops should be immediately placed in the Territory to restore order and punish the redskins, and saying: "Unless the Government at once takes steps to put down the present Indian outbreak and hunt to death every participant in it, our people will no longer consent to the restraint which has thus far prevented their marching upon the San Carlos Reservation and wiping it out of existence. For years it has been the nursery of crime, whence have issued the bands of murdering Apaches that have bathed our homes in blood, robbed our people of their possessions, and retarded the development of our resources."

General Crook telegraphed to General Pope on May 31 from Fort Bayard, Arizona: "Have just arrived. I find there are eight bodies of troops out after the Indians. The latter have doubtless divided into small parties. No reports have been received from any of the troops since the 28th. The Indians have killed a number of people and committed many outrages. The outlook is bad. Everything indicates trouble similar to the Victoria outbreak, and that it will be very difficult to suppress. General Bradley's disposition of the troops seems to have been such as was compulsory under the circumstances."

The *Dolphin*, built by John Roach for the United States navy, made her fourth trial trip on Thursday, going up the Sound to Faulkner's Island and returning. During the first six hours the vessel travelled ninety-three nautical miles, her average speed being 15½ knots an hour, which is more than is required of her by contract. A favorable report has been made by the President of the Board appointed by Secretary Whitney to examine the vessel.

Iron and nail mills in Pittsburgh, Wheeling, Chicago, Cincinnati, St. Louis, and other manufacturing centres shut down on Monday on account of the failure of the manufacturers to accept the scale of wages presented by the Amalgamated Association on behalf of the workmen. About 100,000 men are thrown out of employment. Eight iron mills in the West have accepted the workingmen's terms and are running.

S. W. Talmadge, a Milwaukee expert, has prepared his first preliminary estimate for the season by States of the probable total yield of wheat in the United States for 1885. The estimate shows the probable yield of winter wheat as 231,000,000 bushels, of spring wheat 130,000,000 bushels; total of winter and spring 361,000,000 bushels. According to these figures the crop of 1885, compared with 1884, will show a shortage in winter wheat of 139,000,000 bushels, spring wheat 13,000,000 bushels; total winter and spring shortage 152,000,000.

Governor Hill on Wednesday vetoed the new Census Bill for reasons similar to those expressed in his previous veto. He will not call another extra session

During a hearing before Governor Hill on Monday on the bill to incorporate the College of Medicine and Surgery in this city, Dr. R. A. Gunn, speaking in advocacy of the bill, said he had experienced difficulty in getting the measure out of the Committee on Miscellaneous Corporations, of which Senator Coggeshall (Rep.) is Chairman. He remonstrated with the Senator, but obtained no satisfaction. "Then when I met him in the Fifth Avenue Hotel in New York," Dr. Gunn said, "and asked why the bill was not reported, he said he must have $500 to report the bill favorably, and that he would go on the floor of the Senate and make an argument in its favor. He also desired a guarantee of $1,000 additional to be paid if the bill became a law." Senator Coggeshall represents the Twenty-second District, and lives at Waterville, Oneida County. He emphatically denies the charge.

The General Term of the Supreme Court in this city handed down a decision on Friday in the case of Harvey M. Munsell, the late juror in the Short trial who was imprisoned by Judge Van Brunt for contempt of court. The decision reverses the order of Judge Van Brunt and orders the discharge of Munsell from custody.

During Wednesday's session of the Convention of the Episcopal Diocese of Illinois, an amendment to the canon giving women a right to vote at the election of church officers was defeated

On Wednesday afternoon a derrick, used in hoisting building material for the new Unitarian building in Boston, fell from the second story, owing to the breaking of a rope. Miss Grace Virginia Lord, forty years old, a well-known translator of foreign works, under the nom de guerre of "Virginia Champlin," who was passing with a companion, was struck on the head and instantly killed.

FOREIGN.

It was asserted on Wednesday that the English proposals recently offered to the Turkish Envoy, Hussan Fehmi Pasha, for the occupation of the Sudan by Turkey, had been declined by the Porte. Fehmi Pasha returned to Constantinople from London with the proposal on May 14, after having had an interview at Paris with the French Minister of Foreign Affairs, who assured him that the French

Government would not oppose the Turkish occupation of Suakim or of any part of the Sudan over which the Sultan claimed suzerainty. The reported refusal to accept the proposals after this assurance caused considerable surprise. The proposals permitted the Turkish Government to occupy and control the Sudan, provided action were taken to suppress the slave trade and to develop commerce. The Porte would be free to assert its suzerain rights over the whole of the Sudan, including the Province of Dongola.

Reports were in circulation in Cairo on Thursday that El Mahdi had sent Hassein Khalifa to Cairo to arrange terms with the Khedive.

The rebel forces are beginning to renew their attacks on Suakim.

The Rome *Diritto* foreshadows the occupation of Suakim next autumn by Italy.

The French Chamber of Deputies on Thursday, by a vote of 338 to 90, adopted a motion approving the decree secularizing the Pantheon, in order that Hugo might be buried there.

The funeral of Victor Hugo on Monday was one of the greatest pageants ever witnessed in Paris. Hundreds of thousands of people were abroad at daybreak, crowding the streets along which the procession was to move, from the Arc de Triomphe to the Pantheon. Six orations were delivered under the Arc de Triomphe in the presence of nearly all the illustrious men of and in France. M. Le Royer, President of the Senate, said Victor Hugo constantly pursued the higher ideal of justice and humanity, and thus exercised an immense influence over the moral feeling of France. M. Floquet said that the ceremony was not a funeral; it was an apotheosis. M. Augier, a member of the Academy, elaborated the fact made evident to-day: "To the sovereign poet France renders sovereign honors." M. Goblet, President of the Chamber of Deputies, declared that Victor Hugo will remain the highest personification of the nineteenth century, the history of which in its contradictions, doubts, ideas, and aspirations, was best reflected in his works.

The funeral procession started punctually at noon. The threatening clouds of the morning had disappeared by this time. Many chariots, heaped up with the offerings of the people of France, followed the hearse in the procession. Enormous crowds of people lined the streets. The buildings were black with spectators. The body was deposited in the Pantheon, and the ceremonies completed without the dreaded Communist outbreak. Accidents incident to the presence of such an immense concourse of people were numerous.

A despatch from Tirpul, dated May 23, states that the British section of the Afghan Frontier Commission, lately in charge of Sir Peter Lumsden, was then in camp at a point twenty-five miles to the westward of Herat. The officers of the party visited Herat, and were well received by both the authorities and the people. The neutralization of the Panjdeh district is restoring quiet everywhere.

The London *Daily News* (Liberal) announced on the highest authority on Saturday that the Afghan question had been completely settled, Russia accepting the English proposals. Both Merutchak and Zulfikar were allowed to remain in the possession of the Amir. On Monday morning the *News* published a letter from Earl Granville's secretary denying this assertion, and saying that the negotiations are still in progress. The *News*, however, said: "Although the negotiations are unfinished, it will be found, when the Government is able to furnish an official statement of recent and current proceedings, that our statement of Saturday was substantially correct." The *Standard's* St. Petersburg despatch on Monday confirmed the *News's* statement.

The London *Daily News* asserted on Tuesday that it had been definitely agreed upon by the Ministry to invite the King of Denmark to arbitrate in the Afghan dispute.

The second set of official despatches relating to the Afghan dispute were on Tuesday made public in London, and they throw much new light upon the subject. Earl Granville, Foreign Minister, on April 17, wrote to Sir Edward Thornton, British Minister at St. Petersburg, as follows: "Baron de Staal (Russian Minister at London) informs me that he has received a despatch from M. de Giers (Russian Foreign Minister) ascribing the collision at Panjdeh to the military aspect of Sir Peter Lumsden's Boundary Commission, which, he says, encouraged Afghan pretensions. M. de Giers declined to admit that General Komaroff provoked the collision." On the 19th of April Earl Granville wrote to Sir Edward Thornton, declining to admit that Sir Peter Lumsden's Commission had any bearing on the question, and refuting M. de Giers's statement that English officers had directed the Afghan attack. M. de Giers, in his reply to this, declined to sacrifice the interests of Russia or submit the Panjdeh affair to further inquiry. Earl Granville replied proposing arbitration and the resumption of the Afghan frontier negotiations. Baron de Staal replied that even if Russia should admit the principle, she would intrust the task of arbitration to none but Emperor William of Germany, who would decline to serve. Earl Granville said that England had no objection to Emperor William as arbitrator. At this point M. de Giers proposed to neutralize the Panjdeh district pending the result of the Afghan frontier negotiations, and Earl Granville stipulated that both the Russian and the Afghan soldiers be withdrawn from Panjdeh. On May 4 Earl Granville agreed to resume the negotiations concerning the Afghan frontier, and to submit the Panjdeh dispute to the decision of an arbitrator, if Russia and England found themselves unable to settle it otherwise.

It was reported in Pekin on Wednesday that a Russian outpost had fired upon a Chinese outpost in Mantchooria.

Serinagur, India, was visited by a frightful earthquake on Sunday. The shocks, which occurred at intervals of ten minutes, were of great violence. The greater part of the city was destroyed, and the cavalry barracks is a mass of ruins. Fifty persons are known to have been killed, and hundreds of the injured have already been taken from the general wreck. The total loss of life, or the number of the maimed, must remain unknown for some days, as many of the inhabitants still lie buried in the ruins. Serinagur is near the centre of the vale of Cashmere, and that whole territory experienced the terrible earthquake shocks. The Mohammedan mosque at Sopur, twenty miles north of Serinagur, was demolished by the earthquake, and 200 persons were killed.

Serious anti-Jewish riots occurred in Vienna on Monday, owing to the excitement of the people in consequence of the election agitation. The Carmelite Platz was filled with a howling mob, and free fights were frequent. The shops of the Jews were raided and ruined, and their owners violently assaulted. Not less than forty persons were severely wounded.

The Baptist Missionary Society gave a breakfast in London on Thursday to Mr. Henry M. Stanley, the African explorer. An address in the nature of a eulogy was formally presented by the Society to their guest. Mr. Stanley, in his reply, said that he was glad to have had the opportunity of helping the missionaries, and of obtaining in return their help to teach the natives. Formerly he ill-understood the missionaries. However, since that he had seen Livingstone, in whom he recognized the type of a noble and spiritual manhood. The real work of the missionary was hard, his privations were great, his worldly reward small. In conclusion, Mr. Stanley expressed the hope that the Congo country would soon be well supplied with missionaries.

Charles Rogier, the Belgian statesman, died in Brussels on Wednesday, having almost completed his eighty-fifth year. Since 1868 he had lived in retirement, but for nearly forty years he was the leading statesman of Belgium, and a member of the Cabinet.

The Technical Committee of the International Sanitary Conference rejected in Rome on Wednesday, by a vote of 9 to 2, the American proposal to authorize the sanitary condition of vessels to be verified by the countries to which the vessels are bound, through the respective consuls of those countries at the ports of departure.

The Paris Salon prizes have been awarded as follows: Bouguereau, first; B. Constant, second; Humbert, third.

A despatch from Fort Assiniboine on Thursday announced the capture on Wednesday of Gabriel Dumont, the lieutenant of Louis Riel, and a companion by the name of Michael Dumais.

Poundmaker and 150 of his men arrived at Battleford on Wednesday and surrendered to General Middleton, in accordance with the agreement recently reached. General Middleton telegraphed: "I have made prisoners of Poundmaker and Lean-Man, Yellow-Mud-Blanket, and Breaking-Through-the-Ice, being the most influential and dangerous men about him. I have also White Bear, who killed Indian-Instructor Payne, and Wahwainita, who killed Tremont, the rancher. My next task may be Big Bear. Poundmaker brought in the teams taken, and gave up 210 stands of arms and five revolvers." On Thursday a messenger from General Strange's column brought the news to Battleford that Big Bear and his whole band had broken up their camp near Frog Lake, and were moving eastward. It is supposed that runners had reached him with the news of the defeat and capture of Riel and the surrender of Poundmaker. General Strange, with a flying advance force, followed Big Bear up and watched his movements.

News was received on Sunday of a battle on May 28 between Big Bear and the forces under General Strange, some thirteen miles east of Fort Pitt. General Strange's scouts discovered Big Bear's location on Wednesday last, and the General ordered an immediate advance. The force he took with him numbered about 300 men. About noon on Thursday Big Bear's entrenchment was reached. The General found the Indians occupying an exceedingly strong position. For nearly four hours hot firing was continued on both sides. The enemy, finally becoming exasperated, made a desperate rush, but, under excellent cover, and with the aid of field guns, the troops succeeded in repelling them. The Indians retired to prepare for another attack, and the General seeing the superiority of their numbers ordered a retreat, the troops retiring in good order to Fort Pitt, under fire from the Indians, who did not, however, venture to pursue the retreating forces. About thirteen brave fellows were left behind to guard the wagons containing the supplies. When, a few hours later, General Strange sent back after them, it was found that a terrible struggle had taken place, and it is believed that they were massacred. General Strange is badly in need of reinforcements and provisions, and his position at Fort Pitt is very insecure. General Middleton on Sunday started to his relief. A fierce battle with Big Bear is anticipated.

The trial of Riel, the rebel leader, will probably begin at Regina about the 22d of June before Colonel Richardson, the stipendiary magistrate.

The complete defeat of Caceres at Huancayo by Iglesias's forces, under command of Colonel Yessup, is announced from Lima, Peru. Great numbers of prisoners were taken, and Caceres's artillery was scattered. Caceres himself is wounded and General Mas is in pursuit. This decisive victory is expected to prevent any further revolutionary attempts.

SILVER PUZZLES.

THE Atlanta *Constitution*, in a spirit of candor, asks the following questions:

"Is it not true that the suspension of silver coinage will still further depreciate the price of silver bullion? In other words, as there will be no further demand on the part of the Government for silver bullion, will it not inevitably follow that the price of that commodity will be still further reduced?"

These questions cannot be answered dogmatically. The price of silver bullion is governed generally by the law of supply and demand. The operation of this law is modified by speculation—that is, by the opinions which buyers and sellers hold as to the future conditions of supply and demand. It would be a fair presumption, certainly, that a sudden stoppage of the Government's purchases, which now take about one-half of the production of the American mines, would cause a decline in the price of that metal in the ratio which these purchases bear to the world's total production. The demand of the United States mint is about $28,000,000 per annum. The total production in the world is about $110,000,000 per annum, of which the United States produces a little more than $46,000,000. But since it is certain that the demand of our mint must cease at some time, it is probable that the silver market has taken that fact into consideration, and that the decline has been anticipated, or, in the language of the street, "discounted." A purely artificial demand, resting upon political rather than commercial considerations, and liable, therefore, to come to an end at the opening of the ballot-boxes after any general election, is not the kind of demand which determines the price of an article in the market. There are plenty of securities on the Stock Exchange which pay 6 per cent. dividends and yet sell much below par, because the public believe that a time will come when the dividends will be reduced or will cease altogether. Nothing is more certain than that the United States Government will eventually cease to buy silver bullion for arbitrary coinage. Everybody knows this, from China to Peru. All the bullion dealers in both hemispheres have taken account of it. Consequently, it is a matter of pure conjecture how much the price of silver would be affected by the cessation of our artificial demand. It is also beyond human ken whether the present rate of supply will continue, and whether the demand of India and other silver-standard countries will increase or decrease, or remain stationary. The probability is that there will be some decline in the price of bullion when our arbitrary coinage comes to an end, but no great decline.

We might descant at length on the absurdity and injustice of using the public funds to keep up the price of an article in the market in the interest of a particular class of producers at the expense of all others. We might show how the natural resources of the country—its buying and selling power—are lessened by the action of the Government, which intercepts a valuable product of industry on its way to a bona-fide market, puts it to death for all commercial purposes, and buries it in the earth as a corpse. These are important considerations not touched upon in the catechism of our Georgia contemporary. We accordingly pass them by, in order to take up the gravamen of the difficulty which presents itself to the Atlanta *Constitution*, and which is stated in these words:

"What, then, is to be the outcome of this whole business? What is to become of the silver dollars that are already coined? Will the banks of the country open their doors to them after coinage is suspended and the bullion value of the silver still further depreciated? Will Mr. Manning carry out the law and redeem the legal tenders in silver after the opponents of silver have had their way?"

The first view which occurs to us is, that if a danger exists, arising from the accumulation of silver dollars already much depreciated and liable to be still more so, the wisest thing to do is to stop coining them, in order to avoid still greater danger and loss. If it be true that we must stop coining some time, then manifestly the more we have on hand the more we shall lose. The Government cannot buy metal forever which the people refuse to take off its hands. When the public needs are fully satisfied, it might as well buy and store cotton cloth or cotton bales as silver bullion. The spinning industry is more depressed than the mining industry. The miners have had their innings for about seven years. If the public resources are to be held subject to a square divide, it is time that some other trade should be favored with an artificial market for its surplus productions. The railroads are just now in a suffering condition, and since the Government is short of storage-room for its standard dollars, it would tend to equalize the distribution of the revenue if the Secretary of the Treasury should charter a few thousand cars and carry its surplus ingots around the country for a year or two. A public exhibition of this kind would at least have a valuable educating influence.

The banks, we beg to assure our Atlanta contemporary, will take silver on deposit whenever they are convinced that the silver dollar will be kept at par with gold. The reason why they have refused to take it is, that, seeing no limit to the coinage, they believed that silver dollars would eventually sink to their bullion value, and that a great loss would be entailed upon them and their customers. It is not impossible even now to prevent the decline of the silver dollar to its bullion value, but obviously the difficulty of preventing it increases with the number coined. Therefore the way to avert this evil is to put a stop to the coinage as soon as may be. The action of the Atlanta Commercial Convention on this subject is the most hopeful sign of the times that has been discerned since the Silver Bill was passed in 1878. We trust that the *Constitution* will give it a cordial support.

THE FRENCH PANTHEON.

THE restoration of the Pantheon at Paris to its original use, as a monument to illustrious Frenchmen, is a fresh illustration of the hostility of the Republic to the Church, as well as of the political imprudence of the clergy. The building was begun as a church by Madame de Pompadour, but it was not finished until the Revolution was at its height in 1790, and was then dedicated to the memory of great men. The Restoration, however, had not the good sense to let it alone, and when the Clerical and Royalist reaction set in in 1822, Louis XVIII. gave it back to the clergy, who converted it once more into a church. After the expulsion of the Bourbons in 1831, it was again secularized, and remained secularized until after the Coup d'État. The new Emperor, who was then currying favor with the Church, in 1853 converted it again into a place of worship. The Republic has been much more patient than its predecessors, for it has waited since 1877, when the Conservatives finally went out of power, before again compelling the clergy to vacate it, which they were, it is reported, required to do within forty-eight hours.

The Pantheon, in its original secularized form, was intended to furnish what Westminster Abbey has so long furnished in England—a last resting-place for distinguished public men. Nothing can better illustrate, however, the difference in the course of English and French history than the fact that it has been found impossible in France to make any church seem a fit receptacle for the illustrious dead. The fact that Westminster Abbey is a church makes it in the eyes of even the most sceptical Englishmen the better fitted to be the national Valhalla, or "great temple of silence and reconciliation," where men of all parties, who have in any walk shed lustre on their country, can lie peaceably side by side. Their memory, the public thinks, is all the better preserved by the fact that public worship is every day carried on above their graves. There is, in fact, no creed or sect in England which is not delighted by the chance of giving the ashes of a man whom they have loved or followed into the keeping of the Dean and Chapter, no matter what they may think of the value of the functions these gentlemen perform.

In France, on the other hand, the first thing to be done, in the eyes of probably the vast majority of the Parisians, if not of Frenchmen generally, before burying such men as Thiers and Gambetta and Victor Hugo in the Pantheon, is to get rid of the clergy and their belongings, and completely secularize the edifice. Between the French sceptics and the Church there is no room for compromise or concession. French sceptics are not content, like English or German sceptics, with ceasing to go to church and treating the dogmas with good-humored indifference. They insist on proclaiming in every possible way their hostility to the clergy. They make a great parade of being married only by the maire, of not having their children baptized, and of burying their relatives without religious services. Indeed, there has been no more marked characteristic of French liberalism ever since Voltaire lifted up his voice against "L'infâme" on behalf of the Calas family, than its furious hostility to all ecclesiastical organizations, and especially to the greatest of them all.

Indeed, if anything can serve as a warning to the Catholic Church to keep out of politics, and to beware of the gifts of politicians, it ought to be the condition of the Church in France to-day. In no great modern and highly civilized State has the Government been so ready at various times to give the clergy what they wanted in the way of legislation. Every Government France has had, except the first Republic, has sought to placate or win them over by money or privileges. The result has

een not simply that every revolution leads a diminution of State aid, but that the ood-natured contempt of the sceptics for e clergy which is still to be found in her countries, in France has given place to a rocious hatred, which in times of tumult puts e lives of the priests in danger, and in times peace produces legislative spoliation and pression. The continued blindness of the rench clergy on this point, after a century's xperience of the dangers of politics, is some- ing very remarkable. One would have ought that in 1877, when MacMahon began s foolish attempt at reaction, the clergy would ow better than to cast in their lot with m and take a share of the risks of his enter- rise. But they did not know better. Cardinal onnechose and most of the prelates publicly d him godspeed, and a few months later saw m overthrown by the Republicans, and saw e Church again at the mercy of an enraged emy. And yet, bitter as Republican hostility every one acknowledges that it is a trifle mpared to the hostility of the Radicals under émenceau, who are eagerly expecting the epublican succession.

THE MUNSELL CONTEMPT.

HE General Term on Friday, as was expect- l, reversed Judge Van Brunt's decision com- itting Munsell, the juror in the Short case, jail for one month for contempt of court. he three judges decide unanimously that the fence committed by Munsell, if any, was ot contempt of court, but a misdemeanor, r which he should have been indicted and ied by a jury. This conclusion has not een reached by any elaborate process of le- l argumentation, but by a simple inspec- on of the papers in the case and of the atute. In fact, we fancy it is not often that simpler question goes up on appeal. Conse- uently, one cannot help deploring that the de- ands on the judges' time should have been uch that they were compelled to take a week consider the matter, with the result of inflict- g seven days more of unlawful imprisonment an innocent man. For unlawful imprison- ent is not, and we trust will never be, consid- ed a trifling matter in the United States, no matter on whom inflicted, and though inflicted nly for one hour. When any man, however umble, claims the deliverance from it at the ands of a Court, all other business and ex- ises should, it seems to us, be laid aside until ustice be done, no matter whose feelings e hurt. We fully appreciate the desire of udges Daniels and Davis and Brady to spare udge Van Brunt the further humiliation of prompt reversal of his wrongful order; but udge Van Brunt would have to be a ar more valuable and honored person than e is, to entitle him to consideration at the ost of the personal liberty of an American itizen.

Judge Daniels, in his decision, calls Judge an Brunt "a learned judge," and Judge avis calls him "a learned and able one," ap- arently without perceiving that they are raising his intellectual qualities at the expense f his moral ones. That a learned and able udge, as Judge Van Brunt undoubtedly is, ould not have found out between Wednesday, on which Munsell was brought before him for contempt, and Friday, on which he sent the poor man to jail, that no contempt had been committed, and that the offence was an indictable one, will suggest, when coupled with the extraordinary severity of the sentence, that it was not his knowledge which was at fault, but his temper, or, in other words, that he is unfitted by character for the exercise of discretionary power over the liberty of his fellow-men. The law of contempt, as laid down by the Code, seems most clear. The decision of the General Term shows that it is clear. Had Judge Van Brunt studied it, he would doubtless have noticed the note of the Revisers, in which they say, speaking of contempt:

"It cannot be necessary at this day to urge any reasons for substituting the trial by jury in all possible cases, instead of a trial by an offended tribunal."

He ought to have known, and as "learned and able" he must have known, that rule of elementary morals which forbids a man to try an offence committed against himself, and over which he has already grown angry. After Judge Van Brunt had written to the newspapers denouncing the jury, he ought, as a gentleman and a man of honor, to have seen that he was disqualified from inflicting even a fine of five dollars, were the offence of the juryman never so clear. He ought to have sent Munsell before another judge, in order both to guard against the infirmity of his own temper, and to prevent others from suspecting his impartiality.

It is also to be regretted that the General Term, in order still further to soothe their erring brother, should have thought it necessary to indulge in imputations on Munsell's conduct and motives. His character and conduct were in no way before the General Term, and for the aspersions on them made by Judge Daniels and Judge Davis there was not, in the evidence laid before Judge Van Brunt, the shadow of foundation. Munsell did nothing which a perfectly honorable and well-meaning man ignorant of the law might not have done. The production of the diagrams of Rossa's office in court by the District Attorney was a plain intimation to the jury that it was considered important by the prosecution that they should have a clear idea of the locality in which the crime was committed. Now, a diagram is merely a poor substitute for ocular inspection, or, in other words, a piece of imperfect convenience. No sensible man in any serious transaction would rely on a drawing when he could see the original. It is only as a matter of convenience that the jury was not taken to see Rossa's office. It was, therefore, most natural that an impulsive man, ignorant of the law and in the absence of caution from the Court, should, finding himself close to the *locus in quo*, run in to take a look at it.

This is all that Munsell did. There is nothing in his life or character to furnish ground for supposing his motives to have been bad. Nor was there anything in his subsequent conduct to raise such a suspicion, except his having tried to persuade his brother jurymen to acquit. Judge Daniels's observation, therefore, that "it exhibited the mind of the juror not to have been in that impartial condition which was necessary to enable him . . . to decide the case according to the evidence," we must, with great respect, take leave to regard simply as a sop for Judge Van Brunt. That act of Munsell's is not to be judged by rules of evidence, but by experience of human nature. He did nothing more than any rational man, called on to decide a dispute outside a court-room, would do if he could. In fact, the judges seem to have got into their heads a little of the Van Brunt notion that, having come to the conclusion through the aid of a technically illegal step that the prisoner ought to be acquitted, Munsell had no right to argue in favor of that view in the jury-room. In Judge Van Brunt's sentence sending him to jail, this was set out as if it constituted the gravamen of his offence, whereas it was no offence at all, and was nothing with which Judge Van Brunt had any concern whatever.

It is, of course, greatly to be regretted that such acts as Judge Van Brunt's can be committed with impunity in a community like this. In a more sensitive state of public opinion it would not pass unpunished. We print below an account of the impeachment of a Federal judge for abusing his discretionary power by imprisoning a man for a single day. But impeachment is too slow and expensive a process in this State to be attempted by a private individual without aid from the Bar.

THE PECK IMPEACHMENT CASE.

THAT Judge Van Brunt has made himself liable to impeachment by unlawfully imprisoning Mr. Munsell, can hardly be doubted. The case bears a striking resemblance to that of Judge Peck, of Missouri, against whom articles of impeachment were voted by the House of Representatives on the 24th of April, 1830. Judge Peck had imprisoned for twenty-four hours, and had suspended temporarily from the practice of his profession, one Luke E. Lawless, an attorney, for alleged contempt of court. Lawless, by the way, had been a soldier, and had fought on the French side at Waterloo. The contempt consisted in the publication of an article in a newspaper reviewing an opinion delivered by the Judge in a land case. The Judge had issued an attachment against Lawless, brought him into court, abused him for two hours in passionate and indecent terms, and committed him to jail for one day. Lawless had been released on a writ of habeas corpus before his term of imprisonment expired. He sought first to secure redress for the outrage committed upon him by proceedings at law; but, not succeeding in this, he went to Washington city and presented the facts to the House Judiciary Committee, of which Mr. Buchanan, of Pennsylvania (afterwards President), was Chairman. The Committee, after hearing witnesses who were cross-examined by Judge Peck in person, and after receiving from him a written statement of the case, reported articles of impeachment by a unanimous vote. The articles were presented to the House by Mr. Buchanan, who supported them in a very able speech, delivered on the 21st of April. In his exordium he said:

"I trust I am one of the last men in this house or in this country who would seek in the remotest manner to interfere with the constitutional independence of the judiciary. I know that it is the great bulwark of our rights and liberties, and that this house will never use its power of impeachment as a means of infringing upon an institution so sacred. But when an individual elevated to the high and responsible rank of a judge, forgetting what he owes to his own dignity, to his country, and to the liberties

of the people, shall by arbitrary and oppressive conduct prostrate the rights of a citizen of this Republic, it is fit and proper that he should be held up as an example and made a victim to the offended majesty of the laws. It is my deliberate conviction that such has been the conduct of Judge Peck, and I may add that similar sentiments were held by every member of the Judiciary Committee."

He then proceeded to state the facts which had led to the imprisonment of Mr. Lawless, maintaining that that person had a perfect right to discuss in the public prints any opinion of any judge after the case at bar was concluded, and to use any language he saw fit to use, subject to an action for libel and trial by a jury if his words were libellous, but that in fact the language used by Mr. Lawless in this publication was perfectly respectful, and in notable contrast to that of the Judge himself. Upon the temper displayed by Judge Peck he made the following comment, and the reader will observe how closely it fits the conduct of Judge Van Brunt:

"He (the Judge) was much excited, his manner was very warm, and he was occupied two or three hours in delivering his opinion. And what was its whole tenor? Instead of the calm, dignified, and impartial manner which becomes a judge upon all occasions, and particularly when he is himself one of the parties, we find him heated, acrimonious, and severe. He often used the words 'calumniator,' 'contemptuous,' 'slanderous,' 'libellous,' as applied to Mr. Lawless and his article. He even forgot himself so far as to say that in China the house of such a calumniator would be painted black, as an evidence of the blackness of his heart, and as a warning, that the whole world might avoid him. . . . I admit that we ought not to impeach a judge merely because his conduct has been illegal. All must agree that this may be the case, and yet he may not deserve such punishment. But illegal and oppressive proceedings, accompanied by violence of manner, by passion, and by the appearance of revenge, present a very different case, and give birth to very different conclusions."

Mr. Buchanan then argued that if Mr. Lawless had been guilty of any wrong, he was entitled under the Constitution to a fair trial by a jury, whereas Judge Peck had combined, as Judge Van Brunt did, "in his own person the offices of the prosecutor, the grand jury, the petit jury, and the judge." At the conclusion of Mr. Buchanan's speech the House voted the impeachment by 123 yeas to 49 nays.

When the case came to trial before the Senate, sitting as a high court of impeachment, the principal argument in support of the charges was made by Mr. McDuffie, of South Carolina. The speech made by this distinguished orator was one of the noblest forensic efforts of his career. His peroration is summarized in the following words in Benton's Abridgment:

"A wise man of antiquity, upon being asked what is the best form of government, justified the character which he had received by the answer that that was the best in which an injury done to a single citizen was felt as an injury done to the whole community. There was not a man that ought not to make the injury done to Luke E. Lawless his own. We were told that he was an Irishman. He deserved infinite credit, when ordered to prison, for the moderation he exhibited, for not dragging the tyrant, as Virginius dragged Appius, from the throne. As God was his judge, he believed that if the case of Mr. Lawless had been his, if he had been ordered to prison and his family deprived of the means of subsistence, he should have dragged him from his seat on the bench. He had his whole life lived in abhorrence of despotism in every shape, whether in a judge or in an overseer of slaves, and he considered that this petty judge had been guilty of tyrannical conduct which would have disgraced a slave-driver."

The arguments before the Senate occupied several days and engaged the public attention to the exclusion of every other subject. The honors of the debate were shared in about equal measure by Mr. McDuffie and Mr. Storrs (of New York) for the prosecution and Mr. Meredith and Mr. Wirt for the defence. The case resulted in the acquittal of the Judge by a majority of one vote —21 Senators voting guilty and 22 not guilty. Two-thirds were required to convict. The point which is supposed to have saved Judge Peck from the penalty of impeachment was, that there was then no statutory limitation upon the power of judges of the United States Courts to punish for contempt. Such a law was passed immediately after the trial and in consequence of it. Another consideration which had much weight was, that Mr. Lawless had not been much harmed by the action of the Judge, while, on the other hand, a conviction by impeachment would have been irretrievable ruin to Judge Peck and his family. He was almost blind, and could not have earned a living at any other occupation. He wept copiously during the trial, and Mr. Wirt pictured his distress and that of his gray-haired father in the most moving tones. Although he escaped the penalty which he richly deserved for his assault upon the liberty of a citizen, the peril in which he had stood for nine months while the proceedings in his case were pending, cured him of his bad temper, and put an end to his arbitrary and brutal behavior, and taught a lesson to the judiciary which has been effective up to the present time, Judge Van Brunt's assault upon Mr. Munsell being the first and only repetition of it, we believe, since that famous and now almost forgotten trial.

THE ROYAL ACADEMY EXHIBITION.

LONDON, May 18.

IT is several years since I saw an exhibition of the Royal Academy, and I was ill prepared for the great deterioration in almost all the leading painters which I find to have obtained. With very few exceptions, the popular artists have grown more reckless and mannered in execution and vapid in choice of subject. The dominant impression which my visit left was one of intellectual imbecility and technical decay. Huge canvases are devoted to subjects which are worth, in point of thought, no man's study, and the general qualities of execution and color are cruder, looser in intention, and more vulgar and commonplace, than anything I can recall of the years gone by, when English art seemed stirred up by the influences of the great naturalistic revolution, and the enthusiasm for sincere and exhaustive study which was the result of Ruskin's teaching. The brush-work is coarse and unfeeling. Weak straining for the appearance of masterly execution, which only results in feeble and turgid technical qualities; flimsy rendering of all secondary portions of the theme; exaggerations of local color in place of exalted scales of color, and almost entire absence of that firm and thoughtful, if sometimes forced and grotesque, rendering of form which one used to find so much of in the rising men—these are what one sees usurping the places of honor and almost the entire line. The President, Sir Frederic Leighton, though no colorist, and never distinguished for the great executive powers, retains the studious and polished manner which made him twenty-five years ago the hope of the more earnest art-lovers of England; and his study in half-length of a gracious woman,

"Serenely wandering in a trance of sober thought,"

is, I think, the most scholarly picture in the exhibition. Sir Frederic never painted flesh well, but his drawing is careful and his work always refined.

Alma-Tadema, also, preserves the elaborate and thorough manner of painting which has always made him a favorite with the English public, although his singular archæological fancies are in my opinion the means of diverting him from his true line of art—namely, the straightforward objective painting in which his countrymen are the first in the modern schools. The better the archæologist the worse and colder the painter, and Alma-Tadema's pictures are a compromise between the two—not good archæology, and the worse as art for all the limitations and rules the archæology compels him to follow. The motives of antique life are not germane to the mind of the modern realistic artist, who must, if his work is to be of any permanent value, deal with themes which have some roots of sympathy in his own life. The purely ideal classicism is free from the limitations of archæological science, and depends entirely on the sense of beauty or decorative quality, for its value; but art and science have so little in common that any authority exercised over the former by any branch of the latter, even the natural sciences, is certain to develop a frigidity which is fatal to the best qualities of painting. Alma-Tadema would probably surprise himself and excite a genuine enthusiasm in English Philistinism if he would give the same care and admirable painting of details, with his exquisite sense of realistic color, to some subject which was in entire sympathy with the life we live. In the chief picture of this exhibition, a reading from Homer, the painting of all the accessories is as skilful as anything he has ever done, but his characters are of the purest *pose plastique*, which is but the necessary consequence of want of genuine sympathy with the subject. A man who deals with a dead past will always be a lifeless painter, and may expect the fate of the classicists of other times—David, Poussin, Lesueur, etc. The great and true artists, even when they dealt with antique themes, made no attempt to tie their hands with archæological traditions, which must always be incomplete, and are in any case mere matter of curiosity. Alma-Tadema will never do himself justice until he frankly abandons the purlieus of the Museum.

It is hardly edifying to an American public to hear the details of pictures which I hope they may never see, and I shall confine myself mainly to generalities; but there are a few pictures which show that their painters have not given up to the demoralization of the Academy; for, to tell the truth, the Academicians are generally the worst sinners, as might be expected of men who live by a public which accepts the diploma of the Academy as a guarantee of all the virtues, and asks for no further improvement. Of the whole catalogue of the R. A.s, the two already mentioned are the only ones who paint as well as they used to do. In portraiture, which used to be the strong arm of the Academy, there is little but vulgar exaggeration of executive vigor, affectation of masterly handling, and flimsy breadth, as if the little men were all straining after Velasquez. In this, Millais is the first sinner, and doubtless the leader of the fashion. He could not paint such rubbish as Sant's, nor can he divest himself wholly of his great power of handling and love for brilliant color; but there is little in any of his contributions which does him justice, and this little is accompanied with much of what can only be called daubing—reckless smearing of haphazard color, mere background work; and even his draperies are flimsy and poor. Ouless is the only one of the Academy portraitists who maintains the dignity of the English portrait school; for Watts, who sends a single half-length, not of his best work, is not of the traditional school at all. Ouless is a painter of great vigor, and, if somewhat influenced by the prevailing standard of execution, is excellent in color and large in modelling, with an invariable dignity and simplicity which I can find in none of his rivals, leaving Watts again out of the comparison. Herkomer's portraits are the most exaggerated and vulgar of the work of the immortals—powerful in handling, but without refinement either of drawing or color.

The most remarkable contribution to the exhibition, though in a very humble vein, is the "Dog in the Manger," by Walter Hunt, an animal subject. Two calves, coming into a stable, find a little spaniel sleeping in the manger, and do not know what to do in the matter. It is in its vein singularly felicitous, and painted with great purity and a facile delicacy of touch which contrasts favorably with the dominant coarseness of execution.

The picture which has been generally regarded as the success of the exhibition is "The Salon of Mme. Récamier," by Orchardson, who may, perhaps with Poynter, be classed among the painstakers beyond those mentioned, though *me judice* Orchardson's manner errs by a vice scarcely less obnoxious than the coarseness of the mass. His foible is the mistaking for good color a yellow tone that suggests treacle, and for good execution a semi-transparent method of painting which suggests the vehicle more strongly than the pigment. In this particular picture the vices of manner are dwarfed by the flagrant absurdity of the matter. Mme. Récamier reclines on a sofa in the extreme corner of her salon, in the attitude of a *poseuse* with whom the arrangement of a *tableau vivant* has just commenced, and who waits for the rest of the characters to take their places, while they, in all the attitudes of some arrested action, seem to have been stopped in their movement by the signal of a photographer, and told not to move till the lens is covered. There is no indication of conversation going on, or of listening; no ensemble of motive in the various figures: it is, to recur to the only comparison possible, as if the whole assembly had been photographed, and had been long enough about it to feel very stiff and awkward. It quite makes Alma-Tadema's assemblies seem living and unconscious in comparison. I do not remember to have seen a picture in which there was such utter absence of real dramatic feeling.

Even in landscape, which the English have always claimed as a special possession of the race, the Academy has gone greatly astern. The only good landscape by a member of the Academy, to my mind, is one by Leader, associate, the Academician landscapes being far below the outside standard. Even Brett, who used to be the realist *par excellence* of English landscapists, has gone into a vein of exaggerated local tint without reference to the harmonies of tone or color, which makes his picture seem like a model of a landscape in confectionery—no breadth, no tone, no unity—a very eruption of the color sense, morbid and violent without being strong. Even Henry Moore, who, ten years ago, was the most thorough painter of the open sea, with all its subtle phenomena, that England has ever produced, has sunk to a bald conventionalism no better as sea painting than Hook's, and worse in color. To have won public favor means now almost certain decadence, and Moore is not even an associate, but merely a favored exhibitor. A picture of extraordinary quality is the "Salt-house Dock, Liverpool," by Atkinson Grimshaw, a name new to me. The scene is one of those dreary quays which are the glory and the gloom of Liverpool, with shipping and the most unpicturesque buildings which all know who have had the vexation of landing at that port; with the night coming on, the street lamps gleaming along the wet pavements, and the moon lighting the sky from the side—not visible, but shown by the faint first illumination of the clouds as she comes on the scene. As a rendering of a most difficult effect and poetic treatment of most unpoetic fact, it is the most felicitous piece of work in the exhibition, and one of the most exquisite studies of moonlight I have ever seen. Another excellent and thoroughly artistic extra-Academic picture is "A Fish Sale on a Cornish Beach," by Stanhope A. Forbes—a sea-coast scene in a warm, harmonious gray, painted with a forcible directness of execution which is in striking contrast to the simulated vigor of most of the Academicians' work. Two figure pictures by non-Academicians deserve special mention: "White Hydrangea," by Albert Moore, a delicious study of a classically draped figure in delicate tints, in the best vein of decorative art; and a powerful life-sized "Pied Piper of Hamelin," by A. T. Porter, thoroughly realistic, as befits the subject, but with a weird quality of design that is notable even in a subject so often drawn and painted.

Looking over my marked catalogue, I find that, with very few exceptions, the most ambitious pictures are distinguished by their utter poverty of intellect, and those by the older Academicians even more so than those by the outsiders. The pictures of J. R. Herbert, R. A., which are perhaps the very worst, have the excuse of extreme age and decay of mental powers; but for such pictures, if not for such painters, the Academy ought to provide an hospital, that the canvases may not occupy space which they do not deserve, and which is wanted for the rising and struggling men who cannot claim by right a place on the walls. There are huge canvases by Frederick Goodall, R. A., of which the most preposterous is a life-size Arab on a camel racing across an acre of canvas representing a moonlit desert strewn with skeletons and bones. Crude, hard, and trashy, with an elaborate scarabæus crawling in the near foreground, this picture is called "Gordon's Last Messenger"—a shallow bit of claptrap, spread to catch the excited patriotism of the day. Frith's "John Knox at Holyrood" is hardly better than Herbert's work; and even Edwin Long, so late admitted to the supreme honors of the Academy, has begun to take on the indolent ways of his elders. One might have hoped that his European training would have held out longer. Colin Hunter's much-trumpeted "Niagara," almost the size of nature, is the worst and least liquid caricature of the rapids it has ever been my bad fortune to see It has just the limpidity of a bad mosaic pavement.

Of what our own painters have sent, I shall speak in connection with the minor exhibitions.

W. J. S.

ÉLÉONORE D'OLBREUZE.—II.

PARIS, May 20, 1885.

SOPHIA DOROTHEA, the young daughter of the Duke of Zell and of Éléonore, his wife, had been promised to the Prince of Wolfenbüttel. When this young prince was killed at the siege of Philippsburg, Sophia Dorothea was only ten years old. She was well educated, handsome, and one of the richest heiresses of the Empire. There were many aspirants to her hand. At the death of the Duke John Frederick, who had no children, the ambitious Bishop of Osnabrück became more powerful than his eldest brother; and in order to complete the union of Zell and Hanover, a marriage was arranged between Sophia Dorothea and Prince George Louis. William of Orange, an old friend of the Dukes of Brunswick, advised that the title of Duchess should be recognized in Éléonore. Louis XIV. gave the same opinion. George William and his brother became friends, as of old—"ein fürstliches Dioskuren-Paar," as Leibnitz said. Even the Duchess Sophia became more civil to the Duchess of Zell.

The negotiations relative to the marriage dragged on a long time, as the pretensions of George William were exorbitant; finally, all matters were arranged: "At last, my brother," wrote Éléonore, on Oct. 8, 1682, to M. d'Olbreuze, "my daughter is affianced to the handsomest and wealthiest prince in Germany. He is the heir of this house, the Prince of Hanover, the nephew of my husband." The young bride brought 150,000 florins, and received a *dot* of 50,000 florins a year. The marriage took place at Zell, on December 2, 1682, without any ceremony; and a few days after, the young couple entered Hanover. Sophia Dorothea was still a child, being only sixteen years old; George Louis, her husband, was only twenty-two years old. He had already gone to the wars; he was odd, taciturn, cold, proud, tenacious; he cared for nothing but for the pleasures of the chase and for the company of women—"provided he could change them often," says Ilten. He showed at once a great antipathy to his wife. His mother, Sophia, had taught him to despise her, to consider Éléonore as an adventuress and an upstart, and he had married Sophia merely for her money. Sophia showed no kindness to her daughter-in-law; she never could bring herself to treat her with any sort of attention. Sophia was well received only by Ernest Augustus. A child was born ten months after the marriage. George spent a part of his first year in making war against the Turks. When he was at court, he lived publicly with his old mistresses. Sophia, though she had become a mother, was no better treated; she was alone, and almost abandoned in a court where she felt every day that she was neglected and despised.

During the winter of 1685, Sophia Dorothea made a journey to Venice with her husband and her father-in-law. She affected to accept the homages of two or three Italian princes, and years afterward the Duchess of Orleans was still indignant at what she called her coquetry. George Louis left her alone, and amused himself in Florence and Naples in the company of Ilten. In the spring they all returned to Hanover; but the Prince followed the Duke Charles of Lorraine in his battles against the Turks. Soon after his return Sophia Dorothea had a second child. Life became intolerable for her in Hanover; the education of her children was given to their grandmother. The Prince lived publicly with his favorites, first, Mme. de Weyhe, the sister of his father's mistress, then with Mme. de Schulenburg, Countess Kielmansegg, etc. Sophia was surrounded with enemies; the Duchess Sophia had ceased to see her; her only consolation was an occasional visit from her father and mother.

On the 29th of February, 1688, we hear for the first time of the Count Koenigsmarck. He appears in a fancy ball given by the Duke Ernest Augustus. His mother was acquainted with the Duke and Duchess of Zell. It has been said that almost from a child he had had a great attachment for Sophia Dorothea. It may be so; he certainly had become a very dissolute young man, noticeable for his extravagance in many countries. Stepney, the English minister in Dresden, writes to one of his colleagues in Hanover: "I knew him in England, in Hamburg, in Flanders, in Hanover; he was a true libertine, and I always avoided him." Koenigsmarck had entered the Hanoverian army as colonel. He saw Sophia Dorothea deserted, and he undertook to console her. Leibnitz has left a note on the margin of a pamphlet kept in the archives of Hanover, in these terms: "The Electress and the Princess have not seen each other for two years, for this reason: when there was an appearance of fire at the opera, Count Koenigsmarck quickly screamed, 'Save the Electoral Princess'; and as the chamberlains were not there immediately, in the darkness and confusion, the Count, taking the Electress for the Princess, gave her his hand to bring her out. Then, having perceived his error, he left her suddenly to run to the Princess, and as the others had seen the Count conducting the Electress, she found

herself alone, till Prince Maximilian, having perceived her, took her out of the crowd." This passage tends to show either that Koenigsmarck had made no secret of his preference for Sophia Dorothea, or that, in a moment of excitement, he could not control his instincts. This incident took place two years before the events which cost him his life; it may therefore be inferred that for two years from the time when the electoral dignity was conferred on the Duke of Hanover, Koenigsmarck became a sort of *cavaliere servante* of the Princess. He continued, however, to lead his usual disorderly life.

No precaution was taken against him. Nothing would have been easier than to send him to some distant garrison: it seemed as if the Elector wished to bring matters to a crisis. George Louis had a visit to make to Berlin; before leaving, he told his wife that he would ask her father to give his consent to a separation. Sophia went herself to Zell, and begged her parents on her own behalf to consent to this separation. Her father refused; she returned to Hanover and saw Koenigsmarck again—she saw him every day, and he often remained with her very late in the evening. Madame de Platen, the mistress of the Elector, who hated Koenigsmarck, exposed the conduct of Sophia Dorothea. On the 1st of July Koenigsmarck was seized as he left the palace, and was never seen again. One is shown still, in a passage of the castle, a mark made, it is said, by his sword; but the mystery of his disappearance has never been unravelled. The papers of Sophia and of the Count were seized; Mademoiselle de Knesebeck, the Princess's lady in waiting, was arrested. Nothing of importance was found. The Hanoverian agents were instructed to deny any sort of relation between the disappearance of the Count and the coldness which had lately been observed between the Electoral Prince and his wife. The Countess Aurora of Koenigsmarck, who was all-powerful at Dresden, moved the court of Saxony against Hanover; but Hanover persisted in refusing to give any explanation of the Count's disappearance.

Sophia Dorothea was sent to Ahlden, a small castle which was designated as her residence. She was treated there as a prisoner of state, and kept in ignorance of everything. She was interrogated by the ministers of Zell, but denied having ever allowed Koenigsmarck to remain in her apartment at night; she admitted that "appearances were against her." The account of this inquest has been preserved in Hanover. It was agreed that a separation should be pronounced, and an ecclesiastical tribune was named in order to settle the conditions of the separation. The divorce was declared; the name of Sophia Dorothea was struck out of the public prayers. She received a pension, and was to remain at Ahlden. She did remain there for thirty-two years!

One can easily imagine the effect which these events produced upon Éléonore; she had lost, at least partly, the great empire which she had always had over her husband. Age had destroyed her charms; the Duke perhaps could not at heart forgive her for the dependence in which he had placed himself with regard to his brother. Weak as he was, he needed to be governed, but he had found a new master in Bernsdorff. The fate of Sophia Dorothea made him feel that his *mésalliance* was punished by destiny. His sister-in-law Sophia worked upon all his feelings, and triumphed over Éléonore. She made herself extremely important by the great part which she took in the question of the English succession. In the winter of 1698-1699 William III. made a visit to Zell. The French Minister wrote: "Madame the Duchess of Zell will try to persuade the King to speak in favor of the Duchess of Hanover; but the ministers, who are not the friends of the mother nor of the daughter, have so completely worked upon the Duke that it is to be feared that he will ask the King of England not to meddle with the affairs of this Princess." Nothing in fact was changed, after the visit of William, in the existence of Sophia Dorothea. William left Hanover, promising to assure to the posterity of the Electress Sophia the right of succession to the throne of England. Éléonore had used her good offices in this negotiation. William liked her and was very devoted to her husband, but he could do nothing for the prisoner of Ahlden.

The Duchess of Zell was the only person who visited Sophia in her prison. Sophia lived in a decent style; she had a few attendants, but armed men were constantly watching the doors of her habitation. She could only drive with these guards on horseback. In vain did Sophia write penitent and humble letters to George Louis and to the Electress Sophia; nobody could visit her without special permission. The Archives of Hanover have preserved these permissions: they were chiefly given to French noblemen and their wives, who had found an asylum in Zell. The Duchess Éléonore took much interest in the study of religious questions: "Mme. la Duchesse de Zell," writes Leibnitz to Bossuet, "has read with particular interest your 'Histoire des variations des Églises protestantes.'" She was a good Protestant, but felt more indulgent toward the Catholic Church than did Leibnitz and the Electress Sophia. It was said at one time that she intended to renounce the Reformed Church, but she remained in it to the end. She took a constant and active interest in the Huguenots. She sometimes was able to help them in France, as she had some influence with Gourville, and even with Mme. de Maintenon (who was an aunt of her sister-in-law, Mme. d'Olbreuze). She had inherited some lands in Aunis and Saintonge, and would never sell them. She felt as if they were her last tie to France.

In the year 1703 George William celebrated his eightieth birthday. He died some time afterward. He left in his will to his widow a good revenue, with a palace at Lüneburg. The Duchess of Zell transported her little court to this new place. She was obliged to leave the palace where she had lived for forty years. She was away from her daughter, in a dull, fortified little city. She fell ill, and it was thought for a while that she would not long survive her husband. She was able, however, to go to Hanover for the marriage of her granddaughter, Sophia Dorothea, with the Royal Prince of Prussia. The mother of the bride learned of the marriage at Ahlden, and was not allowed to come to Hanover. Éléonore returned at once to Lüneburg, and resumed her monotonous existence. In 1714 the Elector George Louis was called to the throne of England. Éléonore made a new effort to obtain permission for her daughter to leave her prison. Public opinion in England was moved by the fate of the Princess, who remained shut up in Germany. The Prince of Wales, the Queen of Prussia, interfered in her behalf; nothing could move the King.

Éléonore was allowed, as she became older, to inhabit the castle of Zell, which was nearer to the prison of Sophia Dorothea. She spent there her last years. She lost her sight almost completely, and could only write in very large characters. Her charities, in Germany and in France, had no limit but her revenue. She died on the 5th of February, 1722, and even the vengeful Duchess of Orleans was obliged to write: "The Duchess of Zell has had a fine death; God grant that I die as well!" and she added: "It must be said that the Duchess of Zell had many qualities." She was, indeed, a woman of remarkable intellect, and of a remarkable virtue. She left to Sophia Dorothea 60,000 florins, the estate of Olbreuze, all her jewels, her furniture, and her silver. She was buried at mid night, without any pomp, having in her will recommended this simplicity. When the unfortunate Sophia died, her remains were transported to Zell. Mother and daughter are buried in two simple tombs, without any ornament or inscription, in contrast with the magnificent sepulchres of the Guelph princes.

Correspondence.

A CORRECTION.

To the Editor of The Nation:

Sir: In your issue of May 28, you announce *us* as the publishers of a pamphlet "purporting to contain 'Opinions of the Press' on Mr. Scudder's 'History of the United States.'" In the same article you denounce us for selecting and joining extracts improperly.

Will you do us the justice to correct this statement in your next issue, as we are not the publishers of the pamphlet, nor of the History referred to?—Very respectfully yours,

E. H. Butler & Co.

Philadelphia, June 1, 1885.

[We regret the error, which occurred in a letter from a correspondent. The publisher in question is Mr. J. H. Butler, of the same city. —Ed. Nation.]

THE IOWA PROHIBITORY LAW.

To the Editor of The Nation:

Sir: Your statement in your issue of May 14, 1885, page 393, that the Iowa prohibitory law has been held defective, is incorrect. The question was raised and argued, but the point was not sustained, the Court holding that the record in the journal of the House was sufficient.

The statement that the law had been declared unconstitutional was made, however, in the local papers at the time, but was corrected by Judge Louffborrow over his own signature. You were probably misled by the first account.

Truly yours, J. A. Phillips.

Dunlap, Iowa, May 25, 1885.

THE CLEVELAND APPRAISERSHIP.

To the Editor of The Nation:

Sir: Among the unfortunate changes made by the Administration, the removal of the Appraiser in the Custom-house in this city and the appointment to the position of Mr. J. C. Poe should be noted.

It is difficult to justify the removal of Mr. Begges on the ground of offensive partisanship. He was, before his appointment, a merchant in this city. He has held the position a long number of years, and has the advantage of long experience. The part he has taken in politics has been slight. The attention he has given the duties of his position has been close. He has deserved and has enjoyed the confidence of those who do business at the Custom-house.

On the contrary, the new Appraiser, Mr. J. C. Poe, has been for years the embodiment of all that is offensive in partisan politics. His occupation is that of a farmer. He has been at several times a member of the House of Representatives of the State. While at Columbus he has had a single hobby, which he has constantly ridden: he believes that the judges of our courts and the county officers should be paid salaries about equal to the wages of common day laborers. This has marked the horizon of his political opinions. On other questions he has been con-

spicuously wrong. During the days of the greenback heresy he was one of its most loud-mouthed advocates. In short, he represents the most ignorant, most bigoted wing of the Democratic party here. His vagaries have been the laughing-stock of all intelligent men of both parties.

It goes without saying that he has no especial fitness for the duties of Appraiser; in fact, it would seem that he is most distinguished for a total want of qualifications for the place. The friends of the Administration sincerely regret that such a blunder has been made. It is particularly discouraging to the Republicans who voted for Cleveland.—I am, very respectfully, yours, E. A. Angell.

Cleveland, O., May 25, 1885.

A QUESTION OF BOSTON GRAMMAR.

To the Editor of The Nation:

Sir: I am told that the difference between the Boston owl and the common owl is this: The common owl says "To who," while the one from the Hub says "To whom."

This remarkable devotion to the rule of grammar requiring the objective case after a preposition is also exemplified in the following extract from "The Bostonians," in the *Century* for April, p. 903: "He had the air of being but vaguely aware of whom Miss Chancellor, the object now of his wife's perpetual reference, might be."

Is this the true Boston use? If so, the rest of us will learn to say "To whom."

Kokosing.

May 26, 1885.

Notes.

'New York and the Conscription of 1863' is the taking title of a chapter in the history of our civil war, by Gen. James B. Fry, announced by G. P. Putnam's Sons, who will also begin a series of "Military Monographs" with an essay on 'Our Sea-Coast Defences,' by Lieut. Eugene Griffin, U. S. A. They have in press the following novels: 'A Social Experiment,' by A. E. P. Searing, and 'A New England Conscience,' by Belle C. Greene.

A "Riverside Paper Series" of summer novels, old and new, beginning with Hardy's 'And Yet a Woman,' will be issued during the present season by Houghton, Mifflin & Co. The same house will publish immediately 'Russian Central Asia,' by Henry Lansdell, author of 'Through Siberia.'

The Perine Engraving and Publishing Company have ready 'The History of New York City,' by Benson J. Lossing, illustrated.

Another of the volumes—the third—of "Tales from Many Sources," rapidly published by Dodd, Mead & Co., borrows from William Black, from the author of 'John Inglesant,' from E. M. Clerke, and from sundry English magazines.

Scott's 'Tales of a Grandfather,' abridged by Edwin Ginn, and the 'Swiss Family Robinson,' edited by J. H. Stickney, continue the series of "Classics for Children" which Ginn & Co. issue.

All persons engaged in directing elementary experimental work in physics will welcome Glazebrook and Shaw's 'Practical Physics,' a book of 487 pages, recently published by Appleton & Co. The authors, who are demonstrators at the Cavendish Laboratory, indicate what experiments are suitable for beginners, in order to arrive at a clear understanding of the general principles of physics. The selections all seem good, and the plain and full directions cannot be too highly commended. Theoretical work is given or not, according as the authors have thought necessary. Whether actually needed or not, no one can regret the presence of chapters giving the theoretical basis of the experiments on magnetism and electricity. Statical electricity is entirely omitted. There are good introductory chapters on Units of Measurement and Physical Arithmetic. We have noted only a few errors, and these generally unimportant. On page 386 we have what purports to be the definition of a current of electricity, but it is really the definition of the *strength* of a current.

Authentic views of tornadoes in action are rare enough to give special value to the sketches contained in No. 19 of the Signal-Service Notes. Sergeant Glenn, being himself at Huron, Dakota, on August 28, 1884, witnessed the moderately destructive but very interesting tornado of that date and locality. His five drawings suggest, now a wheat-stack with a broom sticking from the middle, now a balloon which is being lost in the clouds, having parted with its car and all its gearing. Sergeant Glenn's discussion leads him to recognize electrical energy in the force of this phenomenon.

Judge Daly has a genial sketch of the professional life and character of the late Charles O'Conor in the *Magazine of American History* for June. Good anecdotes abound in it, one hinging on the fact of the great lawyer's descent from the last King of Ireland. After a visit to that country, Mr. O'Conor began to spell his name with a single *n*—because, as the Judge suggested when asked the reason, his royal forefathers had done so. Yes, said a bystander, the Irish kings had always been so poor as never to be able to make both *n*'s meet. We must also mention an interesting article on Asa Packer and the Lehigh University. Among the Notes is one from Dr. S. A. Green, instancing the use of the word "ticket" in a political sense by one of the Franklin family as early as 1766; and another defending the spelling of "doughface," a word of John Randolph's coinage, against an alleged "doeface."

Classified "Reading Notes on Education," compiled by Mr. John Edmands, of the Philadelphia Mercantile Library, accompany the April Bulletin of that institution. The list of books is purposely made exclusive of those mentioned in Poole's Index under the same title.

The life and eminent services of the late Stephen B. Noyes are fitly commemorated in the twenty-seventh annual report of the directors of the Brooklyn Library, to which Mr. Noyes gave so much distinction by his admirable catalogue; as well as in the *Library Journal* for May.

The war series in the *Century* finds a modest parallel in the *Southern Bivouac* (Louisville: B. F. Avery & Sons). In the June number, the battle of Franklin (Hood's Tennessee campaign, chap. 7), is related, with the aid of a map and of several portraits, by Major D. W. Sanders. Judge Thos. H. Hines tells of General Morgan's escape from the Ohio penitentiary, which he himself planned. Mr. Paul Hayne gathers together a number of Confederate war-songs, and gives brief biographical sketches of their authors.

We lately had occasion to refer to the actor Forrest's last sitting for his likeness. The result so pleased him that he resolved never to sit again, and he never did. A copy of this fine photograph, mounted on a large panel, and showing two-thirds of the figure, has been sent us by the artist, Mr. F. Gutekunst, Philadelphia. The negative seems to have been admirably preserved.

A book by Georg Ellinger, recently published in Berlin under the lumbering title, 'Das Verhältniss der öffentlichen Meinung zu Wahrheit und Lüge im 10., 11., und 12. Jahrhundert,' endeavors to prove, by quotations from contemporary chronicles and other writings, that in those centuries lying was not deemed dishonorable, but a light and venial offence at its worst; that perjury was readily excused when prompted by laudable motives; that oaths and other solemn pledges were regarded as binding only in a literal sense, and even treachery and wilful deception were not unconditionally condemned. It is hardly necessary to say that the literary remains of those remote mediæval times are scarcely ample enough to give full support to sweeping generalizations of this kind.

A library might be gathered, considerable in size and of great range as regards subjects, consisting solely of books by royal authors. The latest addition to such a collection would be a work on 'The Wars of Cæsar Judged from the Standpoint of Modern Strategy,' by the eldest son of the Crown Prince of Germany, being the substance of some lectures delivered by him at officers' meetings. It is possibly significant of the future of the two rival houses of Hapsburg and Hohenzollern that the Crown Prince of Austria should write books of travel and interest himself in geographical questions, while the presumptive heir of the German crown devotes himself to the study of military science.

A society has just been formed in Germany, with a capital of 1,200,000 marks, for the purpose of exploring and colonizing the recently acquired territory in Southwestern Africa. To the same end Doctor Fischer, a resident of Zanzibar for the past seven years, as well as a traveller in the interior, has published a book entitled 'More Light in the Dark Continent: Views on the Colonization of Tropical Africa, with especial reference to the Zanzibar Country' ('Mehr Licht im dunkeln Welttheil,' etc.). A report of his recent unsuccessful attempt to pass through Masai Land, with illustrations, ethnographic tables, and a map, has also appeared.

The admirable series of facsimile reproductions of early illustrated books issued by Hirth, the Munich publisher, under the title "Liebhaber-Bibliothek alter Illustratoren," now comprises ten volumes. The latest additions to the set are Holbein's "Todtentanz" and "Bilder zu dem Alten Testament," and Dürer's "Kleine Passion." The Holbeins are reproductions of the Lyons 1538 editions. The "Little Passion," as reproduced by Hirth, bears the imprint "Nürnberg bei Albrecht Dürer, 1510." It would be interesting to know whether Hirth has discovered a complete edition with the date of 1510, or has simply reproduced the plates which were thrown off and issued separately before the publication of the series in book form in 1511. Willshire, in his 'Introduction to the Study of Ancient Prints,' expresses the opinion that an edition without text and probably without title was published either before the 1511 issue or not long after its appearance.

The newspapers and their sellers are at loggerheads in Paris. In that city our omnipresent army of noisy newsboys is replaced in great measure by women who sit in ornamental little sentry-boxes ("kiosques"), and distribute the journals to a crowd of eager buyers. The newspapers are received on commission by the venders, two and a-half sous being allowed them on a fifteen-sous paper. At the end of the day they pay for what they have sold, less the commission, and return the unsold copies. But of late years they have devised a way for increasing their profit by letting out the papers for five sous, doubling their commission even if they only lend each paper once, and then returning the paper to the office as unsold. The reader gets his paper for five sous in place of fifteen, and rejoices, but the unfortunate publishers sell no copies at all. At last they have tired of lending their journals to the kiosque women to make money on, and their exceeding profitable commerce is to be broken up.

Prof. Daniel Schenkel, who died near the close of last month, is known in this country chiefly as

editor of the 'Bibel-Lexikon' (5 vols., Leipzig, 1868-75) which goes by his name, a work to which many of the most famous Biblical critics of Germany contributed. His independent writings are, however, also highly esteemed in the theological world, among them, 'Das Wesen des Protestantismus' (3 vols., 2d ed., 1862), 'Die Reformatoren und die Reformation' (1856) and the more liberal 'Christliche Dogmatik vom Standpunkt des Gewissens' (2 vols., 1858-59) and 'Das Charakterbild Jesu' (4th ed., 1873). As a champion of congregational autonomy against hierarchical tendencies, and especially as author of the last-named book, he was involved in various theological controversies, which caused considerable commotion in Protestant spheres. He edited the *Allegemeine Kirchen-Zeitung* from 1852, and from 1859 the *Allegemeine Kirchliche Zeitschrift*. He was born in Zürich in 1813, became pastor at Schaffhausen in 1841, professor at Basel in 1849, professor and preacher at the University of Heidelberg in 1851.

By the acquisition of the Sachau collection of Syriac manuscripts, 320 in number, the Royal Library of Berlin is said to have raised its treasures in this field to a level with the British Museum and the Library of the Vatican. The collection embraces Bibles, commentaries, liturgical writings, hymns, patristic works, histories and legends, grammars, lexica, etc. A catalogue of the collection, with introductory dissertations, has been issued by the Royal Library. It includes an exhaustive report, dated July 24, 1842, by Captain, now Fieldmarshal, von Moltke, concerning some Syriac manuscript codices brought by him from Kurdistan and ceded to the Library. Probably the most valuable part of the newly-acquired manuscripts is Bar Bahlut's great thesaurus of the Syriac language.

—The June *Lippincott* begins with more of what the publishers' notice, kindly prefixed to the volume "for the convenience of editors who have not time to prepare notices," indu'gently calls the "life-like dialogue" of "On This Side." A more interesting piece is the "Letters from the Isthmus" of Panama, written by John Heard, jr., the young engineer who sent the letters from Sonora in a previous number. He does not appear to have found any mines which it would be worth while to work; but his sketches of the swampiness of the country, which makes one wonder that any one can live there, and the indolence of the people, which makes one wonder that they ever either raise or resist revolutions, and the alarming mortality of the Europeans engaged upon the canal, which would prevent any more coming there if it were not carefully concealed in France, are well worth reading. "What shall a Woman do when her Husband fails in Business?" gives good common-sense advice for a misfortune which is only too common in this country. If the impression left upon the reader's mind is that a woman can do very little under such circumstances, it is not the fault of the writer, but lies in the nature of things. Proper stress is laid upon the duty of the mother of small children to enter upon no profession that involves neglecting them, and more encouragement is given to hopes of saving wisely than of earning largely. The short stories are of fair interest. Two have a mystical tinge; one, "Pompeian Ida," opens with a supernatural strain, which modulates at the close, however, into the commonplace. The only historical article is, "With the Conquerors in 1870," by F. S. Daniel, who was correspondent of the New York *Herald*, and even that is concerned more with the difficulties of a war correspondent than with the movements of armies. It was perhaps suggested by Archibald Forbes's story of how he became a correspondent.

—*Harper's*, too, has "A Night with the Germans," an account of some part of the autumn manœuvres in Thuringia. In this the chief point noticeable is the often-praised German discipline, which must be something between the stolid obedience of the Russian and the occasionally disorderly *élan* of the Frenchman. There is also a Spanish-American article, describing Bogota, the least modernized of South American capitals, by reason of its inland situation. Its difficult access, which diminishes its commerce, has encouraged a love of letters and science that has won for it the title of the Athens of Spanish America. Mere isolation will never make a city literary, and no doubt the Bogotans owe much to their excellent climate. The city is nine thousand feet above the sea, and only four and a half degrees from the equator, which makes it at once cool in summer and warm in winter, the temperature varying little from 57 Fahr.; the clear air purifies the brain, and as the body has no struggle to sustain with extremes of temperature, students can give their whole force to thought. The *pièce de résistance* is certainly Professor Hill's "English in the Schools," which gives excellent advice to those who are trying to write English and to those who are teaching them. The pupils may not read it, but may get the good of it by transmission through their teachers, especially if the latter are induced to renounce what Professor Hill calls schoolmasters' English—as, for instance, the distinction between *that* and *who* or *which*, which pedagogues insist shall be confined, the one to restrictive relative clauses, the others to clauses which explain or expand the meaning of the antecedent. It was only last year that the editor of Cobbett's 'Grammar' triumphed greatly at catching his master tripping, and made an agreeable book almost unreadable by inserting in every instance what he thought the correct relative in brackets after Cobbett's mistaken one. Then there is the distinction between *each other* and *one another*, which is purely an invention of the schools, and the objection to ending a sentence with a preposition, which is contradicted by the practice of every idiomatic writer. The improvements in our methods of instruction which Professor Hill suggests, consist in giving children skill in penmanship, spelling, and punctuation as early as possible, so that when they come to write, their attention shall not be diverted from the thought by the mechanical part of writing; secondly, in exercising them in the formation of sentences before they are called upon for "compositions," so that when they are, that also shall be as easy to them as penmanship; and finally, to impress upon them that the main thing is to have something to say and to say it intelligibly and naturally. The corollary from this last point is, that boys should not be asked to write upon vague subjects like Virtue, Friendship, etc., about which it is impossible that they should have anything to say. This is old advice, but it ought to be impressed continually by every school superintendent on every teacher of English composition, for such subjects are continually given out. Professor Hill also urges the advantage of requiring good English in translations and in examination papers. Of course the classical lesson will take a little longer, and the examination paper must be read with more care if the instructor is trying to teach English and Latin, or some other subject, at the same time; but it is worth the while.

—Another solid article in *Harper's*, but not quite so solid, is R. A. Proctor's "How Earthquakes are Caused." His answer is in substance, By gravity. All matter presses toward the centre of the earth; that pressure causes internal heat. The alternating high and low pressure of the ocean on the shore line due to tides bends the earth's crust as a workman bends a sheet of tin, till at last fissures are formed through which water, penetrating to internal cavities, is turned to steam, which, if it cannot readily escape, bursts out into some other cavity left by the constant contraction of the earth's core, and shakes the world. To these causes is to be added the strain put upon the earth's crust by varying atmospheric pressure; for earthquakes, like colliery explosions, are often observed to be preceded by marked changes in the barometer. Thus gravity of the earth, of water, and of air are the three causes, or rather the one cause acting in three ways. It is a pretty theory, and good till a new one comes to supplant it. The history in this number treats of Knoxville in the olden time, and is mainly a sketch of John Sevier, a determined Indian fighter, who saved the white settlers of Kentucky and Tennessee a hundred years ago from many dangers, perhaps from extermination. For travels, Mrs. Rollins carries us to a ranch in Texas and Mr. Millet to Jutland and Vierlande, giving very quaint glimpses of the villages of those Baltic provinces. He also writes on the Watts exhibition, making vigorous protest against hyper-realism and a defence of imagination in art. It is curious to find him urging that the painter must become early familiar with the tools and mechanical processes of his profession so as to be unconscious of them in his highes work, just as Prof. Hill gave similar advice to the writer. In Watts Mr. Millet finds an idealist pure and simple, who makes no effort "to imitate the natural effect of light or the external surface of things," a sombre colorist, a character-seeker in portraiture, a poet in his treatment of other subjects, who has shown our artists directions in which they might worthily use the great technical skill which they acquire in realistic schools abroad. Mr. Brander Matthews contributes a very clever story, an entertaining compound of pirates, type-writers, love, and detectives. The Editor's Easy Chair is good, as it always is.

—In the *Atlantic* Mr. Laughlin calls attention to "Our Pol tical Delusion," which is the popular belief that the President influences legislation. A very little observation of Congressional practice is enough to show that the committees, who report bills with the recommendation, almost always followed, that they pass or do not pass—or, with equally fatal effect for the bill and less trouble to themselves, do not report them at all—are the real legislators, or would be if, in point of fact, an able chairman did not usually rule his committee; and that the Speaker, who appoints both committees and chairmen, is the source of all power. A more ingenious system for separating power and responsibility could not easily be devised. The President is held responsible by the country, and yet has no influence except by an ingenious and very objectionable use of his patronage. If he can bribe Congressmen by giving offices to their constituents, and especially if he can bribe chairmen of committees, he may effect something; but otherwise Congress cares no more for his messages and his wishes than for the party platform. The remedy which Mr. Laughlin suggests is worse than the disease. He would take away the appointment of Congressional committees from the Speaker and give it to the President and Cabinet. Miss Pennell protests against the modern vandalism which destroys the feudal and monastic buildings of Europe, and gives by way of example historical sketches of two doomed edifices, Staple's Inn on Holborn, which is to give place to a freight depot, and the Church of Aracœli on the Capitolium, on whose site a statue of Victor Emmanuel is to stand. Mr. Parkman, too, protests against the Americanism that destroys our forests; and praises Professor Sargent's census volume upon them as "thorough, able, and con-

scientious, a public service of no ordinary kind." Mrs. Kate Gannett Wells sketches the by no means solitary life of the so-called "Quoddy hermit," William Fitz-William, natural son of Admiral William Owen, and himself finally Admiral. The details of primitive fisher and smuggler life on Campobello are curious; the island would be a good scene for a romance, such as Miss Jewett might write now that her "Marsh Island" is finished, or, better still, a Nova Scotian Charles Egbert Craddock, if one could be found.

—The continuation of Mrs. Oliphant's story is accompanied in this number with a sketch of her literary life by Mrs. Preston, in which full justice is done to her fertility, matched by Trollope alone, her quiet humor, matched by no present writer, the variety of character in her works—especially the rich stock of fools, to parallel which we must go back to Miss Austen—her imaginative sympathy with her personages, which makes her a good biographer as well as a good novelist, her charming style of telling a story, not accompanied, unfortunately, by skill in inventing one. Mrs. Preston even goes so far as to say that were her "constructive art equal to her analytic power, she might rank with the few great dramatists of the world." To justify so strong an assertion one would have to substitute "comedians" for "dramatists," for Mrs. Oliphant has given no proof of ability to deal with the intenser passions. The travels this month lead to two places equally unknown to the readers of the *Atlantic*, Astrakhan and a dime museum. Professor J. G. Wood looks at the latter with the eye of a naturalist, and he finds it perfectly respectable and stored with much that is instructive. It is fortunate that this is so, for they are increasing in number and will continue to flourish as long as they can make, as we have been told one of them did last year, $17,000 profits. But though Professor Wood's dime museums brought together Fijians, Zulus, Nautch girls, Cinghalese, and Earthmen from Central Africa, Astrakhan is more interesting. There is quite as great a variety of races in that gate between Europe and Asia, and besides we are introduced in Edmund Noble's account of his six months there to the family life of a remarkable household, that of a rich merchant of liberal opinions, with one daughter a reader of Darwin and Spencer, and another proficient in the old Russian dance. It is like a scene from Turgeneff or Dostoyevsky, and yet not the same, for the eye of a stranger sees differently from the eye of a native.

—Mr. Longfellow's "Morituri Salutamus," the poem written for the fiftieth anniversary of the class of 1825 in Bowdoin College, has been translated into Swedish by Prof. Hjalmar Edgren, and printed in the March number of *Ny Svensk Tidskrift*, published by Reinhold Geijer at Upsala. The meter of the original has been retained with fair success, but no attempt has been made to reproduce the rhyme. The translation occupies 286 lines as compared with the 285 lines of the original, but two original lines, for no apparent reason, are omitted. A singular error has been committed in translating the first stanza. Longfellow's words are:

> "'O Cæsar, we who are about to die
> Salute you!' was the gladiators' cry
> In the arena, standing face to face
> With death and with the Roman populace."

The plural "gladiators" here is changed by the translator to the singular number. By this change he loses in the Swedish a syllable in the second line, to obtain which he transfers the "we" to this line, and is thus obliged to supply its place in the first line by inserting the adjective "great" before 'Cæsar,' which weakens the verse. In a few other places the translator has not been entirely successful in reproducing the intricacies of the poet's verse, noticeably in translating the lines:

> "I cannot go—I pause—I hesitate—
> My feet reluctant linger at the gate;
> As one who struggles in a troubled dream
> To speak and cannot, to myself I seem,"

where the beautiful second line is not given in the translation, and the last couplet is weakened. But the work as a whole is conscientious.

—The first thing to catch the attention in the 1885 edition of Kürschner's directory of German authors ('Litteratur-Kalender') is the evidence it affords of the growing practice of substituting hieroglyphics for frequently recurring words, and thus saving much space and printer's time, as well as conveying more rapidly to the hurried reader the information wished. Instead of repeating the words "poetry," "history," "drama," etc., as occasion demands, after the authors' names, Mr. Kürschner had made an assortment of hieroglyphics. Thus, a tailed star indicates that the author to whose name it is appended writes on astronomy—a slate, on education—a pine-tree, forestry—a pen, literary criticism—an apothecary's sign, medicine — scales, jurisprudence—a spade, agriculture—a triangle, architecture—a leaf, botany—an ancient lamp, philology —a globe, geography—a cogwheel, technology—a cross, theology, etc. Of less obvious significance than the other signs is *** to indicate that the writer in question gives his days and nights to the study of philosophy. Perhaps the editor thinks, now that the German flag is floating in Africa and New Guinea, that the old division of the universe into the realms of the land, the sea, and the air, possessed respectively by the French, the British, and the Germans, is applicable only to a minority of his countrymen. Another space-saving device, common in manuscript and in older print, is that a (usually) repeated letter is given only once, but with a horizontal mark above it to show that it represents a double letter. For the rest, the directory is enlarged by hundreds of names, has the text of new literary treaties, and (a new feature) a rearrangement of names in the alphabetical order of the towns their owners live in. In this list are included not only the authors, but publishers, editors, attorneys competent to arrange literary disputes; literary clubs and informal meeting-places; and a variety of other information. Altogether, this is the most ingeniously contrived and thoroughly carried out directory of any kind whatever that we have ever met with, as well as the most attractively gotten up. Among the deaths of the past year we notice that of Bertha (Heyn) Frederich, author, under the pseudonym of "Golo Raimund," of several popular novels, one or more of which were translated by Mrs. Wister. The real name of this lady was given in the last year's 'Kalender' as "G. Dannenberg," but Mr. Kürschner now informs us that this name was an invention of her publisher, who thus put inquirers off the scent. "Virginia Champlin" (Miss Grace Virginia Lord), who was recently killed by a sad accident in Boston, was another instance of a well-known pseudonym successfully maintained till death.

—Both the leading articles in *Le Livre* for May relate to the Romantic school, whose great leader has just passed away. The first is an entertaining sketch of a dandy journalist, Charles Latour-Mézeray, known, from the flower which invariably adorned his *boutonnière*, as "l'homme au camélia." He was an early friend and literary partner of Émile de Girardin, and together they founded *Le Voleur*—the (*Literary*) *Pirate*, or *Eclectic*, to give it a softer name. Latour-Mézeray ultimately founded and ran into the ground, after a brilliant success, the *Journal des Enfants*, which had the same command of the services of the rising story-writers of that day (1832-1841) as *St. Nicholas* has in our own. Philarète Chasles, A. Dumas, Paul Lacroix, Jules Janin, Alphonse Karr, J. Sandeau, George Sand—the full list of them is given by M. de Contades in his careful bibliography at the end of his article. Some of these names suggest anything but model writers for children, and the editor-in-chief was far from having the moral qualifications for such an occupation. That such a man should make or should think of making his livelihood in such a way, throws a flood of light on the notorious deficiencies of French juvenile literature. M. C. Jolly-Bavoillot manifests the true enthusiasm of the collector in describing and accounting for four very rare etchings by Célestin Nanteuil, made in 1832, and intended to illustrate the then complete series of Victor Hugo's romances—'Han d'Islande,' 'Bug-Jargal,' 'Le Dernier Jour d'un Condamné,' and 'Notre Dame de Paris.' Finally, we have a very recent letter dictated by the master himself to the Comte du Clésieux in response to an appeal to return to the Christian faith. Hugo says he is perfectly familiar with the idea of death, and is tranquil in the face of it, repeating *Dei voluntas*. He has lived and will die a deist; but as for priests and dogmas, they are bad in all possible religions.

—An elaborate and interesting essay, by A. von Randow, on the present current of Jewish migration ("Ueber die Wanderbewegung der Juden") is given in the February, March, and April numbers of the *Deutsche Rundschau für Geographie und Statistik*, edited by Professor Umlauft, of Vienna. Jewish migration in the first centuries following the destruction of the Jewish State by the Romans took place on westerly and northwesterly lines, starting from Syria and Egypt, and traversing Asia Minor, the islands of the eastern Mediterranean, Italy, Spain, and Gaul. This main current was subsequently deflected eastward across the Rhine. During the period of the Crusades this easterly movement was precipitated by terrible persecutions in France and Germany, and the bulk of the Jews were eventually carried into Poland, her Lithuanian dependencies, and some neighboring lands. A southeasterly migration toward the Ukraine and South Russia followed, and finally a southwesterly current set in toward Bessarabia, Moldavia, Wallachia, and the Balkan territories, where it met an opposite stream from the southwest, to which the expulsion of the Jews from Spain and Portugal had given rise. A circle of emigration was thus completed. In our age, as Herr von Randow clearly shows, the Jewish movement, following with great intensity the general one of European populations this side of Russia, is from east to west, both through Europe and across the Atlantic, and chiefly toward the large centres. East Prussia receives a heavy influx of Jews from Lithuania and Russian Poland; Prussian Silesia from Russian Poland and Austrian Galicia; Galicia from Russia; Hungary from Russia and Rumania; Lower Austria (chiefly Vienna) from Galicia, Hungary, Rumania, and also from Bohemia and Moravia; Brandenburg (chiefly Berlin) from Posen, Silesia, and Prussia proper; the Rhenish provinces from central Germany. In some of these countries or provinces, and especially their capitals, the increase of the Jewish population, owing both to its comparatively very low rate of mortality and to immigration, is large enough to exasperate the mildest of Anti-Semites. (The average duration of life among Jews is now computed by European statisticians at from forty-six to forty-eight years, as against from thirty-three to thirty-six among Christians.) Thus, in the last completed census period of nine, ten, or eleven years the number of Jews in Galicia rose from 575,000 to 686,000; in Hungary

from 553,000 to 638,000—the increase being here nearly three times as great in proportion as that of the whole population; in Lower Austria from 52.000 to 95,000 (73,000 in Vienna); in East Prussia from 14,000 to 18,000; in Berlin from 36,000 to 53,000. In Vienna in 1857 the proportion of Jews to the general population was as 1 to 70; in 1880 it was as 1 to 10. A considerable decrease of the Jewish population is noticeable only in Bohemia, Moravia, Posen, Bavaria, and Alsace-Lorraine, all owing to emigration, both to adjoining localities and to America. In other parts the natural increase and immigration, on one side, and emigration on the other, nearly balance each other. The following are some of the noteworthy proportions of Jews to the general population in Europe: Russian Poland, 1 to 7; Galicia, 1 to 8; Vienna, 1 to 10; Berlin, 1 to 20; Hungary. 1 to 24; Prussia, 1 to 75; German Empire, 1 to 80; Switzerland, 1 to 386; Denmark, 1 to 499; Greece, 1 to 500; France, 1 to 746; Great Britain and Ireland, 1 to 766; Italy, 1 to 805.

HENRY TAYLOR.

Autobiography of Henry Taylor. 1800-1875. In two volumes. London: Longmans; New York: Harpers. 1885.

THERE is a quite exceptional interest attaching to this autobiography, in that it is the story of a round man who,early in life, by a stroke of marvellous good fortune, was put into a round hole, and had the rare good sense to appreciate the circumstance at its true value. In Lord Beaconsfield's earliest novel, Vivian Grey sums up the story of human life in the following apothegm: "Youth a mistake, manhood a struggle, old age a regret." And we imagine that there are few who have left or are leaving middle age behind them but will acknowledge that it is a terribly correct account of their own experiences. Of these few, however, Sir Henry Taylor would assuredly be one. He would seem to have been guilty of no mistakes in his youth, unless the making of an offer of marriage to a young lady who did not accept it is to be accounted such. There certainly was no element of struggle in his manhood; and now, in his later years, he looks back, if we are entitled to judge from the tone of this autobiography, upon his past life with a deep and placid contentment in himself, his family, friends, and the world in general. A constitutional indolence of disposition would appear to have been the source of this rare and enviable state of mind. Being indolent, Sir Henry Taylor was not subjected to the goadings of ambition. Being indolent, when he had secured a modest competence he had no desire to rise up early, or late take rest, in order to become rich. Power, wealth, and ambition had, in a word, no attractions for him compared with the superior fascinations of leisure and thought. In consequence of this same fortunate moral (?) deficiency of indolence, he was never assailed by that most exacting of mental diseases—a passion for reforming the world. He passed through life, a spectator *ab extra* of its burdens and i s mystery, bringing to bear upon the problems of existence the resources of a philosophical and cultured intellect, but feeling no impulsion to regard them otherwise than as points of speculative interest. After the publication of "Philip Van Artevelde," he was for a while one of the great lions of the London "season"; but this transient burst of notoriety did not ruffle his admirable equanimity of mind, and when the London "season" abandoned him to feed itself upon other lions, the change did not cost him a pang of regret.

The one thing in this world in which Sir Henry Taylor seems to have found a constant and penetrating delight, was the company of beautiful women. One of his friends said of him that he "liked any woman better than any man"; and he himself records that on the occasion of his paying a visit to Tennyson, in order to be introduced to Garibaldi, although full of admiration for the English bard and the Italian hero, what occupied his thoughts chiefly was a certain pretty girl who was also in the room. There is an imaginative charm in the gracious presence of a lovely woman which would naturally possess a supreme fascination for an indolent-minded poet, and Sir Henry Taylor was always prepared to succumb to it without the smallest resistance. There was, however, nothing Byronic or Shelleyan in this admiration. Rather it resembled the "gentle admirations," the "delight resembling love," with which, as Wordsworth has told us, he used to watch his gold and silver fish swimming in their vase. But, notwithstanding his indifference to masculine society, Sir Henry Taylor's fame as a poet and his position as a servant of the state in the Colonial Office brought him into familiar intercourse with most of the eminent men of his time, both in the world of politics and in that of literature.

Of especial interest to Englishmen at the present moment should be his account, as illustrated by his own experience, of the relations which subsist between the permanent heads of the great state departments and the secretaries of state who come and go with every change of Ministry, and who, according to the constitutional theory, are the guiding spirits of their respective offices, and responsible for all that is done in them. The omnipotence of Parliament is, of course, the cardinal article in the political faith of every orthodox Englishman, but during the last eight or ten years a highly alarming suspicion has taken shape in their minds that this "omnipotence of Parliament" is not so entirely in accord with the facts of the case as it ought to be. When a Ministry is formed, the (so-called) secretaries of state are pitchforked into the various departments without any consideration of their special fitness for one kind of work rather than another. This question of fitness is, in truth, ignored altogether, and a man is thrust into this Department or into that according to the office which he is willing to accept, or the exigencies of debate in the one house or the other. No sooner, however, is a secretary of state inducted into one of these departments, than, to the superficial observer, he appears to become omniscient regarding its minutest details. No question can be asked in Parliament to which—upon due notice being given—he is not prepared with a reply. No debate upon any subject connected with his office can be started upon which he does not speak like a man familiar with the subject from the days of his infancy. Now, it is needless to state that these seemingly omniscient secretaries do not acquit themselves thus out of the abundance of their own natural or acquired knowledge. Rather they are as were the Apostles when summoned before Roman or Jewish tribunals to render an account of themselves: it is *given* them in that hour what they ought to speak. In other words, they are "crammed" by the invisible, irresponsible, permanent heads of the department of which the responsible secretary of state is little more than an automatic figurehead.

When a Government, by a steady persistency in blundering, has got the Empire securely wedged into some grievous difficulty, the English Parliament and people have till lately fondly imagined that by dismissing their Government from office, and installing another in its place, they insured a radical change of policy. Actually, however, the true authors of the policy against which they made this protest, lay quite beyond their reach. And *their* power, so far from being weakened, was strengthened, by the circumstance of a number of new and untried men coming into office. The new-comers, by the necessity of the case, were more completely in the hands of the permanent departmental officials—more dependent upon them for information—than even their predecessors. The responsible Ministers (so called), feeling their own impotence, but anxious to conceal their state of subjection from the eyes of the nation, invented the dogma of "the great principle of political continuity" as the reason why they never remedied the blunders, or redressed the injustice, of their predecessors. This great principle was skilfully dangled before a credulous public. It was instructed to believe that any deviation from it would be followed by troubles and disasters of no ordinary kind; and, by this simple device, the permanent heads of the great State Department guided the policy and dissipated the resources of the British people precisely as they pleased, and no man said them nay. How long, under ordinary circumstances, this imposition might have gone on, unsuspected by the victims of it, it is impossible to say. The course of British history since 1880 has disclosed the secret. Mr. Gladstone and his colleagues were put into office for the express purpose of *not* carrying out "the great principle of political continuity." They stood pledged, as deeply as men could be pledged, to reverse the policy of those who had preceded them in power. There can be no doubt that they were sincere when thus they pledged themselves; and as little that all the manifold difficulties in which they have involved the Empire have come from the fact that, instead of reversing, they have carried on,the policy of Lord Beaconsfield.

In other words, the permanent Bureaucratic Staff which inspired that "spirited foreign policy" that brought the Conservative Government to ruin in 1880, has proved too strong for the wiser mind of Mr. Gladstone's Cabinet, backed though it be by a huge majority in the House and among the people. Sir Henry Taylor's frank disclosures respecting the inner working of the Colonial Office are well fitted to make the failures of Mr. Gladstone's Government intelligible to many who have been anxiously casting about for an explanation of them. They show—the more strikingly because Sir Henry Taylor writes as one unconscious of the light which is thrown by his revelations upon the occurrences of the last five years—how complete is the abasement of Cabinet ministers before the Bureaucratic Staff which furnishes them with facts, prepares their speeches, and provides them with replies to Parliamentary questions. No less complete is the abasement of Parliament, because, as no information is ministerially regarded as trustworthy except what is supplied by this Bureaucratic Staff, it is at liberty to supply only so much, and of that particular character, as supports the policy which it wishes to see adopted.

Very amusing—though scarcely intended to be so—is Sir Henry Taylor's narrative of how Lord Melbourne's Government nerved itself, upon one memorable occasion, to retire one of the permanent staff of the Colonial Office upon a handsome pension. The official in question was notorious for doing no work—a sufficient reason, one would think, for getting rid of him without further ado. Lord Melbourne and his colleagues did not regard the business as thus easy and simple. They worked like conspirators—underground—and successfully diverted the suspicions of their purposed victim from themselves to the individual who had been for many years doing his work. So angry was Mr. Hay—that was the name of the victim—at this base conduct (as he supposed) of his brother official that he went to Lord Melbourne to complain. Lord Melbourne listened with sympathy while Mr. Hay unfolded the tale

of his wrongs, and, on being asked if it did not appear like an attempt to supplant him (Mr. Hay), replied that it "did look devilish like it." At last, all the preliminaries were arranged, and the blow was ready to fall, when Lord Glenelg, the Colonial Secretary, appalled at the nature of the contemplated act, shut himself in his house rather than sign the mandate of dismissal. This desperate expedient did not avail him for long. He had, after a few days, to emerge from his fortress, and at last Mr. Hay was prevailed upon to retire, without any apparent detriment to the British Constitution in Church or State.

The Autobiography introduces us to a great number of interesting and eminent personages, and, in his character of philosophic spectator, Sir Henry Taylor's remarks on life and character are original and penetrating. Perhaps the most interesting of the pictures which he gives us are those of John Stuart Mill and Carlyle. Of the former it may be said that "whatever record leaped to light, he never shall be shamed," and Sir Henry, who knew him as a young man, bears ample testimony to the elevation and unselfishness of his character and the nobleness of his aims. "His ambition," he writes, "so far as he had any, his ardent desire rather (for I doubt if he had much feeling about himself in the matter) was to impress his opinions on mankind and promote the cause of political science." Of the meteoric splendor of Carlyle's conversation, as well as its general profitlessness, Sir Henry gives a very vivid description:

"We have had Carlyle here all the time—a longer time than I have hitherto seen him for. His conversation is as bright as ever, and as striking in its imaginative effects. But his mind seems utterly incapable of coming to any conclusion about anything; and if he says something that seems for the moment direct as well as forcible in the way of an opinion, it is hardly out of his mouth before he says something else that breaks it in pieces. He can see nothing but the chaos of his own mind reflected in the universe. Guidance, therefore, there is none to be got from him, nor any illumination save that of storm lights. But I suppose one cannot see anything so rich and strange as his mind is without gaining by it in some unconscious way, as well as finding pleasure and pain in it. It is fruitful of both."

Carlyle, according to Sir Henry Taylor, was especially fond of knocking down any pageantry of another man's setting up. Some gentlemen came in one evening full of the magnificence of a meteor which they had just seen. Carlyle heard their raptures in silence to the end, and then gave his view of the phenomenon: "Aye, some sulphuretted hydrogen, I suppose, or some rubbish of that kind." Carlyle, though vehement enough in expressing his dissatisfaction, generally introduced into his invectives an element of the grotesque or picturesque which robbed them of their savagery. On one occasion, at Lady Ashburton's, the hostess, believing the sage to be ill, asked a Doctor Wilson to go into his room and see if anything was amiss. "The Doctor presently came flying out again, and his account was that Carlyle had received him with a volley of invectives against himself and his profession, saying, that 'of all the sons of Adam they were the most eminently unprofitable, and that a man might as well pour his sorrows into the long, hairy ear of a jackass.'" Upon which criticism Sir Henry comments as follows: "As in most of his sallies of this kind, the extravagance and the grotesqueness of the attack sheathed the sharpness of it; and the little touch of the picturesque—the 'long, hairy ear'—seemed to give it the character of a vision rather than a vituperation."

BEERS'S WILLIS.

Nathaniel Parker Willis. By Henry A. Beers. [American Men of Letters Series.] Boston: Houghton, Mifflin & Co.

Prose Writings of Nathaniel Parker Willis. Selected by Henry A. Beers. Charles Scribner's Sons.

THERE is no such formidable *experimentum crucis* as in writing a life of a half-forgotten author and then supplementing it with a volume of his selected works. If successful, the bold deed prolongs his fame: if unsuccessful, it is fatal and final, and will never be repeated. Of the two the volume of writings is the more dangerous. The memoir of any man may be so interwoven with the events or habits of his time as to be made good reading, and thus much Mr. Beers, as biographer, has undoubtedly accomplished; but in the collection of specimens the victim is himself put upon the stand, and there is no appeal from his testimony. It is to be presumed that in the selections from Willis made by Mr. Beers we see that author at his best; and the volume certainly includes those sketches whose titles are best known. Yet we turn page after page despairingly and say: "Is this Willis?"

"Is this the mighty ocean? Is this *all*?"

Not that Willis was ever claimed as an ocean, but he was certainly esteemed in his day as being something of note, while this volume gives us almost nothing. Except in the wild sketch called "The Lunatic's Skate"—simply affording us, after all, a good *motif*, which in Poe's hand might have yielded something powerful, but here ends in melodrama—and the single description of a horse's trot upon Nahant Beach, there is nothing that now seems to the reader above the grade of mediocrity. In the English and Oriental stories we have simply pale reflections of Bulwer and Disraeli; in the longest American tale we are surprised by tedious sermonizing; even in the "Letters from under a Bridge" the wit is vapid and the rural sentiment cockneyish. On the whole, it seems probable that the editor and publisher have more effectually extinguished what was left of the fame of Willis by reprinting his "Selected Works," than if they had bought up every extant copy of the original editions and sunk them beneath the depths of the Atlantic Ocean.

It is saying a good deal for Mr. Beers when we add that he has produced, in spite of all this, a readable and almost valuable book of memoirs. His merit is, in a manner, in inverse ratio to the importance of his subject. He has utterly failed to prove—if indeed he ever expected to prove it—that Willis's life was in itself worth writing; but he has shown it amply worth considering as a chapter in American literature. For that purpose a great deal of tiresome research was necessary, an immense deal of minute delving in obscure periodicals and forgotten books—a patience in treating small things as if they were large—an acceptance of Emerson's maxim that no man can do any work well who does not regard it, for the time being, as the centre of the universe. And he has, moreover, selected well his point of view. Willis truly described himself when he spoke of his "light head and still lighter heart" (p. 25); but he was also, as Lowell called him,

"The topmost bright bubble on the wave of The Town."

To know the town as it then was, whether London, or New York, or Boston, in all its little greatness, its microscopic complexity, we must know something of Willis. If the biographer ever strikes us as taking him too seriously, if he gradually grows into the habit of treating each separate "Inkling" or "Hurrygraph" as if it were an entity worth separate consideration, he is yet in the line of duty; and that duty is so well done that the reader for a moment shares the delusion. The curious thing is that, after the book is closed, the bubble immediately bursts again, and it is impossible to remember what was in it, or to attach much importance to anything that happens to be recalled.

Froth Willis was, and to froth he must return; and yet, even in this capacity, he had his influence, and served a certain purpose. We think that Mr. Beers strains a point, in the preface to the 'Writings' (p. xiii), by setting aside Irving, and saying that Willis first contributed to American literature "the instinct for style"; but had he limited the claim to certain lighter qualities of style it would be true enough, and there was certainly a demand for these traits when he wrote. It was a period when our writers were greatly wanting in that essential attribute which the late Edmund Quincy designated, in a phrase far more piquant than any of Willis's, as "specific levity." Of specific levity Willis may be said to have been the pioneer, and he was more than this. The trace of his "Inklings of Adventure" is very plainly to be seen in some of Curtis's first writings, especially his anonymous social sketches in the early volumes of *Harper's Magazine;* the "Potiphar Papers" showed the same thing in a solidified form and with more definite purpose; while, in a different direction, the "Letters from under a Bridge" were the precursors of the "Up-Country Letters" and "Summer in a Garden" of other authors. This thread of literary sequence has a certain value, no doubt; and Mr. Beers is right to rely a good deal upon it, instead of attempting seriously to exaggerate the personal claims of his author.

He certainly errs in this last direction, however, when he compares his hero on equal terms with Leigh Hunt (introduction to 'Writings,' p. xiv). The resemblance is, after all, superficial: they were alike in a few tastes and some mannerisms, but it was not in Willis to produce a gem like "Jenny Kissed Me," and the whole heroic side of Hunt's nature was wholly alien from Willis. Our vivacious American journalist could no more have gone to prison for censuring a prince than he could have written "Captain Sword and Captain Pen." Mr. Beers, indeed, cherishes the kindly belief that his author might have experienced some tonic influence had he stayed in Boston, and kept up "the stimulating and bracing association with men of high serious intellects and strenuous aims" (p. 306). But this was just the society which Willis would have avoided anywhere; even men of real intellect, without the seriousness, were not exactly what he enjoyed—as is well enough shown in two of the "selections" which Mr. Beers has, perhaps by accident, put side by side. In these Willis records pages of meretricious glitter from Disraeli at Lady Blessington's, while he brings away almost nothing from a breakfast with Charles Lamb. After all, in society we find what we seek; and Willis would doubtless have established, wherever he went, his own little circle of second-rate literary dandies, and of admiring women whose Bohemianism got no further than Bohea.

It is surprising to note the general accuracy with which the author has gone over his ground, apparently making but few errors amid all these insignificant details. He has been but once betrayed into a positive injustice, so far as we have noted—this being where he assumes that Mrs. L. M. Child's disapprobation of Willis was owing to a personal grudge (p. 90). Nothing could be more untrue to the character of that eminently generous and unworldly woman, whose life at that time represented all the motives and methods which the life of Willis systematically omitted. On the other hand, the picture of the elder Mrs. Willis (p. 13) may strike those who remember the current gossip of that period as being a trifle too much idealized. The poet's mother was, without doubt, a most estimable and perhaps even a saintly person, but she was most singularly unlike that brilliant and

fascinating woman, Goethe's mother—the Frau Rath of Bettina Brentano and of her own lively correspondence—with whom Mr. Beers rather indiscreetly compares her. Again, a very inadequate impression is given, perhaps without intending it, of John Pierpont as an object of charity in his old age, when our author says that Willis found him in Washington "employed as a clerk in one of the departments, and got rooms for him and Mrs. Pierpont in the house where he lodged himself" (p. 343); the truth being that the courageous old bard had insisted on going out, at the age of seventy-six, as chaplain of the 22d Massachusetts; and, being obviously quite unfit for bivouac life, was transferred to a nominal clerkship at Washington, where he could attend to the soldiers in hospital. Once more, Mr. Beers's statement (p. 273) that Mr. Hiram Fuller, of the New York *Mirror*, was a distant relative of Margaret Fuller Ossoli, is contradicted by the biographer of that lady in a previous volume of this same series, although the fact that they had taught in the same school in Providence, R. I., might well have created the mistake. Yet it must be owned that all these criticisms put together constitute but a very mild indictment.

Apart from the literary value, greater or less, of the Willis tradition, Mr. Beers has done wisely to dwell fully upon its social value. It is this, if anything, which will keep Willis's name alive—though some of his simpler poems will survive for a time. It will keep it alive, namely, because we have few memorials of our rapidly changing society; and he described a phase of American watering-place life which has now passed away as absolutely as Puritanism or slavery. The period when there were at least the rudiments of a single well-defined social circle extending through the few cities that had a social circle at all; when an eminent beau or belle had a national reputation; when a few families, widely separated, virtually settled among themselves whether Ballston or Saratoga should be in fashion that year—we have a glimpse through Willis's writings, and almost through them only, of all that glittering time. Future social historians will no doubt search his books to give the right flavor to their composition or "local color" to their word-pictures; and this search will at least be easier and probably more prolific than the files of dusty newspapers that must else be turned over with the same intent. To such investigators, and even to others, Mr. Beers's manual will be an excellent guide-book; and as to Willis himself, the volume fitly closes—or almost closes—with an admirable summary of his character by a kinsman, the Rev. Dr. Richard S. Storrs: "He will be remembered as a man eminently human, with almost unique endowments, devoting rare powers to insignificant purposes, and curiously illustrating the 'fine irony of Nature' with which she often lavishes one of her choice productions on comparatively inferior ends."

EDIBLES AND EATING.

Dinners and Dishes. By Wanderer, author of 'Across Country,' 'Fair Diana,' etc., etc. London: Simpkin, Marshall & Co. 1885.

More or less true to this hour is Goldsmith's representation of the moral effect of a liberal dinner, disposed of in a leisurely manner, on his eupeptic fellow-countrymen. "When a church is to be built," he says, "or an hospital endowed, the directors assemble, and, instead of consulting upon it, they eat upon it, by which means the business goes forward with success." Nor is it fitting here to pass by unremembered a pronouncement bearing on the cult of creature comforts, of which Goldsmith's philosophic and capacious friend Johnson somewhere has the credit. Quite possibly, if his appetite had been less exacting, and if he could always have had food at will for the asking, the bulimious Doctor would not have transacted his feeding so porcinely and perspiringly as is recorded to have been his wont. Be this as it may, it was very much after his fashion to lay it down, as he is reported to have done, that he who does not care for his dinner is not likely to care for things of weightier import. And somewhat to the same purport, yet stopping short of exaggeration, seems to be the opinion of "Wanderer," the lessons of whose wide experience, while calculated, if duly taken to heart and wisely utilized, to conduce to justifiable enjoyment, are equally of value toward promoting good digestion and, inclusively, all manner of virtue. There may be a kernel of truth even in the saying, attributed to Napoleon, we believe, that every form of heresy and heterodoxy has had its root in dyspepsia.

The genesis of that portentous phenomenon, the normal British cook, with whom we must regretfully bracket, for manifold and multifarious obliquity, her cisatlantic sister, has never been conclusively investigated. Is she a survival of mediæval savagery, one of those evils which eluded extirpation at the era of the Reformation? Or are her maleficent practices a tradition dating from the twilight days of Odin and Thor? And so one might go on propounding questions without end. It ought, however, for practical purposes, to suffice us that she is still extant, nay, extant in mighty force, and that, on every account, measures should be taken to convert her to sane and salutiferous notions touching the exercise of her indispensable craft. "Wanderer," who, like other far-travelled rovers, has undergone a large variety of tribulation, has suffered unspeakable things from her in particular. Yet such is his well-grounded dread of the tyrantess, that he is unable to call up the courage to pour out his whole soul on the beatitude of dining in Paris, till he gets near the end of his book. The chastisement which is administered to her in his eighth chapter cannot fail of inducing considerable irritation in the bosom of that proverbially peppery, and at times acetous, artist; but her indignation will hardly reach true fever-heat before she comes to read of achievements, in her line of business, among the "Mounseers," the realization of which lies leagues and leagues away from the utmost extreme of her accomplishings. To her, as to the rest of the world, comparisons are, of course, odious. As a propitiatory overture, let her be kindly exhorted to bear in mind that there would be no room for them, if only, like a good woman, she would be persuaded to mend her sadly naughty ways.

The modern Gaul, as "Wanderer" estimates him, is, at least at the table and in preparing wherewithal to provide it, altogether a unique and blessed development of humanity. We read, and we are humiliated as we do so, that "every Frenchman possesses, by education and instinct, the knowledge of dinners which the native of any other country must acquire by observation, experience, and study." In strict congruity with the fitness of things, as we are informed further, "in France the instinct of cooking is innate." Again: "Say what we will, dinners are good or bad according as they approximate to or depart from the great French examples." But there is a crumb of comfort in reserve for us, poor creatures as we are taught that we are. It should delight us to know that those models of perfection, the French, "make the gross mistake of taking champagne at dessert. It will not do. No really delicate pearly flavor can be appreciated by a blunted palate." Consolatory it is, likewise, to be assured that "many may be educated into appreciating a good dinner in its higher sense"; for who is so superfluously self-depreciant and lowly-minded as not to believe that he himself is one of the disciplinable elect?

Frenchmen, under one minor aspect, are mildly fallible, as we have seen on the showing of our guide; but, viewed with his critical eye, Germans, as diners, still grope in darkness denser than Egyptian. "What sympathy can there be between an educated, refined Englishman and men whose idea of Paradise is a superior beer-house?" So we are asked, but some Teuton must formulate the reply. Briefly, the premise admitted that "the Germans don't dine," the inference is not easily to be evaded that "one cannot write a chapter about dinners in Germany." Hapless undining folk!

As a fearless, advanced philosopher, "Wanderer" is so intrepid as to scorn the venerable saw that "there is no disputing about tastes." "This error," he pronounces, "is very fatal, and would, if allowed to grow unchecked, sap, with its spreading roots, the very foundations of the edifice of gastronomy." Paradoxical as it is, his, without question, is the true faith. Moreover, as one who holds the true faith in its fulness, he is wholly right in proclaiming it without fear or favor. A single sample of his hardy outspokenness, where he descends to particulars, will not be quoted amiss. It is where he takes up his parable against macaroni pudding. This fearful and reprehensible concoction is, by his rating, "a mischief which must be suppressed like the cattle disease," and "a malignant and poisonous heresy, like Mormonism." After drawing breath—the while, no doubt, invocating the shades of Apicius and Lucullus—he perorates, with solemn emphasis: "Never ask me to back a bill for a man who has given me a macaroni pudding; do not suggest my going into partnership with him, or lending him five pounds, or even joining him in a day's excursion. I should fear any enormity from him, because he has committed an offence against the order of nature, and one which, sooner or later, must be avenged." Who can well help being quelled into acquiescence, entire or partial, by a gentleman of such resolute convictions, and of such directness in enunciating them?

It is not a few vulgar errors that "Wanderer," thanks to his all but ecumenical observation, has qualified himself to correct. For instance, he has discovered that an Englishman in quest of the terrible need not cross the sea in order to be petrified at the awful spectacle of eating peas with a knife. This perilous feat he has, in person, contemplated as performed by a charming Viennese barbarianess. On such topics as the countries where carving is unknown, how to feast on pheasant and court bankruptcy simultaneously, the ecstasies and raptures that lurk in truffles deftly dealt with, and many other interesting matters besides, he is soundly instructive or appropriately eloquent. Unless he expresses himself ambiguously, he is not in the fullest degree confident that eggs may be cooked in 366 different ways; the requisition of an additional way for leap-year being thus provided for. Accordingly, he is capable of doubt. But, in asserting that "rice is the staple food of India," we at last catch him actually tripping. And not only can he trip, but his seeming omniscience, however great the area of the knowable which it covers, is, if we dare say so, only a semblance. Initiation into the mysteries, alike lesser and greater, of Delmonico's still awaits him; not yet has he explored Fulton Market—there to store up for the behoof of his benighted compatriots adequate conceptions of the oyster; and the blissful acquaintance with American wines is to him a pleasure hitherto untasted. But, for all that, his profound philanthropy and his general meritoriousness are not to be gainsaid. The sum of his instruction is, that, provided we bestow

proper and serious pains on the subject, a dinner, whether in anticipation, in actual presence, or in retrospect, may be a thing of joy. In bidding farewell to such a mentor, one's valediction must needs be a benediction.

Politics and Economics. An Essay on the Nature of the Principles of Political Economy, together with a Survey of Recent Legislation. By William Cunningham, B.D. London: Kegan Paul. 1885.

It is with some embarrassment that we undertake to criticise Mr. Cunningham's book; for his subject is of transcendent importance, being nothing less than the true end of the state. To be sure, the state has had its true end determined a great many times—nowadays perhaps several times a day in various parts of the world—so that one additional discussion need not seem revolutionary. Moreover, our author's method is a thoroughly rational one. He lays his foundations on experience, not on theory, and his knowledge of history is extensive and thorough, if not profound. His style is clear and forcible; he appeals to common sense. His aim, too, is single: he keeps to the point, and avoids the numerous temptations to wander into seductive by-paths.

Following a suggestion made by Professor Sidgwick, our author distinguishes political economy, the science that shows how men proceed in the acquisition of wealth, from economics, which is rather an art showing how the end proposed to itself by a society may be attained. He is not at all particular to use these terms in this way, but his meaning is never obscure. Hence it is of economics that he is speaking when he says that "true principles of political economy must be consonant with the current morality of the polity under consideration." In establishing these principles for England he distinguishes three periods, "when the methods of pursuing wealth (1) were determined in accordance with Christian morality, (2) were directed in accordance with national policy, and (3) when free play was allowed to individuals to pursue the courses they preferred." To illustrate these distinctions, he cites the mediæval regulations of usury, trade, etc., as resting upon a desire to enforce the golden rule in the transactions of daily life. The Navigation Act and the colonial policy are examples of the spirit of the second period, when England's rivalry with other nations was becoming sharp. The third period is characterized by the prevalence of the doctrine of *laisser-faire*. This historical review is admirably done, although we may not fully accept the author's conclusions. As to the regulation of wages, for instance, he considers that the aim of the acts was just—a view directly opposed to the interpretation of Mr. Thorold Rogers. He is a little prone to confound facts with theories in his sympathy with the motives of legislators. Thus (p. 65) he says, "The fashionable French commodities supplanted our own coarser wares in our own markets and gave us no corresponding sale of other goods." This seems like the mercantile fallacy pure and simple. How were the French commodities paid for except by the sale of other goods? But upon the whole the sketch is extremely suggestive, and we should be glad, did space permit, to examine it more carefully.

It is in his discussion of the doctrine of *laisser-faire*, that we find ourselves most strongly in opposition to Mr. Cunningham. We shall endeavor to state his position as clearly as possible, and then proceed to show wherein we conceive him to be in error. He maintains that about the beginning of the present century a school of thinkers arose which held that wealth should be pursued as a good, independently of the effect it might have on the power of the country. Upon the principle that every man understands his own business better than any one else, it follows that the most rapid increase of wealth will arise from giving free play to every man to pursue his own bent. But, Mr. Cunningham says, the increase of individual possessions does not necessarily mean an increase of national wealth. Land may be so managed as to increase the wealth of the landlord and eventually to ruin the country. Manufactures may be so carried on as to increase the wealth of the capitalist and to degrade the workmen. The pursuit of wealth, therefore, must be qualified by the requirements of national life; the State must interfere in behalf of its future existence; it must enforce a regard for posterity upon those who are disposed to regard only themselves. More than half the book is taken up with a review of recent English legislation in the light of this principle.

Undoubtedly, it would be easy to produce from the writings of men classed with the "Manchester school," passages that exalt the pursuit of wealth beyond reason. But the true advocates of *laisser-faire*, (Adam Smith, for instance,) would never have admitted that wealth was to be pursued without regard to the effect upon the power of the country. They maintained, on the other hand, that the increase of wealth tended to increase the power of the country. To be sure, Adam Smith has been criticised by his followers for supporting the Navigation laws, but it is on the ground that the country would have been more powerful without these laws than with them. There is still less justice in implying that this school is indifferent to the condition of the human beings that constitute the state. The land "where wealth accumulates and men decay" is not its ideal. Its writings are full of solicitude for the laborer; we know of no justification for the assertion that the production of more wealth seemed of more importance to these economists than the just distribution of this wealth. No doubt Malthus and Ricardo are names of ill omen; they are used to conjure with. But the men were not, as is popularly believed, actuated either by a devilish malignity or a cold cynicism. Their vindication will be an honorable labor for some future economist.

The theory of *laisser-faire* is this: that state will be the happiest wherein there is the greatest amount of freedom. It will be more independent, because a spirit of independence will animate its citizens. It will be more wealthy, because its citizens freely exercise all their powers with the certainty of securing their just results. Its citizens will be provident, for they know that they are responsible for their own support; they will be good parents, for they know that they are responsible for their children's happiness; they will be patriotic, for patriotism is nourished by freedom. The theory of Mr. Cunningham and of much recent English legislation is despotic. It amounts simply to this: whatever the governing body holds to be for the public interest is to be law. For the governing body represents the state, and it is the supreme judge. Against this theory every revolution has been a protest. As a matter of fact, whatever the Government (the majority of force) wills must be law. But it does not follow that it ought to be law, or that folly is made wisdom by getting itself enacted in statutory form. The restraint of Government in favor of individual freedom is the lesson of political history.

The importance of the principle of non-interference to the future of England is immense. It is a conservative principle, and if it fall into disrepute, it may take ages of struggling against oppression to reëstablish it. The Government of England has been hitherto in the hands of the aristocracy. It seems now about to pass into the hands of the people. Parliament is omnipotent, and although Mr. Cunningham may view with complacency the regulation by his class of the contracts of the lower orders, he may feel otherwise when the people undertake to prescribe regulations for the aristocracy. As to certain measures, he already sounds an alarm; and as to the result of the legislation of the future, if his theory is carried out, we may say, in his own language (p. 251), it will be "a terrible price for the nation to pay in order to exhibit the mischief which may be done by benevolent enthusiasm coupled with misconceptions as to the duties and the powers of the state." But of what avail are his protests? He has called up a spirit that he cannot lay. He has said that the established principles of political economy must yield to the will of Parliament; and to the decision of the arbiter that he has invoked he is bound to submit. Yet our difference with him shall not prevent our recognizing the great merit of his book and the excellence of his spirit. We feel like saying, "This man might have been set at liberty if he had not appealed unto Cæsar."

Elementary Text-Book of Zoölogy. By Dr. C. Claus, translated and edited by Adam Sedgwick. Part I, General Part and Special Part: Protozoa to Insecta; Part II, Mollusca to Man. Macmillan & Co. 1885. 8vo, pp. 615-352; 706 woodcuts.

Although nowhere stated, this is evidently a translation of the second and enlarged edition of Claus's 'Lehrbuch' which was published in 1883. The translator's preface is very brief, and by its modesty contrasts strongly with the preface to the English edition of Gegenbaur's 'Elements of Comparative Anatomy.' Notwithstanding the obvious and commendable effort to emulate the remarkably compact style of the original, the translation occupies one hundred and ten more pages. Other and more potent reasons may have led to its publication in two volumes (the original is in one) at dates several months apart, and with separate paging and indexes, although the figures are numbered continuously. The "General Part" occupies one hundred and seventy pages, and deals with the distinctions between organisms and unorganized substances and between animals and plants, cell-structure, embryology, classification, and evolution. These important and difficult problems are treated wisely, clearly (which is not always to be said of German philosophical discussions), and in an admirable spirit. Like the vast majority of working and well-informed naturalists at the present day, the author regards the general idea of evolution as probably correct; he also dwells upon the value of that particular form of the theory, "Natural Selection," which is associated with Darwin; but (as did Darwin himself) he admits the "incompleteness of the explanation" as accounting in no way for the *cause* of variation, and concludes the discussion of the whole subject with the following (p. 179):

"However well grounded we admit the theory of Selection to be, we cannot accept it as in itself sufficient to explain the complicated and involved metamorphoses which have taken place in organisms in the course of immeasurable time. If the theory of repeated acts of creation be rejected and the process of natural development be established in its place, there is still the first appearance of organisms to be accounted for; and especially the definite course which the evolution of the complicated and more highly developed organisms has taken has to be explained. In the many wonderful phenomena of the organic world—among others, in the origin of man in the diluvial or tertiary period—we have a riddle the solution of which must remain with future investigators."

In the "Special Part," what are regarded as the nine primary divisions are taken up in the fol-

lowing order: Protozoa, Cœlenterates, Echinoderms, Vermes, Arthropods, Mollusca, Molluscoidea, Tunicates and Vertebrates. The classes and orders are somewhat fully considered, the families are enumerated, and a few representative genera and species named. To a certain extent, therefore, the present work may be said to combine features of the manuals of Huxley and Gegenbaur with those of Van der Hoeven's. Most of the numerous figures are admirable (perhaps the poorest being that of the Echidna, Fig. 681). In the original they really illustrate the text, but in the translation many are so strangely misplaced as not only to fail of their office, but actually to mislead the student. For example, the Hyrax is represented not in its own description, but in the midst of the opening paragraph upon the rodents. Whatever difference of opinion may exist respecting the desirability of adopting certain uniform positions for comparable figures, there can be no doubt that when two figures are placed one above the other on the same page, as with Figs. 326 and 327, the recognition of homologous parts is facilitated by making both heads look the same way. In the original figures the parts are designated by abbreviations of their German names, and these abbreviations are retained in the translation, although the names themselves are rendered into Latin or English. In both, in the arrangement of the abbreviations in the explanations, there is no regard to the alphabetical order, which, being wholly artificial and conventional, is the only one adapted to all uses of a figure. Dissent from the proposition (substantially made in the New York *Medical Journal* for August 2, 1884, p. 116) that abbreviations should represent Latin technical terms, should be uniform throughout the work, and should be explained in alphabetical order, seems to imply either indolence or a wilful disregard of the convenience of others.

Probably no two persons could agree as to the precise amount of additional information which might advantageously be given to adapt the work to English or American students, but it would seem that room should have been found, at least in the translation, for a more definite account of the neurenteric canal (Part ii, p. 128), which is merely named in the text and not included in the index; for mention of the Australian dugong and the Florida manatee; of the Australian "dingo" as an exception—possibly introduced—to the mammalian fauna of that region; of the remarkable and very suggestive early stages of the gar-pike as described and figured by A. Agassiz. Good examples of the translator's bracketed interpolations by way of addition, emendation, or explanation occur on pages 202, 205, and 296 of Part 2; the last referring to the discovery last summer that the Monotremes, unlike all other mammals, are oviparous, and their ova meroblastic.

As a rule, the German terms are well rendered; but *Waschbär* is translated *washing raccoon* instead of simply *raccoon*, and *Schädel-kapsel* as *cranial capsule* instead of *cranium* alone. Of writers referred to, only the no longer living are named in the indexes. In the absence of a general bibliography, it would be well to refer to the places where each author's publications are cited. Naturally, German writings preponderate; but surely the zoölogical and palæontological works of Leidy and Cope deserved mention. It is difficult to see upon what grounds the Carnivora are interpolated between the Insectivora and the Cheiroptera, and there are few who will approve the erection of the seals and walruses into a separate order, especially when the Hyracoidea are left among the Proboscidians.

In a work of this kind precise dimensions are rarely called for, and there is as yet no written law against using *zoll* and *fuss* (*inch* and *foot*), although the metric measures are now universally understood; but, considering that a "nut" may be either a filbert or a cocoanut, the description of the new-born embryo of the kangaroo as "nussgross" conveys no very exact information. Among points which should be attended to in future editions are the confounding of the lateral-line system with the system of mucous canals; the ascription of valvulæ conniventes to all mammals, and of the pouch to all marsupials; and the inclusion of the Sirenia with the Cetacea. In the description of the parachute of the flying dragon, *anterior* might be taken as a misprint for *posterior* but for the fact that "*vordere*" occurs in the original. Verbal and pictorial inaccuracies respecting the brain are so constant a feature of all manuals of comparative anatomy, that criticism seems almost useless; of the present work it can at least be said that the errors are fewer than in some others, mainly because the authors have refrained from making the usual number of statements and generalizations. Without being hypercritical, the following must be condemned as either wholly incorrect or likely to convey wrong impressions: (p. 137) "The nervous system of Pisces [in the widest sense] presents the lowest and simplest form found in any vertebrate. . . . The median globular swellings correspond to the lobe of the third ventricle with the corpora quadrigemina"; (p. 154) "The Cyclostomi possess a brain of the piscine type"; (p. 179) "The nervous system of Amphibia is higher in several respects than that of the fishes: the differentiation of the thalamencephalon and mesencephalon is further advanced"; (p. 282) "In mammals the hemispheres partly cover the cerebellum; in the Marsupials and Monotremes their surface is still smooth." The figure of the dissected cat's brain, though copied from Gegenbaur, is nearly as bad as it could be.

As usual, in the characterization of the groups no clear distinction is drawn between the several categories of characters—those which are constant and peculiar, those which are peculiar but not constant, those which are constant but common to other groups, and finally those which are neither constant nor peculiar. Without such distinction, in some cases at least, the formulæ which most writers on comparative anatomy are so fond of constructing are not only useless but positively mischievous. In, for example, the characterization of the Pisces (which our authors retain as "convenient" while admitting the incongruity of its constituents), some of the statements apply equally to other vertebrates, while others—as that they (*all*, by distinct implication) have paired fins and a single auricle, and "breathe exclusively by means of gills"—are simply untrue. Like so many passages in anatomical and zoölogical compendiums, these remarks mislead and bewilder the student, and are at least superfluous for the better informed instructor.

Still, on the whole, the present work may be characterized as no less commendable than the compendiums of Huxley and Gegenbaur, and as having the advantage of later date. It is a fair example of its class, and this is not the place for full consideration of the questions whether such works are in any sense "elementary," and whether, indeed, it is possible, in the present state of the science, for the structural relations of the entire animal kingdom to be presented satisfactorily by a single author. Nor is the liability of an individual to err or omit through lack of information or judgment sure to be compensated by the revision—too often hasty and perfunctory—of the various divisions by acknowledged specialists. That did not exclude from an American text-book mistakes which would discredit one who had attended a single course of accurate instruction in zoölogy. In a record of original investigation, or in an advanced manual, errors of observation or interpretation can hardly fail to occur; in elementary works there is no excuse for them whatever.

In neither the original nor the translation are the indexes complete; that of Part 2 contains neither *ovum*, *ovary*, *oviduct*, nor even *egg;* and, although the texts have *winter-schläfer* and *winter-sleep*, these words are not to be found in the indexes, while the more common *hibernation* occurs nowhere. Comparatively new and little-known terms, like *adoral*, *epibole*, and *poikilothermic*, should be accompanied either by their etymologies or by reference to their proposers. The volumes are handsomely printed, but marks of haste are visible in the errata on p. 8 and the even greater number of uncorrected typographical errors.

Bible Characters: being Selections from Sermons of Alexander Gardiner Mercer, D.D. (1817-1882). With a brief Memoir of him by Manton Marble, and a Portrait. G. P. Putnam's Sons. 1885.

If one should open this book at the portrait of Doctor Mercer, never having heard his name or anything about him, he would certainly desire to know something of the man whose aspect was so engaging. The photograph is in perfect keeping with his biographer's account of his exterior semblance: "Tall, finely proportioned, and of the most attractive aspect, distinction was his chief mark both in person and bearing." Crawford the sculptor wrote of him to George Sumner in 1858 or 1859: "Looking as an artist I was compelled to admire; every movement was so graceful; his manner, so strong, so earnest, so full of dignity, had the unconscious perfection of a work of art." Mr. Marble's biographical sketch is less than forty pages long, but it is so suggestive of a character of unusual strength and sweetness that we would gladly know more of its discipline and its relations to others of service and companionship.

The principal lines of his career are quickly traced. Born in 1817, in Philadelphia, he was reared from birth to youth by his mother, his father having died during his infancy. He was graduated from Princeton College in 1837 and was the valedictorian of his class; next studied law, and was admitted to the bar in 1839, and, when he should have been inciting his friends to litigation, gave himself up to literary, philosophical, and theological studies. The last survived preëminently in the struggle for existence, but the others always had a generous allotment of his time and heart. He was ordained in 1846, and till his death in 1882 continued in the active work of the ministry, with the exception of a brief interval in 1854, when he occupied the chair of Moral and Intellectual Philosophy and Logic in the University of Pennsylvania. His successive pastorates were at Clifton, Staten Island, at Newark, N. J., at Newport, R. I., at Trinity Church, Boston, and finally again at Newport. Both as a preacher and as a pastor his success was marked in all these places. He endeared himself greatly to his people. In Newark his preaching was the pride of the whole city, and he had there and elsewhere many temptations from wealthy and importunate parishes to resist and conquer.

We are warned by his biographer not to take the measure of his power as a preacher from the sermons following his sketch. They present only one aspect of his preaching. Another aspect is reserved for another volume. But no printed record of his preaching could give an adequate account of it, for oftentimes his sermons were wholly or in part unwritten, and his unwritten speech was generally his most effective, while to the written MS. his voice and manner added an

impressiveness that the mere reader misses altogether. His sermons were distinctly sermons—not lectures nor essays nor speeches; and the success that waited on them was owing to no cheap contrivance to "tickle the ears of the groundlings." His abstinence from political preaching is warmly praised by his biographer, though some will think it a defect. On the National Fast-day, January, 1861, he preached an exceptional discourse on "American Citizenship, its Faults and their Remedies," but the terms in which Mr. Marble praises it are so vague that we get no clear idea of its scope.

"Gravity," said Rochefoucauld, "is a peculiar carriage of the body invented to conceal the defects of the mind"; but no one who knew Doctor Mercer could have imagined that his gravity, which was characteristic not only of his public utterance but of his private conversation, was any such device. Seldom humorous himself, his appreciation of others' wit was always keen, and his laughter was heartier than Emerson would have liked, though he would probably have succumbed to its infection. A notable proof of the reserve which was a conspicuous trait of his character, is found by Mr. Marble in the fact that in the course of his life he amassed a large estate, without the knowledge of the community at large or of his less intimate friends. Other clergymen have had his power of silent acquisition, but few of them have been so generous in their use of what they have acquired. The provisions of his will established a hospital in Boston, another in Philadelphia, and scholarships and foundations at Harvard, Yale, and elsewhere; nothing to go by his name, but all by the name of his "beloved mother and brother." It was Doctor Mercer who provided the bust of the poet Coleridge which Mr. Lowell recently dedicated in Westminster Abbey.

The sermons chosen by his executrix for publication in this volume are twenty-eight in number, and all treat of persons famed or hardly more than named in the Old Testament and New. They are well characterized by Mr. Marble. He compares the gift which they denote to that of the naturalist "constructing by the scientific use of his imagination the class, form, and dimensions of an extinct or unknown animal from the fragments of a few bones, or from their impress left in a stone matrix." So from a phrase, a choice, an action, in an environment barely sketched, Doctor Mercer has created almost the temperament and personal history of the Bible characters that are the subjects of his discourses. They are extremely simple in their form. They have no elaborate picturesqueness, no fine writing for its own sake. They seize upon the salient point of one character after another, and drive it home upon the conscience of the auditor. Sermons so little theological are seldom preached in pulpits, orthodox or heterodox. They are ethics in a parabolic form. It is as if Dr. Mercer had taken a certain stanza of "In Memoriam" for the mark of his high calling—the stanza which declares how

> "Truth in closest words shall fail
> When Truth *embodied in a tale*
> Shall enter in at lowly doors."

Die Wiener Gesellschaft. Vom Grafen Paul Vasili. Autorisirte Uebersetzung. Leipzig: H. Le Soudier; New York: B. Westermann & Co.

In literature, as elsewhere, every rose has its thorn. That is to say, a really clever book is sure to be followed by imitations resembling their model outwardly, but destitute of the merits which caused the original success. We have a striking instance of this in 'La Société de Vienne,' which first ran through the *Nouvelle Revue*, and has already had fourteen editions at home as well as a translation into German, a copy of which is before us. Like the 'Société de Berlin,' the present work purports to be written by "Count Paul Vasili," but is the product of many hands, of unequal merit. The "Count's" first book is believed to have consisted of real letters, occasionally abridged or expanded so as to be readily understood by the public, but retaining their fresh and unstudied character. Besides this advantage of form, the book had three very decided merits, which are conspicuously absent from the "Count's" last production. It was, to begin with, just what it claimed to be—a description of Berlin as seen by a person who had enjoyed the best opportunities for observation, and who got his gossip at first hand. Then, the observations were very shrewd, and the comments clever, while there was just enough malice mingled with it to secure for the book wide attention and a nominal prohibition, which, of course, was the best possible advertisement. Now the 'Société de Vienne' consists in the main of what obviously is either backstairs tattle or café invention; it is not well put together; and it is even devoid of malice—a quality which often supplies the place of wit. That it should be widely read in Paris is natural enough, for the everywhere implied inferiority of the "Prussians" to their southeastern neighbors is a bait which still attracts the Parisian appetite, though this is perhaps even more pleased by the instances of domestic scandal sprinkled through the volume.

Nevertheless, in view of the fact that there is no European country, except Russia, with which we and our British cousins have so little to do, in the way of travel or otherwise, as we have with Austria, and our consequent ignorance of that country's politics, statesmen, institutions, and manners, the book is worth reading, though under other conditions it would deserve nothing but the wastebasket. It is very easily read, and contains a good deal of information which, though incorrect in some details, is sound enough in the main. The most disappointing chapter is that on Viennese authors, but it would perhaps be unfair to blame the compiler for this, since his task was here pretty much what it would have been had he been commissioned to discourse on snakes in Iceland. There are *no* Austrian authors; there are Hungarian, Bohemian, and numerous other varieties, including Austrian in the sense of persons born and bred in the narrow territory between Vienna and the German border. But these last, few as they are, find at home no remuneration for their labors in fame or in money, and either migrate to Germany, or strive to keep soul and body together in some provincial town where living is cheap and social temptations few.

Historical Sketch of the Organization, Administration, Matériel and Tactics, of the Artillery, U.S.A. By William E. Birkhimer, 1st Lieut. 3d Regiment, U. S. Artillery. Washington: J. J. Chapman.

Lieutenant Birkhimer's meritorious book will perhaps find but few readers outside his profession, though it has been compiled from original authorities with great care and no small amount of labor. It fills what was a complete void, for, singularly enough, although the artillery arm has had a distinct organization for more than a century, no attempt had previously been made to write its history. Lieutenant Birkhimer now tells it very fully, giving not only the changes in its organization since it was first established by Washington in 1776, and its record in four wars, but discussing with a completeness that leaves nothing to be desired its functions, its material, its tactics, and its relations to the other arms of the service. He also gives a clear synopsis of the organization and equipment of artillery in foreign armies, and shows what features of them are adapted to our conditions and what are not. The "burning question" in the artillery for the last fifty years has been its relations to the Ordnance Department. This is discussed by Mr. Birkhimer at great length, and is constantly referred to incidentally. He argues in favor of a reorganized and reunited artillery, in which those who construct guns and those who man and fight them shall be brought together under a single chief. It is impossible to even summarize here the points of his argument, but it is safe to say that no other book affords an equal amount of data for the solution of this question, so important for the military service.

BOOKS OF THE WEEK.

Historical Account of the Work of the American Committee of the Revision of the Bible. Charles Scribner's Sons. 50 cents.
History of the Christian Church During the Middle Ages. With a Summary of the Reformation—Centuries XI. to XVI. Harper & Brothers.
Ingoldsby, T. The Ingoldsby Legends. Thomas Y. Crowell. $1.25.
Lansdell, Dr. H. Russian Central Asia. Including Kuldja, Bokhara, Khiva, and Merv. In 2 vols. Boston: Houghton, Mifflin & Co. $10.
Macquoid, Katharine. Louisa. A Novel. In 2 vols. Vol. II. Harper's Handy Series. 25 cents.
Macquoid, Katharine S. Louisa. A Novel. 2 vols. Harper's Handy Series. 25 cents.
Malczewski, Kademir. A Poem of the Snow. Howard Lockwood.
Meyer, H. C. Water-Waste Prevention. Its Importance and the Evils Due to its Neglect. Sanitary Engineers.

HERBERT SPENCER'S
Cyclopædia of Social Facts.

This comprehensive work, projected and edited by the greatest of living sociologists, forms the true basis of social and political science. It furnishes the organized, systematic, tabulated data descriptive of seventy-two distinct communities of all orders and types, and in every stage of evolution. The work is on a new and original plan, and gives the pith and substance of many thousand standard volumes. It is invaluable for consultation, and should be in the library of every statesman, historian, economist, and politician, and is itself a library for the student of social affairs.

In eight parts, folio. Price of first seven parts, $4 each; part eight (a double number), $7.

D. APPLETON & CO., New York.

Cushing's Manual
OF
PARLIAMENTARY PRACTICE.

This is the standard authority in all the United States and is an indispensable handbook for every member of a deliberative body. Price, 75 cents. For sale by all booksellers. Sent by mail on receipt of price.

Address

THOMPSON, BROWN & CO.,
Boston, Mass.

French, German, Spanish, Italian.

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. Rich. S. Rosenthal's celebrated Meisterschaft System. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, part I, 25 cents. Liberal terms to teachers.

MEISTERSCHAFT PUBLISHING CO.,
Herald Building, Boston, Mass.

German Simplified.

An easy method for learning the German language by self-instruction or in classes. In 12 numbers; 7 numbers now published. 10 cents a number (postpaid), or stamp for prospectus.

Prof. A. KNOFLACH, P. O. Box 1550, New York.

"The author's explanations are clear and most concise, and his arrangement admirable."—*Chicago Current.*

BLOCK ISLAND, R. I.—OCEAN VIEW Hotel. A summer at sea. Fine bass, blue, and sword fishing. Surf bathing. Fine drives. First-class. Elegant music hall; good orchestra. PERFECT DRAINAGE. N. Y. Office, 52 B'way. C. W. BOLLES, Agt., will call if desired. Refer to Dr. H. CURTIS, 29 West 30th St. O. S. MARDEN, 43 Bowdoin St., Boston.

Goose-Quill Papers.

Miss Guiney's pleasant essays are winning for her golden praise.

"She has the faculty of touching old themes with a deftness and an individual humor which make them young again. Her style has an easy grace which deserves cordial praise."—*N. Y. Tribune.*

"Written in clear, ringing prose, with plenty of music in it, and always fresh and free."—*N. Y. Independent.*

"'Goose-Quill Papers,' by Louise Imogen Guiney, contains some twenty papers, or essays, written in a charming style, and with a quiet and graceful humor and a refined and easy wit that make them delightful reading. Her volume is without one dull page, and the reader who opens it is not likely to put it down willingly before he has read it through. The paper 'On the Beauty of Idleness' and that 'On the Good Repute of the Apple' would not have been unworthy of Lamb, and the finished sketch, 'Brentwood Pulpit,' has all of Addison's delicate humor and tenderness, with a force and a vivacity wholly its own. These writings are creditable to their author in every way, and seem to indicate the advent of one who, if she carries out the promise of her early work, will prove a new and brilliant light in our native literature."—*Saturday Gazette.*

One neat, handy volume. Price $1.00.

Sold by all booksellers. Mailed, postpaid, by the publishers,

The Nation.

NEW YORK, THURSDAY, JUNE 11, 1885.

The Week.

THE defeat of the Gladstone Ministry on Monday night, on an important question of taxation, after a formal announcement by Mr. Gladstone that he would stand or fall by the division, is a very momentous event. The Ministry were never more in the right. They proposed to meet half the expenses incurred by the late and pending warlike ventures, which have been literally imposed on them by the country, by an increased duty on the most legitimate objects of taxation—beer and spirits—particularly legitimate in view of the large share of these beverages in keeping up the warlike spirit which has got the British nation into its present troubles. The Opposition proposed to substitute an increased duty on tea and light wines, and the second reading of the budget was defeated by a vote of 264 to 252. The majority is small, and may be said to have been made up wholly of the Parnellites, who of course do not care a straw about the tax question. What they voted against was the Coercion Bill, "buckshot Forster," and "the murderers of Miles Joyce," or, in other words, against the Irish policy of the Government generally. But it is a settled tradition of English politics that a defeat on the budget is a mortal blow for the Ministry, and accordingly, after a Cabinet meeting, the resignation of Ministers was announced. The Tories are probably more dismayed by their victory than anybody else. The difficulties they will have to contend with at home and abroad are tremendous, and they will give the Liberals the immense advantage of being in opposition, and showing them up on the stump during the coming canvass for the fall election. Moreover, the character of the Parliament which will be elected by the new constituency is confessedly a mystery for everybody. The probabilities are that it will be enthusiastically Gladstonian, and carry the Grand Old Man back to power with a mighty rush.

While the Republican organs continue despairingly to predict that "clean sweep," the Administration goes steadily forward in the application of civil-service reform principles. A notable proof of its sincerity is afforded by the action of the Postmaster-General regarding some appointments of Post-office Inspectors which he has to make. The Civil-Service Law does not apply to this class of subordinates, and Mr. Vilas might, if he chose, have gone on treating the places as a part of the spoils, after the practice of Frank Hatton and a long line of other Republican predecessors. He has voluntarily decided to extend the operation of the competitive principle so as to cover these inspectorships, and all applicants have been notified to appear for an examination which will have special reference to their probable usefulness for the peculiar service required. To remove the last vestige of doubt as to the basis upon which the final decision will be made, the Postmaster-General takes pains to say in his circular letter that "no recommendation to favor will avail anything to the advantage of the applicant in respect to this examination, but rather to his disadvantage, it being the purpose of this Department to secure the most efficient corps of inspectors possible, and to have them depend for their positions hereafter wholly upon their merits." It is by such extensions of the scope of the merit system that the Administration demonstrates its fidelity to the reform beyond the possibility of cavil.

A very interesting statement is sent to the *Herald* from Washington of the reforms which Secretary Manning has already secured in the Custom-house service. In a few branches of the service alone they will save the country millions of dollars a year. In 1879 an appropriation of $100,000 was made to be used for the detection and prevention of frauds in the customs service. It was devoted mainly to paying the salaries of persons who for the most part did nothing except draw pay, and work for the party. Their names made up what is known as the "Fraud Roll," and the appropriation was really the payment from the public treasury of a large sum of money to support party workers. Their business was not to detect revenue frauds, but to run the primaries, help pack conventions, and avert from the country the constantly impending peril of paying the rebel debt. There were all sorts of names on the roll, those of judges, colonels, brigadier-generals, and "boys," and the compensation ranged from $4 to $8 a day. There were twenty of such patriots on the New York roll, and at one time there were no less than sixty under pay in various cities, not one of whom did a second's work for the Government. Secretary Manning has cut off the whole crew, and the expense of the "Fraud Roll," which was $90,000 last year, will be $15,000 this year, and every cent of it will be paid for Government service. We understand that every man of those who drew the other $75,000 is going about with a heart full of gloomy apprehensions concerning the future of the poor negro.

In the Appraiser's Department, the condition of the service when Mr. Manning removed Mr. Ketchum and put Mr. McMullen in his place, was almost incredibly bad. Mr. Ketchum had, like his predecessors, run the Department with the main purpose of making it "worth" as much as possible, not to the Government, but to politics, and the result was a great triumph of his political skill. The most fruitful field of activity was the recalling of invoices. Under the law, an importer who is dissatisfied with an appraisement must within twenty-four hours after the appraisement make an appeal to the Collector, or forfeit all right to a reappraisement. If he makes the appeal within twenty-four hours, he can have a reappraisement made by a board of merchant appraisers appointed under the law by the Collector. There is no other legal way of securing a reappraisement; yet for several years the appraisers have ignored this law entirely, and have arbitrarily established the custom of recalling invoices and changing them as they pleased. In 1884 Mr. Ketchum "recalled" 1,709 invoices, and in nearly every case he reduced the valuation made by the examiner and assistant appraisers. There are numerous cases on record in which importers who had made appeal in accordance with the law, "waived" this appeal before the board of merchants could be called, and accepted the reduction made by the appraisers, which seems to have been very generous in all cases. The same importing houses were pretty regularly favored with these reductions, and it naturally happened that a house which was not thus favored was driven out of the business. It is estimated that undervaluation in the New York Custom-house alone for several years past, has cost the Government at least 20 per cent. of its customs revenue.

Secretary Whitney, soon after taking office, appointed a board of experts to inquire into the usefulness of a wood-preserving process which had been bought by the Navy Department in January last. The history of the "process" is very interesting. It was first called to the Department's attention by General B. F. Butler, in 1875. Secretary Robeson had it investigated and made a contract with the owners to have the timber which was to be used in building the Government ships "impregnated" by it. In 1879 the company built some "works" to accommodate the "process," in the Boston Navy-yard, at a cost of nearly $39,000. In 1881 a board of examiners, appointed by Secretary Hunt, reported against the process, saying it had no useful effect upon the timber. Later in the same year General Butler appeared before the Department, complaining that the "works" had been comparatively idle since June, 1880, and asked to have the Department either buy the "works" or contract at once with the company to have some more timber "impregnated." In 1883, Secretary Chandler having come into power, a contract was given the company for the preservation of 100,000 cubic feet of timber at 14 cents a foot. In January last Mr. Chandler had the process reinvestigated by a board, which reported that it was good, and the Government ought to buy the "works." This the Government did on January 31, paying $38,891 95 for them, together with nearly $10,000 for timber and about $1,000 for labor performed upon it. The total outlay of the Government has been over $156,000. Secretary Whitney's experts report that the process is not new and is useless; that the "works" could be duplicated for much less than was paid for them; and that the outlay has resulted in no practical advantage to the Government.

Mr. Graves, the new Chief of the Bureau of Engraving and Printing, was asked the other day as to the policy which he should enforce in the management of that great institution. Among the sensible features of business-like administration which he set forth in reply, nothing was better than this: "One thing I do want understood, and that is that this bureau is not an eleemosynary institution—not a place in

which persons can obtain work simply on account of their personal misfortunes." Mr. Graves here attacks one of the most serious abuses in the Government service. While the chief aim of the spoils policy has been to provide places for followers of the bosses, who had been or could be serviceable to their patrons, there has grown up a system of giving office to people who seem unable to support themselves, and of retaining people in their places after age or infirmity has rendered them incapable of good work, simply because they need the salary to which they have grown accustomed. The appointment of General Rosecrans as Register of the Treasury is one illustration of this system. Rosecrans is now a man of nearly sixty-six, whose lack of business training would prevent any private establishment from giving him such a place, and the only excuse that can be assigned for the Government's giving it to him is that he is old, "out of a job," and needs to be taken care of. The case of Marr, chief clerk in the First Assistant Postmaster-General's office, is another illustration of the working of this system in the other direction. Marr was a very efficient man in his time, but he is now eighty-four years old and incapacitated for the duties of his place, which is now vastly more laborious than when he entered the service long before the war. His superior is greatly embarrassed by the inability of this old public functionary to do the work which devolves upon the chief clerk, and yet the precedents in favor of keeping the official landmark are so weighty that Mr. Hay shrinks from discharging him and securing a capable successor. Mr. Graves has an excellent chance to do a great public service by discarding, in the important bureau which he is to superintend, the vicious principle of treating Government office as a refuge for the unfortunate or the superannuated.

The result of the municipal election in Wilmington, Del., on Saturday, like that of the local elections in Virginia the week before, furnishes welcome evidence that the race line in Southern politics, which was so unfortunately maintained throughout the period of Republican rule, is destined to disappear under a Democratic Administration. Wilmington has repeatedly been carried by the Republicans, and has now a Republican Mayor, but the Democrats elected their ticket by about 500 majority on Saturday, in a vote nearly equal to that of last fall, and the character of the canvass renders their success of general interest. Recognizing that the colored voters held the decision of the contest in their hands, the Democratic candidate for Mayor appealed for their support by promises no longer to maintain the ancient race discrimination in the appointment of policemen, but to give some places on the force to black men. The woful predictions of the Blaine orators and organs last fall as to the future of the negro, in case the Democrats should elect the President, read oddly enough in view of such incidents as this. The Democrats have now been in power three months, and the country has yet to hear of the first outrage upon a black in the South; while, in the only three States which have held elections of any sort, the noteworthy events have been the choice of a capable negro over rival white candidates as police judge in Hot Springs, Ark., the nomination of a number of negroes for local offices upon the Democratic ticket in Virginia, and the election of a Democratic Mayor in the chief city of Delaware after his promise to appoint negroes upon the police force.

That the sectional line is beginning to vanish along with the race line appears from such an incident as the recent appointment of Colonel Robert A. Howard, of Arkansas, as an Assistant Attorney-General of the United States at Washington. Mr. Howard won his title as commander of a Nebraska regiment in the Union army during the civil war, and assisted in the capture of Little Rock from the Confederate forces. He was so well pleased with the city that he settled there after the war, and, despite his Northern origin and his prominence in the Union army, he has secured a front rank at the bar, and has won such general respect that his present appointment is hailed with hearty satisfaction throughout the State. Even more encouraging than such willingness to honor a worthy Union soldier from the North is the readiness of influential Southern journals to condemn unworthy men of their own section. The recent revocation by a Northern President of the appointment to a post-office of Meade, who was implicated in the Copiah County (Miss.) election outrage of two years ago, is heartily endorsed as wise and proper by the foremost Democratic newspapers in the South.

The Atlanta *Constitution* is still in pursuit of information about silver. It wants to know again whether the stoppage of the present coinage would not "further depreciate the value of the silver dollars already coined." We answer again that we think it would—a little, but not much. What difference this would make to anybody but the silver miners, inasmuch as the coins stay in the Treasury, we fail to see. It also wishes to know "whether the banks of the country would open their doors to them [the silver coins] after the coinage was suspended and the bullion value of the silver still further depreciated." We answer that they would not, if properly managed. Banks are business and not philanthropic institutions. Any bank manager, therefore, who took on deposit a metal which he might be called on to refund dollar for dollar in another metal of greater value, would be either a fool or a knave. Banks have no *duty* about silver, any more than about hides or wool. They are carried on for the purpose of making money. Sentimental banking is always bad banking. The first duty of a banker is to secure his depositors and note-holders and stockholders, and he could not do this if he took depreciated metals of fluctuating value on deposit. We may add that there is no use in discussing economical questions with the *Constitution* or anybody who imports sentiment into the consideration of such a topic as coinage, and talks of "raids on silver," and "hatred of silver," and so forth. The real trouble with the silver men of the South and West is, that they treat the precious metals as animated beings. Several cranks in those regions have seriously maintained that we ought to drive gold out of the country, because it basely abandoned us at the outbreak of the war, and substitute the greenback, which stuck closer to us than a brother.

The recent death of the man who stood at the head of the Louisiana lottery business may prove the first step toward the downfall of this enormous swindle. The New Orleans papers for the first time now have the grace to admit that "doubtless it was an objectionable creation," and they seek to lay the blame for its origin upon the "dark régime of Radical misrule." The excuse which the *Picayune* offers for its continuance thus far under the Democrats is as amusing a development of the protection theory as was ever presented. It says that the Louisiana institution was permitted as a defensive measure against a similar institution in Havana, which used to monopolize the business and withdraw large amounts of money from New Orleans. In other words, the Louisiana lottery people were really a set of public benefactors, who were building up an "infant industry" against the competition of "pauper labor" in Cuba, and who, therefore, had a just claim to the support of the State. It was thus, it will be seen, only a brotherly feeling which made the chief Philadelphia organ of protection to home industry publish the advertisements of the Louisiana swindle until it was compelled by law to stop.

A few of the Blaine worshippers still continue to burn incense, but the number constantly dwindles. Halstead, of the Cincinnati *Commercial Gazette*—late of the New York *Extra*—is the undisputed leader in this political idolatry. He still insists that the nomination of Blaine last year was wise, because the Mugwumps, whom he pleasantly characterizes as "supercilious, vain, pompous, cranky, silly, malicious," would have defeated any candidate who was worthy of the confidence of the party. Moreover, he holds that "the glory of the campaign will be a proud and splendid historic possession," and he expresses his pity for "the Republican who does not feel yet the inspiration of the splendid leadership of Blaine in the late campaign." Apparently there is going to be a great drain upon Mr. Halstead's stock of pity. The Sandusky *Register*, a leading Republican paper of Ohio, pronounces Blaine's nomination a "mistake," and declares that the Republican party never makes the same mistake twice. The Dayton *Journal*, another influential party organ, is still more emphatic; it says that the nomination was a "palpable mistake," which was "manifest when made," protests against any more "defensive campaigns," and calls for a "solid candidate" next time. Nine out of ten of the Republican papers throughout the country are evidently with the Sandusky and Dayton organs in this matter. They got their fill of "splendid leadership" last fall.

The caucus has evidently seen its best days when a politician like "Bill" Chandler admits the possible wisdom of disregarding its edicts. A few years ago, when a New Hampshire Legislature was called upon to elect a United

States Senator, the members of the dominant party met and balloted for a candidate. The man who received a majority in the caucus—even though it might be, as in Senator Blair's case six years ago, a majority of but a single vote—thereby secured a perfect claim to the support of every member of the party; and the legislator who ventured to cast his vote for anybody else was denounced as a "traitor." Something was accomplished toward overthrowing this tyranny two years ago. So many Republican members of the Legislature either stayed away from the caucus or refused to be bound by its decision that Rollins, who secured a nomination from a majority of those who did attend, could never command the votes of more than 127 of the 195 Republicans, and finally had to withdraw his name. Chandler tried his luck next, but with still poorer success, and the long contest ended in the choice of an outsider. Chandler showed the first signs of treachery to the caucus system when he hailed this result as "patience's perfect work," and assured President Arthur that the Republican party in New Hampshire was "reunited, courageous, and invincible" after thus defying all the traditions. Two years of reflection have apparently only confirmed him in the error of his ways. Now that another Senator is to be chosen and another caucus is proposed, he publishes in his Concord paper an editorial which says that, if "substantial unanimity" shall characterize the action of the caucus, that action should be endorsed by the party in the Legislature; but if there is a large element which does not acquiesce in the result, it cannot be expected that they will be bound by it. In other words, he admits the right of private judgment, and is ready to sustain the bolter, instead of "branding" him. Such sentiments might be expected from a wretched Mugwump, but nobody expected the day would ever come when "Bill" Chandler would give utterance to them.

The difficulty, and in fact the hopelessness, of getting people interested in a special election has been again illustrated in the experience of Illinois. It was provided years ago that the election of Supreme and Circuit Judges in that State should be held in June, on the theory that it would be easier to procure a non-partisan judiciary by holding a special election for their choice, than by voting for judges along with other elective officers in November. But the result has been extremely disappointing. The party lines have been as strictly maintained as before, and last week in every circuit in the State—outside of Chicago, where the present circuit bench was reëlected without opposition—Republicans and Democrats voted for candidates of their own political faith, just as they would have done if the election had been held at the same time as other elections in the fall. So little interest, however, is manifested in these special elections that it is even easier for the politicians to manipulate conventions and elect their special favorites than it would be in the case of a November election, while the expense of the business to the taxpayers is about a quarter of a million dollars, which would be saved if the Supreme and Circuit judges were chosen at the usual time, as is the case with judges of the lower courts. The Legislature is urged to submit a Constitutional amendment doing away with the June election system, and it would seem as though the change ought to be made. The experience of Illinois with June elections for the judiciary is in the same line as that of this city with spring elections for Mayor years ago. One important election a year is as much as voters generally want or will attend to, and the true policy for those who want to secure the best judges or city officials is to have them elected at the usual time in November, but to separate the choice so far as possible from that of Federal officials. The Constitutional amendment which was pressed upon the New York Legislature at its last session proposed to accomplish this by making the elections of city officers come in the intermediate years between the Congressional elections. The reform was deferred through the refusal of the Legislature to endorse the project, but it is bound to come, sooner or later.

There is at last a promise that Ferdinand Ward will be brought to trial and his days of luxurious living in Ludlow Street Jail, at the expense of the people whom he robbed, be terminated. An indictment for grand larceny has been found against him by the Grand Jury, based upon Ward's alleged theft of his grip-sack of securities, amounting to about a million of dollars, from the vaults of the Marine Bank. Fish testified that Ward was allowed, because of his friendly and business relations with the bank, to visit the vaults where the grip-sack was, and that he took advantage of this privilege by walking off with the contents of the grip-sack, leaving the bank with no security for its heavy loans to him. The District Attorney has seized upon this point in Fish's testimony as the first opportunity which has presented itself for getting Ward into court on a criminal charge. He is at present in civil custody of the Sheriff, in default of $500,000 bail which was demanded in the suit brought against him by the late J. Nelson Tappan, and cannot be reached on the two pending indictments against him for violation of the National Banking Law, because so long as he is in charge of the State authorities he cannot be made amenable to the laws of the United States. The new indictment, however, being for violation of State laws, can be tried while the civil suit is pending, as was done in the case of Tweed.

The trial of Ward on this indictment will be very interesting. It will bring out his side of the story of the relations between himself and Fish, and will probably lead to developments concerning the methods of this precious pair which will throw important light upon the mysteries of their memorable swindle. Few people are prepared to believe that Ward's "grand larceny" of the grip-sack was committed without the knowledge of Fish, and there are sceptical persons who think it was a joint theft planned by the two. If we can get them into court, pitted against each other, we are likely to secure, before the case ends, a great deal of valuable information. They ought to have been disposed of months ago, but Ward's counsel were shrewd enough to obstruct affairs with the old expedient of a civil suit. There has been no such obstruction in Fish's path, and we are hopeful that the long delay in his case has about reached its limit.

While the depression of business continues in most parts of the country, it is pleasant to learn that there is one quarter where the people are already congratulating themselves upon the coming of good times and the assurance of still better. This is in the northwestern corner of the United States—the State of Oregon and the Territory of Washington. Oregon especially is in high spirits over the situation and prospect. While the great wheat-growing States will have a short crop this year, and California less than half her usual surplus, Oregon's crop will be the largest ever known. The decreased exportation of grain from California will cheapen tonnage rates from the Columbia River country, and there is thus an excellent promise of good prices to the Oregon growers. The population of the State is growing at a very rapid pace. For ten weeks past the arrivals by rail, ocean, and wagon have averaged a thousand a week, and the tide slowly swells as the season progresses. The new comers are mostly Americans of the best class, who bring more or less money with them, and soon find satisfactory settlement. Portland, the metropolis of the State, is doing a larger and healthier business than ever before, and the *Oregonian* concludes a review of the present encouraging situation with a confident prediction of still better times in the near future.

The extent of the diversion from the ocean to the railroads of our exports to Mexico, of which we recently spoke, may be seen in the customs revenue reported from El Paso. The amount realized in the month of April last was $98,145, as against $34,482 in the same month of 1884. Yet this rapid increase in the business of the Central Railroad is not viewed with entire complacency by Mexican merchants, especially those outside of the capital. The provincial press, together with the opposition newspapers of the City of Mexico, is filled with protests against the iniquity of differential rates which, it is alleged, are ruining the domestic trade of the country. Raw cotton can be shipped from San Antonio or Galveston to Mexico City at the rate of 1½ cents a pound, while from Villa Lerdo the rate is 2¾ cents. Cotton sheetings are carried from New York for $44 a ton, while from the cotton mills of Durango the rate is $63. Tallow from New York pays $33 a ton, from El Paso $55. Against such inequalities is urged the 46th article of the concession to the Central Company: "Freights shall always be adjusted with the most perfect equality. The company shall not concede to any one an advantage which is not conceded to all in the same circumstances." Under this section, and under the authority of the Secretary of the Interior to revise the rates of transportation every two years, the Government is urged to compel the railroad officials to place all shippers on an equality. The President has, in fact, appointed a commission to investigate the matter, and assures the aggrieved merchants that he will do everything possible for their relief.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 3, to TUESDAY, June 9, 1885, inclusive.]

DOMESTIC.

THE President has not receded in the least from his position that worthy and faithful Chiefs of Divisions shall be safe in their places. Appeals have recently been made to him by the friends of chiefs who have been removed or threatened with removal. His replies have been clear and emphatic. He has said that the members of the Cabinet are bound by an understanding that no competent and deserving chief is to be removed. It is very necessary, in the President's opinion, that heads of departments shall be confident of the loyalty and ability of their chiefs, and that a serious doubt as to a man's fidelity or efficiency is ample excuse for his removal. He believes that no departure from these principles has been made.

Some of the active friends of civil-service reform in Washington claim to have obtained within the last few days new light on the President's reform policy in some very interesting directions. According to these gentlemen, the President's advocacy of a non-partisan civil service goes much further than even the most radical reformers have supposed. They assert that every act of the Administration which has been personally sanctioned by the President has been in accordance with these ideas. The President thinks that the protection of the Civil-Service Law should be eventually extended to many classes now exempt from its provisions. He does not believe that this should be ordered while nine-tenths of the employees of the Government are Republicans, and a large percentage of them appointed on political grounds.

The President has amended civil-service rule 9, relating to the examination of applicants for office, by inserting after the words "no person dismissed from the public service for misconduct," and before the words "shall be admitted to examination within two years thereafter," the following words: "And no person who has not been absolutely appointed or employed after probation."

President Cleveland has appointed Herbert F. Beecher Collector of Customs for Oregon and Washington Territory. He is a son of the Rev. Henry Ward Beecher, and a resident of Port Townsend, where he is engaged in the steamboat business. It is said that his father persistently refused to speak in behalf of his son's appointment, or to allow any other member of his family to do so.

Among the President's nominations on Tuesday was Henry C. Urner, to succeed Lot Wright as United States Marshal for the Southern District of Ohio. He is a lawyer by profession and a resident of Cincinnati. He was formerly President of the Chamber of Commerce. Fred H. Marsh was nominated to succeed A. M. Jones as Marshal for the Northern District of Illinois. He at present holds the office of Sheriff of Ogle County. This nomination is a snub to the "gang" which has controlled Chicago politics.

The Commission which has been investigating the workings of the Internal-Revenue Bureau has completed its report, and the result has been virtually approved by the Secretary of the Treasury. The report will not be made public at present, and probably its entire scope will not become known until the end of the fiscal year, when most of the recommendations will go into effect. It is estimated that, if effect is given to the recommendations, the total annual cost of the collection of internal revenue will be reduced 30 per cent., and that the expense of the internal-revenue establishment in Washington will be reduced 25 per cent. Radical changes are proposed in the method of collecting the revenue, and an additional consolidation of districts is recommended.

The Secretary of the Treasury on Saturday received a strong protest against the continued coinage of the present silver dollar, which contains the signature of almost every banking association and business man in the State of South Carolina. Among the signers are the Treasurer and the Comptroller-General of the State.

General Crook telegraphed the War Department on Saturday through General Pope that citizens have been killed by the Indians as follows: 7 in the Blue Mountains and around Aliva, 5 near Silver City, 2 near Old Camp Vincent, and 3 near Crafton, a total of 17. There may have been others killed, but there are no reliable data obtainable.

Minister Lothrop had a warm reception from the Michigan Legislature on Thursday. In a brief speech he thanked the members for the kind feeling they had expressed toward him.

John H. Aufdemorte, for seventeen years a confidential clerk in the United States Sub-Treasury in New Orleans, has absconded with Government money which may amount to $50,000. He is supposed to be in Mexico.

Isaac Hibbs, Postmaster at Lewiston, Idaho, has swindled the Government out of about $50,000, by means of fraudulent money orders.

The Ohio Greenback-Labor party on Friday nominated a full State ticket, with J. W. Northrop for Governor.

At a meeting of the Tammany Committee of Twenty-four in this city on Wednesday evening resolutions were adopted declaring, "That the most complete harmony exists in the ranks of the Tammany Hall organization, and that we look forward with pleasure and gratification to the early return of the Hon. John Kelly to his place at the head of our organization." The resolutions were signed by the representatives of all the Assembly districts.

It is decided that the New Orleans Exhibition shall reopen in November. Enough money has been subscribed, and large numbers of exhibitors promise to return.

Governor Hill on Tuesday signed the bill to regulate the height of dwelling-houses in New York.

Mayor Harrison, of Chicago, has decided to enforce vigorously the ordinance against gambling in that city.

The Hessian fly is reported to be ravaging the wheat in Kansas and Maryland.

The statue of "The Pilgrim," erected by the New England Society in Central Park, near the Grand Drive, was formally unveiled at 3 o'clock on Saturday afternoon. George William Curtis delivered a commemorative address.

It was announced on Wednesday that Richard S. Scott, paying teller of the Bank of the Manhattan Company of this city, had absconded with $160,610 42. He had been employed for twenty years by the bank and had an excellent reputation. He has fled to Canada. It is believed that he is residing near Prescott, Ont. The bank's surplus unimpaired after the above loss is $925,000.

It is now a little more than a year that Ferdinand Ward has been confined in Ludlow Street Jail. On Thursday he was brought to the bar in the Court of Oyer and Terminer in this city to plead to an indictment charging him with grand larceny in the first degree. His plea was not guilty, and his case was postponed until the 15th instant. More indictments were presented against him on Friday and Monday.

Ex-Governor Hale, of New Hampshire, failed on Saturday. It is reported that his liabilities may reach $1,000,000.

The jury at Richmond which tried Cluverius for the murder of Lillian Madison, found him on Thursday night guilty of murder in the first degree.

Robert Treat Paine died in Brookline, Mass., on Wednesday, at the age of eighty. He was the grandson of the distinguished man of the same name who signed the Declaration of Independence. Mr. Paine was graduated from Harvard in the class of 1822, and was almost the last survivor of that class. He studied law and was admitted to the bar. He was a member of the Boston Common Council in 1828, '33, and '34. During the greater part of his life he devoted his time to benevolent and scientific labors, chiefly in astronomy.

The Rev. Daniel Denison Whedon, D. D., LL.D., late editor of the *Methodist Quarterly Review*, died at Atlantic Highlands, N. J., on Monday, aged 77.

FOREIGN.

Lord Randolph Churchill, speaking in East London on Wednesday evening, summarized the Tory policy of the future as follows: "For Ireland a return to the policy of Pitt, Peel, and Beaconsfield; a comprehensive revision of the present fiscal revenue arrangements; rigorous retrenchment in national finances; a reform of the procedure of the Commons by meeting earlier, rising earlier, and giving much larger power to the committees of the House; a large scheme of local reform for Ireland, England, and the metropolis; a comprehensive inquiry into the whole operation of Indian government; confirming British predominance in Egypt, and making a close alliance with the Sultan."

The House of Commons reassembled on Thursday. Mr. Gladstone announced on Friday that Russia and England had come to an agreement concerning the points of difference between them which were to be referred to arbitration. He also stated that the Governments of the two countries have likewise agreed upon the arbitrator. But as the person chosen for arbitrator has not yet been formally asked to accept, he was therefore unable to say further on the subject then.

The majority of Mr. Gladstone's Cabinet, led by Earl Spencer, would maintain the following provisions of the Irish Crimes Act: First, enabling a change of venue of a trial; second, giving power to try special cases with special jurors; third, giving power to try summarily for intimidation before two resident magistrates; fourth, giving power to conduct a preliminary secret examination. Mr. Joseph Chamberlain, in a speech at Birmingham on Wednesday night, said the task of the new Parliament would be to give the widest possible self-government to Ireland consistent with the integrity of the empire, and to find a safe mean between separation, which would be disastrous to Ireland and dangerous to England, and excessive centralization, which would impede legislation.

The British Cabinet on Friday discussed Irish coercion for two hours, but failed to reach an agreement. Earl Spencer, in a recent interview with Mr. Gladstone, stated that an irreducible minimum of coercion he considered indispensable for governing Ireland. He showed by his absence from the council that he was determined there should be no compromise. Mr. Gladstone asked Mr. Chamberlain and Sir Charles Dilke to accede to Earl Spencer's full demands for one year. The excitement in Ministerial circles over the crisis became intense.

On Friday evening in the House of Commons Mr. Gladstone announced the following as the order of Government business: The second reading of the budget, on Monday; the consideration of the Scotch Crofters' Bill and the bill for the renewal of the Irish Crimes Act, remodelled, on Thursday, and the introduction and consideration of an Irish Land Purchase Bill as soon as possible.

Mr. Childers, Chancellor of the Exchequer, announced in the House of Commons on Friday afternoon that the extra duty on spirits and beer had been fixed at a shilling a gallon. This was a reduction, he said, which would involve a loss to the public revenue of $1,500,000 per annum. The additional duty on beer, the Chancellor said, would be retained until May 31, 1886, and no other changes in the budget would be made.

Mr. Childers, Chancellor of the Exchequer, announced in the House of Commons on Monday evening that the Government had decided not to refund to the taxpayers the amount of the increased duty on spirits paid over and above the extra shilling per gallon finally decided on, because consumers had been charged higher rates after the announcement of the original increase. Mr. Childers moved the second reading of the budget, and in his supporting speech explained that, of the total increase in the beer and spirits duties, England pays seven-ninths, Scotland one-ninth, and Ireland one-ninth. The Conservatives denounced the increased duty on spirits, asserting that the amount needed could have been raised by increasing the duty on tea or wine. Mr. Gladstone in his reply said he thought that the Opposition were creating a precedent which they would regret when they came into power again. The previous reduction of wine duties had a beneficial effect in preventing adulteration and increasing the trade many millions annually. It would be most impolitic to increase the wine duty, unless under the most extreme pressure. The Opposition cavilled at the mode of raising the money without suggesting an alternative. Tea would require an additional tax of 3d. per pound to produce the same amount, thus raising the duty 75 per cent. on an innocent beverage. The Government had to choose between alcoholic liquors and tea and sugar. They would accept the issue of the vote as one of life or death, and did not envy those who, if they gained a victory, would have to bear the consequences. Mr. Gladstone's remarks were received with prolonged cheers. The Government was defeated on a motion for the second reading of the budget by a vote of 264 to 252. Tremendous excitement was caused by the announcement of the result. Mr. Gladstone immediately adjourned the House.

A Cabinet Council was held on Tuesday afternoon, and, after a thorough discussion, it was decided to resign. When Parliament met, Mr. Gladstone said the Cabinet thought they were under obligation to submit a dutiful communication to the Queen. It would be premature on his part to enter into particulars concerning the nature of that communication just now. As a few days must elapse before the result of that communication could be arrived at, he moved the adjournment of the House until Friday. This was carried. Mr. Gladstone's bearing was dignified and even cheerful, and his reception was highly demonstrative.

The crisis produced a general depression of the London stock market. The effect of the resignation on the negotiations with Russia may be very serious. It is believed that the Conservatives will assume office.

Sir Peter Lumsden arrived in London on Saturday. He is severely censured for talking freely on the way about the Afghan dispute, but lays the blame upon the reporters. A Tory ovation has been talked of.

Great excitement was caused in St. Petersburg on Saturday by the announcement of the *Novosti* (newspaper) that it had been privately informed from the Caucasus that the Amir of Afghanistan, Abdurrahman, had been murdered by his suite. It is said that the murder took place in Persia, where the Amir was at the time travelling, and that Ayub Khan, the deposed Amir, will be his successor. Abdurrahman Khan, who in the summer of 1880 was acknowledged by the British Indian Government as Amir of Kabul, had long been an exile in Turkestan. He is the lineal representative of Dost Mohammed, the founder of the Barakzai dynasty, and is the eldest son of Afzul Khan, a half brother of the late Amir Shir Ali. It is believed that Abdurrahman was born about 1830. Nothing confirmatory of his reported death has been received in London, and the rumor is not credited.

The English troops will leave Assuan about the middle of June for Cairo at the rate of 1,500 a week. The rebels have occupied Korti, and it is expected that they will advance upon Dongola when the English have gone. The Guards have been ordered to remain at Alexandria for the present.

Mr. Phelps, United States Minister to Great Britain, was the principal guest of the evening at the dinner given in London on Wednesday night to the judges by Lord Mayor Fowler at the Mansion House. Mr. Phelps, in responding to a toast, said that he had no such claims to the hospitalities of Englishmen as his predecessor, Mr. Lowell, had established, and, therefore, the flattering reception that had been accorded him was all the more gratifying. He ascribed the warmth of his welcome to the natural and abiding love between Englishmen and Americans, which was fostered and constantly broadened and deepened by their great international intercourse. Those present and the press of the country warmly praise Mr. Phelp's speech. The *Times* says he spoke with a grace of diction and an elevation of tone that proved him fitted to fill Mr. Lowell's place, as well socially as officially. He will be the medium of bringing English and American bars and benches together in other modes than by their partnership in law-books and axioms.

The Corporation of London will present ex-President Arthur with an address and a gold casket upon his expected visit to London, and the Lord Mayor will give a reception.

Oxford University will on June 9 confer the degree of D.D. on the Rev. Phillips Brooks, of Boston.

The first part of Mr. John Ruskin's autobiography has appeared. In the preface he says: "I have written frankly and garrulously of what gives me joy to remember, passing in total silence things which give me no pleasure in reviewing. My mother's influence in moulding my character was conspicuous. She forced me to learn daily long chapters of the Bible by heart. To that discipline and patient, accurate resolve I owe not only much of my general power of taking pains, but the best part of my taste for literature."

The slander case of Charles W. Adams against Lord Coleridge has been compromised. The terms of the settlement are these: The Lord Chief Justice settles an income of £600 yearly on his daughter, Mildred, on the occasion of her marriage to Mr. Adams, and the legal disputes are to be referred to arbitration.

James Moncrieff Arnott, F.R.S., the celebrated Scotch surgeon, is dead, in his ninety-second year.

Sir Julius Benedict, the musician and composer, died in London on Friday. He was born at Stuttgart, November 27, 1804, and at an early age showed much musical talent. From 1821 to 1824 he had the benefit of Weber's exclusive instruction, and was treated by him rather as a son than as a pupil. At the age of nineteen, on Weber's recommendation, he was engaged to conduct the German operas at Vienna. His first opera was produced at Naples in 1827 and was not successful. He went to England for the first time in 1835. In 1836 he undertook the direction of Opera Buffa in London, at the Lyceum. His operetta "Un Anno ed un Giorno" was well received. After this he turned his attention to the English musical stage. "The Gypsy's Warning," his first English opera, was produced in 1838, and was a remarkable success. He visited this country in 1850 with Jenny Lind. His most popular opera, the "Lily of Killarney," was produced at Covent Garden in 1862. The oratorio "St. Peter," his last choral work, was written expressly for the Birmingham festival of 1870, and is considered by far his best composition. "Graziella," a cantata, was performed at Birmingham in 1882. Queen Victoria conferred on him the honor of knighthood on March 24, 1871. He received many other honors and decorations from European sovereigns.

By an explosion of fire-damp in a Durham (Eng.) colliery on Wednesday, twenty-two miners lost their lives.

The winner of the Derby at Epsom Downs on Wednesday was Lord Hasting's bay colt Melton. He was the favorite in the betting, and was ridden by the famous jockey Fred Archer. Captain C. Bowling's bay colt Paradox secured second place, and Mr. Childwick's bay colt Royal Hampton third place.

The French Chamber of Deputies on Thursday resumed the discussion of the report of the Committee of the Initiative advising the rejection of the motion to impeach the entire Ferry Ministry. M. Brisson, Prime Minister, speaking for the present Government, urged the House to accept the report of the Committee. To reject the report now, on the eve of a general election, would be a useless proceeding. Such action would but reopen a discussion that could only result in dividing the Republican party. The impeachment motion was rejected by a vote of 322 to 153. The scene in the Chamber during the debate was exceedingly stormy.

The Paris *République Française*, in what seemed to be an "inspired" editorial, on Friday, said: "France demands that the equal rights of all European Powers in Egypt be recognized and secured, so that no Power shall be able to interfere alone."

It is asserted that the manuscripts left by Victor Hugo will fill ten volumes. Three of them will be prose and poetry; the others notes and letters written during his exile.

The treaty of peace between France and China was signed on Tuesday.

Letters from Saigon, the capital of French Cochin China, state that the Cambodian revolutionists against French authority have, with the King's secret support, attacked Namwang, the capital of Cambodia, and driven the European residents from the city. The refugees were sheltered on board a French ship which lay in the Me-Kong River.

A Spanish Government commission has declared Asiatic cholera epidemic in the province of Valencia.

It is asserted that there have been eleven cases of Asiatic cholera and two deaths in Madrid.

Prince Bismarck, in replying recently to a number of petitions from the Eastern Provinces of Prussia in favor of a bi-metallic standard for the coinage of money, said that the question was being studied by competent authorities, and that the Government would await their report before taking action.

The Russian Council of the Empire, at its session on Wednesday, discussed the question of an increase of the tariff. Although nothing of a definite nature was done, the general conclusion was that the increase of the duties on most of the importations should be 20 per cent.

A cyclone disastrous in its consequences struck Aden, Arabia, on Wednesday. The damage done is estimated at $250,000.

The report that Dumont, Riel's lieutenant, had been captured at Fort Assiniboine is incorrect. He has arrived at Fort Benton, Montana.

A courier arrived at Battleford on Thursday from the front. He reported that General Strange had had three engagements, in the last of which one man was killed and three wounded. Big Bear sent a flag of truce to General Middleton, but the bearer was killed by a shell. Big Bear was reported to be fleeing northward.

The news reached Winnipeg on Sunday that General Middleton had marched against Big Bear on June 4. The latter fled, dividing his men in two forces. One division, containing 300 men, was met by Captain Steele's force of police, numbering 100, and, after a severe skirmish, was routed. The Indians escaped over a large creek. General Middleton is in pursuit. A number of the prisoners with Big Bear have escaped.

THE DIPLOMATIC SERVICE.

WHATEVER may be thought about the wisdom of this country's maintaining a diplomatic system, there can be no question that, so long as it is continued, it ought to be fairly representative of the whole nation. For many years this has not been the case, since one section of the Union has practically monopolized all diplomatic places. When the Republicans went out of power last March, not only was every first-class foreign mission filled by a man from the North, but among all the sixteen envoys extraordinary and ministers plenipotentiary only two, the Ministers to Mexico and to the United States of Colombia, had been appointed from the South, while of the forty officials who filled the places of ministers-resident, chargés-d'affaires, and consuls-general, only five came from below the old Mason and Dixon's line. In other words, of the important places in the diplomatic service forty-nine were occupied by men from the North, and only seven from the South, while these seven were all second or third-rate.

The new Administration has done well to put an end to this most glaring and unjust one-sidedness. The four first-class missions were originally divided equally between the two parts of the country, the North receiving the English and German and the South the French and Russian, though the doubt as to Mr. Lawton's eligibility resulted in the last-named place also going to a Northern man. Of the twelve ministers plenipotentiary thus far appointed six are from each section, while of the nine new ministers resident six are from the North and three from the South. In all, seventy appointments of various sorts have been made in the diplomatic and consular service, of which thirty-eight have been from the North and thirty-two from the "Solid South." This almost exactly answers to the relative populations of the two sections, while the wiping out of the old sectional line rescues this branch of the Government from the reproach of representing but one part of the country.

The Blaine organs have had a great deal to say the last few weeks about the "wholesale changes" which have been made in the foreign offices, and many people have doubtless got the impression that the State Department has been demoralizing the service by indiscriminate removals. So far is this from the truth that a comparison between the early weeks of the Garfield and the Cleveland Administrations actually shows a greater number of changes, in that portion of the service which should be outside the range of American politics, during the brief period of Blaine's undisputed reign as "Premier" before Garfield's assassination, than under Bayard, although the Republican Secretary found the places already filled by adherents of his own party, while the Democratic chief could discover scarcely a representative of his party in any foreign office.

It is conceded by all fair-minded men that a new Administration is entitled to fill the chief diplomatic posts with men in hearty sympathy with its purposes. An entire change in the personnel of our foreign ministries after the 4th of March might, therefore, have been expected, and would be justifiable. As a matter of fact, however, instead of any indecent haste about such proper changes, three months after the Democrats came into control of the State Department, no less than nine of the thirty foreign missions are still to be filled by the new régime. While the justice of changes in the missions is obvious, every consideration of sound public policy dictates that the incumbents of consulates should not be ousted every time a new administration takes command at Washington. The argument against such changes is all the stronger when the new Administration is of the same political faith as its predecessor. Yet the statistics show that the Garfield Administration, whose election maintained in control the same party which had held the reins for twenty years, made more changes in the consulships than the Cleveland Administration, which restores to power a party that has scarcely had a foreign—or, for that matter, a domestic—office for a quarter of a century. Thus far only twenty-nine consuls have been appointed since Cleveland was inaugurated, while thirty-seven changes in such offices were made by Blaine during Garfield's brief Administration.

As the whole number of consulates in 1881 was only about 180, it will be seen that a full fifth of the men whom Blaine found in office appointed by Secretaries of his own party were discharged within four months for the sole purpose of paying off political debts. Anybody familiar with the names of working politicians during the years preceding 1881 will recognize at a glance the motives which dictated the appointment of nearly all the consuls whose commissions were signed between the 4th of March and the day when Garfield was shot. The purely political basis upon which foreign appointments were made—openly confessed when such a man as Kilpatrick was sent to represent the United States in Chili, and Hurlbut was allowed to bring disgrace upon the country as Minister to Peru—ruled in the changes among the consulates, hardly one of which was not for the worse.

Mr. Bayard's administration of the State Department has been by no means beyond criticism. The lack of knowledge of Italian politics displayed in choosing a man of Keiley's record as Minister at Rome was remarkable, while the notion that the ancient Court at Vienna would welcome a man whom Italy was unwilling to receive, was scarcely less so. But as a rule the foreign missions have been well filled. The average level of our representatives at London, Paris, Berlin, and St. Petersburg has seldom if ever been higher than it will be with Phelps, McLane, Pendleton, and Lothrop. The consul-generalships have been given to good men, with the exception of that at Melbourne, which the Administration was tricked into bestowing upon a worthless fellow by persons in whom it had a right to confide. The new consuls have been, as a rule, men qualified for their places. But the most creditable thing about Mr. Bayard's course is the deliberation and moderation which he has shown in making appointments in this branch of the service. Actions speak louder than words here, and the fact that Mr. Bayard has made fewer changes thus far than Mr. Blaine did in a corresponding period, when one considers the tremendous pressure for office upon the first Democratic Secretary of State in twenty-five years, goes far to show his fidelity to his professions in favor of civil-service reform.

Mr. Bayard, like Mr. Cleveland, appears to comprehend a fact which too many Democrats do not yet appreciate. This is the fact that the country has made a great advance during the past four years in its demands regarding the foreign service. The public will not endure now from a Democratic administration what it accepted as a necessary part of politics under the Republicans. Mr. Blaine's prompt removal of a fifth of the consuls when there had been no change in parties, is evidence that he would have made short work of the other four-fifths if he had succeeded a Secretary of the other party; but the country would not stand from Mr. Bayard in 1885 the logical completion of Mr. Blaine's work in 1881. The policy which has been pursued regarding the foreign appointments is, all things considered, a strong proof of the Administration's fidelity to the pledges upon which it secured power.

THE CIVIL SERVICE AND THE SOLDIERS.

THE passage of the bill by the Massachusetts Legislature exempting soldiers and sailors from the operation of the Civil-Service Law of that State is being used to some extent by the enemies of the reform, as an indication that the popular sentiment in its favor is not as strong as it has been supposed to be, even in States like Massachusetts. Some have been so much impressed by it as to fear that it might have some effect on President Cleveland's determination in executing the Federal Civil-Service Act. The answer to this is, that we have yet to see anywhere the success of a direct attack on the competitive system. Such attacks have been made, but they have invariably failed, and have never been led by politicians of any weight or respectability. They have usually been the work of small demagogues who find difficulty in keeping themselves before the public. In fact, there has been no more remarkable phenomenon in politics in recent years than the rapid diminution in the number of politicians of note who are willing to avow themselves enemies of the new mode of appointment and admirers of the spoils system. This need not be ascribed—in fact, we dare say that in a large number of cases it cannot be ascribed—to real change of opinion. It is, however, quite certain that, in nearly all cases, it indicates a belief that the reform is growing in favor with the voters. It is very rare nowadays to meet among politicians holders of unpopular opinions or supporters of unpopular systems. When politicians favor a thing, it is pretty certain that they think it a good thing, in the low as well as in the high sense of the term, to favor; and when they assail anything it is, as a rule, pretty certain that they do not believe it has much popular support. In other words, we should to-day have neither the Federal Civil-Service Law, nor that of either New York or Massachusetts, if legislators were not convinced that the change was called for by a growing public sentiment, and that its opponents would be punished for their opposition at the polls.

That anything has occurred to shake the

President's belief in the competitive system, we believe, and indeed we may say we know, to be untrue. On the contrary, it is right to assert that he is to-day more of a civil-service reformer than when he came into office, and more determined than ever to extend the operation of the new system, when he gets relief from the present "pressure." And one of the strongest reasons for his upholding and extending it is, that it is emphatically a popular system, that through it for the first time the Government service is thrown open to the people, and especially that portion of the people which is poor, and has no "influence," and does not "work" in politics. It gives the workingman's son, for the first time in American history, a chance to get a place under the Government without asking a favor of any great man, or even knowing a great man. It puts a check on that terrible degradation of the national character which was caused by the rapid growth of the army of political solicitors, dependents, and henchmen. Nothing is more un-American or more dangerous to free government than the existence of such a class, and it was a class which, under the spoils system, was increasing with alarming rapidity. Our Senators at Washington, as well as some members of the House, were, under it, rapidly taking the place of the Roman patricians, with a huge tribe of clients and freedmen at their heels, dependent on their favor for comfort and often for a livelihood. In fact, we were gradually building up an aristocracy only surpassed in baseness by a plutocracy. President Cleveland sees this as clearly as anybody. In other words, he is a genuine American, and, besides this, in his habits of thought is a modern business man, who hates humbug, and phrases, and disguises.

The explanation of the attempts to exempt soldiers and sailors from the operation of the civil-service rules is to be found in the exhaustion of the previous modes of capturing or placating what is called "the soldier element" in the voting population. For some years after the war this was done by imagining the existence of a body of persons who were aiming at the withdrawal of the pensions, and denouncing them vigorously in the party platforms. Nobody knew exactly who these persons were, but the soldiers and sailors were given to understand that the party managers had their eyes on them, and would at the proper time frustrate their knavish tricks. Afterward, when this device began to grow stale, the plan of increasing the number of pensioners and making pensions easier to get was resorted to, and persisted in until the present law was passed, which offers a pension to nearly everybody who has heard a shot fired in war. Under it, indeed, it is difficult for a soldier or sailor to avoid being pensioned, so that there is not much more to be done for "the soldier element" in that direction.

Under these circumstances, the passage of the civil-service acts in this State and in Massachusetts was a real godsend to those who cultivate or stand in fear of the soldiers and sailors. It promised them what was very difficult to find, something to offer to this class of voters—namely, exemption from examination as a condition of getting office. The soldiers and sailors were already, under the law, entitled to a preference in all cases of equality in answering, but this was something apparently much better—namely, relief from answering altogether. Of course a moment's reflection would show that the thing was conceived in humbug, and would do the soldiers and sailors no good in practice; but politicians do not expect their schemes to be analyzed closely by those for whose benefit they appear to be intended. On its face it would seem as if the exemption would lead to an equitable distribution of offices among those who have served in the army and navy and are dependent on their labor for a livelihood, but in reality it will do nothing of the kind. It will simply enable politicians to thrust into office that portion of the "soldier element" which "works" in politics, and likes the occupation of a "heeler" or henchman. It will, in fact, take away from the respectable and intelligent soldier the chance of entering the service which the civil-service examinations would give him, for the places he might have got will be filled by the generally worthless favorites of the politicians.

THE WINE INDUSTRY.

It is estimated that the quantity of wine produced annually in all the civilized countries of the world is 2,485,829 gallons. Of this, France produces nearly one-third. Seven years ago wine-making, owing to the ravages of the phylloxera, seemed in danger of extinction in France. To-day she has within one-fifth of as many acres of vineyards as before the plague set in. Moreover, large quantities of new land are being turned into vineyards by people who believe that the late troubles were in part due to the wearing out of the old soils. If this movement continues at the same ratio as during the last ten years, France will have next year under vine culture not simply 6,214,572 acres, as before the phylloxera plague, but probably 7,500,000 acres. It must be remembered, too, that a great increase—though perhaps not as great as this—is going on in the wine production of Italy, Spain, Austria (including Hungary), Greece, Algeria, and the United States. The consequence is, according to M. Leroy-Beaulieu, that the wine-growers are threatened with just the same kind of crisis as that through which the corn and wheat-growers of the Old World are passing—that is, they are in danger of finding more wine on their hands than they can sell, while the cost of growing vines has in France greatly increased, owing to the precautions which have now to be taken against insects and disease. A large number of wine growers in France have taken the most radical, but the most expensive precaution of all, that of planting American vines instead of the French—the American being the only one which has thus far shown ability to defy the phylloxera without artificial aids. There were about 125,000 acres planted with American vines in 1884. Next year it is thought there will be 250,000 acres; but this means a great outlay of capital.

Great efforts were made in Italy, Spain, and Greece, while France was suffering from the phylloxera, to take her place in the wine markets of the world, which the French endeavored to resist by importing foreign wines, especially those of Spain and Italy, and reëxporting them as French wines. But they suffered seriously in the struggle, and undoubtedly would permanently lose ground if their foreign rivals were not themselves beginning to experience the French plagues. The phylloxera has transferred itself to Spain and Italy and Portugal, so that the production of wine in these countries is not likely to increase in the old ratio. M. Leroy-Beaulieu is not afraid of any very rapid increase in this country, because, he says, "Americans cannot be taught to drink wine."

The greatest enemy of the French wine-grower now, however, is, according to him, the foreign falsifier and adulterator. He gives a most dolorous account of the very flourishing manufacture of French wines which goes on in Hamburg, where German wine dealers advertise and sell large quantities of Lafitte, Latour, Margaux, and indeed all the finer brands of French wine, made out of German red wines at ridiculously low prices. They sell, for instance, a cask of Château Lafitte which, if genuine, would cost in France $400, for $26. But the truth is, that it is the French themselves who have taught foreigners the art of counterfeiting wine, and it is poetic justice that they themselves should suffer from it. There is at Cette one of the greatest wine factories in the world, where with the coarse Roussillon wines as a basis, any wine you call for is got up, and sold dirt cheap. During the years, too, of the phylloxera plague the adulterating industry was carried on in France on an enormous scale. The exports of every variety of French wine continued to be as large as ever, and there was no rise in price. But the importations from Italy, Hungary, and Spain were as large as the exports, and these were doctored by the French themselves into any brand of French wine for which there was a demand.

It is not, however, at all likely that the wine growers of Europe will ever have to contend with the kind of glut from which the wheat growers and cotton manufacturers are now suffering. The consumption of wine by the population of civilized countries is exceedingly small as compared with their consuming capacity, and the amount of wine a man can dispose of is, unhappily, not nearly as well marked as the amount of clothing and food he can use. The consumers of whiskey and brandy, whose number is enormous both in this country and Europe, offer a new field to the enterprise of the wine grower such as no other manufacturer has within reach. In fact, his greatest enemy is the temperance reformer, but he is not wholly an enemy, for there are few temperance advocates who are not willing to compromise with the whiskey drinker on claret or hock. Beer is the most powerful competitor that wine has to contend with, and has invaded even the French market very seriously. Which will get the upper hand as a popular cheap drink in this as well as some European countries, is still doubtful.

"THE DESECRATION OF THE SABBATH."

The Chamber of Commerce last week discussed and passed Mr. Dodge's excellent resolution advising its members to adopt in their

business the custom of closing on Saturday at 1 o'clock from June 1st till September, which has been so successful in England. Mr. Jesup supported it on the ground that it disposed of or neutralized the argument in favor of opening the libraries and museums on Sunday, that the clerks have no other day on which they can visit them. But this argument is, after all, not by any means the principal one. The chief one is that the views of a small minority of the Christian world as to what constitutes "desecration of the Sabbath" ought not to prevail in the management of public institutions, and that the clerks and workingmen are, or ought to be, in the matter of Sabbath-keeping, sole judges of their duty. In other words, every man should consult his own conscience in making his choice among different modes—in themselves harmless—of passing the first day of the week, and should not have his choice restricted by the workings of other men's consciences.

The law which forbids ordinary and unnecessary labor on Sunday is really a sanitary regulation, beneficial to health, and through the health to the morals of the community. But all attempts, direct or indirect, either by legislation or otherwise, to control the choice of adults as regards innocent modes of spending Sunday are mischievous in the extreme. In the first place, they prejudice workingmen against the whole class to which Mr. Jesup belongs—that is, the class which believes in passing Sunday in the old Puritan way, in religious exercises or religious meditation, and in abstinence from all amusement or recreation, and they thus lessen the influence and authority of this class on other matters. This we hold to be a real misfortune, because there is no more useful, self-sacrificing, and public-spirited class in the community. We are largely indebted to it for nearly everything the city possesses in the way of libraries and museums, as well as other good things, and it is, therefore, a public misfortune to have the ears of the masses closed against its advice in general, because its advice in one particular savors of intolerance or spiritual arrogance. No sober, intelligent, and industrious workingman or clerk—that is, no man whose tastes and intelligence make him desire to pass his Sunday in a museum or library—likes to be told by Mr. Jesup or Mr. Prime that he does not know how to pass his Sunday, that he needs restraint to prevent his passing it improperly or wrongly. There are very few who will not resent it, and, in consequence of it, become slower to listen to these gentlemen in matters on which their authority is unquestionably high. In fact, it is in our day hopeless to try to put restrictions on freedom of conscience as to the mode of passing Sunday, any more than as to the obligation of going to church. Men will have their liberty in both, and the wise course for those who love the old Puritan Sabbath is to recommend it as much as possible through their own tolerance, and charity, and example, and impose it as little as possible on others through rules and regulations.

We must remember, too, that what Mr. Jesup and other good men consider "desecration of the Sabbath" is not so considered by the great majority of the Christian world. Protestants of Continental Europe have never held his view. The way people look at the Sabbath, like the way they look at so many other things, seems to depend largely on education and custom. The late Count Gasparin, as spiritually minded and religious a man as ever breathed, shortly before his death, talking with an American friend about President Lincoln, expressed in strong terms his sense of the pain it caused him that Mr. Lincoln should have been at the theatre when he was killed, but not because, like so many religious people in America, he objected to theatre-going. It was because Lincoln went on the evening of Good Friday, a day which Continental Calvinists "keep" with great solemnity, but to which an American Presbyterian pays no attention whatever. Count Gasparin, on the other hand, would not have had the smallest objection to taking a ride, or visiting a library or museum, on Sunday, or going to a public promenade after church hours. A New England divine of considerable eminence has told us of the surprise, and at the same time of the profitable lesson in tolerance and charity, which he received when he first went to Berlin and delivered his letter of introduction to a leading German theologian, whose learning and piety he had long admired. It was on Saturday when he called, and he did not find the theologian at home, but he got a note from him the same evening making an appointment with him on Sunday in a well-known beer garden, where they met accordingly and had a most edifying talk across the mugs of beer and tobacco smoke.

The danger there is for some minds in trying to apply the letter of the Bible to the solution of modern social problems was well illustrated in the opposition to Mr. Dodge's resolution by Mr. Isaac Phillips, who held that the proposed half-holiday would be wrong, because the commandment says, "Six days shalt thou labor." He had in fact discovered in the Commandment which only binds Mr. Jesup to pass Sunday in religious exercises and in abstinence from mundane pleasures, a positive prohibition of any other holiday or half-holiday. So that, according to the Phillips theory, breaking off work on Saturday would be as much a "desecration" of that day as working on Sunday would be of the Sabbath. People are best saved from these vagaries by asking themselves, when any change in social usage is proposed, whether it will make men and women healthier, happier, more refined in their pleasures, higher in their standards and ideals of life, and wider in their mental horizon. If they satisfy themselves on this point, they may feel well assured they have got nearer to God's will in the matter than ninety-nine out of one hundred of them can ever get by trying feats of hermeneutics on the Bible.

UNSURPASSED ENGLISH.

A MEMOIR of Onoocool Chunder Moorkerjee, who died in 1871, one of the judges of the "High Court" of India—its highest tribunal—was published at Calcutta, shortly after his death, by a nephew. A copy of the third edition, issued last year, has come into our hands, and we greatly regret that we cannot give it *in toto* (as the author would say) in these columns. But such space as we can afford we gladly devote to the most remarkable passages of this verbatim reprint, though the preface states that "the first edition of this humble and unassuming treatise was assailed on all sides by native and European papers." For our part, we find it highly amusing and interesting.

The subject of this little volume was unmistakably a really admirable man, who, "by dint of wide energy and perseverance, erected a vantage ground above the common level of his countrymen—nay, stood with the rare, barring few on the same level with him, and sat arrayed in majestic glory, viewing with unparalleled and mute rapture his friends and admirers lifting up their hands with heartfelt glee and laudation for his success in life." "His father died when he was very young, and the large estate which he had bequeathed to his children was gradually squandered away by his eldest brother in unfortunate blind bargains and speculations. The family was threatened with Barmecide feast. . . . Onoocool Chunder was pressed by his mother to search for an employment. . . . 'All love the womb that their first beings bred,' and Justice Moorkerjee was not out of the pale of it." And his nephew, enlarging on this topic, after some rather surprising remarks on childbearing, reminds us that "there cannot be a greater instance of self-denial than a mother endures during the whole existence of her offspring. Nothing in the world can make her facetious when her child is not so, and nothing in the world can make her lugubrious when her child is not so. . . . Ergo, on the contrary, a mother is loved and respected in every age."

Ergo, on the contrary, "the late Hon'ble Moorkerjee could no longer sit at home"; he "saw that an effort was necessary, and an effort he did make." He applied for a "Nazirship," and served for five years under three successive magistrates, each of whom, "as he left the magistracy, gave him a certificate testifying to the excellence of his character and his *cui bono* in the post he held." Meantime an English judge became acquainted with him and interested in him, and advised that he should "be nurtured for the bar"; and "Onoocool Chunder began to study law, for none can be great *Impromtu!*" And in 1855, when he was twenty six years old, he joined the bar of the Sudder Court. "It is impossible to describe the oblactation with which he contemplated this change in his position." "His first business, on making an income, was to extricate his family from the difficulties in which it had lately been enwrapped, and to restore happiness and sunshine to those sweet and well-beloved faces on which he had not seen the soft and fascinating beams of a simper for many a grim-visaged year."

In 1869 a discussion arose between Mr. Moorkerjee, who was what, in Indian parlance, is called a "Pleader," and a Mr. Mone Mahone Ghose, a barrister "fresh from England," on a point which had never been raised before, namely, the Pleader's right, when engaged conjointly in a case, to have precedence over the barrister in arguing the case, if he (the Pleader) were the best prepared and the senior. The judges before whom the question was brought gave decision in favor of the barristers.

"Justice Moorkerjee [he was not "Justice" till two years afterward] was now stung to the quick for the first time of his life, and returned to his chamber malcontent. On the next day he received a letter from the Chief Justice (Sir Barnes Peacock) asking him to become Advocate of the High Court. He thought that if he accepted the offer, he, being senior to many barristers, would have the pre-audience to many; but, on the other hand, he would thereby leave to go to wreck his hope of becoming a Judge, and would also leave his brother Pleaders to opprobrium. Accordingly, he held a meeting in the bar-library for determining whether he should accept the offer. After a heated discussion, all the pleaders *una voce* said 'No!' And the Hon'ble Moorkerjee did nill the offer politely."

A few weeks after this incident his eldest

brother died, and "now Hon'ble Moorkerjee was once again thrown into the peck of troubles." In the same summer he "was attacked with a doloriferous boil"; but in the autumn he "felt himself much emendatory in his health." The next year he was offered and accepted a seat in the Legislative Council of Bengal. "This was the first time (and in the case of the Hon'ble Moorkerjee) that we see a Pleader of the High Court taking a seat in the Bengal Legislative Council, solely by the dint of his own legal weapon, and he was an *au fait*, and therefore undoubtedly a transcendental lucre to the Council. . . . The selection in Justice Moorkerjee was most judicious and tip-top." But within the year he resigned his seat in the Council to accept a seat on the Bench.

"This was a *desideratum* to him. The hope which he so long hatched at last yielded him what he hankered after, and in seven-league boots, 'True hope is swift and flies with swallows' wings'; and he might have justly said: Veni, vidi, vici! The law study to which he had devoted so long his midnight hours, with indefatigable ardour and the zeal of a martyr, yielded him fruits most sacchariferous and wished for, *position*, *respect*, and *wealth*. . . . His elevation created a catholic ravishment throughout the dominion under the benign and fostering sceptre of great Albian."

He had, however, but short enjoyment of his success. Within eight months, one day after delivering a judgment in court, "he felt a slight headache, which gradually aggravated and became so uncontrollable that he left like a toad under a harrow"; and sent

"to inform or apprize Justice Jackson with whom he was sitting on the same Bench of his indisposition, which will cause him to be absent from the Bench for that day,—and who knew to EVERNESS! . . . All the well-known doctors of Calcutta . . . did what they could do, with their puissance and knack of medical knowledge, but it proved after all as if to milk the ram! His wife and children had not the mournful consolation to hear his last words, he remained *sotto voce* for a few hours and then went to God at about 6 P. M. The doctors all . . . [were] with tears in their eyes, [we must, most regretfully, greatly abridge] . . . his wife . . . shrieked bitterly, . . . his children did *fondre en larmes*, . . . his friends . . . departed broken-hearted, . . . his servants cried out. . . . The house presented a second Babel or a pretty kettle of fish."

But it is not merely mirth that these pages excite when read unbrokenly. There is a very touching short conversation reported in this comical style, which the Judge had with a friend after his seizure, reminding him, "I have told you about fifteen days ago that my time was very near to its close, and my father went to reside with the morning stars at about this age of mine." And the whole impression of his life is most agreeable. "He was a faithful Hindoo," and "the Hon'ble Moorkerjee did bleed freely, but he was not a leviathan on the ocean of liberality; . . . the mode of assignment of his charities was to such men as we truly wish and recommend and exsuscitate enthusiastically. He used to give monthly something to . . . many relicts who had no hobbardy-hoy even to support them, and had no other source of sustenance left to them by their consort." Among other details of his personal appearance our author says:

"When a boy he was filamentous; but gradually he became plump as a partridge. . . . His dress was unaffected—he used to wear *Dhootee* and *Chadur* on all occasions except when going to court, office, or to see any European gentleman, or attending any European party. And even on going to see a *Nautch* or something of the like I have never seen him in a dress fine as a carrot fresh scraped, but *esto perpetuum* in Pantaloon and in satin or broad-cloth Chapkan, with a Toopee well quadrate to the dress."

We can easily believe and understand that "when the Hon'ble Onoocool Chunder Moorkerjee left this earth all wept for him, and whole Bengal was in lachrymation—and more I shall say, that even the learned Judges of the High Court heaved sighs and closed it on its Appellate and Original Sides."

BRITISH HOME POLITICS.

LONDON, May 25.

IN England, a registration bill comes after a franchise bill as naturally as plum pudding after roast beef. We have an excessively complicated and cumbrous system of registering voters, which is always needing to be cobbled up after a change in the franchise and the constituencies; and on this occasion there was the more need for a measure because the ordinary process of registration has to be quickened in order that a general election may be held before the end of the present year. Nothing less interesting than a registration bill can well be imagined; it is full of details which hardly anybody understands, and in which even a draftsman can find no pleasure. But three discussions arose upon this bill which were so instructive, so indicative of features in our present political condition and prospects, that I cannot do better than present some account of them. It is not always in the large questions, the great party debates, that we find the best illustrations of the tendencies that are beginning to move men's minds, and destined before long to show an irresistible force.

The first of these debates turned on a very trivial question, whether undergraduates in the universities who have reached the age of twenty-one should be permitted to vote at Parliamentary elections. A clause in the Reform Act of 1832 declared, as respects England, that the occupation of rooms in a college should not confer a vote. No such prohibition existed in Ireland, and accordingly there the occupants of rooms in Trinity College, Dublin, both graduates and undergraduates, voted in respect of their rooms. As they nearly all voted against the Parnellite party, the latter determined to take this opportunity of disfranchising the undergraduates, and moved an amendment to that effect in the Irish Registration Bill. This amendment was lost, whereupon they moved, in the English Registration Bill, which came on later, the repeal of the clause above mentioned in the Act of 1832, alleging that since Irish college residents were to have votes, English college residents ought to have votes also. The Government at first opposed the proposal, but finding it advocated by their Liberal supporters, who wished the graduates resident in colleges to have votes, and by the Tories, they gave way, and the clause was struck out. A further amendment was then proposed, by some of the Liberals connected with Oxford and Cambridge, to exclude undergraduates from this enfranchisement, on the ground that they had really, as being mere birds of passage, no connection with the boroughs of Oxford and Cambridge, and that to give them votes would interfere with the discipline of those universities, whose authorities exercise the right of forbidding their students to attend any political meetings in the town, on the ground of the disorders which might ensue. This view was supported by a resolution of the Council of the University of Oxford, which strongly objected to bringing the undergraduates into local politics. The Government intimated their view that undergraduates ought not to have votes; but the Tory Opposition, who counted on the votes of the undergraduates to carry the seats in the towns of Oxford and Cambridge for their party, fought the point with the greatest warmth, and received help from many Liberals, who declared that the more people receive the vote the better, and that it was ridiculous to exclude undergraduates from the franchise when agricultural laborers were being admitted. However, the advocates of exclusion carried it by a small majority, but when the contest was renewed on the Irish Bill, which had now come up in a later stage, they were defeated, and the Dublin undergraduates confirmed in their suffrage. When the English bill went to the House of Lords, the Tory party seized their opportunity and struck out the clause which disfranchised undergraduates; Lord Salisbury, who is himself Chancellor of the University of Oxford, going out of his way to sneer at the University dignitaries, who seemed so incapable of maintaining discipline that they could not trust their undergraduates with the suffrage. The House of Commons acquiesced, feeling that the anomaly of giving the franchise in Ireland and withholding it in England could not well be defended.

Whether the English undergraduates will, after all, obtain votes, is doubtful, because they are not really legal tenants of their rooms in the ordinary sense of the word, but are merely permitted by the colleges to occupy them during term time. But the interest of these skirmishes lies first in the revelation of the heat of party spirit, which caused so small a matter to be discussed at such an expenditure of time—it is plain that if the Redistribution Bill had not been settled as a compromise, the battles over it might have filled two sessions—and, second, in the strength of the notion that electoral privileges ought to be extended as widely as possible, and it was a sort of wrong to debar any one from them. This is really a new idea in England, for till the recent agitation began, it was only the advanced Radical party that cared for extending the franchise, and the progress which the idea has made seems to show that we have by no means reached the bottom, but may go on to manhood and universal suffrage. It is in the same abstract notion that all citizens have a right to vote, much more than in any expectation of good results to follow, that the strength of the Women's Suffrage party lies; and the power of such abstract notions is a comparatively new thing in the ruling classes of England.

The second question related to the disqualification from voting which our electoral laws have hitherto imposed upon persons in receipt of parochial relief from the poor-rates. Such a disqualification was absolutely necessary, not only because it tends to repress pauperism, but also because the vote of a pauper could not be a free vote, since those who dispense relief might control him in his exercise of his rights. And this disqualification extends not only to relief given in money, or in articles of food or clothing, but also to medical assistance—*i. e.*, medical advice and medicine. The number of persons excluded from the suffrage by such medical relief has been heretofore small, because in the cities there exist public hospitals and dispensaries supported by endowments or subscriptions, where the poor can get advice or drugs, while in the rural districts the poor have not had the suffrage at all. Now, however, that they are to obtain it under the Franchise Bill, the question becomes important, for a good many will doubtless be debarred from its exercise by having received the attendance of the parish doctor. Hence it was proposed to abolish this disqualification so far as related to medical relief, on the ground that as no one will break his leg or catch a fever in order to get help from the parish, there is no danger of inducing people to become a burden to the parish by removing the penalties attached to the receipt of this kind of relief.

Forty-five years ago, shortly after the passing of the New Poor Law, as it used to be called, the party of economic reform was the Whig party. It was they who had carried that great measure; it was they who defended it against the assaults of the Tories. They were the rigid scientists in

economic matters, and the Tories the humanitarians. Now, however, the generation of strict economists has all but died out. Other matters have filled the public mind, and the Liberal party has become very largely a party of sentimentalists and sentimentalism. There is no more economic science among the Tories than in old days, but there is certainly far less among the Liberals, as any one may perceive who reads the oft-recurring debates on the modes of applying charitable endowments. In this instance the movement to remove the restriction came from the Liberal side, and was supported by the vast majority of that party: some because they thought it bore hardly on the poor, some because they believed it would destroy many county votes that would otherwise have gone to Liberal candidates. The Tories defended the restriction mostly for the same reason that the Liberals sought to remove it—because they expected a party gain from it; but a few, conspicuous among whom was Mr. Albert Pell, the most experienced and successful local administrator of the Poor Law who sits in the House of Commons, were no doubt moved by their sense of the danger of weakening any barrier against the increase of pauperism. The Ministry declared themselves in favor of the existing law, but fought the point so languidly that when it was raised in committee they obtained only a small majority, and when it came up again in the stage of Report, they were beaten, nearly the whole of their usual supporters and a section of the Tories voting against them. The House of Lords replaced the disqualification in the bill, and the Commons, at the instance of the Ministry, somewhat sullenly acquiesced; so the law remains unchanged, and medical relief will disqualify a voter. But the tone of the debate was significant. The economic arguments urged by Mr. Pell fell on heedless ears. To both parties the question presented itself only as one of party advantage, or as of a hardship on the poor which it was unkindly and ungracious to perpetuate. "Why," said a Tory alderman—"why shouldn't the poor laborer have the parish doctor to look after him? His lot is a hard one, and you will make it harder if you force him to choose between going without the doctor and losing his vote." This "common-sense view" of the matter commended itself to politicians on both sides, who, now that they have bestowed electoral power on the laborer, shrink from the unpopularity of seeming to take back any portion of the gift. It is plain that we are destined to move further and further in the direction of State Socialism, and away from those strict economic doctrines which the Whigs of fifty years ago revered as another Magna Charta.

The third contested point in the Registration Bill related to the payment of the expenses of registration. The Tory party, which finds its chief support among county members, has for some years past complained of the pressure of local rates upon real property, and sought to shift various local burdens on to the national exchequer. An opportunity arose on this bill, at which they jumped, of throwing registration charges on the exchequer instead of, as heretofore, on the local rates; and as they had the Liberal county members with them, the position of the Ministry was perilous. To avoid defeat, Mr. Gladstone was obliged not only to declare that the Government would resign if they were beaten, but also to bend to the storm by offering a grant from the Treasury in aid of the local rates for the present year, when the registration charges will be exceptionally heavy. By this concession he escaped defeat, but added one more to his previous pledges that the first business of next session will be to reconstruct our whole system of local government, and revise our whole system of local taxation. As the Tories insist that land is now taxed too heavily, and the Liberals that it is taxed too lightly, there are materials here for an angry conflict. It is one which will test, and perhaps finally decide, the balance of power in England between the landed gentry and the industrial classes.

Y.

THE GROSVENOR GALLERY EXHIBITION.

LONDON, May 28.

THE Grosvenor Gallery serves the art world not merely as another on the list of exhibitions to receive the pictures which overflow from the Royal Academy, but as the favorite field of certain painters who have not the latitude or consideration at the Academy which that institution gives to its own members, as well as for certain kinds of art which do not show to their full advantage among the exaggerations and intensities which dominate there. It is a small exhibition, comprising only 418 numbers, including water-colors, and a few busts, etc.; and what has the good fortune to be admitted is treated on a different system from the commercial Academy, to which the Grosvenor bears the relation that a gentleman's drawing-room bears to the reception-room of a huge hotel. The pictures are more carefully placed, and are not hung so near the stars as to be practically out of the art world, as many are at the older institution; and they are visited by a far more select public than that of the Academy, where during the season it is impossible, except at certain hours the most unfashionable, to see the pictures to any advantage.

Thus the Grosvenor has a prestige quite its own, a prestige due certainly to the proprietor's being a gentleman to whom art has an intellectual value, and to whom the exhibition is a possession, looked at, as a work of art ought to be, not as so many pounds sterling, but as an agent of culture. This leads to the welcoming to its hospitality of many forms of art which the Academy turns the cold shoulder to, or which avoid the Academy as too huge, too indiscriminate, and too shoppy for them to expect a fair appreciation. Here one sees Burne Jones sometimes, and the school which sympathizes with his aims and those of Rossetti and Watts—the school of art for art's sake, which comprises here Stanhope, Strudwick, Crane, Mrs. Stillman, Miss Pickering, Albert Moore, etc. This year the Grosvenor shows in extraordinary force the productions of a young man whose work I do not recall in the exhibitions of the years when I knew English exhibitions—Mr. W. B. Richmond, who contributes nothing to the Academy, but whose power is such that it may well be that he shall take the first place in English art, subject only to the alternative of Mr. Watts. His chief picture, "An Audience in Athens during the Representation of the Agamemnon," is certainly the great picture of the year, not only for its intellectual power, but for the mastery of technical resources and the triumph over the greatest difficulties in art. It represents the audience of a Greek theatre looking at the play which is going on out of the picture, no other element of the tragedy appearing on the canvas than the varied emotions in the audience. There is none of the affectation of archæological exactitude which hampers the freedom of design in many pictures of this class, and the theatre, instead of being put under the south slope of the Acropolis Hill, where the play was really performed, is put far down on the road toward Eleusis; the Acropolis, seen at a distance in the east, glowing with the light of the sinking sun, the Theseum at the left, and the Hill of the Nymphs showing at the extreme right. To have attempted the Theatre of Bacchus as an actual scene would have necessitated the immense audience of that huge structure, and made the picture a spectacular affair, in which any study of individual character would have been lost, and the opportunity of introducing an outside world, glowing in rosy, peaceful light, which adds so immensely to the tragic effect of the horror in the faces of the audience under the shadow of the velarium, would have been thrown away. It is only a small theatre, constructed for Mr. Richmond's special use, and even only a small sector of the semicircle, which is shown. The composition of the picture and the needs of the painter have been consulted to the complete disregard of the science of archæology. There is no affectation of detail or archæological research. A colonnade of Ionic columns surrounds the theatre and bears the velarium, which throws the audience into complete shadow; only a few straggling rays of sunshine, coming through crevices or rents in the shelter, emphasize the shadow. The marble of the seats is just recognizable as marble. The landscape seen through the interspaces of the columns is simply and broadly painted, and the draperies, though carefully studied, and disposed with the dignity which befits our modern conceptions of an Athenian audience, do not catch the eye as stuffs. No tendency is there in any part to the extreme realization of mere accessories, which is so commonly regarded now as the triumph of art, and which is the most deadly enemy of every form of ideal art; but the fullest force of the painter is given to the faces of the audience, each one of which is a study of expression, and the ensemble is a masterpiece of dramatic power. The moment chosen is evidently the crisis of the tragedy. The spectators, not a huddle of populace, but a chosen assemblage of judges rather, show each in his own way the instant's horror. One has caught his chin in his hand; one, wide-eyed, half rises from his seat; another clutches the arm of his seat with a nervous grip, and every face is a mirror of the catastrophe. I do not know anything in the vein of archæological restoration in art so entirely in the right classical form, and so true to the inspiration of Greek art, as this picture. It is useless to attempt to describe it more in detail—one could only do so by cataloguing the heads and assigning each its quality of expression.

In writing of the Academy I had put Mr. Ouless at the head of English portrait painters, because I had seen none of Richmond's portraits; but there are eight of them in this exhibition, and several of these are of a quality which puts any competitor in English art quite out of the comparison, either for grasp of character in subtlety or in variety, or for technical power. There is none of the gratuitous display of physical energy which injures so much the work of Millais, Herkomer, and the Academy portraitists generally, and on which I animadverted in my Academy letter; but a simple, subtle, and varied treatment in the vein rather of Mr. Watts than of any other painter. The portrait of Andrew Lang, half-length, in a most characteristic and happy attitude, is considered by those who know the original to be a singularly fine portrait, and is really more like a Velasquez than any of the intentional imitations of that master which affect his brush and show none of the brain power which lay behind it. Certainly Mr. Richmond (if I may take a judgment from so partial and short experience of his art as shown in these varied and individual portraits—scarcely even recognizable as the work of a single painter—and the ideal work which he contributes) seems to me the man destined to be the great English master of the generation succeeding Mr. Watts. In comparison with Millais he suffers in no serious quality, for though Millais is the more vigorous in execution, he is generally ostentatiously so,

which means vulgarity; and in this, Herkomer leads him a hard race, the lesser men, except Ouless, coming in *haud passibus æquis*, while Richmond has absolutely no affectation of any kind. His drawing is simple and inclined to the severe, his painting facile and varied in resource, and his perception of character singularly profound, and in this respect only the portraits of Mr. Watts among English painters of to-day can compare favorably with his.

Holman Hunt has a character-bust, "The Bride of Bethlehem," a contemporary Jewess, in the paraphernalia of her class—I suppose, correctly rendered, for Mr. Hunt has studied the details of Palestine life long enough to be at least accurate in them; but his picture—a life-size—is certainly one of the most disagreeable crudities I have ever seen. Opalescent, with dabs of all the tints that enter into flesh color—pink, and rose, and blue, and purple—laid on over a white ground, and of a garish intensity which could only be rendered into harmony by a sort of zoetrope motion—it is not art, this, but a mere fad; an eccentricity which seeks its market as such. It is always something in the estimation of the English public that a painter is eccentric, and this merit Holman Hunt certainly has; but his quest for a style has gone too far afield here for lovers of pure art or of common-sense nature-painting.

A sensational success, in the popular estimation, is a "Hypatia," by Mr. C. W. Mitchell, a new man and a student of Paris. It represents the martyr as she takes refuge at the altar—nude and gathering her hair around her to hide her nudity. It is a life-size study of a model, with admirable drawing, the foreshortening of one of the legs being most remarkable; but the attitude is strained and the conception theatrical. The type of figure is of the grisette order, without the least idealization, and the expression of fright in the face is rather that of a woman who is afraid of being pelted with rotten eggs than menaced with an awful death. It shows a thorough appreciation of what the French school can teach, but artistic and intellectual aims of a low order. It is one of the nudities as to which the English public is just now greatly excited, owing to the ridiculous protests against all nude *female* figures which the usual prude of exhibition season raises. It is not one of the salacious worse-than-nudities which the public winks at, but a negative Academic study, which could only excite the enthusiasm it has evoked in a country where good drawing was rare and the higher qualities of art little cared for.

Stanhope has a "Birth of Venus" of the antagonistic tendency, and which, while even more completely nude than Mitchell's "Hypatia," is so severe, so pure in its drawing, and so purely ideal in color, that no one could for a moment, be she ever so much a prude, find herself embarrassed by a crowd of such nudities. The whole question involved in the voluminous correspondence which has been running on in the *Times* for some weeks, and in which prudery has been at blows with art, lies in a nutshell. When art has for its object mere realization of the nude human figure, and especially of those types of it which provoke erotic feeling, it is difficult, if not impossible, to escape sensuality of motive; while when idealism of form and color—or even form alone, as in the Greek sculpture, or color alone, as in Venetian painting—is the study of the artist, it is very difficult to do anything which shall excite pruriency or deserve the denunciation of the moralist. Those who are disposed to revolt against Stanhope's "Venus" or Watts's "Love and Life," of which a duplicate hangs opposite the "Hypatia," should never go into a picture gallery, for they are not able to profit by the study of art.

There are two portraits of Robert Browning—one by his son, not at all flattering, and not at all commendatory of the artist's skill. It seems to indicate a flimsy style and poor draughtsmanship, and the likeness is not at all good; while that by Mr. Lehmann, its pendant, is merely a show of the society Browning—very like, but a most irritating likeness, with all the special character of Browning gone. Of the two, it seems to me the portrait of the son is the more valuable; but as painting it does not justify the hopes which he inspired years ago.

Alma-Tadema sends a charming little picture, not at all archæological but classical, of a girl waiting on a marble terrace for her lover's bark coming across a bay. But even here the painting of the marble is so much better than any other thing in the picture that it becomes a fault.

There are some American contributions in the Grosvenor, which I shall notice with others elsewhere exhibited. W. J. S.

Correspondence.

CHARLES EGBERT CRADDOCK'S DIALECT.

To the Editor of The Nation:

Sir: When, about two years ago, I read for the first time a story from "Charles Egbert Craddock" in the *Atlantic Monthly*, I felt that I had discovered a new writer, and immediately commenced a search through the back numbers of the magazine for more stories of the same kind. I was almost ashamed at first to ask about the author, through fear of exposing my own ignorance; for I supposed that one who wrote so charmingly must, of course, be well known. I hoped the author might prove to be a Southerner, one of a brilliant trio whose mission it was to depict those peculiar phases of Southern life that had so long waited in vain for an interpreter; and wished to find in him an added proof that we are, as I have for some time fondly believed, on the eve of a literary era in the South. But one thing troubled me. The dialect, while on the whole well rendered, seemed to me in some respects inaccurate, and to err in just those little points where one "to the manner born" would instinctively go right. I made a close study of the language of the stories, and reluctantly fell upon the hypothesis that the author was a Northern person who had spent perhaps many years in the South. I questioned, moreover, every one of my acquaintance who had lived in the Cumberland or Smoky Mountains, and found my criticism of the dialect sustained in nearly every instance, though every one agreed with me in my enthusiasm for the stories themselves. The fact that the newspapers began to publish Mr. W. L. Murfree, of St. Louis, formerly of Tennessee, as the author, did not shake my theory at first, for I felt that the dialect was sufficient proof to the contrary. But a phrase which the author used in his own name in 'The Prophet of the Great Smoky Mountains' had of itself, before Miss Murfree declared herself, almost convinced me that I was wrong. It was this: "a wagon body inverted, with a heavy *rock* upon it." I knew that a Northern, even a Western, writer of the grade of Craddock would have said "stone." I am rejoiced that my theory was wrong, that Miss Murfree is a Southerner; but my objections to the dialect remain.

There is, for instance, I believe, no place in the South, mountain or valley, where *ez* (as) is used for the relative *that*. Joel Chandler Harris, who renders the dialects of the South more accurately than any other writer, never allows this usage. He makes, for instance, Uncle Jake Norris, in 'At Teague Poteet's,' say: "I'm sorter like the gray colt *that* tried to climb in the shuck-pen—weak but willin'." Not "*chil'ren*" but *childern* or *chillern* is Southern dialect; so not "*hefted* the sledge," but "histed" or "raised," not "ef Vander air *lef' be*," but "*let* be" or "*let* alone." The rustic says not an *ox* but an *oxen; beastis* in the plural, but not in the singular; *you-uns* for several persons, perhaps even for one, but never *you-un;* not "*sodden* with drink," nor "stood in *amaze*"—rather *amazement* or *'miration*. Both *sodden* and *amaze* belong to Miss Murfree's own vocabulary, as may be seen by comparing, for instance, pages 9 and 18 of 'Where the Battle was Fought.' Further, in the mountaineer's dialect it would be not "*pretty*," but *putty* or *purty* (J. C. Harris); not "*fund*" but *foun'*; not that a horse "cast a shoe," but *los'* or *drapt*. *Differ* is with him not a noun, as "Vander tells a differ," "Live stock air a differ"; and the mountaineer's phrase, as, indeed, anybody's, is not "'twarn't *much shakes* of a calf," but "*no great* shakes"—compare Carlyle's "Will Douglas, *no great shakes* at metre"; and he says not "*get* the blame *shet o'* the idjit," but "get the idjit shet o' the blame."

I feel sure no mountaineer would understand what it is to "get a good *hank* on his knack for new notions"; and if he guessed the meaning of "this wild *junketing* after governors and sech through all the valley country," it would be from the connection and not from any acquaintance with the word junketing. I do not believe that one would hear anywhere in the South such a phrase as "Vander Price *her kem* ter be mighty *difficult*," but has come to be mighty *bigity* or *stuck-up;* so, also, not "a mighty *suddint* man," but mighty *quick* or *techy*. Moreover, *comical* (queer, strange), which is heard in Virginia, does not belong to the Tennessee mountain dialect any more than "*evil* one," "*evil* doer," or "*evil* man." A letter in the *Nation* recently pointed out, among other things, the incorrect use of "*harnt*" for *ha'nt*, and "*stiddier*" for *stid o'*.

The dialect of mountaineers is usually very limited, it is true, but there are still many quaint words and phrases current among this people which Miss Murfree does not use. Best of all, there are often, no doubt generally, good old usages which survive in these remote districts. It would be a pity if one who has certainly found the secret by which to interpret the long-hidden life of these people should not thoroughly master the dialect and preserve it in this most readable form, thus earning the gratitude of the philologist as well as of the general reader. It would be unfortunate if what is so well done should not be still better done.

With Joel Chandler Harris the dialect is more accurately rendered, but the mountains and mountain life are a sealed book to him compared with what Miss Murfree reads there. She is unequalled in depicting the mountain scenery of this region, but her mountaineers are hardly less picturesque than her mountains; and underneath their rough exterior she shows us sometimes a moral grandeur so high and so pure that we are ready to say with her: "The grace of culture is, in its way, a fine thing, but the best that art can do—the polish of a gentleman—is hardly equal to the best that Nature can do in her higher moods." Charles Forster Smith.

Vanderbilt University.

WAGNER AND VERDI IN GERMANY.

To the Editor of The Nation:

Sir: In your review of the 'Dictionary of Music and Musicians,' part 20 (*Nation*, 1036), you use, I think, much too weak a word when, in commenting on the article on Verdi, you say:

"In Germany . . . Wagner, Meyerbeer, Mozart, Lortzing, and Weber *outrank* Verdi in popularity." I have resided in Leipzig a little more than eight months. The high order of excellence in the operatic performances in the Leipzig City Theatre requires no comment. During the past eight months Wagner has been given 21 times, Mozart 12, Lortzing 8, Beethoven's "Fidelio" 4, Meyerbeer 3, Rossini 2, Cherubini 2, and Verdi only *once* ("Aida"). Furthermore, I have kept track with some regularity of the weekly répertoires of Dresden and Weimar, where Wagner averages once a week and Verdi's name has not appeared. In Berlin, the prevalence of Millöcker and operas of the hand-organ type averages everything else out of sight. It is worthy of remark that in a city where Wagner's real admirers are probably fewer than in any other city of the Empire, albeit that Leipzig is the city of his birth, his operas still lead the list.

To-day is the anniversary of Wagner's birth. It occurs to me that perhaps the following simple and just inscription under his bust in the Theatre here may prove interesting to those of your readers who share your opinions of his greatness:

"Denker und Dichter
Gewaltigen Willens
Durch Worte und Werke
Wecker und Meister
Musischer Kunst."

Respectfully yours, C. H. G.

Leipzig, May 22, 1885.

SCUDDER'S HISTORY OF THE UNITED STATES.

To the Editor of The Nation:

Sir: If you are willing to spare a few more lines to Mr. Scudder's History, I desire to apologize for my inexcusable blunder in ascribing its publication to Messrs. E. H. Butler & Co. My attention was first called to the error by a note from Mr. J. H. Butler, who in correspondence has shown a courteous and delicate anxiety to do justice to my review, and is incurring considerable expense to free himself from every suspicion of garbling or misrepresentation. It would not be easy to look at the matter more correctly or kindly than he has done.—Yours very truly,

The Reviewer.

June 8, 1885.

JUDGES AND JURORS.

To the Editor of The Nation:

Sir: The position taken by your influential paper in the case of the State vs. Short, and especially regarding Juror Munsell, so far in both matters as concerns Judge Van Brunt's action, has been such as to command the gratitude of all thoughtful men who would protect the liberty of the citizen and the rights and duties of jurors from assaults by judges like Van Brunt. It is to be hoped that the Bar Association of New York may take steps looking to the impeachment of Van Brunt; and I should be glad to contribute to the expense of printing in pamphlet form the articles from the *Nation*, embracing the facts and the comments, for distribution to all the judges and lawyers in the United States. If lawyers will not protect themselves and express their condemnation of the action of judges like Van Brunt, they deserve neither the respect of the bench nor the confidence of jurors and clients.—Thanking you on my own behalf, I am,

Your obedient servant,

J. A. Beecher.

Newark, N. J., June 8, 1885.

Notes.

Mr. Sibley's example in preparing biographies of the earliest graduates of Harvard, of which the third volume appeared recently, has been imitated at Yale. Henry Holt & Co. publish this month 'Biographical Sketches of the Graduates of Yale College, with Annals of the College History, from October, 1701, to May, 1745,' of which Mr. Franklin Bowditch Dexter is the author. The work is printed in a limited edition, and sold only by subscription.

A book of hunting adventure, 'Nimrod in the North,' by Lieut. Frederick Schwatka, will be shortly published by Cassell & Co. It is based on personal experience.

Mr. Lowell's 'Biglow Papers' will be the next numbers in the Riverside Aldine series. Houghton, Mifflin & Co. will also publish directly 'By Shore and Sedge,' Bret Harte's new book.

A new and revised edition, in three volumes, of Alfred H. Allen's 'Practice of Commercia Organic Analysis' is in the press of P. Blakiston, Son & Co., Philadelphia.

In July, Ginn & Co. will have ready Lotze's 'Outlines of Practical Philosophy,' translated by Prof. Geo. T. Ladd, of Yale College.

The appearance of the second number of the *American Journal of Archæology* has been delayed on account of the decision to bring out a double number. It contains articles by H. W. Henshaw, Eugène Müntz, of Paris, Charles C. Perkins, W. M. Ramsay, of Oxford, the explorer of Asia Minor, and Dr. A. Emerson, as well as correspondence from Mesopotamia by Doctor Ward, and on Tunis by E. Babelon, who was sent to Carthage by the French Government.

We can praise the first samples of the "Daintie Edition" and "Cabinet Edition" of classic English authors undertaken by Arthur Hinds, at No. 3 West Third St. The former thus far includes Irving's 'Rip Van Winkle,' 'Legend of Sleepy Hollow,' and 'Mutability of Literature'—square little books, bound either in embossed paper or in blue cloth. The Cabinet edition is introduced by Lamb's 'Tales from Shakspere' in two "blue and gold" volumes of a very handy size. In these the paper is perhaps a little too transparent, but of both series it can be said that the typography has been well studied and is a pleasure to the eye.

The last degree in the popularization of the Revised Version of the Old Testament is its appearance in Harper's Franklin Square Library, in four numbers. The preferred readings and renderings of the American Revisers are given in foot-notes. To the same series has been added 'The Professor,' by Charlotte Brontë.

The students of our colonial history will be interested to learn that the Society for the Propagation of the Gospel in Foreign Parts proposes to publish its manuscript journals from the time of its foundation in 1701 to 1800, provided 250 subscribers can be obtained. It is estimated that they will fill five octavo volumes of about 700 pages each, costing six guineas for the set. As their efforts were originally almost wholly confined to this continent, and their agents and correspondents were scattered in all parts of the colonies, it is easy to see that the journals must contain much valuable historical material. In fact, the Society has received so many applications for information by students that it has been led to issue these proposals. It would seem as if it would not be difficult to secure subscribers for the entire edition in this country.

The third edition of Dr. N. S. Folsom's 'Translation of the Four Gospels' (Boston: Cupples, Upham & Co.) differs from the second only in having a few corrections and additional notes. The author's unfaltering fidelity to his theory that the Greek Aorist and Present must always be rendered by English Aorist and Present, and Greek Subjunctive and Optative by "may" and "should" respectively, introduces some bizarre locutions: "whenever he may tell the lie, he tells [it] out of what is peculiarly his own"; "if you are children of Abraham you would be doing the works of Abraham"; "and they come to the synagogue-ruler's house, and he views a tumult and . . . he says . . . the young child had not died, but is asleep"; "the kingdom of heaven was like a man having sowed choice seed in his field." Nobody will accept such writing as English. Yet, in spite of this blemish, the translation has so well caught the simple, straightforward spirit of the original, and so judiciously modernizes the language, that it is pleasant to read, and by a revision might be made valuable. The notes are short and sensible, and the tone of the venerable author's preface is so manly and genial that the reader cannot fail to be attracted to him: he is first a Christian and then a Unitarian. His renderings of disputed doctrinal texts are the same as in former editions, and have already been noticed in the *Nation*.

The Psalter of Richard Rolle, of Hampole, the Latin Biblical text with English translation and commentary, was once a popular and useful book. Richard himself was a notable personage, a sort of learned Bunyan, one of the men who prepared the way for Wiclif. His commentary is written in the loosely allegorizing style of the time, without attempt at careful exegesis, without originality, finding references to Christ everywhere—a fair picture of the ordinary Biblical learning of the fourteenth century in England. It gives us, also, a glimpse of the literary activity of the period. Richard Rolle died, according to his editor, in 1349, and as he himself wrote many books, we may conclude that there was no little study of religion in England in the first half of the fourteenth century. The dialect is that of North Yorkshire, and the book should be welcome to students of English. It is carefully edited from manuscripts by Rev. H. R. Bramley, of Magdalen College, Oxford, and printed at the Clarendon Press.

When Mr. Gladstone was Rector of the University of Edinburgh, twenty-five years ago, he was so struck with the historical interest and importance of the Catechism of Archbishop Hamilton, a copy of which happened to be placed in his hands, that he strongly urged a fresh publication of the work. In accordance with this suggestion, the Catechism has been edited by the librarian of the Signet Library, Mr. T. G. Law (Oxford; Clarendon Press), and Mr. Gladstone furnishes a pretace, in which he points out the bearing of the work on the history of ecclesiastical and religious development in Scotland and England. The striking thing is, that the Archbishop's official and authoritative book of popular instruction, issued before the beginning of the Scottish Reformation, makes no mention of the Pope or of the Church of Rome. The origin of the reform movement in Scotland and England lay deeper than the whims of Henry VIII. or any other such outward fact: it was in the great religious life of the people. Hamilton himself was not an edifying character. He was not worse than the mass of the clergy of the time, but he was not better; and though he was a not unimportant element in the progress of liberal ideas, he seems not to have had any firm principle, but to have accommodated himself easily to circumstances. The Catechism is admirably written, and leaves little to be desired as a popular text-book. As to its literary form, the editor has properly preserved the spelling of the original.

The 'Annual Cyclopædia' for 1884 has been issued by the Appletons, and its value need not be insisted upon, though this, as usual, lies more in its collection of facts than in critical or judicial editing, as in the reviews of American and British literature, and in the biographical sketches. The four articles of prime convenience are Congress, United States, Events (of the current year),

Obituaries. In this last we think it highly desirable to introduce a cross-reference to such biographical sketches as are inserted independently. For example, the late Secretary Folger is found in the main alphabet, but not among the grouped obituaries. A steel portrait of President Cleveland serves as frontispiece, and both he and Mr. Blaine have articles devoted to them, the unfortunate Augusta speech being fatuously set down as if to the latter's credit. Mr. E. O. Graves gives a résumé of the official progress of civil-service reform. Timely political articles are those on the Congo International Association and on Egypt, Gordon's portrait being added. Among the fresher miscellaneous topics are bicycles and tricycles, catamarans, microscopy, music (tonic-sol-fa), spelling reform, etc. This last gives the latest rules for the reformed orthography, which is itself observed in printing the article. We must not omit to mention a general index for the volumes 1876-1884—the so-called "New Series."

A new edition of J. Fitzgerald Molloy's 'Court Life below Stairs, or London under the First Georges, 1714-1760' (Scribner & Welford), completes the series which we lately mentione l in connection with the second volume. Chapter four of the volume now before us deals with the episode in the married life of George I. which has just been treated by our Paris correspondent.

The Rev. M. Harvey has prepared a 'Textbook of Newfoundland History,' which, though he is a very competent writer on this subject, and though he has again secured Boston publishers (Doyle & Whittle), is not likely to be used in United States schools. He has made, nevertheless, a readable abstract of his former work, which children can enjoy. A chapter in the appendix, on the early history of the Atlantic cables, recalls to deserved prominence the late Frederick N. Gisborne, as the pioneer in actual endeavor to raise capital for the making of a cable between Newfoundland and the British Isles. He laid the first submarine cable on this continent, and his unsuccessful larger scheme he communicated and relinquished to Mr. Cyrus W. Field, whose faith and energy at last carried it through.

The laborious and praiseworthy compilation entitled 'Our Police Protectors: History of the New York Police from the Earliest Period to the Present Time,' is published by the author, Mr. A. E. Costello, for the benefit of the police pension fund. It is a mine of information on a subject in which every city in the country has a vital interest—the development of a constabulary force equal to the demands of increasing population and increased facilities for crime, disorder, and destructiveness. The chapters on the draft riots of 1863 connect this work with the political history of the republic. Great numbers of portraits and other illustrations add much to the value of the record.

Again we have to report as coming from the West a useful citizens' manual, though this time the idea has been improved upon by addressing not the adult voter, but the child. Professor Macy, of Iowa College, has compiled 'A Government Text-book for Iowa Schools,' in which the origin of our political institutions and their special development in that State are set forth simply and clearly. Both teacher and pupil have been kept in mind in the preparation of it, and in the hands of a good instructor the study can certainly be made attractive. We have observed nothing to criticise, and experience alone can determine how this school-book might be bettered. It is, in fact, put forth tentatively now in order to invite comment. The circumstance that Iowa was settled both from New England and from southern Illinois, brought the Southern county system of local government into conflict with the township system of the East. This is one of the points which make Professor Macy's little work interesting for a much wider class than that which it addresses.

The 250th anniversary of the settlement of Newbury, Mass., has been commemorated by the Historical Society of that town, a recent organization. To Mr. Robert Noxon Toppan was confided the task of writing 'Brief Biographical Sketches' of eminent natives of the place, which the Society has now issued in a neat form. Mr. Toppan's forte does not lie in condensed biography. His sense of proportion is very imperfect, and he has dwelt at length on lives which are amply presented in the cyclopædias. Caleb Cushing, for example, fills twenty-eight pages, while only one is given to Joshua Coffin, the historian of Newbury, and a character whose marked individuality would attract any born biographer. Mr. Toppan, moreover, has not discarded his prejudices, and shows little but a superficial familiarity with many of the lives he has undertaken to narrate.

Thoroughly readable and full of instruction is the address of Mr. John M. Shirley before the New Hampshire Historical Society on June 13, 1883, now just printed by the Society (Concord). The subject is the "Early Jurisprudence of New Hampshire," from the records, and the treatment is a model of its kind. The chapter on the law of the marriage relation involves the question of divorce, which is brought down to the present time, so that this pamphlet is a valuable contribution to one of the burning questions of the day. Mr. Shirley, speaking for his State, says t at divorces have multiplied as the population has increased, but otherwise there is nothing to favor a pessimistic view of social tendencies in this regard.

The International News Company send us a specimen number of the reissue of Letts's 'Popular Atlas of the World,' of which there will be thirty parts containing 150 maps. While having a place among the cheaper atlases of its class, this does not rank with the best German ones, though for regions British it naturally possesses some advantages.

A side-map of the bay and environs of Assab is the most valuable feature of a large colored map of the Red Sea, Egypt, and the Eastern Sudan which accompanies the March-April *Bollettino* of the African Society of Naples. A map of Massowah and a plan of Khartum are also given on the same sheet.

What a Catholic reviewer in *Polybiblion* calls a washed, neutralized, and fumigated Voltaire for use in primary schools ('Le Voltaire des écoles') has been published by Delagrave in Paris. It is praised for everything but its editors' failure to scourge the great writer whom the anniversary of the St. Bartholomew massacre afflicted as often as it recurred.

By a recent decree the Russian language is henceforth to be used instead of the German, in all the public schools of the district of Dorpat in the Province of Livonia. Private schools of every description must obtain permission from the Government for carrying on their instruction in German. This will be granted only on condition that Russian history and geography shall be taught only in Russian, and that instruction in this language shall be given at regularly prescribed hours. It is expected that similar action will be taken throughout the Baltic provinces.

The Observatory Department of the Colony of South Australia was established in 1867, and its director, Mr. Charles Todd, reviews its work for a period of seventeen years in his last report. The observatory at Adelaide is well supplied with all the self-recording and other apparatus necessary to constitute it a first-class station as defined by the Meteorological Congress at Vienna. There are also fourteen well-equipped stations of the second order, from Port Darwin in the extreme north of the Continent to Cape Northumberland in the extreme south. Mr Todd is also General Superintendent of the Post-office and the Telegraph for the colony, and these interests are harmonized with those of immediate scientific interest. Rain-gauges are kept at every telegraph office in the colony, making reports from 46 stations in 1870, and in 1883 from 254. A system of weather telegraphy has been arranged between the Australasian colonies, these being subdivided into districts to facilitate the transmission of messages, and to afford the necessary data for laying down the isobars. Mr. Todd has lately secured the coöperation of Mr. Clement E. Wragge, who has established a high-level meteorological station on Mount Lofty, and who brings to the work great practical experience and unbounded enthusiasm. The important operations which Mr. Todd has executed in determining the chain of Australasian longitudes telegraphically, we have already alluded to.

— The June number of the *Century* is not remarkable, but it is readable. Prof. Edward S. Holden sketches the extraordinary lives of the three Herschels, William, Caroline, and Sir John; and T. Johnson engraves their portraits excellently. Sir John's face is very effective, and William's is delightful with its good-humored wisdom. The second instalment of the account of the New Orleans Exhibition drops here and there hints worth noting on the condition of Louisiana and the South. New Orleans is not decaying, but it is not advancing; the grain does not go that way, as was hoped, the cotton does not yet come in as it did before the war, and it does not give so much profit in its transit, because it comes already pressed and ready for shipment. The leading idea of the Exhibition was to foster the trade with the Spanish-American countries, but if this comes out of it, it will be by the energy of Northerners. Louisianians by birth are too lethargic; the Northerner himself may resist the enervating influence of the climate, but his children will surely feel it. Throughout the South, manufactures, in spite of the great increase—109 new mills in four years—are neither very productive nor productive of fine goods; a single town in Connecticut will turn out more than all of them. Yet there is a new spirit of industry in the South which will lead to something, particularly if Northern men, with their inherited manufacturing instincts and their habit of close application and attention to detail, shall see any inducements to do in the South what they already have done in the West. Theodore Roosevelt's "Still-hunting the Grizzly" belongs to a class of literature that must very soon disappear from the world; for we take it grizzlies will never be "preserved," even in parks of the size of the Yellowstone. Howells's "Florentine Mosaic" is dangerous reading for those who can almost but not quite afford to travel. It will throw too heavy a weight in the scale marked "Go." But there is another side to it. If one could only see all that Mr. Howells sees in a place, one would not need to travel so very much, and perhaps reading his articles may help to that result. His story is becoming almost exciting. The illustrations to Miss Herrick's "Orchids" are excellent pieces of plant engraving, yet not wholly satisfactory; the texture is well represented, the color could hardly be suggested. In the "Open Letters" Walter B. Hill complains of the law's delay, making no suggestions, however, to expedite matters; and in the "Topics of the Time" the editor sets forth clearly some of the necessary causes of delay, and suggests some remedies designed to relieve the courts of appeal. John Brown's Harper's Ferry raid is described by an

eye-witness of the attack, who was one of Brown's prisoners in the engine-house. He confirms one's admiration for the high-motived courage of the man.

—The *Century's* war papers for the current month are briefer than the last, but do not lack in interest. The battle of Gaines's Mill is described by Gen. Fitz-John Porter, on the one side, and by Gen. D. H. Hill, on the other. They both restrict themselves closely to the incidents of this fiercely-contested engagement, and only in a casual way refer to the larger problem of the struggle between McClellan and Lee. Both say enough, however, to give emphasis to the reader's natural inquiry whether Lee's attack by concentrated forces upon McClellan's isolated corps at Gaines's Mill would not have sacrificed Richmond and the Confederate campaign, if the Federal commander had taken advantage of the opportunity to push upon Richmond with the three corps south of the Chickahominy. General Hill does not conceal his opinion that the situation was perilous in the extreme for the Confederate army. The two accounts do not differ as to the larger facts in the history of the battle, but the different standpoints of the writers pleasantly vary the perspective, and together they give a very vivid picture of this hard-fought field. General Imboden contributes a lively sketch of "Stonewall" Jackson's campaigns in the Shenandoah valley, with a number of personal reminiscences of the famous Confederate which are strongly characteristic. It goes without saying that the illustrations are abundant and rich. The portraits are of Longstreet, Porter, and A. P. Hill.

—Such of the London inns of court as have not already been pictured in the series of prints issued annually by the Society for Photographing Relics of Old London, have been grouped in the issue of the present year. Staple Inn has, indeed, been shown as to its Holborn front in No. 24; but here we have, in No. 107, a view of its Hall from within the Garden, offering many points of architectural interest and even beauty. Of Clement's Inn, too, No. 105, we are shown the "Garden House." with a bit of the grounds. Clifford's Inn, No. 106, and Gray's Inn, No. 103, comparable in their general situation, attract, the one rather by its buildings, the other by its more considerable enclosure of trees. The Hall of Gray's Inn, again, No. 104, with its screen of fine old woodwork, compares with the contemporary Hall of the Middle Temple, No. 102, which is, however, the more grandiose, and has a stained-glass window of 1570. If the tables shown in the former were the gift of Queen Elizabeth, it can be said of the latter that here took place the first recorded performance of Shakspere's "Twelfth Night" (1601-1602). The Temple, as is proper, receives the largest amount of attention. Besides the view last described there is one of Fountain Court, in the Middle Temple, a charming nook; the Gatehouse of the same quarter, a piece of Wren's designing, just two centuries old; the Gatehouse also of the Inner Temple, a still older structure, dating from the time of James I., and now occupied by an enterprising barber who does "hair-brushing by steam power"; a doorway in King's Bench Walk, and Churchyard Court (once so called), both in the Inner Temple. This last print exhibits the plain memorial slab of Oliver Goldsmith, placed in 1860 in a corner of the court already adorned with monuments, in default of exact knowledge of the spot where the great author reposes in the churchyard. No. 108 is the first of the series devoted to more than a single subject. It contains six curious carvings, all but one of stone—the exception being the Wooden Midshipman of 'Dombey & Son.' The rest are various insignia, private, municipal, and royal, and two are relics of the City gates. We regret to learn that the Society will probably cease to publish after next year. Its American support has been, if not very considerable, at least gratifying.

—The extension of female employment is going on slowly but surely throughout the world, even in places which no one would have thought half a century ago it could ever reach. Not long since, for instance, Signora Giulia de' Cavallari, having passed an examination for a doctorate in philology at Bologna, was appointed by the Italian Minister of Instruction Professor, or Professoress, of Latin and Greek in the girls' academy, "Fua Fusinate," in Rome; and four young Turkish ladies, after examination before a commission appointed by the Turkish Minister of Instruction, have been appointed instructresses in certain girls' schools. It is no new thing for a woman to be a professor in Italy; on the contrary, the practice is so old as to have gone out of fashion and to need revival; but in Turkey female teachers are not at all in accordance with the manners and customs of the 'Arabian Nights,' and the teachers mentioned in the accounts of recent travellers are all English governesses. It is an advance that natives are found capable of filling such positions and are allowed to do so. Even the opponents of the higher education of women may view these facts without dismay. In our own country, however, there is a little more justification for those who fear that when learning enters at the door, love will fly out of the window; that there will be so many professors and lecturers and so forth, that there will be no more wives and mothers, and that, in short, the emancipation of woman means the extinction of man. For such forebodings a few statistics from the Tenth Census will be the best corrective.

—There are now some twenty-five million women of all ages in the country, of whom at least ten millions must be of marriageable age. If annexes and joint colleges are more successful than even their friends expect, there can hardly be found in the course of years more than twenty thousand young women who would have the means and the inclination to seek the higher education. Taking a college course at four years and the marriage period at thirty, this would transfer less than two hundred thousand from the ranks of possible wives and mothers to the ranks of blue stockings. Now, granting that a thorough education invariably makes all who receive it averse to love, inspires a distaste for maternity, and disqualifies for its duties—an assumption which facts contradict every day (indeed, the stock argument of the opponents of co-education has always been that there would be too much love and too little learning)—but, granting this assumption, there would still remain nine million eight hundred thousand possible wives and mothers; enough, one would think, to utterly prevent the American race from dying out. And these mothers will be all the more able to perform their wifely and maternal duties because it is evident, from the character and aims of those who at present seek the higher education, that a large part of the two hundred thousand will be employed in educating the children which the nine millions bear. And, perhaps, after all, the conservatives are right in their anticipations: this may be the next step in the evolution of the race, a specialization by which the two hundred thousand scholars become the (intellectual) workers in the hive, and the fourteen millions the (rather numerous) queen bee.

—The firm of Cotta at Stuttgart, publishers of Goethe's works, make the following statement through the organ of the German book-trade in regard to the sums paid for the copyright of Goethe's works from 1795 to 1865, at which date they became public property. Goethe himself received in round numbers, in American money, $100,000, Goethe's heirs (since 1832) $118,000; in all, the firm paid $218,000. This is the first authentic statement, and it is now made in correction of an erroneous computation from figures not long ago published in Cotta's correspondence with Schiller, which made $114,000 the total paid by Cotta for Goethe's works. From this correspondence it also appears that Goethe was hard to deal with, and fully aware of the commercial value of his writings, while Schiller was liberal in the extreme. He had little occasion to regret the confidence he placed in Cotta, whose imprint all his books bore after 1794. From this date to 1805 Schiller received $14,400 from Cotta (for "Wallenstein" and all he wrote subsequently); Schiller's heirs received about $52,500 more. It has to be taken into consideration that up to 1830 (and in some smaller States—"Raubstaaten"—to a much later date) book-pirating was as flourishing a trade in Germany as it now is here, and Cotta had only a small field which the Emperor's "Privilegien" covered, and even this was flooded with unlawful reprints. But making allowance for the higher value of a thaler then, these sums, as they stand, should dispose of the ridiculous fiction of the feasting publisher and the starving poet. Cotta's dealings with Schiller reflect much credit on him; and, in perusing the published correspondence, it is difficult to say whether the publisher or the poet was the more generous or large-hearted of the two. When "Wallenstein" proved a better success than the publisher had anticipated, he added of his own free will to the stipulated $1,000 royalty half as much more; and when Schiller was unwilling to accept for the "Bride of Messina," because a shorter piece and sold at a lower price, the honorarium agreed upon in advance for every new drama (300 ducats), Cotta insisted on his taking the full amount, and declined taking off 50 ducats as Schiller proposed. "I should act ignobly if I availed myself of your offer," Cotta writes, and on another occasion: "In my opinion the honorarium can never be an equivalent for the poet's work, and the publisher's obligation does not cease with paying it. Whenever the success of a book warrants it I shall gladly do more in recognition of such a man's friendship. I shall feel myself your perpetual debtor." The book is full of such traits, and redounds to the credit of both men as well as the present proprietors of Cotta's firm, who have handed over for publication unreservedly all the letters in their possession to and from Schiller. There is no occasion to wish a single line suppressed.

—Moderation, a poetical nobility of sentiment, and an amiable inconsistency characterize the political as well as the literary career of Count Terenzio Mamiani, who died recently at the age of eighty-five. A native of the Marches, educated in Rome, he took an active part in the revolutionary movement of 1831 in the Romagna, became a member of the provisional government, and soon after an exile in France. Here he founded a "committee of propaganda," and coöperated with men like Leopardi, while elaborating works of sentimental philosophy, such as the 'Rinnovamento della filosofia antica italiana' (1834), which made Gioberti exclaim, in his 'Principato,' "Qual amatore di sapienza e di eleganza non conosce e non ama Terenzio Mamiani?" Recalled to his native country in 1848 by Charles Albert of Sardinia, he soon repaired to Rome, accepted the portfolio of Minister of the Interior under Pius IX., in a Cabinet of which Antonelli and other cardinals were members, tried in vain to hold the balance between the Clericals in the Curia and the Mazzinians in the Constituent Assembly,

succumbed to intrigues of the former, and retired to Turin, where he worked with Gioberti in the cause of Italian federation. The flight of the Pope to Gaeta brought Mamiani back to Rome. He became Minister of Foreign Affairs, counselled energetic measures, but opposed the deposition of the Pope, and was forced by the ultra-revolutionary current of events to resign. Seeing the Roman ship of state helplessly drifting between the Austrian Scylla and the clerical Charybdis, he is said to have favored French intervention. It came, and drove him to Genoa. Elected in 1856 a member of the Sardinian Parliament, he supported the policy of Cavour, became under him Minister of Public Instruction in 1860, and subsequently represented the court of united Italy at Athens and at Bern. From 1870 he resided in Rome, where he again chiefly devoted himself to philosophical pursuits, honored with the dignity of Senator, and enjoying a high reputation as an elegant writer in prose and verse, an ardent and liberal patriot, and a venerable old man, "d'animo e di costumi gentilissimo." His works are very numerous. In his philosophy he began as an ontologist bent on reconciling reason and sentiment, science and faith, through psychological investigation. He was influenced by Rosmini to abandon the empirical method, and in his 'Dialoghi di scienza prima' (1846) he made common sense and immediate perception the basis of his doctrine; in his 'Confessioni di un metafisico' (1865) he expounded a kind of Platonism; and, after becoming more and more sceptical, returned, in his 'La Religione dell' Avvenire, ovvero Della Religione positiva e perpetua del genere umano' (1880), to a system in which the spiritualistic element predominates, and in which Christianity, demolished as a whole, is in large part reconstructed out of its fragments.

—Whoever has enjoyed the pleasure of reading the three small volumes which bear upon their title-pages the name of J. P. Jacobsen will be grieved to learn of this author's death at Thisted, Denmark, the place of his birth, upon the last day of April. He was born April 7, 1847, and studied at the University of Copenhagen. Early in life he wrote a considerable quantity of verse, of which, however, but little has been made public, but in 1874 he published an "Arabesque on a drawing by Michael Angelo," and another "Arabesque" was printed in a Danish anthology in 1882; and in addition to these, his prose works contain a few exquisite poems. He studied natural history and was strongly impressed by Darwin's works, and contributed, during 1871 and 1872, a series of articles to *Nyt dansk Maanedskrift* on the "Origin of Man," "Natural Selection," etc., designed to acquaint the Danish reader with the Darwinian theories. This led to his becoming Darwin's champion against the attack of Bishop Monrad. He also translated and published the great naturalist's principal works in three volumes. In 1872 he wrote, in French, a monograph upon the Desmidieæ of Denmark, which was printed in 1875-76 in the 4th volume of the 2d series of the *Journal de Botanique* of Copenhagen. This treatise was awarded the gold medal of the University. It was naturally a surprise, therefore, to the readers of the *New Monthly* when the promising young naturalist and student of Darwin reappeared in the pages of that journal in 1872 with his first story. Two years later the periodical edited by Georg Brandes, *Det nittende Aarhundrede*, contained his second short story, "Et Skud i Taagen" (A Shot in the Fog); but it was not until the appearance, at Christmas, 1876, of his historical novel, "Fru Marie Grubbe: Interieurer fra det syttende Aarhundrede" (Madam Marie Grubbe: Interiors from the Seventeenth Century), that Danish readers realized that the naturalist had been transformed into a great story-writer. Three years later he published a short but powerful story, "To Verdener" (Two Worlds), and this was followed, in the fall of 1880, by his second larger work, "Niels Lyhne," which had been conceived and begun in 1875. A fanciful sketch entitled "Der burde have været Roser" (There ought to have been Roses), appeared in the journal *Ude og Hjemme*, and, finally, in 1882 the author's first novel and the three short stories already named, with two new ones, "Pesten i Bergamo" (The Plague in Bergamo), and "Fru Fönss" (Madam Fönss), were published in a single small volume, entitled 'Mogens og andre Noveller' (Mogens, and Other Stories).

—This enumeration of the products of Jacobsen's literary life, which barely covered ten years, does not indicate great literary activity. Taken collectively, his works contain hardly as much printed matter as a single story by Henry James, jr.; but this lack of quantity is due, not to indolence, but rather to the almost morbid desire of the writer that every portion should be as nearly perfect as possible. "Marie Grubbe" represents four years of conscientious labor, and the author has endeavored to impress his style upon the book so completely that it should be recognizable as his not only by a single chapter, but by a detached page or fragment. He attempts in each passage to give a distinct, brilliantly-colored picture, and some of his stories are hardly more than a series of these vitalized images, each one an essential part of the whole, but each complete and containing in itself the explanation of its relation to the others. Scandinavian critics have commented upon the influence which his studies as a naturalist may have had upon his work as a poet and novelist, and have noted, also, the probable influence of Flaubert; but none the less his originality is unquestionable. Mr. Georg Brandes, in an elaborate study of Jacobsen's works, published in a volume of essays in 1883, speaks of him as "the great colorist of our modern prose. Never before in our Northern literature has there been such word-painting as his. His language is saturated with color, his style is the harmony of color." A fine characterization of the novelist was contributed to the January, 1883, number of *Nyt Tidsskrift* of Christiania, by Mr. Henrik Jæger; and German readers can find translations of his two last stories in the *Deutsche Rundschau* for 1883—"Fru Fönss" in the April number, and in the May number "Pesten i Bergamo," with a *Nachwort* from the pen of Georg Brandes.

—For the past ten years the Royal Observatory of Greenwich has been assiduously observing the spectra of more than fifty of the brightest stars, for the purpose of determining the velocity of their motions toward or from the earth in the "line of sight"—the line joining earth and star. The Reports of the Astronomer Royal have given the annual results, but no general exhibition of the present state of the question has been made until lately, when Mr. Maunder, the observer, has collected them in an interesting paper in the *Observatory*. Mr. Maunder points out, in the first place, that the conclusions which are drawn are worthy of confidence in spite of the extremely small displacements of the spectral lines upon which they depend. The entirely independent researches at Greenwich and those of Doctor Huggins and Doctor Vogel mutually confirm each other; and, moreover, if the method is applied to the measurement of the difference between the velocity of approach of the two limbs (edges) of the sun or Jupiter, the results are consistent with what we know of the rotation-times of these two bodies. We can compute exactly how fast one limb of the sun is approaching us, and how fast the opposite limb is moving away; and these same quantities can be determined by the spectroscopic methods with substantially the same results. Hence the spectroscopic determinations of the velocity of a body in the line of sight may be fairly said to belong to exact astronomy. The directions and the velocities for some fifty stars have been thus determined at Greenwich by measures extending over several years. Velocities of thirty to forty miles per second are not uncommon. A velocity of less than ten miles corresponds to such a small displacement that its determination becomes difficult. The case of *Sirius* is an interesting one from the fact that its motion has changed from a recession of twenty-one miles per second in 1875-6 to an approach of twenty-one miles per second in 1884. The proof is very clear, the separate years giving:

1876	21	miles	per	second;	recession.
1877	23	"	"	"	"
1879	15	"	"	"	"
1880	11	"	"	"	"
1881	2	"	"	"	"
1882	5	"	"	"	approach.
1883	19	"	"	"	"
1884	21	"	"	"	"

—But the interest of this research is not in accumulating data as to the motion of individual stars, however important this may be. The real point is, What light does this method throw upon the theory that the sun, with the whole solar system, is moving toward the constellation Hercules at a rate of some 590,000,000 miles per annum? Attempts have been previously made to show that the spectroscopic data confirm the theory, which, indeed, has a fairly firm basis on other grounds. Mr. Maunder declares that these attempts are premature; and that the spectroscopic data are as yet insufficient. So far as they go, they rather indicate a motion toward *Alpha Aquarii*. "Still, if the sun's speed be small compared with the average speed of the stars observed, there is nothing in the observations incompatible with the generally accepted direction." Mr. Maunder points out the fact that Greenwich Observatory is the only observatory prosecuting these researches, which demand a refined spectroscope, a large telescope, and a very clear and quiet atmosphere—conditions all lacking at the Royal Observatory. He expresses the hope that the Observatories of Nice and Melbourne may devote their large telescopes to this work. In America we have several large refractors admirably suited for this work, and it is to be hoped that some one of them may be exclusively devoted to it.

THE REVISED OLD TESTAMENT.—I.

In order to show what the Revisers of the Authorized Version of the Hebrew Scriptures have done or have not done; why they have made certain alterations and forborne to make others; how far, in our estimation, they were guided in their conclusions by decisive reasons; how much, in proportion to the texts, their emendations amount to; and how high, on the whole, we may rate the value of their arduous labor—we deem it best to lay before our readers small fragments of Genesis, Joshua, Job, Psalms, Proverbs, Isaiah, and Hosea, taking the first five verses of the tenth chapter of each book, and to append our remarks special or general, as we proceed. We shall thus introduce every group and almost every class of Scriptures; present, as far as possible within such narrow limits, a fair average of work and merit; and escape the suspicion of making selections for effect. The differing portions of the Revised Version will appear in italics, enclosed in the text of the Authorized:

Genesis X.

1. Now these are the generations of the sons of Noah, Shem, Ham, and Japheth [*Shem Ham and Japheth*]: and to them were sons born after the flood.

2. The sons of Japheth; Gomer, and Magog, and Madai, and Javan, and Tubal, and Meshech, and Tiras.
3. And the sons of Gomer; Ashkenaz, and Riphath, and Togarmah.
4. And the sons of Javan; Elishah, and Tarshish, Kittim, and Dodanim.
5. By [*Of*] these were the isles of the Gentiles [*nations*] divided in their lands, every one after his tongue, after their families, in their nations.

"Shem Ham and Japheth," undivided by commas, was chosen in order to obviate a possible misapprehension of the slightly ambiguous connection, in the sentence, of those three names with the preceding one. This ambiguity might be effectually removed by substituting *Noah's sons* for "the sons of Noah," but that construction would be contrary to the general usage of the Authorized Version, and hence to the rule laid down for the Revisers by the Canterbury Convocation of 1870, that "the style of the language employed in the existing Version be closely followed." The same rule also made it incumbent on them to preserve more than half a dozen superfluous conjunctions in verses 2 and 3. The Hebrew particle corresponding to our *and* is a short syllable or half-syllable, *ū* or *v'*, which, like the Spanish *y*, Italian *e*, or Slavic *i*, smoothly and lightly attaches itself to the following word, while our *and*, like the Greek *καί*, and the German *und*, grates upon the ear when often repeated. Literal fidelity to the sacred original was the paramount consideration of King James's translators, but literalness in translation is often the contrary of fidelity. Had a Hebrew of our age written an epitome of ancient and modern history worth translating, no translator would think of making him say in English, "Magog, and Madai, and Javan, etc.," or "The tribes of Israel were: Reuben, and Simeon, and Levi, and Judah, and Issachar, etc."—*cf.* Gen. xxxv. 23, in either version—any more than of rendering a sentence in the modern portion of the epitome thus: "Now the first five Presidents of the United States were: Washington, and Adams, and Jefferson, and Madison, and Monroe." The damage done to the more ornate, and especially the poetical, portions of the Old Testament by such literal adherence to the words and forms of speech of the original is enormous. But in a contest with dogmatic conservatism, taste is bound to succumb, and our Revisers were enjoined to follow in the wake of the translators of three centuries ago. Besides, it is a great convenience to joint workers to have strict rules of uniformity, obviating all discussions and conflicts on points of taste. It is therefore fortunate that our equivalent for the Hebrew *v'*, which is repeated nearly a hundred times in the short chapter before us, is not a polysyllable like the kindred *also, equally,* or *simultaneously.*

Marginal notes to verses 3 and 4, in the Revised Version, properly call attention to different readings in the corresponding list of Chronicles: *Diphath* for *Riphath*, and *Rodanim* for *Dodanim.* The Authorized Version has only, in reference to the latter name: "Some read it *Rodanim*," which is rather loose, ignoring as it does both the text of Chronicles and the Septuagint's confirmatory Ῥόδιοι in the verse before us. That the Revisers did not here introduce in the text the more probable reading is quite natural, for it was not their task to follow probabilities, but to render exactly everything in the Masoretic text that might possibly be correct; and the author of the ethnological table may, after all, not have spoken of Rhodians, but of Dodonæans, Dardanians, or Daunians, as the various conjectures run. There is no end to more or less plausible emendations of the Hebrew text—beginning with the very first verse of the Bible, which a bold Jewish critic, by dropping one Hebrew letter, makes to read: "In the beginning God created the *water* (*hammayim*) and the earth," thus harmonizing it with the mention of "the deep" and "the waters" in verse 2, and with the succeeding narrative of the creation of "heaven" on the *second* day (*He'hālūç* iii. 97). But conjectural emendations require weighing and elucidation, and can be presented only in extensive notes, as conjectures. Allusions to the most tempting of them in marginal notes would be bewildering to most Bible readers.

The alterations in verse 5 recommend themselves at first glance. *Gentiles* is generally replaced by *nations* (as the rendering of *gōyīm*), but left in the text of Judges iv. 2 ("Harosheth of the Gentiles"), which conflicts with "Galilee of the nations" in Is. ix. 2, the *gōyīm* of Harosheth being evidently a part of the Galilean *gōyīm.* The substitution of *nations* for *Gentiles* in the verse before us has unfortunately rendered the following "every one after *his* tongue" apparently ungrammatical; but the Revisers probably felt bound to tolerate this objectionable phrase, being convinced that the words *These are the sons of Japheth* are wanting before it, corresponding to "These are the sons of Ham" in verse 20, and to "These are the sons of Shem" in verse 31. (See Knobel's irrefutable argument, *in loco.*)

JOSHUA X.

1. Now, it came to pass when Adoni-zedec [*Adoni-zedek*] King of Jerusalem had heard how Joshua had taken Ai, and had utterly destroyed it; as he had done to Jericho and her King, so he had done to Ai and her King; and how the inhabitants of Gibeon had made peace with Israel, and were among them.
2. That they feared greatly, because Gibeon was a great city, as one of the royal cities, and because it was greater than Ai, and all the men thereof were mighty.
3. Wherefore Adoni-zedec [*Adoni-zedek*] King of Jerusalem sent unto Hoham King of Hebron, and unto Piram King of Jarmuth, and unto Japhia King of Lachish, and unto Debir King of Eglon, saying,
4. Come up, unto me, and help me, that we may [*and let us*] smite Gibeon: for it hath made peace with Joshua and with the children of Israel.
5. Therefore the five Kings of the Amorites, the King of Jerusalem, the King of Hebron, the King of Jarmuth, the King of Lachish, the King of Eglon, gathered themselves together, and went up, they and all their hosts, and encamped before [*against*] Gibeon, and made war against it.

The changes in these verses are insignificant—though improvements all—and it is the paucity of rhetorical changes which calls for remarks. Why do we read: "Joshua had taken Ai and destroyed *it*," and immediately after, "Ai and *her* King," and again, "Gibeon . . . , and all the men *thereof*"? Simply because the word *its*, unusual in the times of James I., is generally discarded by our Revisers in deference to the style of the old version. To the same deference we owe "*unto* Hoham," "*unto* Piram," "*unto* Japhia," and "*unto* Debir"—and thousands of other *untos* in the Revised Version, renderings of the brief Hebrew *l'* or *el;* as, "unto me" for *lī*, "*unto* him" for *lō*—and also "it hath made." Now this, whether the rules of the Convocation be alone responsible for it or not, is not literal fidelity in rendering the word of God—which may excuse scores of thousands of *ands* superfluous in modern English—but fidelity in copying forms used in an old translation, which in numberless instances distort the words of the Scripture for us. Let us see, first, as to the non-use of *its.* Tayler Lewis translates Job xiv. 7-8, faithfully enough, thus:

> "For a tree there is still hope.
> Cut down, it springs again;
> Nor do its suckers fail.
> Though in earth its root be old,
> Its stump all dead and in the dust."

The Revised Old Testament, faithfully copying every *thereof* of 1611, has this:

> "For there is hope of a tree, if it be cut down, that it will sprout again;
> And that the tender branch thereof will not cease,
> Though the root thereof wax old in the earth,
> And the stock thereof die in the ground."

Is this fidelity to the sublime poetry of Job? The three times repeated *thereof* stands for the Hebrew termination *ō;* the five words "and the tender branch thereof" stand for one word in the original, *v'yōnaqtō.* And yet, there is nothing really objectionable in the modern *its*, even in the eyes of our Revisers, for they substitute it occasionally for the Authorized Version's *his* or *her*, as in the following rendering of Ps. i. 3:

> "And he shall be like a tree planted by the streams of water,
> That bringeth forth its fruit in its season."

It is clear that the beautiful brevity of the Hebrew—as in *v'hāyāh*, "and he shall be"—is inimitable in any of our Occidental languages. It is unfortunate that literal fidelity to the meaning may demand the rendering in our excellent idiom of *hambass'rōth*—in German *die Botinnen, die Heilbotinnen* (Sachs), or *die Siegesbotinnen* (De Wette)—by "The women that publish the tidings" (Ps. lxviii. 11, Revised Version); the rendering of a Hebrew saying in four words, as clear as it is pithy (1 Kings xx. 11), by "Let not him that girdeth on his armour boast himself as he that putteth it off"; or even the rendering of *t'hīmennāh mēādām* (Mic. ii. 12: they shall noisily swarm with men; Arnheim, "sie werden wimmeln von Menschen") by "they shall make great noise by reason of the multitude of men." But, this being so, why add in translation unnecessary to unavoidable length? Fidelity to the meaning of *orkō v'ro'hbō* (Ez. xl. 20) is perfectly satisfied with *its length and breadth;* literal fidelity may require *its length and its breadth;* but why say "the length thereof and the breadth thereof"? And in the second verse following, why translate three Hebrew words meaning *And its windows, arches, and palm-trees* by "And the windows thereof, and the arches thereof, and the palm-trees thereof"? In the same utterly prosaic narrative we read "*unto* me," "*unto* thee," and "*unto* the gate which look*eth* toward the east."

"*Unto*," at least, occasionally alternates with *to*, in both versions—here and there inconsistently, as in Ex. xix.: "*say to* [*l'*] the house of Jacob" (verse 3) "what I did *unto* [*l'*] the Egyptians," "brought you *unto* [*el*] myself" (v. 4), "*said unto* [*el*] Moses" (v. 9); and, distinguished from *to*, it also stands, in its old sense, for *as far as* (*'ad*), (*e. g.* in Neh. iii: "unto the broad wall," "unto the place," "unto the pool," "unto the house," etc). The verbal termination *th, eth,* however (as in "hath made," "look*eth*"), which never alternates with *s*, has, in 1885, as an invariable form for both prose and poetry, no intrinsic justification whatever. It reflects throughout the English of three centuries ago, but never the Hebrew of two or three thousand years ago.

In almost all this—we must repeat, in justice to them—the Revisers have been bound by their rules. The literal adherence to the text of the Authorized Version enjoined on them was demanded in the ecclesiastical and religious interest of the Anglo-Saxon Protestant communities; and the reverential feeling which lies at the bottom of this interest inspires even Matthew Arnold to write thus, in the introduction to his 'Isaiah XL—LXVI' (1875):

"I have had a most lively sense of the risk one runs in touching a great national monument like the English Bible, and how one is apt, by changes which seem small, to mar and destroy utterly. . . . I am conscious of an 'affectionate reverence' for the diction and rhythm of the English Bible, greater even, perhaps, than that of many of the official revisers—a reverence which, while for our purpose some change is needed, makes me eager, notwithstanding, to preserve its total effect unimpaired, and binds me, in this aim, to a moderation in altering much more than commonly scrupulous. . . . Nothing would be so gratifying to me as to find that a reader had gone from the beginning of the chapters to the end without noticing anything different from what he was accustomed to, except that he was not perplexed and thrown out as formerly. No corrector should

wish to claim any property in the English Bible. That work, and the glory of it, belongs to the old translators; and theirs, even if their work is amended, it should remain."

MEDIEVAL THOUGHT.

Illustrations of the History of Medieval Thought in the Departments of Theology and Ecclesiastical Politics. By Reginald Lane Poole. Published for the Hibbert Trustees. 1 vol., 8vo. London: Williams & Norgate. 1884.

THIS volume has special interest as a manifestation that England is at last awaking to a sense of the value of the work done during the so called Dark Ages; and if the Hibbert Trust had accomplished nothing else, it would have justified its existence by the travelling scholarship which enabled Mr. Poole to make these studies. It is, in fact, in no sense flattering to English culture to observe that, notwithstanding so many of the schoolmen here discussed were of British origin, or connected with Britain, the authorities cited by Mr. Poole are so largely Continental. The fashion of sneering at the intellectual achievements of the Middle Ages has lasted longer in England than elsewhere, and it is to be hoped not only that the present volume is a proof of enlightenment, but that it will serve as a stimulant and a guide for further honest work in the same direction.

We may smile, if we please, at the trivial subtleties of the schoolmen, and at their enormous waste of intellectual power on matters which the world has come to recognize as useless, yet none the less are we their heirs, who should be thankful for the inheritance so laboriously worked out for our benefit. When the Latin Church civilized the barbarians, the scheme of life which formed itself in Christendom rendered it inevitable that theology should dominate philosophy—should become the supreme object of intellectual effort. Successive schools of thought sought to reconcile the two—to render theology philosophical, or philosophy theological; and, puerile as were often the debates which occasioned such uproar in Paris and Oxford, in Prague and Cologne, they formed part of the general movement in which the human mind was gradually training itself to adjust the antagonistic claims of authority and progress, of tradition and speculation. What was futile in these discussions may safely be relegated to forgetfulness; but not a few of the eternal problems which will ever confront the thinker were explored with a boldness and acuteness that have never been surpassed, leaving their indelible impress upon modern thought. Erigena and Abelard, Aquinas and Occam were supreme types of a multitude who not only kept alive the sacred fire of intellectual effort, but rendered possible the further development of which our modern civilization is so proud. These men took as their motto the saying of William of Conches: "Nos autem dicimus in omnibus rationem esse quærendam" (p. 128); and, imperfect as were the methods by which the reasons and causes of all things were sought, the hardy spirit which prompted the attempt, and the acute training which it insured, were of no little service to the progress of humanity. These paved the way for the emancipation of theology in the great movement of the sixteenth century; and when theology once came to be acknowledged as subject to debate in its fundamental dogmas, the evolution of the scientific spirit in turn became a necessary consequence. The intricate and formal dialectic of the schools is naturally repellant to the superficial reader, and it was easier for the mocking eighteenth century to ridicule it than to penetrate and understand it. Its true import and significance in the historical development of thought have for some time been appreciated on the Continent, and profound investigations have been made into its methods and objects and results. Some of the salient points of these investigations are now presented to the English student by Mr. Poole, who has controlled them by accurate and independent work of his own. His modest title of "Illustrations" disarms the criticism that the book is somewhat fragmentary in character, and it can be warmly recommended to all who value the inheritance which we have received from these able and resolute champions on either side of the great questions of existence.

Yet we may be permitted to remark that Mr. Poole's special studies appear to have been too exclusively scholastic. A wider acquaintance with the institutions and internal development of the Middle Ages would have given him greater breadth of view; would have saved him from making some positive assertions on points which are, to say the least, doubtful; and would probably have led him to embrace within the scheme of his labors some intellectual movements of peculiar interest because they spread among the people and were not confined to the schools. Thus we think that a more accurate knowledge of the condition of the Church in the twelfth century, and of its relations with the populations, would have softened his judgment of St. Bernard, in his account of the tribulations of Abelard and of Gilbert de la Porrée. It is true that St. Bernard's most unamiable aspect is exhibited in his persecution of Abelard, but allowance is to be made for the inevitable antagonism between that brilliant but impracticable scholar and the objects to which Bernard's life was devoted. If Abelard stood for independence and freedom of thought, St. Bernard was no less the champion, not alone of orthodoxy, but of reform within the Church; nor can we venture to affirm that his ideals were less high, while his objects were vastly more direct and practical. To a twelfth-century churchman the welfare of the Church and people could only be accomplished by the enforcement of respect for authority, and Abelard was the type of intellectual revolt. The moral force of Bernard prevailed against the intellectual force of Abelard; and this could scarce be otherwise, for Bernard was the highest example of the prevailing mind of the age, while Abelard represented but a few daring souls, impatient of the trammels of tradition and authority. Yet the antagonism which he excited was not so much caused by what he had said and written as by dread of what he might say and write if permitted to continue his career unchecked. Mr. Poole, it seems to us, does not attach the importance it deserves to Abelard's first essay in the field of theology—the "Sic et Non." This remarkable work may be, as he suggests, merely a collection of notes for the writer's own use—a commonplace book of the contradictions of dogma, canon, and decretal, yet none the less was it the most dangerous assault that had ever been made against the authority of tradition and the infallibility of the visible Church. It could not of itself be made the ground of arraignment, but we may be sure that thereafter the author was a marked man, whose transcendant abilities only rendered more dangerous the resolute spirit of free inquiry which gave them purpose. It requires no great depth of historical insight to see that, to a man like St. Bernard, it was the plainest of Christian duties to deprive the iconoclastic logician of further capacity for evil.

In the same way, Mr. Poole's interesting chapters on the hierarchical doctrine of the State would have been more philosophical if he had familiarized himself with the influence which the revived study of the Roman law exercised upon the thought of Europe. It was this, more than all other causes combined, which effected the transformation of the feudal medieval sovereignty into the absolute monarchies of the seventeenth century; and the difference between the political theories of France and Germany at the beginning of the fourteenth century, to which Mr. Poole calls attention, is to be explained quite as much by the greater ardor with which the imperial jurisprudence was studied and applied in France, as by the virtual collapse of the Holy Roman Empire during the great Interregnum. Mr. Poole is thus led to attach too much importance to the speculations of Marsilio of Padua, who sought, in his remarkable "Defensor Pacis," to sustain the failing cause of Louis of Bavaria by transplanting the French theories to Germany, where they withered in an uncongenial soil. As a bold thinker, Marsiglio was in many ways far in advance of his age; but Mr. Poole gives him undue credit in saying that he had "arrived at the fully mature principle of religious toleration which modern writers are apt to vaunt as their own peculiar discovery" (p. 272). In denying all secular power to the Church, Marsiglio argued that the divine law pronounced no temporal penalties for its own infraction, and that heresy was punishable only by human law, which it was the province of the secular authorities to decree and enforce, calling in ecclesiastics merely as experts to determine its existence, and taking care that the confiscated goods of the heretic should not inure to the benefit of the Church. He had no objection to the persecution of heretics, provided it gave added power to the State and not to the hierarchy. In fact, it would have defeated his purpose, in that age, to proclaim any broad principle of religious toleration. Somewhat rash is a similar tribute to Wiclif—"He alone had the courage to strike at the root of priestly privilege and power, by vindicating for each separate man an equal place in the eyes of God" (p. 292)—seeing that the Waldensian churches had long been based upon the individual responsibility of each man to God, and the denial of any mediatory power between the Creator and the creature.

All this evidently arises from a lack of sympathy and of acquaintance with popular currents of thought outside of the schools; and to this lack may be attributed Mr. Poole's mistake in speaking (p. 280) of the schism in the Franciscan order under John XXII. as caused by "the latter's condemnation of their newly proclaimed doctrine of the necessity of 'evangelical poverty,'" and in further alluding to it as "the doctrine that the clergy are bound to hold no property." This manifests an entire misconception of one of the most curious phases of thought in the thirteenth and fourteenth centuries, which, if rightly investigated, would have opened to him a region of speculation not inferior in interest to any of those which he has examined—of greater human interest, indeed, as it was glorified by the martyrdom of those who eagerly preferred the stake to the abandonment of the theories which they had adopted.

We trust that the reception of the present volume may be such as to encourage Mr. Poole's further labors in the same field, and that he may hereafter enrich English literature with a work of more ambitious character, giving not only isolated sketches but a history tracing the continuity of thought in its evolution from the ninth century onward, and noting not merely the learned disputations of the schools, but the popular developments, such as those of the Spiritual Franciscans, the Brethren of the Free Spirit, the Friends of God, and others. Such a work, executed by a man of Mr. Poole's general accuracy and clearness of thought, would be of great value, and might be made of surpassing interest.

Under the Rays of the Aurora Borealis, in the land of the Lapps and Kvæns. By Sophus Tromholt. 2 vols. 8vo, xvi, 288 and x, 306 pp. Boston: Houghton, Mifflin & Co. 1885.

DURING the progress of the work of the International Polar Commission, it was considered highly important to determine, if possible, the height of the aurora borealis above the surface of the earth. As it seemed probable from earlier investigations that this height was between 60 and 120 miles, a distance of some sixty miles in a north and south direction between two observing stations offered the best opportunity for simultaneous observations of the vertical angle by which the actual height might be computed. When Bossekop on Altenfiord was selected as the Norwegian station, it became evident to the author of these volumes that the village of Koutokæino was advantageously situated for the purpose. It lies nearly due south, about 63 miles from Bossekop, is situated nearly in the maximum zone of frequency of auroral displays, on a nearly level sandy area, affording a clear view of the horizon, and enjoys a comparative immunity from the clouds and moisture of the mountainous coast-lands. The present work is devoted to a popular description of the journey to and from the station, of the results obtained there, of a flying visit to the Finnish station of Sodankylä, a hundred miles southeastward, and of the life and manners of the native population which finds a congenial home in Finmark.

The author's style is lively and amusing, seeming to have suffered little in the translation made from the Norse by Carl Siewers. Almost the only indication we have noted of a failure to grasp the English idioms occurs in the attempt to represent the ages and sexes of the reindeer by the terms "ox" (!) cow, and calf, which in one instance has produced a comical confusion. The work is profusely illustrated by sufficiently good "process" engravings from the author's photographs, and two chromotype plates of Lapp costume. It has a map as good as the knowledge of the region permits, and a tolerable index. The author has avoided giving too great prominence to his physical researches, which would have resulted in a loss of interest for the general reader. He does not seem to have been specially trained to observe matters of natural history or ethnology. Yet the most interesting and valuable parts of his book are those devoted to the manners and customs of the Lapps and Finns, or Kvæns, as the latter are called by the Norwegians. Doubtless there was much that escaped his observation, but the book, taken in connection with its very characteristic portraits of the people, is probably the best summary we have of the general features of the life of these little known, half-civilized hyperboreans.

Leaving Bergen in August, 1882, the writer skirted the coast of northern Norway, which he briefly and pleasantly describes, with an interlude on the fisheries of Lofoten, the most important in northern Europe; terminating his voyage at the southern extreme of the Altenfiord. Here his inland journey was to begin, at Bossekop, which is Lappish for the "village of whale bay." This little town, only twenty degrees from the pole, seems exceptionally favored by nature. The bay is as lovely as an Italian lake, smooth, surrounded by a garland of green and gray mountains, with soft rounded outlines, a level beach of white sand, a distant vista of blue snow-capped peaks, a valley where a river winds between the feathery birches and green firs, with banks gorgeous with wild flowers and rich with berries. The little town consists largely of pretty villas tenanted by hospitable folk, and the sky, blue by day, is nightly arched by the lambent flames of the aurora, ceaselessly playing, with a depth of color and beauty of form seen nowhere else in Europe. This is the most northern spot in the world where grain ripens. The Alten River is one of the richest salmon streams in Norway, and near the bay is a small street of little houses, the most northern market-place of the world. Generally deserted, in April and December it teems with varied life. Then the great Bossekop fairs are held, Lapps, Finns, and Norwegians in motley costumes throng the little square, flags and bunting fly from every pole, and for a time commerce and gayety hold joint sway. Bossekop is also a classical spot in the annals of science. The French Scandinavian expedition under Lottin and Bravais sojourned here in 1838-9, and did admirable work on the physical conditions of northern Europe, especially on the aurora.

Leaving this attractive spot, after a rough but interesting journey Tromholt reached his wintering place at Koutokæino in September. Here the landscape, for Norway, seemed unique. Not a mountain being visible, the river forms a broad white plain of sand, an "intervale" bordered by steep banks; while stretches of heathery moor and low ranges of rounded dunes alternate with tiny lakes like mirrors. Near the river is a little red church nearly two centuries old; a few birch trees, the only ones in sight, guard the graves which the sand threatens to engulf. There are four frame buildings, a school and the residences of the vicar, the sheriff, and the post-trader. On either side of the river are the farms of the settled Lapps. Here was a settlement before the *Mayflower* sailed; its cemetery, disused for more than two centuries, still exists, though the river has invaded it. There are but few families here; the Mountain Lapps, who form the chief population of the parish, are generally on the move with their deer. Their valuables are left in little huts on posts, like small pigeon-houses, which form the sole fixed property of the Mountain Lapp. The residences of the settled people are generally of logs with turf roofs, surrounded with sheds for sheep and cattle, elevated hayricks, a hut where the hay is boiled for the stock in winter, and a well with weighted pole, like that of some New England farm-house.

The dress of the Lapp, in its essentials, is that adopted by all boreal people. The boots, tied at ankle and knee, stuffed with non-conducting straw, and the deer-skin blouse differ in details of form and ornament, but at bottom are the same for Eskimo, Lapp, and Kamchadal. The head-dresses of men and women are characteristic and much ornamented. Their riches are in their herds of deer, which afford them milk, meat, and transportation. These reindeer are much smaller than the wild American caribou, but are hardly specifically different. Though under control and even broken to harness, they can hardly be called tame; and if the driver loses his hold on the single rein, they are apt to attack him with their fore feet. They receive very rough usage from their masters. The sledges resemble a shallow, keeled boat, truncated abruptly behind. There are no runners. With a good animal and favorable conditions, sixty miles a day can be made over the snow.

The masters of the deer live in a tent made of a blanket-like woollen material called vadmel. The tent is conical, stretched over poles eight or ten feet high, with the hearth in the centre, and the sole chimney, window, or ventilator above it. The small entrance is closed with a "portière" of vadmel. The earth is covered with birch twigs, on which the inmates squat, eat, work during the day, or sleep at night. Their dress is their bedding: unlike the Eskimo, they do not strip at night. Their utensils are few and simple; wooden dishes, scoops, or trenchers, spoons of horn, wood, or even silver; a few kettles and pots. Each carries a large camp-knife. There are no fixed meals. All take turns in guarding the deer, and eat when they return or feel hungry. The pot is always over the fire. Reindeer meat, milk or cheese, and snow-water are their chief reliance; they are devoted to tobacco and to coffee when they can get it; spirits do not last long enough with them to warrant the charge of habitual drunkenness. There is no privacy in the tent, which is also shared by the dogs, and the status of these people is distinctly below that of the western Eskimo. This is not true of the settled members of the race, who are often fairly prosperous and semi-civilized. Labor is pretty fairly divided between the sexes, but, curiously, the men do all the cooking. The race is phlegmatic, and brutally practical. There is little filial affection, and while hospitable of fire and house room, they do not offer food to the visiting stranger of their own race. They are nominal Christians, but full of superstition, which, by evil counsellors, has at times been so fostered as to break out in extraordinary fits of insane fanaticism. They do not dance, and have no musical instruments except whistles. They are great talkers, eager for news, and have a certain sense of humor. Of sentiment there is little, and marriages are invariably made on a business basis. For details which our space does not admit of summarizing further, the reader may be referred to the book itself. It is certainly one of unusual interest.

Samuel Adams. By James K. Hosmer, Professor in Washington University, St. Louis, Mo. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1885. 12mo, pp. 442.

IN his preface, Professor Hosmer makes an unnecessary apology for the presumption of a Westerner in writing a life of a typical Bostonian. But, wherever born, it would be impossible for a Hosmer to be other than a Yankee, and the only evidence of local feeling is shown in the author's tendency to treat his topic somewhat abstractly. A few literary peculiarities may be assigned to the same cause, but these are most apparent in the opening chapters. Mr. Hosmer has prepared an interesting and appreciative Life of Adams—one which fairly sets forth the man, his work, and his times; and it will certainly be of great service in renewing the fame of this pioneer of the Revolution. Materials, indeed, abounded. Mr. Wells's pious labor in preparing the three bulky volumes of his ancestor's writings has greatly lightened the work of the late biographer. The publications upon the history of the rise of the Revolution are numerous and accessible. Nevertheless, the reduction of the ponderous mass to a convenient summary must have been the result of much care, and the compiler is entitled to the warmest thanks of his public.

One thing is noticeable in the life of Samuel Adams, and that is the entire lack of any individuality in the man apart from his work. Living to the age of eighty-one in the town of his birth, a public character from his earliest manhood, always filling the public eye, trusted and honored as few men have been, he has left hardly a trace of his personality as distinct from his official position. No anecdotes are preserved of his domestic life, his ways and customs, his goings-out and goings-in, not even of his methods of so powerfully influencing the destinies of a nation. There are abundant testimonies to the results he achieved, we see him in his public career, but the inner man eludes our scrutiny. It may, indeed, be that he was so absorbed in the greater work that he lived no other life; but greater men have had a human side. If it be true that he was a fanatic, the incarnation of the institutions of New England, the fact may explain some of the apparent weakness of his later career.

Mr. Hosmer has judiciously contrasted Samuel Adams with his contemporary and rival, Governor Hutchinson. But as regards the latter, how different is the nature of the record. Of Hutchinson's own mind we have a faithful picture in his letters and diary. We can reproduce him to the mind's eye, and see his virtues as well as his defects. Of Adams, apparently, no trace remains, and we are forced to regard him as an instrument of destiny working out almost unconsciously the great problem of human progress.

Public opinion, to which Mr. Hosmer conforms, has agreed in stamping Adams as the "Man of the Town-Meeting." He is the visible sign of that form of popular sovereignty which perhaps reached its most conspicuous height in Boston during the ten years preceding the Revolution. And this personification is doubtless a correct one, though we are still in doubt how far the assembly and its exponent reacted upon each other. In the one view Adams revivified the old forms, but suppressed his own prominence to the greater glory of the system. In the other, Adams was but the creation of the popular will, pushed forward by it, and only the agent in formulating its affections, its hatreds, and its aspirations. Which view is correct cannot be solved by this abbreviated narrative. It is confessed that Adams was not a great orator; it is painfully evident from his writings that he was not a great master of composition. His greatest art, in the eyes of his contemporaries, was his mastery of popular assemblies; and after witnessing the exploits of his successors for a century, that talent does not seem to be so exceptional or so desirable to us as it did to them. That he profoundly moved the Boston town-meetings is certain, but were his methods pure, his intentions honest, his aims right?

To these questions it will be impossible to give succinct answers. His enemies denounced his methods, inasmuch as they accused him of appealing to the prejudices of the more ignorant part of the populace. Of the honesty of his intentions, however, no doubt exists. He lived and died a poor man, incorruptible either by bribes or honors, a man without a known defect in that respect. But as to his aims, there were and always will be various opinions. The more certain that it is that he was the first American to dream of separation from the mother country, the greater is the diversity of opinion as to his wisdom. That he was the first of our Democrats is beyond doubt, and the present generation is not a unit on the validity of that claim to immortality.

It would be obviously useless for us to run through the well-known record of his life. It is told as briefly as possible in the volume under notice. We pass instead to those digressions and comments of the author which open up questions of living interest. Mr. Hosmer has much to say about the town-meeting, or, as he rather affectedly terms it, the folk-mote. He praises it somewhat too much, as after all it is the sign of a very primitive stage of legislation. He traces it to the "primeval Teutons," not apparently noticing the similarity of circumstances in these communities separated by centuries. The individuals were differently equipped, but the founders of New England occupied a position very like that of the first founders of villages in Old England. The town government occupies so prominent a place because it represents almost the only authority and the only cause for mutual concessions and support. For scanty public duties simple forms suffice. The real difficulty lies in adjusting greater burdens, in devising new forms which shall be strong without being arbitrary.

In his closing chapter Mr. Hosmer heaves a sigh over the decay of the town-meeting system. He is unnecessarily alarmed. Our towns will be the same a century hence, for the foreign element in the second generation takes to debates and parliamentary law with an avidity which would have surprised a North End caucus in Adams's time. The real problem, as Mr. Hosmer states, is to organize a city government; and this mainly because a city requires so much more than a town. That problem is being slowly worked out, and its solution is mainly hampered by the recollections of the town-meeting. Massachusetts is again the chosen ground for the fight. Already sixty per cent. of its inhabitants live in cities, and the next social and political revolution will be the transfer of power to those corporations.

The Russian Revolt: its Causes, Conditions, and Prospects. By Edmund Noble. Boston: Houghton, Mifflin & Co. 1885.

We are far from satisfied with this little book as a pragmatic exposition, which it aims to be, of the origin, growth, and present significance of the revolutionary movement which for years has been menacing the Czarish order of things in the great Slavic empire. But we can say, on the other hand, that it is the production of a writer familiar with Russia and her history, her people and her woes, from study as well as from personal experience; and—which is saying more—that it can be read with interest even after the writings on the same subject of Eckardt, Leroy-Beaulieu, "Stepniak," and others. The authors just mentioned, though seldom referred to by Mr. Noble, have evidently been his guides; but he presents his views and conclusions with an animation and warmth indicative of personal observation and sympathetic study. There is considerable force in some of his descriptions of the past and present—descriptions, unfortunately, almost always tinged with despondency—as witness the following:

"The tendency really universal in Russia is to pessimism. This penetrates all spheres of thought, gives its hues to every coterie and school, creates resemblances between the most diverse productions of the pen, restores as with a bond of gloom the shattered solidarity of society. . . . Not to be pessimistic in Russia is to be divorced from all contact and sympathy with the national life; to be cut off, either by foreign birth or by some monstrous denial of nature, from the tree of the national development. All influences and epochs have contributed to the tendency. A monotonous landscape, the loss of free institutions, Byzantinism with its cruel law-giving and ascetic tyranny, the fiscal burdens of the new State, the antitheses suggested by European culture, the crushing of the individual, the elimination from Russian life of all those healthy activities which engage citizenship in other countries, the harassing restrictions upon thought and movements, the State-created frivolities of society—all these have contributed to the gloom of the mental atmosphere, until to-day pessimism may be said to be the normal condition of all Russian thought. . . . The lives of Pushkin, Lermontoff, Gogol, Dostoyevsky, and many other of Russia's greatest men were passed in a perpetual struggle with the pessimistic tendency. . . . Herzen doubted whether it was possible for any Russian to be genuinely merry. He called the Russian laugh a *ricanement maladif*. . . ."

This extract contains a virtual epitome of the main point in the author's view of Russian development. Like "Stepniak" and his school, he holds "Byzantine" Christianity and Czardom in its later development—accidental evils, as "Stepniak" would say—responsible for all the terrible ills which Russia has been writhing under. In spite of her "monotonous landscape," on which, as on other "environments," he dwells at length, Russia was happy and merry, because free, federative, and democratic, before the Nessus-shirt of the Byzantine religion was violently fastened upon her, having in its folds "the three unities": "unity in deity, unity in sovereignty, unity in territory." This not unmixed calamity was followed, after some centuries, by the unmixed one of the Tartar yoke, and, when this was broken, by the equally calamitous omnipotence of Czardom. But the Slavs being a freedom-loving race *par excellence*, the protests of the Russian nation against oppression have not ceased, manifesting themselves in the religious schism known as the Raskol; in wild popular insurrections—like Stenka Razin's in the seventeenth century and Pugatcheff's in the eighteenth; in republican conspiracies like that of the Decembrists in 1825; in the clandestine agitations of Hertzen and his school under Nicholas; in the more widespread and earnest propaganda under Alexander II.; in university demonstrations; in the regicidal attempts of Karakozoff, Solovieff, Hartmann, and Salturin, and the fatal one carried out under the lead of Zheliaboff and Sophia Perovskaya; and in the many murders of Czarish officials which preceded or followed the catastrophe of March 13, 1881. This movement is bound to triumph, and with its victory Russia will be redeemed, regenerated, and freed from the lust of conquest, and Europe delivered of a constant menace. This theme is elaborated by Mr. Noble, with occasional obscurity and inflation, in a manner of which the following may afford an example:

"Just as a mass of water may assume the character of a still lake, a rippling brook, a noisy waterfall, may ascend even in vapor and appear as a cloud, yet retain unchanging the nature and properties of its essence, so the Russian revolt takes all protean shapes in the process of its expression. Constrained by circumstance to manifest itself as passive discontent, as religious protest, as philosophical dogma, as ethnological sentiment, as negation in criticism, as Nihilism in morals, as Socialism, as incitement to revolution, or as violence and terrorism, the revolt never varies in its inner being, never changes in its essence, but remains the immutable antithesis of absolutism; in this aspect not tainted with the immorality of force, or soiled with the shedding of blood, but fair as the cause of human liberty, and irradiated with the sunlight of awakened human consciouseness in its struggle with the darker hemisphere of the national life."

Dogmatic one-sidedness is the general defect of the book, which is, besides, not free from inaccuracies of detail, not a little surprising when we consider the author's knowledge of Russian and use of good original materials. Thus—to mention only a few slips—Russia's great painter, Vereshagin, is always called Vere*shch*agin; the "chemist of terrorism," Kibaltchitch, repeatedly Kibal*shch*ich; Sophia Perovskaya is at one place (p. 202) stated to have been the niece, and at another (p. 220)—here correctly—the granddaughter, of the Minister of Public Instruction, Perovski; Vera Zasulitch, who was implicated in the Netchayeff plottings of 1873, is represented as a girl of sixteen when attempting the life of Trepoff in 1878.

The Chinese Painted by Themselves. By Colonel Tcheng-ki-tong. Scribner & Welford.

Bits of Old China. By William C. Hunter. London: Kegan Paul, Trench & Co.

The Cross and the Dragon. By B. C. Henry. A. D. F. Randolph & Co.

'The Chinese Painted by Themselves' is a book purporting to have been written in French by "Colonel Tcheng-ki-tong, military attaché of China at Paris." In its make-up it suggests a projectile, or the use to which volumes are put by irate schoolmasters when the ears of urchins need boxing. It is flung at the reader in a mass, with few of the appurtenances of a well-made book. The frontispiece presents a belted and mandarin-capped young Chinese, who may be the alleged author; but no legend, note, or reference gives any information as to his name or personality. Certainly his garb is not that of a Chinese colonel in uniform. The book, even in its trans-

lated form, is too thoroughly French to deceive. The style is that of the boulevard *demi-sou* newspaper, and the thoroughly Gallic ear-marks are patent. It is a screed intended to satirize Parisian politics, social life, and customs, rather than to inform concerning the sons of Han. In its occasional citing of passages from English books on China its amazing incorrectness in misprinting foreign names is accomplished with true French originality. We doubt whether a Chinaman, without the assistance of a *boulevardier*, could be guilty of such misprints. Such a person as Tcheng-ki tong may exist, he may be a colonel of infantry, and he may have written much of the tedious matter of the book; but the flavor of the writing is so Frenchy that we prefer to trust for our information about the Chinese to foreign instead of native authors of the Tcheng-ki-tong sort. A thoroughly honest book, which can fairly claim the title here usurped, is certainly needed.

'Bits of Old China' is the unpretentious title of a collection of memorabilia by one familiar with life at the seaports of China a generation or two ago. The author was already known by works of a similar nature entitled 'Old Canton' and 'The Fankwae [foreigner] at Canton before Treaty Days.' The sketches treat of curious characters, pleasant places, stirring events of war and peace, literary, epulary, and commercial incidents, which make the days of sailing vessels and non-telegraphic business methods seem romantic and even poetic. The author, in living over the days when American commerce was proportionately more of a power in China than at present, intersperses his narrative with anecdotes interesting to our countrymen, and especially to old residents of China. Some specimen titles of his short chapters may give one an idea of the variety of contents: "Doctor Cox's Visit to a Chinese Patient," "Jade Stone," "Bronze Vases and Tripods," "Black Dragon Tea," "Public Schools," "Macao—Old Residents," "The Sea-Screen Temple," "Incidents of the War of 1842." The following sentence illustrates the author's style:

"With the Chinese the medical man is paid so long as his patrons continue in health, but when sickness occurs payment ceases until recovery takes place; then it recommences. Amongst other droll ideas, . . . we find that the *goose* is the emblem of married life, the *bat* of happiness, the *duck* of domestic bliss, and the long-legged *stork* of longevity. After all, the Chinese are—at least were until Treaty days—a happy and contented people, of exemplary industry, sober, and of simple tastes, passing through the ordeal of existence as sensibly and successfully, in view of their resources, as the inhabitants of any other land."

'The Cross and the Dragon' is the artless story of a missionary's life in Canton. The sub-title, "Light in the Broad East," refers to the increase of Christian life and knowledge in the province of Kwang-tong, in which the city is situated, and of the name of which the English sound is a corruption. The narrative has little value from a literary point of view, though some of its chapters, such as that on Geomancy, are freshly worded, showing that the author has seen as well as heard and read. The book would have gained in value and sprightliness if its original bulk in manuscript had been reduced one-half. The loss of the hideously cheap "process" sketches, and the ridiculous little note by Joseph Cook, which has only local value, would not even now be missed with pain by readers. The style, too, smacks too much of a speech before the General Assembly or Synod. Apart from these defects, the volume contains the results of original observation during a period of ten years, judgments clearly expressed, and facts calculated to encourage the believer in the final triumph of Christianity. As an honest picture of actual missionary labor, methods, results, and prospects, it is one of the latest and best of its kind. The genial, catholic spirit of the writer charms and wins. The frontispiece, representing him surrounded by his Chinese elders, shows that he bears a striking resemblance to the President of the United States.

BOOKS OF THE WEEK.

Abbott, Dr. E. A. Francis Bacon: An Account of his Life and Works. Macmillan & Co. $4.
Alexander, Mrs. A Second Life. A Novel. [Leisure Hour Series.] Henry Holt & Co. $1.

READY JUNE 13TH:

Second Volume of McMaster's United States.

A HISTORY OF THE

People of the United States,

FROM THE REVOLUTION TO THE CIVIL WAR.

VOLUME TWO.

By JOHN BACH McMASTER.

The second volume of McMaster's 'History of the People of the United States' extends from 1790 to 1804, including the greater part of the administration of Washington, all of that of Adams, and the first term of Jefferson. It will be found to be a singularly vivid and stirring picture of the period, throwing not a little new light on many political questions, and affording an insight into the manners and social condition of the people not elsewhere to be found; while some of its portraits of leading men are likely to provoke considerable discussion.

8vo, cloth, gilt top. Price, $2.50.

D. APPLETON & CO., Publishers,

1, 3, and 5 Bond Street, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 18, 1885.

The Week.

THE Ohio Republican platform, which is significant because it is the first formal utterance of the party since the national election, is very dreary reading. It seems to have been constructed on the model of the daily anti-Cleveland editorial article in the *Tribune*, though we miss the familiar allusion to Higgins and Pillsbury. It declares that the Democratic victory of last fall was won by "wilful suppression of the ballot," which is a much less striking way of putting that "issue" than the temporary Chairman of the Convention hit upon when he called it "a combination of crimes, accidents, and blunders," which is threatening to grasp this nation and "hurl its dissevered fragments into the vortex of anarchy and dissolution." On the labor question, the platform calls for "such legislation as will harmonize the relations of labor and capital and promote the welfare of the people," demands a national bureau of industry and the enforcement of the eight-hour-law, denounces the importation of contract labor, and favors such a protective tariff as will encourage American development and furnish remunerative employment to American labor. All these "issues" are warmed over from the last campaign, from which they emerged in a very sloppy condition. The remainder of the platform is made up of a demand for the restoration of the wool duty of 1867, condemnation of the national Administration, pledges of fidelity to the Civil-Service Law, and denunciation of Democratic administration in Ohio.

So far as we have seen them, all the party journals which gave the Republican Presidential ticket the most hearty support last year, are delighted with the Ohio Republican platform. Their praise is in all cases centred upon the planks which wave the bloody shirt and denounce the President for putting ex-rebels in office. About the civil-service-reform plank, which is the only sensible utterance in the document, they have little or nothing to say. These comments, taken together with the facts that the platform was reported and probably written by the same man who was at the head of the Platform Committee of the last National Republican Convention, and that its sentiments are the same as those which Mr. Blaine expressed in his bitter speech at Augusta after the election, seem to show conclusively that the party is wedded to its sectional idol, and will live and die in its embrace. This is Bourbonism of the most fatuous kind, for there is nothing in the Ohio resolutions which can be galvanized into a live issue. From first to last—excepting always the civil-service declaration—they are an arraignment of the Democratic party for alleged tendencies, crimes, and misdemeanors which are simply bugaboos. There are no specifications. The President is charged with "general discrimination" in his appointments against Union soldiers and in favor of rebel soldiers; but there is no proof of such a charge, and the people who make the assertion know it to be false. The Republican party is said to look "with the deepest regret upon the failure of the present Administration to promote the reforms of the civil service," yet not an instance can be found in which there has been a violation of the reform laws. Every member of the Civil-Service Commission has testified to this fact repeatedly.

It looks very much as if the public career of the late Secretary Chandler had closed forever. His canvass for the Senatorship in New Hampshire has had a ludicrously weak ending. After a great deal of valiant talk about his strength in the Legislature being so great that it was likely to cause a deadlock, and after a declaration that he would not consent to abide by a caucus decision unless it showed a decisive majority for some particular candidate, he has gone into caucus and come out with a grand total of 37 votes to 108 for his chief rival, Senator Blair. Chandler is said to "feel his defeat keenly," as he expected a prolonged contest in which his power would be demonstrated. He sees now no way of regaining his prestige. His career as a journalist is also clouded. He laid his plans to get the State printing for the paper of which he has recently acquired the control, but the Legislature has voted it to a rival journal. The outlook is gloomy all around. In his recent stirring speech on naval construction there was a fine passage in which he favored taking the navy out of politics. The Legislature seems to have seized upon the idea, and taken him out.

One feature of the Senatorial contest in New Hampshire has not received the attention which it deserves. This is the activity of the Republican Federal office-holders in behalf of Blair, the successful candidate. A careful correspondent who watched the fight at Concord, reports that "Blair's best workers have been the Federal office-holders"; "the most active is Pension Agent Cheney"; "Internal Revenue Collector Putney, with his chief deputy, James E. French, are both here and active"; while Postmaster Stevens, of Manchester, and Naval Officer Hall, of the Boston Custom-house, are also mentioned as among "Blair's best workers." These facts certainly warrant some summary removals by the President of Federal office-holders in New Hampshire, on the ground that they have been "offensive partisans" and that such officials "should be taught," in the words of the famous letter of last December, "that efficiency, fitness, and devotion to public duty are the conditions of their continuance in public place." It is worth while to contrast this display at Concord with the course of the Administration at the Illinois capital during the long struggle over the Senatorship in that State. Although the Democratic Administration came into control of the Federal patronage two months before the conclusion of that contest, it scrupulously refrained from bringing any influence to bear upon the evenly divided Legislature. The leader of "the gang" which has run Democratic politics in the State declares "we could have elected a Democratic Senator if Judd had used the patronage of the Chicago Post-office," and there is no doubt that he tells the truth about it. The contrast is the more striking because Mr. Judd was appointed as successor of a man removed for "offensive partisanship," and his course shows that he at least comprehends the force of the pregnant clause in Mr. Cleveland's letter which we italicize: "such officials, *as well as their successors*, should be taught" their proper prerogatives.

The delegation of Philadelphia Mugwumps who visited the President the other day, came away much impressed with his honesty of purpose and determination to do right. They went on for the purpose of getting two or three Federal officials in Philadelphia, in whose efficiency and non-partisanship they had confidence—among them the Postmaster—retained in office. They found the President very well informed indeed about the Federal functionaries in that city, and he somewhat dumfounded them by the production of a letter of the Postmaster, written in 1881 to a newly-appointed letter-carrier, telling him not to get his uniform or file his bond until he answered the charge of "not supporting the Republican party" at the previous election, and of "working against it." The delegation were only able to plead that Huidekoper had grown in civil-service reform since then, like so many other men; but the President asked for signs of repentance in the appointment of a Democrat or two out of the 80,000 in Philadelphia to assist in the work of the Post-office. These the delegation were not able to produce. At this writing it looks dark for Huidekoper, but we venture to say that if allowed to remain he will never write another letter to a subordinate about "supporting the party," nor if removed will his successor inquire curiously into the politics of sub-carriers. The world moves slowly, but it moves.

Secretary Manning has sent a letter to the General Appraiser of the Custom-house which is of itself a remarkable commentary upon the kind of government we have had in this country for the past ten or fifteen years. He has found it necessary to set forth at much length the law governing the appraising of imports, and to instruct all officers engaged in that service to obey the law. The closing passage of his letter is especially noteworthy:

> "This department expects that all appraising officers, including the general appraisers, will coöperate in all proper measures for the suppression of undervaluations and the just and uniform appraisement of imported merchandise, to the end that the tariff laws may be strictly enforced, and fair and honorable merchants protected from loss by the dishonest practices of unscrupulous importers."

The meaning of the letter is that a Democratic Administration, whose accession was "viewed with alarm" because of its alleged free-trade tendencies, has found it necessary to come to the rescue of the protective system of the country. That the abuses which Mr. Man-

ning says must be broken up, actually exist in the Custom-house management, nobody appears to doubt. The evidence of their existence is overwhelming. There are reams of it, taken under oath, on file in the Treasury Department, and there is not a merchant of any standing in the city who could not add to it out of his own experience. Even the officials who are accused of the violations of the law do not deny it. The former Appraiser, Mr. Ketchum, when confronted with the official record of 1,709 invoices illegally recalled and altered in his department in 1884, did not attempt to explain why he had allowed the law to be violated, but coolly made a calculation that in order for him to recall all these in person he would have had to pass upon an average of five a day, the "very suggestion" of which was "unreasonable and absurd." It was his opinion that most of the "recalling" had been done by assistant appraisers and examiners for corrections of a "purely incidental character." Unfortunately for Mr. Ketchum, there is a great mass of sworn evidence that nearly all the "recalling" was done at his special order, that nearly all of it resulted in reductions, and that a great deal of it was in the interest of the same set of importers. It does not seem to have occurred to Mr. Ketchum that the law expressly forbids "recalling" of any kind.

Proofs that a new era has opened at Washington multiply. The action of the Postmaster-General regarding the subsidy question is especially significant. The last fight which the Republicans made in Congress was in defence of the subsidy system. The Democratic House stood out against it, but the Republican majority in the Senate insisted, and finally succeeded, by means of a conference committee in the last hours of the session, in getting into the Post-office Appropriation Bill a clause authorizing the Postmaster-General to pay $400,000 to American steamships carrying the mails, at the rate of 50 cents a mile. Mr. Vilas has been investigating the subject, and he finds, in the first place, that there is no need of paying any more for carrying the ocean mails than the present liberal rates, and, in the second place, that the appropriation is only a third as large as would be required for a fair and uniform system of payment to all American vessels engaged in this service. As the act of Congress is not mandatory, but merely gives him permission to expend the money, the Postmaster-General has decided, with the approval of the President, to take no action in the matter, but to remit the subject to Congress for more explicit legislation. The practical effect of this conclusion is twofold. It casts a gloom over the stockholders of the Pacific Mail Steamship Company, but it saves the taxpayers of the country the snug sum of $400,000.

Two events happened in Florida last week which throw a flood of light upon the character of the two political parties in the South. One was the death on Monday of L. G. Dennis, "the Little Giant of Alachua"; the other, the meeting on Tuesday of the convention called to frame a new State Constitution. Dennis was the typical carpet-bagger of the reconstruction era. He appeared in Florida during the rebellion as a captain in a Massachusetts regiment, settled in the State after the war was over, rose to prominence in the Republican party by reason of his shrewdness and unscrupulousness, stole the vote of the State for Hayes by planning and carrying through a fraud in the returns for his county large enough to overcome the honest Tilden majority, and after years of obscurity and obloquy, made a last bid for fame by a wager that he could drink two quarts of whiskey at a sitting, winning his bet, but losing his life by delirium tremens.

The second was the action of the Constitutional Convention—the first which has met in Florida since the Democrats came into power. If Republican predictions were good for anything, its assembling should foreshadow terrible woes to the poor negro. Unfortunately for the Blaine organs, however, the body began its work by unanimously electing as President a liberal and progressive Democrat, who made a speech which it is quite impossible to "view with alarm." He pronounced the present an auspicious time for such a convention, since "the passions engendered by the late war have cooled; the Union is firmly restored and permanently established; the people have become accustomed to their new political relations; those to whom the right of suffrage was extended by the Reconstruction Acts are learning to discharge the duties of citizenship with judgment and intelligence; the importance of educational progress was never more generally realized; the great work of internal improvement is extending to every portion of the State, and our wonderful resources are being constantly and industriously developed." He insisted that mere partisanship had no proper place in their councils, and declared that the new instrument "should be broad enough to cover our entire population" and "should clearly recognize the changes made in the national Constitution." Indeed, there is nothing in either the letter or the spirit of the speech to which any honest Northern man can take reasonable exception, and a comparison of the way in which this convention opens, with the record of "the Little Giant of Alachua," ought to unseal the eyes of even the bitterest Republican partisan.

The custom of lumping together all the old slave States as "the solid South," and the frequent reference to the civil war as a struggle between slavery and freedom, are calculated to give the rising generation a very incorrect idea regarding the parties to that great contest. Indeed, many of the generation which lived through it have either forgotten or never fully appreciated the large measure of assistance rendered to the Union cause by the more northern of the slave States. A recent compilation of the deaths which occurred in the Union army brings out this interesting feature of the struggle very clearly. Kentucky's population available for military service was not much larger than Michigan's, yet no less than 10,774 Kentucky men gave up their lives for the Union, as against 14,753 from Michigan. Tennessee, still nearer the heart of the Confederacy, sacrificed no less than 6,777 of her sons in the same cause. Missouri, with not so many white males between the ages of 18 and 45 as Massachusetts by over 25,000, had a death-roll in the Union army of 13,887, while that of Massachusetts was but 13,942. Delaware had only about half as many white males as Rhode Island in 1860, and her 882 Union dead constituted a larger proportion of her population than Rhode Island's 1,321. Such figures as these show how absurd it is to talk about the Southern States which voted for Cleveland as "rebel States." It may not be true that, if the slave States had gone solidly into the rebellion, it would have succeeded, but it is certainly plain that but for the help given the Union cause by Delaware, Maryland, West Virginia, Kentucky, Tennessee, and Missouri of the "Solid South," the struggle would have been much prolonged, and the difficulties of the Federal Government vastly increased.

The Republicans in the Tennessee Legislature have again defeated the passage of any registration bill at the extra session, as they had previously done at the regular session. A measure was proposed by the Democrats last spring which provided for a fair system of registering voters in all large places throughout the State, but the Republicans fought it bitterly from the first, by fair means and foul. Last week the bill was passed in the Senate, three Republican members refusing to break a quorum, but when it came up in the House, just before the session must expire, the Republicans interposed all sorts of dilatory tactics, and, as a last resort, enough of them to break the quorum left their seats, ran down the aisle, leaped over the iron wicket gate at the rear, and escaped before the Sergeant-at-Arms could stop them. Republican organs have long been abusing the Democrats roundly for their failure to throw safeguards around the ballot-box. It is a curious commentary upon these diatribes that a Democratic Legislature in Ohio was the first to pass a registration law for the great cities of that State, and that it was the Republicans who prevented the adoption of such a system in Tennessee.

Both parties share in the responsibility for denying Pennsylvania a new apportionment of legislators and Congressmen. The Democratic Governor vetoed the bill passed by the Republican Legislature, on the ground that it was a gerrymandering scheme, and the Republicans in the Legislature have failed to carry it over his opposition, because a dozen Republicans in the House, from personal motives, sought a new deal, which they hoped might be more favorable to their political ambition. The whole business has been wretchedly botched. The scheme presented by the Republicans was more favorable to the Democrats than the existing arrangement, and fair enough to command the votes of some Democrats against sustaining the veto. The Governor's course was not justifiable as a matter of public policy, and it was as stupid in its partisan bearing as that of Governor Hill regarding the census in this State.

Some statistics were recently presented regarding the consumption of spirituous liquors, malt liquors, and native wines in 1860 and 1884 respectively, which showed a considerably smaller production of spirits in the latter year than in 1860, despite an increase of more than 75 per cent. in population, while there had been an immense growth in the call for malt liquors and native wines. An attempt has been made to impugn the deduction from these figures that there has been a marked diminution in the prevalence of whiskey-drinking, by the claim that no fair comparison can be made between the production of spirits in 1860 and 1884. It is said that at the earlier date the cheapness of alcohol led to its extensive use in the arts and manufactures, and particularly in the composition of "burning fluid," while the imposition of the internal-revenue tax carried up the price so high as greatly to diminish its use in these branches of industry, and the discovery of petroleum supplanted the old-fashioned illuminating agent. The most conclusive way to dispose of this question is to dismiss all consideration of the 1860 figures and substitute the record for a later period, when all such disturbing elements had no more weight than now. Here are the official statistics of the production of spirits from grain during the five fiscal years beginning with July, 1870, and the five beginning with July, 1880, the total for the twelvemonth now closing being estimated by the Commissioner of Internal Revenue:

Years.	Gallons.	Years.	Gallons.
1870-71	54,576,446	1880-81	117,728,150
1871-72	68,275,745	1881-82	105,853,161
1872-73	68,236,567	1882-83	74,013,308
1873-74	68,805,374	1883-84	75,435,739
1874-75	60,930,425	1884-85	72,000,000

The manufacture of whiskey, like all other industries, is affected by the general financial condition of the country, and the flush times which preceded the panic of 1873, as well as the boom which culminated in 1882, led to great activity in this business. This was aggravated in the latter period by a great speculative movement, and the whiskey market has not yet recovered from the tremendous overproduction of 1880-1882. The figures for those two years carry the average for the second period a trifle above 89,000,000 gallons annually, although the probabilities are that the actual consumption is not over 80,000,000 gallons. With these two years included, the average yearly product from 1880 to 1885 is 38 per cent. greater than from 1870 to 1875. The actual production for 1885 was only 25 per cent. larger than in 1870, but a fair estimate would make the real demand fifteen years ago about 60,000,000 gallons, and now not over 80,000,000—an increase of 33 per cent. Within these fifteen years the population of the country has increased fully 45 per cent., or considerably faster than the production of whiskey. On any possible showing, therefore, it appears clear that the American people do not drink so much whiskey per capita now as they used to do.

Medford rum is, we believe, still made in Massachusetts, but its glory is a thing of the past in its ancient stronghold. The substitution of the milder malt beverages for the old-fashioned stronger liquors is making steady progress in the old home of the Puritans, as in other parts of the country where the influence of German immigration was more immediately felt. The Police Commissioners of Boston report that during the past year only 1,318 licenses were granted in that city for the sale of distilled liquors to be drunk on the premises, as against 1,535 in the previous year, while the number of places licensed to sell only malt liquors and light wines rose in the same period from 56 to 236. The whole number of saloons thus remains nearly as large as before, but the number where only the milder sort of drinks is sold has increased fourfold. Such a change in the character of the liquor drunk ought, theoretically, to be reflected in a decrease in the amount of intemperance in the community. The facts sustain the theory, as the arrests for drunkenness during the past year, despite a perceptible increase in the population, were less by over 10 per cent. than in the previous year. There is food in these figures for much reflection on the part of temperance advocates.

The June report of the Department of Agriculture is on the whole very encouraging. It gives an increase in the cotton area of 5 to 6 per cent., the total being about 18,000,000 acres. The promise of the crop is better than in the three preceding years in June, with unusual uniformity in the various States. The accounts of the winter wheat, on the other hand, are very dismal. The report says that its condition is lower than ever before in June, and the average yield will not be over ten bushels to the acre. Spring wheat looks better, with an area about the same as last year, and the indications as to the yield are 360,000,000 bushels, or 23,000,000 bushels short of 1881. There is no perceptible change in the rye and barley prospect of last year, but the acreage of oats has increased.

The figures of railroad construction in this country have for years constituted a sort of financial barometer. In the flush times which preceded the panic of a dozen years ago there was a boom in this industry, which carried the number of miles of new track laid in the first five months of 1872 up to 1,305. From this height there was a rapid and steady fall, until the total for the corresponding period of 1875 was only 250 miles. Then a rise set in, at first gradual and then by leaps and bounds, which made the construction for the first five months of 1882 no less than 2,991 miles. Since then there has been a falling off each year of nearly or quite one-half from the record for the preceding year, until the *Railroad Gazette* reports the number of miles of new road constructed between January 1 and May 31, 1885, as only 451. The corresponding figures for 1884 were 885 miles, and there are no signs as yet of any recovery in the business. The showing, however, is not altogether discouraging. Nothing is plainer than that the activity of 1880-1882 in this direction was to a large extent feverish and unhealthy. The business of railroad building was overdone, and many lines were constructed in advance of any adequate demand or support. The effect was bad on the general financial situation, and the country now has much more reason to desire a return of moderate activity in this branch of industry than any such spurts as those of three to five years ago.

Some suggestive statistics regarding traffic movements by the trunk lines are presented in the current number of the *Railroad Gazette*. Allowing a reasonable estimate for the Lackawanna and the West Shore roads, which have made no detailed reports, the movement of all freight, except live-stock and dressed beef, from the Western termini of the Eastern trunk lines destined for New York, Boston, Philadelphia, and Baltimore, reached a total of 7,484,286 tons in 1880, rose to 8,258,834 in 1881, and then sank suddenly to 5,487,677 in 1882, from which it fell still lower in the next two years, the aggregate for 1884 being only 4,680,580 tons. Seven-tenths of this falling-off was in the two great staples of flour and provisions, and the decrease was, of course, chiefly due to the diminished demand for export. This is demonstrated by a comparison of the shipments from the same Western points to Eastern destinations outside the seaboard cities, and therefore exclusively for home consumption, which have increased from 3,060,062 tons in 1880 to 4,225,808 in 1884. The West-bound movement of freight is a better index to the business condition of the country, since the prosperity of the community is measured by its ability to purchase goods, and more than five-sixths of the imports are made at these four seaboard cities. There was a steady and enormous growth of this traffic from 1878 to 1882, the yearly total rising in this period from 1,288,225 to 2,405,460 tons, but it has fallen off largely in the past two years, reaching only 1,922,192 tons in 1884, although two more roads were competing for the business in the latter year. The showing, as a whole, is not one which stockholders in any of the trunk lines can contemplate with much satisfaction.

The appearances are all in favor of the supposition that "The Foreign Resident" who has written the little book on 'Society in London,' is no other than Mr. Edmund Yates, the editor of the London *World*. The style is distinctly that of 'The Memoirs of a Man of the World,' by the same author. The account of Mr. Labouchere is simply a specimen of the banter so frequently exchanged between "Edmund" and "Henry" in their respective journals. The portrait of Lord Coleridge is evidently the work of a man who has suffered at his hands, and is determined on vengeance of some kind. Finally, to Mr. Yates himself are assigned the qualities on which, if one may judge from his autobiography, he most plumes himself—vivacity as a talker, talent as a raconteur, a tenacious memory, a quick eye, the possession of much social reminiscence, and, to crown all, lots of "vitality and vigor." To have said less or more than this would have excited suspicion. The treatment of Lord Coleridge is in somewhat striking contrast to that accorded to most of the other characters. It is the fashion in this species of literature now to be kindly on the whole, and, when there is any damning to be done, to do it with faint praise or very delicate irony.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, June 10, to TUESDAY, June 16, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND has furnished another illustration of his determination not to make any appointments of members of his own family. The most prominent candidate for superintendent of one of the new public buildings in Ohio—Mr. Bacon, of Toledo, an architect of high repute—is a brother-in-law of the President, and was strongly recommended. But the President says it will be better to bestow the appointment on some one else.

With the approval of the President, and after consultation with the Cabinet, Postmaster-General Vilas has decided not to advertise for bids to enter into contracts for the transportation of the foreign mails upon a mileage basis, under the permissive authority conferred by the act of Congress of March 3, 1885. He thinks that the compensation is already fair and just, and a carrier by water, as by land, is bound to receive and carry for a fair compensation. Then, too, foreign vessels which compete with American steamship lines have been willing, and are still willing, to carry for the same rates. At the rate of fifty cents per mile it would require $1,151,615 to pay the American vessels employed during the year 1884, and it becomes at once apparent that the $400,000 appropriated cannot be so extended as to afford all these vessels a subsidy at the full rate.

Secretary Manning has revoked all Treasury orders about the disinfection of rags, leaving all vessels entering American ports with rags on board subject to the local health regulations. The authorities believed that the work of disinfection could be safely intrusted to local health authorities, and that it would be as thorough as it could be under the Government. Surgeon-General Hamilton, of the Marine Hospital service, abandoned his opposition to the repeal of the regulations on the ground that the health ordinances of Boston, New York, Philadelphia, Baltimore, and other ports have become much more stringent.

In a letter to the Appraiser at Philadelphia Secretary Manning writes: "There appears to be no good reason for the failure of the appraising officers either in Philadelphia or New York to advance invoices of consigned goods which are unquestionably undervalued to equal at least the cost of production. The fact that a reduction of such advance might be made on appraisement, or that at some other port the same class of goods may be passed at a lower value, is not a valid reason to justify your failure to perform a plain official duty. It is not for you to assume that the importer will appeal from your action, or that, if he appeals, your action may be reversed on reappraisement. The law (section 2,902 Revised Statutes) makes it your duty to ascertain, estimate, and appraise the true and actual market value and wholesale price of the merchandise at the time of exportation and in the principal markets of the country whence the same has been imported into the United States; and when it shall appear that such true and actual market value cannot be ascertained to your satisfaction, you are to ascertain the cost of production pursuant to the ninth section of the act of 1883 referred to, and in no case to appraise the goods at less than the cost so ascertained. These statutes are plain, and the appraising officers must comply with and enforce them."

The despatch boat *Dolphin* made her trial trip at sea on Thursday under the same conditions as if she were actually in commission. Her coal bunkers were full, and the weight of her future armament, of her stores, and of her crew was represented by an equivalent weight of pig iron. She made the run from Scotland Lightship to Barnegat and return in six hours, her average speed being at least 13.9 knots per hour, which is in excess of the Government requirement. On Friday Secretary Whitney telegraphed to the President of the Examining Board: "Yesterday's trial was, as you know, wholly valueless. It occurred without my orders or knowledge. I find that the orders were given here in my absence under a mistake. To test her strength when subjected to the strain of a heavy sea was the object of the trial. I do not doubt her ability to run thirteen knots an hour in smooth water. I want to know whether she is structurally weak or not." He added that more tests should be required if necessary for the Board to make a proper determination of the vessel's qualities.

The report of the Court of Inquiry in the case of Paymaster-General J. A. Smith, Chief of the Bureau of Provisions and Clothing, Navy Department, made public on Tuesday, finds that he has been in many ways unfaithful to the trust imposed upon him by his office. The Secretary of the Navy has decided to order a court-martial for the trial of the case.

Commissioner Mann summoned to his office in Washington on Monday the entire force of the Statistical Bureau of the Agricultural Department, numbering twenty-one persons, and announced that there would remain no money to pay their salaries after the 20th inst. They were all furloughed without pay from the 20th inst. until the 1st of July.

The bill to apportion the State of Pennsylvania into Congressional districts was passed in the Senate on Wednesday night over the Governor's veto by a two-thirds vote. The Republican majority is three less than two-thirds. Senator Agnew, Republican, announced that he could not vote with his party, as the bill was unfair politically, and illegal in other respects; but Senators Hart, Ross, of Green, Sutton, and Vandergrift, all Democrats, voted with the Republicans, making exactly the number necessary to pass the bill. The bill was, however, defeated in the House on Thursday by the votes of several Republicans.

The Republican caucus of the New Hampshire legislators on Thursday night renominated Henry W. Blair for United States Senator on the first ballot. He received 108 votes. Ex-Secretary Chandler got 37.

The Ohio Republican Convention on Thursday nominated Judge Joseph B. Foraker for Governor on the first ballot, with General Robert P. Kennedy for Lieutenant-Governor, Judge George W. McIlvane for the Supreme Court, John C. Brown for Treasurer, J. A. Kohler for Attorney-General, and Wells S. Jones for member of the Board of Public Works. Among the planks in the platform are the following: "The Democratic party, which owes its national victory last fall to the wilful suppression of the ballot, cannot be looked to for the enforcement of these constitutional guarantees, and the hope of the friends of equal laws and equal suffrage is in the Republican party, which pledges itself to wage the contest to a successful end. We are in favor of a protective tariff which will encourage American development and furnish remunerative employment to American labor, and we are opposed to the British policy advocated by the Democratic party under the guise of a tariff for revenue only. We demand restoration of the wool duty of 1867, or its full equivalent, and we denounce the Democratic Congress for failing to make good the pledges they made in this behalf. The elevation to important and honorable offices of the Government of unrepentant rebels, whose political disabilities have not been removed, is a flagrant violation of the Constitution and an insult to the loyal people of the whole country; and we denounce the Administration of President Cleveland for its general discrimination, in the appointments so far made, against Union soldiers and Union men in behalf of those who fought against the Union."

It is asserted that Blaine is to take the stump for Foraker in Ohio.

Governor Hill, of this State, on Thursday, vetoed the Broadway Arcade Railroad Bill. He has also vetoed Dr. Gunn's Medical College Bill, the Brooklyn Bridge Bill, and the bill to provide for the computation and preparation of certain criminal statistics by the Prison Association of New York.

Governor Hill on Saturday filed a document vetoing a great many items of the Supply Bill, among them: "For the deficiency in the appropriation for the expenses of legislative committees, fees of counsel and stenographer engaged therein, and for other contingent expenses of the Legislature, $20,000; for the State Board of Health, for deficiency in their appropriation for sanitary inspectors, compensation and travelling expenses, $15,000; and for Commissioners of Emigration, for rebuilding landing wharf at Castle Garden in the City of New York, $10,000. Not approved."

General Grant was on Tuesday taken from this city to a cottage on Mount McGregor, New York. He made the journey safely, but was much fatigued.

While the epidemic at Plymouth, Penn., appears to be rapidly abating, there is every symptom that it is about to break out in other and neighboring towns. Sugar Notch, a mining borough of about 2,000 people, is suffering from typhoid fever that promises to assume serious proportions.

The Harvard base-ball nine have won the inter-collegiate base-ball championship over Princeton, Yale, Amherst, Brown, and Dartmouth.

The body of Alexander H. Stephens was removed on Wednesday from Atlanta to its final resting place at his old home, Liberty Hall, Crawfordsville, Ga.

Giovanni Francesco Secchi de Casali, editor and proprietor of *L'Eco d'Italia*, of this city, died on Wednesday morning, at his home in Elizabeth, N. J. Signor de Casali was born in Piacenza of a good family. In 1836, when scarcely seventeen years old, he conspired with other students against the Government, and was compelled to go abroad. He established his newspaper here in 1848, and made it very influential among Italians. The King of Italy has several times honored him with decorations.

James H. Rutter, President of the New York Central and Hudson River Railroad, died on Friday, at Irvington. He was 49 years of age. He succeeded Mr. Vanderbilt as President in May, 1883.

FOREIGN.

Mr. Parnell is elated at the overthrow of the Gladstone Ministry. He says: "We have taught a lesson to all future Cabinets. We have got rid of the present one, with its successive failures of Forster, Trevelyan, and Spencer; we have saved the only remaining industry of Ireland—whiskey—from a permanent burden; and we have put an end to coercion forever." He adds that his party will give the Tories a fair trial.

The London *Standard* authoritatively announced on Wednesday that the Conservatives, if requested by the Queen, would undertake the formation of a new Ministry.

A private deputation of Conservative members of Parliament waited upon Sir Stafford Northcote and the Marquis of Salisbury on Wednesday, and urged them to refuse office. The Marquis of Salisbury stated that if the Queen called them they must form a Government. He would support Sir Stafford Northcote as Premier, and he expected that the Queen's commands would place Sir Stafford in that position.

The London *Standard* on Thursday said: "There exists a suspicion which daily deepens, that the Gladstone Ministry courted their recent defeat for the purpose of concealing behind its excitement their own dissensions. The statements made since the defeat by some of the Liberal members who absented themselves from the vote on the fatal division, show that

the Government might have saved themselves on that vote if they had cared seriously to do so."

Lord Salisbury, at an informal conference with a number of Conservative members of the House of Commons on Thursday, said he would refuse office unless assured by the Liberal leaders that the factions of the Opposition would not hamper the Administration. If the Liberal majority were willing to give fair play to a Conservative Ministry, office might be accepted. Without some such understanding between the leaders of both sides it would be impossible for the Conservatives to undertake the Government. The possibility of such an understanding is being discussed in the political clubs. Mr. Gladstone, Lord Hartington, and other moderates, it is believed, would accede, while Mr. Chamberlain and Sir Charles Dilke would refuse. Lord Salisbury arrived at Balmoral on Friday. He received an enthusiastic reception along the route.

In the House of Lords on Friday afternoon Lord Granville announced that Mr. Gladstone had tendered to the Queen the resignation of himself and his entire Cabinet; that the Queen had accepted the resignations and had summoned to her presence the Marquis of Salisbury, who was now at Balmoral in conference with Her Majesty. Therefore, Lord Granville said he hoped the House would abandon all ordinary business.

Mr. Gladstone, in announcing the acceptance of his resignation by the Queen in the House of Commons on Friday, said the present Government would go on with the pending legislation concerning the bill for the redistribution of seats only with the full consent of the House. Sir Stafford Northcote, for the Opposition, said that his party desired to proceed with the bill as rapidly as possible. The House adjourned until Monday, when the amendments to the bill made by the Lords were discussed.

The House of Commons on Monday completed the remaining stages of the bill granting an annuity to Princess Beatrice on the occasion of her marriage, and accepted all but two of the amendments made by the Lords to the Redistribution of Seats Bill. On motion of Mr. Gladstone the House adjourned until Friday. The House of Lords also adjourned until Friday, when it is expected the Marquis of Salisbury will announce his programme and probably his Ministry.

An important conference of leading Conservatives was held in London on Tuesday. It was reported that Lord Salisbury and Lord Randolph Churchill reconciled their differences, and that a Cabinet had been arranged.

It was semi-officially announced in London on Tuesday evening that Sir Stafford Northcote will be created a peer and be given a minor place in the Cabinet; that Lord Salisbury will be Premier and Secretary of State for Foreign Affairs, and that Sir Michael E. Hicks-Beach will be Chancellor of the Exchequer and leader in the House of Commons.

The Queen has offered Mr. Gladstone an Earldom in recognition of his services. Mr. Gladstone has asked that he be allowed to forego the honor.

A committee of the House of Lords on Wednesday began the consideration of the claim of Major Maitland to the Lauderdale peerage. Major Maitland, in his petition to the Lords, says that he is the heir of the fourth son of the sixth Earl of Lauderdale, who, it is alleged, married Mary MacAdam in New York in 1772, two days before his death. Mary MacAdam had borne three sons to this fourth son of the sixth Earl, and it is contended by the petitioner (Major Maitland) that this marriage legitimatized the offspring. Sir James Maitland, a descendant of the fifth son of the sixth Earl of Lauderdale, contests the claim of Major Maitland to the peerage.

At Friday's hearing of the case, Mr. Stephen P. Nash testified that, between the years 1691 and 1830, the laws governing marriage in the State of New York required only a contract of marriage made in the presence of witnesses, without ceremony of any kind. In 1830 the New York marriage laws, he said, were revised. Minister Phelps also testified on the same point. His testimony was similar to that of Mr. Nash. The Lord High Chancellor moved that in consideration of Mr. Phelps's position he be accommodated with a seat in the body of the house. This was a most unusual proceeding, and the action is regarded as a special and extraordinary mark of honor, and as an adequate recognition of the American Minister's courtesy in consenting to appear as witness before the Lords. When Mr. Phelps arose to leave the chamber their Lordships all rose and bowed deferentially to him.

At the furtner hearing on Saturday, United States Senator Edmunds and Mr. Fowler expressed opinions contrary to those of Minister Phelps and Mr. Stephen P. Nash, as given on Friday, respecting the New York marriage laws of 1772. Messrs. Edmunds and Fowler believed that the publication of banns or the obtaining of a license was necessary, but they were unable to cite any judicial decisions showing that a marriage performed without such ceremonials had ever been annulled.

An account of the early life of the Rev. John Harvard, founder of Harvard College, is promised by Mr. Rendle, of Southwark, England. He has found a record of the date of Harvard's birth, parentage, and family residence in the parish of St. Saviour, and has traced the breaking up of the family in the great plague of 1625.

The Rev. Edwin Paxton Hood, pastor of the Independent Chapel, Falcon Square, London, and author of many religious, historical, and other works, is dead. He was sixty-five years old. Among his books are lives of Wordsworth and Swedenborg, 'The Peerage of Poverty,' and 'The Uses of Biography.'

A fire broke out on Friday afternoon in the India Museum "annex" to the great building in which is being held the International Exhibition of Inventions at London. The whole exhibition was threatened with destruction, but the vigorous efforts of the firemen confined the flames to the India Museum building, which was damaged beyond repair.

A sensation has been caused in London by the publication of Lord Wolseley's despatches denouncing the evacuation of the Sudan. He warns the Government that on the withdrawal from Dongola the whole province will be given up to anarchy and will revert from civilization to barbarism. Withdrawal, he says, will not avert the struggle. The Mahdi in a few years will attack Egypt. The best policy, in both a military and a financial point of view, would be to attack the Mahdi at Khartum.

The Indian Government proposes a newspaper copyright bill, similar to the one recently advocated in the United States.

Earthquake shocks continue in the Vale of Cashmere. The towns of Baramula and Sopur have been utterly ruined and 400 persons killed.

Three hundred and twenty of the 353 Deputies to the Austro-Hungarian Reichsrath have already been returned from the present elections. Of this 320 the Government party have elected 167, the German-Liberal party 132, and the 21 others have been elected by the combined political elements of different kinds.

The following are provisions of the treaty of peace with France: French soldiers shall not enter Chinese territory nor shall Chinese soldiers enter French territory. The relations between France and Anam must not be of such a character as to embarrass China. A boundary commission shall be appointed to settle questions relating to the frontier by December next. The French shall construct a railway in Tonquin. If the Chinese wish to construct a railway they must construct a French railway. The treaty shall endure for ten years. Existing negotiations shall remain unchanged. The French shall evacuate Chinese territory directly.

The death of Admiral Courbet, the commandant of the French fleet in Chinese waters, was announced on Monday. The Admiral died on board his ship, the *Bayard*, from prostration, brought on by overwork and mental anxiety. His recent operations around Formosa and on the Min River brought him into prominence. The most notable operation was the bombardment of Foo Choo on August 23, 1884.

General François Ernest Henri de Chabaud-Latour, member of the French Senate, is dead, in the eighty-first year of his age. He was one of the chief commanders during the siege of Paris, and was Minister of the Interior in 1874. Three years later he was elected a Senator. He was a prominent member of the Central Council of Reformed Churches.

Charles Alphonse Léon Renier, the eminent French archæologist, died in Paris on Friday in the seventy-seventh year of his age.

By the fall of a great stone staircase in a court-house at Thiers, France, on Wednesday, 24 people were killed and 163 injured. The building was crowded with people who had been attending an exciting murder trial. The panic which ensued was terrible. Many of the wounded will die.

Prince Frederick Charles, of Germany, nephew of the Emperor William, and known as the "Red Prince," died on Monday of apoplexy at the age of fifty-seven. Early in life he showed excellent military promise. In 1866, being placed at the head of the first army put in the field against Austria, he entered Bohemia through Saxony. The movements of his forces were remarkably swift and energetic, disconcerting the Austrian General Benedek. Prince Frederick Charles drove the Austrians to Sadowa, and won the great victory of Königgrätz with the aid of the Crown Prince, who arrived with the Second Army at the crisis of the battle. During the Franco-German war of 1870-71 he had still greater opportunities to display his generalship, and employed them in a manner which made him one of the most conspicuous and brilliant figures in the contest. He was placed in command of the Second German Army Corps of 260,000 men. His greatest feat was the siege and capture of Metz, which resulted in the capitulation of Marshal Bazaine with 150,000 men. For this he was created a Field Marshal. He also defeated the Army of the Loire, recaptured Orleans, took Le Mans, and compelled General Chanzy to withdraw his forces to the northward.

The final returns of the recent elections for Representatives to the Austrian Reichsrath have all been received. The result is that 191 Ministerialists and 132 German Liberals have been returned. The German Liberals, according to these figures, lose 15 seats. The Ruthenians, Italians, and Centrals secure 22 seats, and the Democrats 3 seats.

The public announcement is made that the Pope has given his sanction to the decisions of the Irish bishops upon the questions submitted to them at their recent meeting in Rome.

Cholera is raging in the provinces of Valencia, Castellon de la Plana, and Murcia, and in the city of Madrid, Spain. Thirty thousand people have fled from Murcia.

A despatch from Fort Pitt, dated June 10, said: "General Middleton, who has been pursuing Big Bear, has found the country impassable for horses, and is on his return to this place. Supplies for the North have been countermanded. The probabilities are that the command will leave for home at once." Intelligence reached Winnipeg on Friday that Big Bear was coming back to meet Middleton's force, the Indian chief having collected all his forces for a desperate break for victory.

The State of Panama has been declared under martial law.

THE MINISTERIAL CRISIS IN ENGLAND.

THE position of the Tories in England begins to assume a comic air, in view of their unwillingness to take office unless Mr. Gladstone gives them a pledge of general support. If Mr. Gladstone made any such promise, however, it would be a promise to do for the Tories what he was unable to do for himself. The reason he was defeated the other day was, not that he had too many Tories in front of him, but that he had too few Liberals behind him. In fact, he fell because his followers would not follow him for his sake and that of his party. The notion that they would follow him now, on such matters as the Irish Coercion Bill, for the sake of the Tories and in order to enable Lord Salisbury to stay in office creditably till the election, is little short of ludicrous.

So also are the complaints of the victors that the vanquished allowed themselves to be vanquished so easily. Some of the bitterest opponents of Mr. Gladstone are now denouncing him savagely because the Liberal "whips" were not more urgent in bringing up their forces. The whip is a member who, like Lord Richard Grosvenor at present, makes it his business to keep in constant communication with the rank and file of the party in the House, and to ascertain, for the information of his chief, what they are thinking and saying, who among them are "disgruntled" and why, and to give them timely notice of a division which is thought by the leaders to be important. He is, in fact, a sort of aide-de-camp to the Prime Minister, and on him largely depends the maintenance of cordial and loyal relations between the Cabinet and their supporters. Not only is he called "a whip," however, but the notices he sends out requesting members to be in their places on a certain day, or during a certain debate, are also called "whips," and it depends on their language whether they are "urgent" or ordinary. In the present case Lord Richard Grosvenor declares that he was very particular in seeing that every Liberal member got his whip either by mail or messenger for the budget debate, which is probably correct. But the Conservatives now say that he ought to have made the whip more urgent in its tone, and to his answer that it *was* urgent, they answer that it was not more urgent than other whips issued for very ordinary occasions. All this is of course rather funny, coming from men who, when they won in the division, jumped on their seats and waved their hats and cheered themselves hoarse. They now declare, in short, that their designs toward Mr. Gladstone were very much what the Scotch minister had in mind with regard to a certain well-known sinner when he prayed, "Lord shak' him o'er the mouth o' hell, but dinna drop him in!" They wanted, in short, to frighten and worry him, and discredit him, but not to turn him out.

One of the oddest incidents in the episode is, that ostensibly neutral newspapers like the *Times* see nothing nearly so discreditable in the Tory conduct of pretending to wish to take possession of the Government without being ready to do so, as in Gladstone's pretending to defend his position when he was really ready to yield it. The fact is, that there rested on the Tories a far stronger obligation to keep Gladstone's Cabinet going until the election than can possibly rest on Gladstone to start a Tory Ministry now. Every interest, home and foreign, required, as is now seen, that the hands of the Liberal Minister should be upheld until the country could be appealed to. A Salisbury Ministry, upheld by Gladstone in doing things on which Gladstone's own Cabinet was divided, would be a political monster, which would be killed before the general election by mere laughter.

At the Cobden Club dinner on Saturday, both Chamberlain and Dilke came out boldly for local self-government for Ireland, and were loudly applauded. This means clearly that coercion is dead, and the Irish have substantially won their fight. The Radicals are pledged to home rule in some sort, or, in other words, to the assimilation of Irish government to English and Scotch government, and the Radicals are the men of the future. They will, when the first opportunity offers, bring this protracted experiment of sham constitutional government in Ireland to an end. At the same time will come to an end the experiment of governing the island by "English gentlemen." It is high time it was governed by such materials as the Irish themselves supply. However poor these may be, the results cannot be worse than those obtained during the last century and a half by the English system.

The part the Parnellites have played in bringing about the defeat of the Ministry has naturally greatly elated them. They have not simply shown their strength in the existing condition of English parties, but they have secured what was their main object, the defeat of the attempt to renew the Coercion Bill, and have driven from office its principal advocate, Lord Spencer. Two such triumphs may well rejoice a mere handful of men, as a sign of what they may accomplish when their force is trebled or quadrupled, as it undoubtedly will be, in the next Parliament. Parnell, in fact, like all other men whose business is not to speculate or to preach, but to work, must be judged by what he accomplishes. His methods, when he began his operations seven years ago, were, we confess, as odious to us as anybody, but we cannot get over the fact that he has accomplished more in these seven years than all preceding Irish agitators had done in seventy-five. He has taken the Irish question out of the category of bores to be dismissed annually after a dreary debate, to which no one listened, and has made it one of the practical problems of British politics, which Englishmen ponder, and which any man who takes office in England now is compelled to take up on pain of political ruin. It is to Parnell, also, that Ireland owes the Land Act, which would before his day have been laughed at in any assemblage of Englishmen as a chimera, and owes the near approach of a system of local government which will, for the first time in their history, give Irishmen some experience of practical politics.

His system has been very simple. It is based on the theory that if you seek to serve a country which labors under the misfortune of being governed by the public opinion of another very different, utterly unsympathetic, unimaginative, and busy country, you must adopt any means that will fix its attention on your grievances. If you have tried in vain the methods of ordinary agitation, public meetings, and newspaper articles, and then Parliamentary debates, you must resort to such others as are within your reach. Accordingly, he went to work deliberately to obstruct all English government, in order to get Irish questions attended to, and he was not at all nice in his modes of obstruction. To those who found fault with him because he would not trust such a good old man as Mr. Gladstone, he said frankly that Gladstone, no matter how good his intentions might be, could only do for Ireland what English opinion would let him do, and if the ill treatment of Gladstone was necessary to force English opinion up to the Irish mark, ill treated Gladstone must be. Individual feelings cannot be considered by a man who has a nation's cause in his hands, and if Parnell did not believe he had a nation's cause in his hands, he could not for so many years have supported the contest from which he is now issuing victorious. He is a gentleman in the conventional sense of the term, by birth and position. As the ordinary, placable, well-mannered Irish member of Parliament, he could have enjoyed everything that is enjoyable in English society. He has chosen, instead of this, the lot of an outcast in London, and contented himself with living and working with men some of whom he must on many accounts heartily despise.

The expectation of the Liberal politicians at present is, apparently, that Gladstone, if he does not break down physically, will be carried back to power by a popular uprising greater even than that of 1880. For his defeat has been largely due to the lukewarmness toward him which seems invariably to overtake the Whiggish Liberals after a few years of residence in London. Society in London, both that in which Whiggish Liberals from the country live, and that in which they would like to live, is intensely anti-Gladstone. In fact, it hates him with a cordial hatred, and it infects everybody who enters it, if not with dislike of him, with doubts about his strength with the country. The consequence is, that he has every few years to appeal to the provinces for a fresh and ringing affirmation that he is not only a great minister, but the greatest England has had since the final triumph of Parliamentary government—greater than Walpole, greater than either of the Pitts, greater than Peel, greater than Disraeli—not simply a Parliamentary orator of the first order, but a legislator such as no modern country can boast. He might, indeed, by simply pointing his critics to the statute-book, justify the retort of Guizot to some of his Parliamentary persecutors, "You may rise as much as you please, or as much as you can—you will never reach the level of my contempt."

BOSTON AND MASSACHUSETTS.

THE passage by the Massachusetts Legislature of what is called the Metropolitan Police Bill for Boston is an event which should command wide attention. The measure takes the power of appointing Police Commissioners from the municipal authorities, and vests it in the Governor of the State. In other words, it makes the Commonwealth for the first time the practical ruler of the metropo-

lis in many of the most important prerogatives of local government, instead of leaving the people to govern themselves.

Two motives combined to carry the bill through the Legislature. One was purely partisan. The Democrats have secured political control of Boston, and seem likely to retain it. The Republicans have the Governorship and the Legislature, and are pretty certain to keep them. The temptation for narrow partisans, who wanted to see the Police Board a Republican body, to make it so by an arbitrary use of their power in the State Government, was thus strong. The party aspect of the question becomes perfectly clear when one reflects that, if the Democrats had elected their excellent candidate for Governor last fall, a Republican Legislature would never have thought of such a thing as giving Mr. Endicott the appointment of Boston's Police Commissioners.

But the desire for partisan advantage alone would not have sufficed to carry through so revolutionary a change. The political motive was reinforced by an honest demand for the passage of the bill from many good citizens of Boston without reference to party lines. These people declared that the police force of the city was utterly demoralized; that the laws, especially those regarding liquor-selling and gambling, were not enforced; that there was no hope of securing reform at the hands of the voters; and that moral ruin was sure to overtake the city unless the State came to the rescue by assuming control of the police administration. There is no doubt that these complaints were well founded. The tone of municipal administration in Boston has been deteriorating for a good while, and the bad effects are naturally most evident in the Police Department. There is no doubt, either, that the Republican Governor is likely to give the city a better Board of Commissioners than the present one. The immediate consequences of the change, so far as they appear on the surface, are quite likely to be good, and its advocates will probably be able to show three months hence that the laws are better enforced than they have been for some time past.

Nevertheless, in the large view this change is a step backward. It is not a new thing for Legislatures to tinker with city charters, or for partisans to take advantage of a legislative majority to seize control of city offices. Nor is it a novelty to have the claim set up that a Legislature can do better for the people of a city than the people can do for themselves. New York has had a surfeit of such experiences at Albany, and large cities in other States have had doses of the same legislative remedy. What makes the Massachusetts business at once noteworthy and discouraging, is the fact that what are known as the better classes not only accept but even demand the interference of the State. The main local opposition to the measure has come from the Democratic Machine in the city, while the claim of its advocates that the wealth, intelligence, and morality of Boston are for the most part on their side, appears to be well founded. In short, the men who ought, by virtue of their superior advantages, to accomplish the most for the good government of the city, throw off the burden upon the broad back of the State, and fold their arms with a self-satisfied air, as though they had thus vindicated their good citizenship.

The pretence that there is anything unique about the condition of Boston which demands the introduction of so un-American and unpatriotic a system, is absurd. It is complained that the foreign element is so large that demagogues can easily rally a majority at the polls in support of bad candidates and vicious policies. But the proportion of foreign-born to the whole number of inhabitants is no larger in Boston than in Brooklyn, and is much smaller than in either New York or Chicago. Moreover, the assumption that bad government is in exact ratio to the proportion of foreign-born voters was disproved long ago by the experience of Philadelphia, which, with a larger percentage of native inhabitants than any other large city, allowed its government to fall into the hands of the worst municipal ring, except Tweed's, ever known. The statistics of illiteracy equally disprove the theory that Boston is suffering from any unprecedented infusion of ignorance in her population. And certainly no Bostonian will admit that his favorite city is less prepared to cope with ignorance, vice, and crime than New York or Chicago by reason of her having poorer schools, fewer churches, and less efficient reformatory agencies.

The main trouble with Boston is the decay of public spirit. How serious, and even alarming, this has become only appears when one remembers that Massachusetts was the birthplace of self-government on this continent, and Boston the stronghold of the new movement. The fathers of the New England commonwealth made the control of its local affairs by each community the corner-stone of their structure. They little dreamed that the day would ever come when the people of its metropolis would confess their inability longer to govern themselves, and throw themselves upon the mercy of the State. If that spirit were widespread in the country, the outlook for the future would be most disquieting. Of our whole population in 1880 more than 22 per cent. dwelt in cities, and the proportion now approaches closely to a full quarter. If our great cities cannot govern themselves, the experiment of popular government for the nation is a predestined failure. The stream cannot rise higher than its source.

But our cities can govern themselves, if they will only try. New York, Brooklyn, Philadelphia, Chicago, have proved this. Boston has never sunk so low as any of them, and each of them had greater obstacles to overcome than now confront Boston. Yet the movements set afoot by the Committee of Seventy in New York in 1871, the Committee of One Hundred in Philadelphia a few years later, and the Citizens' Committee and the Young Republican Club in Brooklyn still more recently, showed that the hearts of these great cities were still sound; while the result of the Chicago election a few weeks ago proved that even in that city, where the conditions of the problem are most difficult, a wonderfully shrewd demagogue might have been overthrown if honest citizens had only struck hands earlier and worked a little harder. The men who want good government everywhere outnumber those who want bad, but they can never secure it except by hard work, nor maintain it except by ceaseless vigilance.

THE "AMERICAN" ISSUE IN POLITICS.

THERE was a vast amount of talk in the last campaign about the intense "Americanism" of Mr. Blaine and the various issues which he represented. Many efforts were made to get an exact definition of the term, but they were never successful. It was this very vagueness which gave the word its greatest value. Whenever a Blaine disciple found himself worsted in an argument about the record of his candidate, he could always take refuge in some such formula as this: "Ah, he may have been indiscreet at times, but what I like about him is that he is such a thorough American." So eminent an advocate as Senator Hawley, if our memory serves us aright, rolled out some very eloquent periods about this American attribute of his candidate, but, like all the others who extolled it, he gave no bill of particulars. As the campaign neared its close, this issue became really the only one which was in sight. The whole party was begging for a further lease of power as the champion of American interests, and the country was warned that to put the Democrats in power would be to surrender the Government to the control of men who were un-American, and who sympathized with everything foreign, especially with things British.

Since the accession of President Cleveland there has been a good deal of the same kind of talk. The appointment of Mr. Phelps to the English mission was objected to because of his "un-Americanism," though he was born in Vermont, of the best Revolutionary stock, and had lived there nearly all his life. Other efforts have been made to keep the American issue alive, but they have not been successful. We notice that the old formula about such a tariff as will encourage American industries and American labor appears in the Ohio Republican platform. This is the use of the word in its original sense, and it was a natural growth for Mr. Blaine to pass from the simple champion of American protection to the champion and exponent of Americanism itself. When he and his followers had reached that point the rest of the journey was easy. They had only to parody the old Roundhead declaration, "Resolved, First, that the earth belongs to the saints. Resolved, Second, that we are the saints," and make a declaration like this: "Resolved, First, that America belongs to the Americans. Resolved, Second, that we are the Americans." This is about what they did, but they did not explain what Americanism was.

Recent developments have thrown a great light upon this mystery. Secretary Whitney has begun to show us what Robeson, Chandler, Roach, and Butler understood by Americanism in naval affairs. It meant plenty of "repairs," enormous forces of idle workingmen in the navy-yards, and nice fat contracts for wood-preserving processes which were not worth a cent. Secretary Manning, on a much larger scale, is showing us what it meant in the Custom-houses of the land. It meant in 1884 a probable loss to the United States Treasury of $65,000,000, a sum large enough to nourish handsomely a very formidable force of devoted "Americans." And it meant,

besides this direct loss, a vast injury to the interests of American business men. Upon this point the testimony of Mr. Reed, of the firm of Bates, Reed & Cooley, one of the largest dry-goods houses in this city, is very striking. He said to a *Herald* reporter a day or two ago:

"This system of corruption which the Government has undertaken to uproot is driving all the honest importers out of business. So vast is the fraud that our house can buy goods in New York from the fraudulent importers cheaper than we can in Europe with all the advantages of money and organization. It is simply killing us in certain lines. We have the cash to pay for goods in Europe, and we have people there who will sell to us as cheap as they sell to any one. Unless we descend to conspiracy against the Government we cannot get our goods into New York at a price that will allow us to compete with those who cheat the revenue service."

"How is the stealing done?"

"In this way. A manufacturer on the other side sends an agent here, who opens an importing house. The manufacturer and the agent agree upon as low a price to invoice the goods as they think the appraisers can be induced to pass upon. Of course, this price is far below the real selling price. With the aid of a sharp broker and a little perjury the goods are sworn through the Custom-house. You can see what a field for bribery there is in a business which involves millions upon millions of dollars. Well, when the goods are delivered in New York at a low value, of course the duty is very small. That is what gives the dishonest importer his advantage. The manufacturer and the agent 'whack up,' to use a slang term. It is for the Government to learn who else receives any profit from these transactions. Foreigners come here without any record or any particular advantage in trade, except what they have through the Custom-house, and in four years they amass a fortune that it would take an ordinary American merchant twenty years to make. Then they go back to Europe and settle down as rich men. They cheat the Government out of its duties and spend the money in their own country. It is a burning shame that in America our American merchants are to be driven out of trade because they are honorable."

That is a full and accurate definition of "Americanism" as the term was used last summer. It was so understood by every worker in the party who was proclaiming his devotion to it on the stump. Under the pretence of protecting American industries and American labor, what were they doing? In the first place, they were getting a fine living for themselves. As saviours of the country, defenders of the rights of the colored man, and obstructers of the payment of the rebel debt, they considered themselves entitled to this. In the second place, they were advocating the perpetuation of a system which was robbing the American Government of millions of dollars a year. This was necessary in order to keep strong and healthy the party organization, and withstand the efforts of the Confederacy to get into the saddle again. At the same time they were driving honest American importers out of business, were greatly injuring honest American manufacturers, and were enabling dishonest foreign manufacturers and merchants to get rich at the expense of honest Americans. It should be remembered that this is the same Americanism which rejoiced in the coöperation and companionship of the dynamite Irish faction. Having resolved that America belonged to them, these, the elect of Americanism, believed that any means to retain possession were justifiable.

If this is not the correct definition of the Americanism of last summer, what do the comments of the Republican organs upon the President's course mean? They said that he entered office amid the jubilant cheers of the whole British press; they say daily that he is doing those things which Mr. Blaine would not have done, and is failing to do those things which Mr. Blaine would have done. In other words, he is antagonizing Americanism. And yet he is making a thorough civil-service reform Administration; is refusing to make appointments which are partisan and unfit; is abolishing the abuses in the Navy Department, and is breaking up the enormous conspiracy against the Government and American business interests in the customs service. If he is un-American in this course, then the description which we have given of Americanism is the only correct and logical one.

MEXICAN POLITICS.

THE second session of the present Mexican Congress, which came to its close on the 31st of May, seems to have marked a new stage in the slavish subordination of that body to the Executive. Perhaps the most striking proof of this is found in the method of dealing with the Government finances. From the report of the committee which unites the functions of our Committees on Ways and Means, and on Appropriations, the following state of affairs appears. The estimated revenues of the next fiscal year from customs and taxes, under the most favorable circumstances, will not exceed $30,000,000. From that sum must be deducted, however, 30 per cent. of all the receipts from customs, since that proportion has been already pledged as follows: 15 per cent. to the National Bank of Mexico to secure the interest on loans; 7 per cent. to the account of railroad subventions; 3 for the improvement of harbors, and 5 for the payment of maturing debts; leaving thus but little over $20,000,000 of available income. Yet the Committee recommended and Congress voted appropriations to the different departments of the Government, amounting to no less than $34,000,000. The report admits that there is a prospect of a heavy deficit, but cheerfully hopes that it will not very greatly exceed that of the past three years, a period during which the country has been prospering notwithstanding annual deficits. Furthermore, with the ample powers conceded to the President to negotiate loans, there need be no fear, the Committee thinks, that things will not come out satisfactorily in the end. It is no wonder that the commercial classes in Mexico, already greatly depressed, are inclined to indulge in gloomy apprehensions at the probability of new schemes of oppressive taxation, and the negotiation of ruinous loans. But so the President willed it to be, and so it is.

A curious illustration of the intricacies of Mexican politics has been furnished in the supposed rupture between President Diaz and ex-President Gonzales. This grew out of the necessity of submitting the accounts of the last year of the latter's Administration to an auditing committee of Congress. According to the law, this committee, which has had all the material in hand since last fall, should have presented a report on the second day of this spring's session—that is, two months ago. But, on one flimsy pretext and another, its report was delayed until the near approach of the constitutional limit of the session. This prolonged evasion of duty was rightly surmised to indicate irregularities in the accounts, which could not stand the light of day. But it was thought that Diaz would never allow his friend Gonzales to be disgraced, and it was alleged that all this unlawful delay was in accordance with his orders, and that no report would be made at all. Yet, to the surprise of all, two days before the close of the session, the Committee brought in its report to the effect that grave abuses had been found, and recommending the presentation for impeachment of the last Secretary of the Treasury and the Treasurer-General.

The debate which followed gave occasion for the most damaging charges against the last Administration, the members of which, from the President down, were openly charged, in the midst of the frantic applause of the galleries, with systematic robbery of the public funds. The report was adopted by a vote of 142 to 40, the heretofore thick-and-thin supporters of Gonzales making haste to trim their sails to the wind from the new quarter. The ex-President himself was reported to have left the capital in a fury, vowing vengeance upon his perfidious friend Diaz, and it was the common belief that the relations between the two would henceforth be bitterly hostile. But the older and shrewder observers are of the opinion that it was all a pretty farce; that Diaz found it necessary to do something to quiet the popular indignation, and so allowed the Committee to make their report; but that nothing will ever come of the impeachment, and that the whole affair will now be allowed to lapse. In support of their view they point to a large number of technical defences which might be successfully urged in behalf of the accused officials, and also declare that Diaz was with Gonzales up to the last moment before the latter's departure, in the most friendly and confidential conversation.

THE DUKE OF MONTMORENCY.

PARIS, June 5, 1885.

IN a time very fertile in powerful and original characters, Anne of Montmorency stands in the foremost rank. The life of the great Constable has never been well written, in the spirit of the modern historical schools, which is not content with second-hand opinions but will have original documents. Much may be said about this modern documentary school, for the use of written documents requires criticism, choice, discussion; people can lie in letters as well as in words, and it is not always easy to discern in the florid style of the sixteenth century what is the part of truth, and what of deceit and exaggeration. At the same time it must be confessed that history hardly deserves the name when it does not rest on documents of the period which it intends to resuscitate. M. Francis Decrue, Doctor of the Faculty of Letters of Paris, has devoted his time to Anne of Montmorency; he has copied nearly eight hundred letters, almost all inedited, of the famous warrior, which were written from February, 1520, to February, 1567. He has collected extracts or analyses of nearly 8,000 letters addressed to him during the reign of Francis I. He has consulted in our great National Library three inedited and manuscript biographies of him.

Marshal Montmorency belonged to the race of Bouchard, the first lord of Montmorency, who was a Knight of the Duchy of France in the tenth century. (We give this name of Duchy of France to the lands of the descendants of Robert le Fort, Comte de Paris.) During the middle ages the descendants of Bouchard grew more and more important, and became allied with the royal families of France and England, and with the Dukes of Savoy. They played a significant part in the war between France and England, as their domains were chiefly in the disputed borderland of the valley of the Oise, all along which and its affluents their castles were spread. Anne of Montmorency was born at Chantilly on March 15, 1493. Chantilly was then a stronghold, built on a rock, surrounded on all sides by springs and marshes, and thus isolated from the main land. Not far away were Mello, another castle of the family, and Écouen, in the neighborhood of Montmorency.

His education was much neglected. He learned, however, to write, which he never did otherwise than imperfectly, and his ignorance did not prevent him from becoming later one of the most eminent patrons of the art of the Renaissance. He was at an early age placed near Francis, the presumptive heir to the crown, and lived with Monsieur François, as he was then called, at Amboise, near the Countess of Angoulême, Louise of Savoy, the mother of the young Prince. He was seventeen years old when he went with Louis XII. to Italy, under the name of M. de la Rochepot (as he had received the estate of La Rochepot from his father). Brantôme says: "The first time that he crossed the mountains to learn the art of war, M. de Montmorency, his father, gave him only five hundred francs, with good arms and good horses, in order that he should suffer and not have everything easy, and that he should learn how to make a virtue of necessity." La Rochepot was among the volunteers on the field of battle of Ravenna, where Gaston de Foix, Duke of Nemours, the nephew of the King of France, found a glorious death. The year afterward La Trémoille was beaten at Novara, and the French army returned to France.

In the absence of La Rochepot his sister had married Gaspard of Coligny, Lord of Coligny and Châtillon-sur-Loing. Soon after his return Louis XII. died, and Francis of Valois became King of France (January 1, 1515). The brilliant youth of the Renaissance came to power with him: all the thrones of Europe were occupied by young men—in England by Henry VIII., in Castile by Charles of Austria. La Rochepot became a gentleman of the bed-chamber of Francis I.; he followed him to Italy, and at Marignano he distinguished himself near his King. When Francis, after his victory, returned to France, La Rochepot remained at Milan under the orders of the Constable of Bourbon, and afterward of M. de Lautrec. He only returned to France in 1516, after the death of his elder brother, and was appointed by the King captain of the castles of Vincennes and of the Bastille, those historical fortresses which commanded the capital of France. He was one of the King's favorites, and he accompanied him to the famous interview of the *Champ du Drap d'Or* (June, 1520). He was afterward sent to Henry VIII. by his master, and saw him at Calais, where he fulfilled a mission concerning the fortifications erected by the French at Ardres. In recompense of this service, he received the guardianship of the great forest which adjoins the forest of Chantilly.

A war was imminent between Charles V. and Francis, and Francis sent La Rochepot to inspect Sedan, Mouzon, Mézières, the frontier places of the north, which belonged to an ally of France, Robert de la Marck, Lord of Sedan and Bouillon. Hostilities began with the siege of Mouzon (August, 1521), which was taken by the Germans. La Rochepot threw himself with three hundred men into Mézières, which soon afterward was besieged; he defended the place for a whole month against the Imperial forces and forced them to retreat. Francis sent for him and for Bayard in his campaign made for the relief of Tournay, which was besieged by the Emperor. The campaign was lost, and Charles took Tournay, at the same time that Lautrec lost Milan in Italy, which had remained for six years under the domination of France. Francis I. sent La Rochepot with the Bastard of Savoy, grand-maître of France, and Marshal Chabannes to Switzerland to raise a levy of 16,000 infantry for the relief of Lautrec and the Duchy of Milan. La Rochepot started out with the Bernese Captain Jean de Diesbach at the beginning of December, 1521, and succeeded in his undertaking, notwithstanding the opposition of Zurich, with the help of Lucerne. On the 6th of February the Bastard of Savoy, who had crossed the Alps of Grisons, met at Bellinzona the Swiss troops sent by La Rochepot. He established his headquarters on the road from Milan to Paris in a country house of the Trivulce family. La Rochepot was with him and began the siege of Novara; he took the place, and the Swiss, who only entered the town after his own *hommes d'armes*, sacked it and killed all the inhabitants. La Rochepot a few days afterward entered Vigevano.

These exploits did not hinder the junction of the Duke Francis Sforza with Prospero Colonna. They entered Milan together in April, 1522. The storming of Novara did much, however, for the prestige of the French arms in Italy, and the reputation of La Rochepot was greatly increased by it. The campaign did not end well. Marshal de Foix capitulated at Cremona; and La Rochepot, who had been sent on a mission to Venice, could not hinder the Republic from entering into an alliance with the Emperor, who had become the master of Italy. He returned to France, with some difficulty, through Switzerland, and on his return, he was made a Marshal of France (August 6, 1522), and a member of the Order of St. Michael. He became thus a very great personage (there were at the time only five marshals and thirty-six knights of Saint Michael). We cannot give even a summary of all the campaigns of the Marshal of Montmorency. His heroism at Pavia was much admired; he was thrown from his horse and made a prisoner with the King. The captivity of Francis I. brought the King and the subject close together, as Charles V. had allowed Francis to choose his companions, and the King of France had named Montmorency, with a few others. Everybody knows the famous letter of Francis I.: "Tout est perdu sauf l'honneur." The letters of Montmorency to his wife, after Pavia, are not so eloquent; they are full of faults of orthography. In the negotiations which followed, Montmorency was very useful to his master; and when they both became free, his favor was at its greatest height.

We must look upon Anne of Montmorency as a type of a transition period. Though he had still some traits of the feudal chieftain, by reason of the immensity of his domains, the possession of many strongholds, the command of distinct troops, a number of valuable privileges, a very extensive patronage, he was at the same time of necessity a courtier; he could not dispense with the royal favor. A word from his master gave him no alternative but to obey or to revolt; and revolt was punished with capital punishment. After the deliverance of the King, Montmorency entered upon the functions of Grand Master of France, and during this period, which extends from 1526 to 1541, he was virtually the head of the administration of the country. For fifteen years he was the dominant Minister of State. In that period, and especially after 1530, when a Spanish queen came to France, he represented the peace party, which at that moment was somewhat identified with the party of the Emperor and of the Pope. He had conservative instincts, and stood on the side of the great powers of the age. He was, however, obliged to make war, from 1526 to 1529, as his own King refused to fulfil the conditions of the treaty of Madrid. He tried to save Burgundy, and made every effort to secure the triumph of the League of Cognac. Burgundy was saved, and Francis then wanted to reconquer the Milanese provinces. Montmorency long hoped to secure them for his master by treaty, and to obtain this result by alliance with the King of England, Henry VIII., or with Pope Clement VII. This time, again, he was forced to resort to arms, but he continued to negotiate while he was making war. The campaigns of 1536 and 1537 were directed by him, and are among the most remarkable of the time. The defence of Provence and the crossing of the "Pas de Suse" are operations which will always remain famous.

At the end of his victories, Montmorency, who was now Constable of France, sought an alliance with the Emperor: he was avowedly a partisan of this alliance, and for a time he succeeded in procuring it. But he triumphed perhaps too much; and the success of his policy depended on an element which he could not control, namely, the good will and the good faith of Charles V. The interview of Francis I. and of Charles V. at Nice was followed by another at Aigues-Mortes. Henry VIII. became very angry. Some time afterwards the Emperor asked permission to cross France in order to punish the revolt of Ghent. Montmorency hoped to obtain from him, without a war, the cession of the Milanais; if he had succeeded, his triumph would have been complete. But Charles was even more wily than the Constable; he had no intention of abandoning Milan. He amused Francis with words; and when it was proved that Montmorency had been deceived, he fell into disgrace. Pretexts were easily found. Montmorency had been chosen as a favorite by the Dauphin; Madame d'Étampes, who governed the King, was the mortal enemy of Diane de Poitiers, who governed the Dauphin. Speaking of the Constable, Madame d'Étampes said, when she heard that Charles V. had given Milan to his son: "The Constable is a great scamp: he promised the King that the Emperor would give him Milan at once, and he knew the contrary." Montmorency left the court and all his employments, and retired to his domains. But his rôle was not ended; and as he had been a favorite under Francis I., he became a favorite under Henri II., after a long period of disgrace.

Correspondence.

HISTORIES FOR THE YOUNG.

To the Editor of The Nation:

Sir: I observed in the *Nation* several weeks ago a favorable notice of a new, semi-juvenile book of history—an American reprint, I think, of an English work—entitled 'Little Arthur's History of France.' The general commendation bestowed in that notice was slightly qualified by a remark having reference to the illustrations, which were said to be inferior.

Now, as regards the mechanical execution of those illustrations I have no comment to make,

Respecting the subjects of the pictures, however, I should be very glad indeed, should a new edition of the work be called for, that they be materially changed. Because, while this book—for children mainly—contains fifteen illustrations, one of these is a murder scene, eleven are representations of battles or of other warlike subjects, and one has reference to an incident of war. There remains then but one picture, in addition to the map, which does not suggest to inquiring youth that man is, above all things else, a *fighting animal*.

Having had occasion, within a short time, to advert to the fact that some of the text-books of American history lately prepared on this side the Atlantic showed a marked improvement over most of those which had gone before, in that they gave less prominence to warlike subjects, and more to the economic concerns of the people generally, I should hence regard with regret any deflection or reversal in this present happy trend in the direction of the more humane. So high an authority as Principal Currie, of the Church of Scotland Training School, in his late 'Work on Teaching' (Edinburgh, 1884), after deploring the fact that "in giving prominence to wars, teachers have only followed the examples of historians themselves, who have confined their narrative too exclusively to those," he concludes:

"The *first reform* in the teaching, as in the writing of school history, should be to assign to these wars of a nation their true position and character, instead of measuring national prosperity or greatness exclusively by its warlike achievements. We should regard war in general as a divergence from the true course of a nation's history, both on moral and on social grounds. . . . The arts of peace, which have been almost overlooked, should be raised to the position of prominence hitherto assigned to those of war."

Having briefly cited this much of good augury from American and British sources, I simply refer, in concluding, to the circumstance that, in Imperial Germany, Herman Molkenboer, of Bonn, proposes (and has extensively circulated) a project for a Permanent International Council of Education, one of the principal prospective duties of which shall be that the educators of the different countries represented therein shall press upon their legislators the need there is for settling international disputes by other and better means than war. He is bold to say that "the imperfect demonstration of the injustice and the immorality of war by the legally-appointed teacher is the chief reason that wars continue to be carried on." I see the name of Thomas W. Bicknell among those who have signified their adherence to this project. Meanwhile, might not our own Bureau of Education issue, with advantage, a Circular upon the Teaching of War in text-books of History? Translated into German, the "legally appointed teacher" might serviceably support the scheme of Herman Molkenboer. JOSIAH W. LEEDS.

PHILADELPHIA, Sixth Mo., 8th, 1885.

A MUSICAL PROTEST.

TO THE EDITOR OF THE NATION:

SIR: Acting on the suggestion of Mr. Spencer that Americans are too little given to grumbling, I should like to redeem the national reputation in the matter of the music offered by first-rate performers and orchestras in smaller places. I am familiar with the character of the music played by the Mendelssohn Quintet Club in and around Boston, and, on the announcement of their engagement to play at the opera-house in this city, rejoiced in the opportunity of hearing the same fine quality of musical pieces. My dismay amounted to indignation when, on entering the house and reading the programme, I saw there set for performance such choice morsels as the following: Aria from Verdi's "La Traviata"; fantaisie for clarionet, by Ryan; fantaisie for 'cello, from "La Fille du Régiment." This head and front of the offending was redeemed (?) only by an uninteresting quintet of Mendelssohn; "The Miller's Daughter," of Raff; the Minuet of Boccherini, and Weber's "Invitation à la Valse." To complete the degradation, an encore of the "Last Rose of Summer" was given in the most sentimental manner.

There were many amateurs present who were accustomed to a very different kind of selection. A concert given but a few weeks before by some of these consisted wholly of music from Mendelssohn and Haydn, and was heartily appreciated. To make public such insults to the musical taste of the people, is the only way to be relieved of the danger of repetition. Before some of us again subscribe to a concert by this club, it will be necessary to have the programme announced in advance. The whole point of view of the performers was well shown in the circular announcement, in which a frivolous singer of trivial music was described as being endowed by nature with a fine figure and beautiful face, and, *in addition*, a pleasing voice.—Yours,

JOHN TUNIS.

QUINCY, ILL.

Notes.

AT last an opportunity seems offered the Harvard "Annex" to purchase suitable quarters at a low price. A private dwelling, of brick, having that "touch of dignity which belongs to an old-fashioned house," and well planted about with shade trees, is procurable for $20,000. The officers of this institution, now in its sixth year, with more than fifty women students, make an appeal to the public to enable them to effect the purchase. Subscriptions may be sent to Miss Alice M. Longfellow, Treasurer, Craigie House, Cambridge, Mass. The building in question is not designed to be used as a dormitory, any more than is the present home of the Annex, which is manifestly inadequate to the immediate increase in attendance indicated by the applications for 1885-86.

Mr. James R. Osgood, it is announced, will accept a position in the house of Harper & Bros. as soon as his affairs are finally settled in Boston.

John D. Ross, 419 W. 48th St., New York city, intends publishing by subscription 'Celebrated Songs of Scotland, from King James V. to Henry Scott Riddell,' edited with memoirs, notes, glossary, and index.

A sketch of the anti-slavery movement in Maine is in preparation by the Rev. Austin Willey, now of Northfield, Minn., formerly of Hallowell, Maine.

It must be thought singular that a life of the late Rev. John Pierpont, whose career was many-sided and of far-reaching influence, has yet to be written. Such a memorial, we are glad to learn, is in course of preparation, and the compiler will be thankful for any original letters or other MSS. which might assist him. They should be addressed to Pierpont, 3 Chauncey St., Boston.

G. P. Putnam's Sons have accepted the agency for this country for the publications of the Victoria Institute of Great Britain, one of whose objects is to reconcile any apparent discrepancies between Christianity and science. Scientists and clergymen are about equally represented on the list of forthcoming pamphlets.

Summer reading is to be found in Hardy's 'But Yet a Woman,' introducing the Riverside Paper Series, and in the fourth volume of 'Tales from Many Sources' (Dodd, Mead & Co.). Here we have Walter Besant and James Rice, James Payn, Wilkie Collins, and Daudet translated ("The Siege of Berlin").

In eleven years great changes have been made at Mt. Desert, as a comparison of the first edition of Mrs. C. B. Martin's Guide-Book (Portland: Loring, Short & Harmon) with the sixth, now before us, shows. The book itself has increased in every dimension. The two fragmentary maps have been replaced by one of the whole island. The text has been largely rewritten to keep pace with new routes, new settlements, new roads and drives. The dainty photographic views are all new; yet one would gladly have retained the old subjects also, fading as are the silver prints of the 1874 edition. Why should not the publishers prefer some permanent process—carbon prints or albertype, or the mechanical engraving which often makes a lucky hit with landscape?

Mr. Francis Parkman has met a real need by compiling from his historical works an 'Historic Handbook of the Northern Tour' (Boston: Little, Brown & Co.). This embraces Lakes George and Champlain; Niagara; Montreal, and Quebec. A few portraits and maps are interspersed.

From the office of the *American Angler* comes 'The Angler's Guide and Tourist's Gazetteer,' compiled by the editor, Mr. Wm. C. Harris. The tourist and the angler here referred to are one; at the same time, the unpiscatorial traveller can avail himself of Mr. Harris's directions for reaching a vast number of pleasant places. The condensation and clearness of this little guide-book are remarkable. First we have a summary of the fish laws of the several States (Canada included), and then an alphabetical list of towns, rivers, lakes, islands under their respective States, with an index (again by States) to fishing waters. Still another index furnishes a key to transportation. What kinds of fish, to be caught at what season, with what sort of bait; at what cost for boats, hotels, etc., at some 4,000 fishing grounds—all this is concisely stated in a pocket volume.

A selection from the lyrical poems of Lord Tennyson, made by Francis Turner Palgrave, has been added by the latter to his Golden Treasury Series (Macmillan). It includes a portion of "In Memoriam," and the most of the shorter pieces which are familiar and dear to the English-speaking world. A Tennyson Society to explain this author's obscurities would hardly be needed, but Mr. Palgrave's notes—which are not many—will be welcome, and doubtless have been prepared in consultation with Lord Tennyson. The print of this tasteful volume, which may be carried in the pocket, is necessarily small.

The fashion of preparing personal bibliographies has hitherto been followed in this country chiefly by the *Literary World*. Whenever a man dies or celebrates his ——th birthday, or even (as in the case of Mr. Gosse) visits America, a complete list of his works chronologically arranged appears in the columns of that Boston journal. But these are apt to be mere lists, with the briefest possible titles, and with no mention of publishers names or number of pages. They are useful but not luxurious. Quite different is the style of 'The Longfellow Collectors' Handbook' which Mr. William Evarts Benjamin, No. 744 Broadway, has just compiled and published in a limited edition. Here every title occupies a page by itself; the separation of the lines of the title-pages is marked, full collations are given, and the original binding is noted. But it is not a complete bibliography. Only first editions are entered; yet it seems to us that the collector, without losing caste, might put on his shelves specially fine copies of the illustrated editions; and collectors have been known who got together every edition of a favorite author. The volume is a dainty one, the glazed sides pleasantly recalling the early volume of Longfellow's poems published by John Owen, of Cambridge, to the out-

ward charm of which Poe liked to ascribe the popularity of the poems within. One hardly knows whether to be surprised at the smallness or the greatness of the number of works in the list, cut down as they are to their first appearances. They number thirty-seven without the text-books, but among them are one volume of translations and three compilations, not including the 'Poems of Places.' Yet Longfellow was not a prolific writer, and publishers find no difficulty in condensing the thirty-three original volumes into half a dozen. In an appendix are recorded the text-books in French, Italian, and Spanish which Longfellow published before he assumed his Harvard professorship.

We had an American edition of Barbou's 'Victor Hugo and his Time' in 1881 (Chicago: S. C. Griggs and Co.). A translation by another hand, with a motley assortment of woodcuts whose range reveals the longevity of the poet, is now issued by Harper & Bros. in their Franklin Square Library. The general typographical appearance is highly appropriate to its Romantic theme. Several of Hugo's own sketches are reproduced among the rest.

We lately called attention to the new "final edition" of the complete works of Gustave Flaubert now issuing by Quantin, Paris. 'Salammbô' was the first to reach us, though numbered second in the series. We now have 'Madame Bovary,' which not only shares the beautiful typography of its predecessors, but offers an interesting etched portrait of the author as a frontispiece. The last eighty pages of the total 556 of this volume are given up to the report of the judicial proceedings by which 'Madame Bovary' was sought to be condemned as an offence against public morals and religion. Readers who can derive moral instruction from the story will also find their profit in the pleadings and judgment of the tribunal. With the general reader it may be otherwise; and it marks the difficulty of dealing with offences of this class, that the worst passages not only are quoted by the prosecution, but are referred in foot-notes, with scrupulous exactness, to the new paging of the present edition.

Eugène Delacroix and Bastien-Lepage supply the chief pictorial interest of *L'Art* Nos. 502, 503 (Macmillan). M. Charles Diehl continues his archæologic study of Ravenna, with the help of Mlle. Herwegen's designs. Mr. C. C. Perkins, of Boston, treats of the competition for the second bronze gate of the Florence Baptistery, with illustrations. Among the numerous engravings representing private collections, Fragonard's "Visit to the Nurse" might stand for the text of which Rousseau's 'Émile' was the sermon.

Parts 7-10 of the new Lesser Brockhaus' Conversations-Lexikon (New York: L. W. Schmidt), approach the end of the letter B. The condensation is such that Bismarck gets but little more than a column; Beethoven only half a column; the great Thomas Hart Benton is compressed, 'Thirty Years' View' and all, into six lines; Blaine, and his 'Twenty Years of Congress,' into nine. Other American reputations suffer even worse by such rigorous treatment. The illustrations continue to be excellent.

From Selmar Hess, New York, we have four more parts, 9-12, of 'Our Living World'—the text by the Rev. J. G. Wood, the illustrations mostly after Brehm—of which we have already spoken. Dr. Holder's interpolations are not indicated in any way, but they can generally be detected—sometimes by a literary maladroitness. Thus, his reference to the late Lewis H. Morgan's standard work on the Beaver would lead one to infer that the author was still alive, and his monograph a recent one. Of the common seal it is said that these creatures are seldom seen south of Cape Cod, though they formerly frequented Robbin's Reef in this harbor, to which they gave its name (by way of the Dutch). During the past winter they were tolerably abundant in our New York waters, and one was seen floating on a cake of ice as far up as Tenth Street in the North River.

The delegates of the Clarendon Press, Oxford, England, send us two mathematical text-books. One is a little book of 112 pp., smaller than the 'Science Primers' of the Appletons, entitled 'Differential Calculus for Beginners, with a Selection of Easy Examples,' by Alexander Knox, B. A. Cantab. Its method of presenting the calculus is essentially the same as that of the little treatise on the same science published some thirty years ago by Rev. William Ritchie, Professor of Natural Philosophy in the Royal Institution and in University College, London. After reading through Mr. Knox's little book, it seems to us more likely to prove interesting to one who has some knowledge of the calculus, than useful as a text-book for a class of beginners. In this respect it is inferior to the work of Professor Ritchie. To those who have a taste for what may be called metaphysical mathematics, its perusal will prove interesting and suggestive.

The other book is vol. i. of the third edition of Professor Minchin's 'Statics.' The first volume is published and sold separately, and is intended to contain all that is necessary for attaining undergraduate honors and scholarships, while the more recondite subjects are reserved for a second volume. This method of publication has of course rendered necessary considerable alterations in the arrangement of the work, and Professor Minchin has embraced the opportunity to make many additions which increase the value of it. There are many problems in statics, as in fact in all branches of mathematics, the accurate solution of which defies the powers of analysis, and the approximate solution of which by the same means is attended with a vast amount of labor. A solution of these problems, sufficient for practical purposes, can often be obtained by graphic methods at once simple and interesting. The use of such methods has been greatly extended throughout the present volume. It is impossible to pronounce judgment on the work as a whole until the reception of the second volume; but judging from the execution of the present volume, and from the excellence of the second edition, to which we some time ago called attention in a note on Professor Minchin's 'Uniplanar Kinematics,' it will, in its complete form, be by far the best treatise on statics that has appeared in the English language.

A good instance of the opposition between vested interest and improvement has lately occurred in Kensington. There is no doubt that steam-rollers are vastly superior to horse-rollers in the making of macadamized roads, in the matter of cheapness to the makers, in the saving of wear and tear of vehicles, of injury to horses, and of discomfort to drivers. But their weight dislocates the gas pipes, and the gas company has sued the vestry. A London vestry defending progress against conservatism is something new. They lost their case, and steam-rollers cannot be used now in England on roads in which gas pipes are laid. Steam-rollers are used in American cities, but we have not yet heard of injunctions against them.

A friendly hand has pointed out that in our last week's review of 'The Russian Revolt,' we taxed the author with the misspelling of a name ("Vereshchagin") in regard to which we had ourselves been led into error. We very much regret having done him this injustice, which we make haste to acknowledge.

A very obvious error escaped our attention in our article last week on the world's wine crop, which was stated to be 2,485,000 gallons. As a matter of fact, France alone is capable of producing 800,000,000. The world's vintage is not far, we believe, from 4,000,000,000 gallons.

—The sixth annual report of the Archæological Institute of America is largely retrospective, the chief event of the past year having been a reorganization of the Institute itself. Affiliated societies have been established in Boston, New York, and Baltimore—an arrangement favorable to independent and to concerted effort. The publications awaiting their opportunity to be printed are two works by Mr. A. F. Bandelier—viz., Part 2 of his 'Historical Introduction to Studies among the Sedentary Indians of New Mexico,' and his report of his perilous explorations in the Apache district of Northern Mexico—and the Assos report for 1882-83. Nothing has yet been heard from the expedition sent out last autumn to Babylonia, under the charge of the Rev. Dr. W. H. Ward. The most urgent need insisted upon by the Institute is for a fund to erect a permanent home for the American School of Classical Studies at Athens, for which the Greek Government has given the necessary ground. This enterprise calls for an outlay of $15,000 to $20,000, and about $4,000 has already been subscribed. We understand that the British School has now in hand £4,000 for building purposes, and that construction will proceed at once. As the lots of the two schools adjoin each other, great economy and a friendly unity would be secured by building a library in common, to which the American contribution of books would be more than respectable. The Executive Committee of the Institute, who originated the American School, make a strong appeal for the money necessary to put it on a stable foundation.

—The Association of Collegiate Alumnæ has issued a brief report of its last quarterly meeting, at which there was an interesting discussion of "Work for Women in Local History." The discussion was opened by Miss Katharine Coman, Professor of History in Wellesley College, who advocated the idea that college work in history should be regarded as a preparation for original research, more particularly in the historical environment where young women might find their lot to be cast, whether as teachers or residents. Returning from school or college to their own homes, girls often find life somewhat aimless. The annals of quiet neighborhoods could be made to yield fruit for local history if bright, well-trained girls would utilize the records of town, church, and parish. Such work hitherto has been left for antiquaries, who have not always succeeded in removing the dust from the subjects which they attempted to handle. There are many subjects of American local history which women can perhaps treat better than can men. An examination of almost any local history written by a typical antiquary will suggest to women improved methods of presenting certain topics. Women would particularly excel in the description of manners and customs, in the delineation of local character, in the study of family life and society in general. Miss Katharine Coman, of Wellesley, Massachusetts, will receive the names of collegiate alumnæ who may wish to coöperate in this work.

—A suggestive piece of feminine work in local history is 'The Nation in the Parish; or, Records of Upton-on-Severn,' by Mrs. Emily M. Lawson, wife of the rector of that ancient parish in Worcestershire. This tasteful, well-illustrated little book, of something over two hundred pages (London: Houghton & Gunn, 1884), is an attempt to show that the chronicles of an ancient parish are in a certain sense the chronicles of England. The English nation is here to be studied in miniature. Just as the local annals of a New England town—for example, Plymouth or Salem—illustrate the life of a larger commonwealth, so Upton-on-

Severn contains more than local history. The place presents pictures of many historical changes which have swept over the face of England. A British village, a Roman camp, a Christian mission, a Saxon *tun*, a Norman manor, a mediæval and modern parish, are phases of English history as well as of Upton-on-Severn. The author notices the blending of the Norman conquerors and of their English subjects in the tax-lists of Upton, which show the rise of the middle class. She follows with special interest the history of the feudal lords of Upton—the De Clares, the De Spencers, the Beauchamps—who connect the little town with kings and king-makers. But none the less, on account of a certain predilection for aristocracy, does the writer investigate the history of the common people. With feminine literary art, she suggests that Piers Plowman caught his vision of social and rural England, "on a May morning," in the immediate neighborhood of Upton, which is hard by the Malvern Hills. Particularly suggestive is Mrs. Lawson's account of the Black Death in 1348-9, and the subsequent conflict between labor and capital (the first recorded strike in England). The cholera of 1832 is described with a graphic power that reminds one of the classic story of the plague at Athens. The writer obtained her information almost entirely from conversation with her husband's parishioners. The treatment of the parish poor and of lunatics; local education; old drinking customs and the growth of temperance; parish riots; ancient games and curious modes of punishment; the parish ghost and the historical value of ghost stories, are among the many interesting topics discussed by the wife of the English rector, who himself supplements the volume by a most valuable glossary of more than eight hundred words and phrases of unusual sound or meaning that are current in his parish. In this list the student of American local dialects will find many old words which crop out in provincial speech. Similar lists might perhaps be prepared in the mountain districts of the South and in the archaic towns of New England—for example, in the towns along Cape Cod.

—A curious controversy has been going on in the German papers apropos of the popularity and influence of "the Marlitt," and other *Gartenlaube* novelists. A dozen or more years ago, the *Gartenlaube* published a novel by a then unknown author, called 'The Old Mam'sell's Secret, by E. Marlitt,' under which pseudonym was, for a long time, concealed the personality of an elderly maiden lady named Eugenie John, living in a little town of central Germany. This tale is said to have had more readers than any other novel in the same space of time, except 'Uncle Tom's Cabin.' It has been dramatized several times (without the author's consent) and translated into all European languages, one of the first translations being that by Mrs. A. L. Wister. Every successive story by Miss John has been published in the *Gartenlaube*, and has been promptly translated by Mrs. Wister, other versions of most of them having appeared in England, one made by a writer so considerable as the Rev. Baring-Gould. The vein struck in the novel mentioned proved so very successful that Miss John was unable to supply the demand, so that the conductors of the *Gartenlaube* had to seek material elsewhere. They were so successful that if the aching void, the existence of which was discovered by the success of 'The Old Mam'sell's Secret,' has continued, it can only be because, with the public as with the individual, appetite comes with eating; for a whole series of writers, all of them women writing under a masculine pseudonym, such as "Ernst Werner," "E. Hartner," "W. Heimburg," etc. (some of whom, notably "E. Werner," are much cleverer than the author of the original success), have followed the latter's lead both in the *Gartenlaube* and in Mrs. Wister's series of translations. The strong family resemblance of these works cannot be better illustrated than by the fact that frequenters of circulating libraries, including the largest, entirely ignore the individuality of the writers, asking only for "Mrs. Wister's last translation," or even "the newest book by Mrs. Wister."

—With these facts in his mind, it strikes a foreigner as singular enough that German critics should speak of these fictions with combined hatred and contempt. A writer in a recent number of the *Magazin für die Litteratur* cries out that they are fit only for chambermaids and seamstresses, and otherwise describes them in terms such as would be used in this country only in reference to works quite beneath serious criticism, such as those of Mrs. Holmes and Mrs. Southworth. The editor of the *Magazin* remarks that they have practically driven Freytag, Heyse, Keller, and others equally worthy from the market, and perhaps if our public were so constituted that Howells and James remained unread because of the meretricious attractions of the American ladies we have named, we should regard the latter with similar feelings. But we think there is a more reasonable explanation of the situation in Germany. We should attribute the neglect with which Heyse and Keller and the like are treated, to the fact that, however graceful and artistic and truthful their writings may be, they are only tales or sketches, while the public demands a sustained effort—a work that involves a regular development, a consistent plot, with a middle as well as a beginning and end. The *Gartenlaube* ladies—whatever their faults—succeed in what the critically superior German novelists do not even attempt. Freytag, indeed, published two abundantly successful novels a dozen years before the Marlitt began her career; but he has done nothing of the kind since, and the dearth of sustained fiction is so great that the more dignified periodicals, like the *Rundschau*, have never, we believe, published anything more ambitious than novelettes.

—It is saddening to read in the May number of *Westermann's Monatshefte*, in a very pleasant literary sketch of Alfred Meissner, by Fritz Lemmermayer, these words: "His poetical power has remained faithful to him to this day," at the very moment when the cable brings the news of that amiable Austrian's death. How his career has suddenly been cut short, we have still to learn. The last of his works is the 'Geschichte meines Lebens' (2 vols., 1884), an autobiography more interesting in its characterizations of contemporary men and events than in its unfolding of the author's own life. This was uneventful and literary throughout, yet few poets of our time have lived in warmer sympathy with the liberal ideas which have stirred the last half-century. The son of a Bohemian physician and a Scotch mother, Meissner (born in 1822) devoted himself to his father's profession, studying at Prague, but practised medicine only a short while, and throughout his life maintained himself by his prolific pen. By his 'Gedichte' (1845), he at once achieved an honorable standing among the German poets of Austria, ranking next to "Anastasius Grün" (Count Auersperg) and Lenau. He combined the liberal agressiveness of the former with the pessimistic melancholy of the latter. Prevented by Metternich's censors from publishing in Austria his 'Ziska'—an epic poem containing brilliant parts, but defective as a whole, and too lyrical for a work of its class — he went to Saxony, where he lived in intimate intercourse with Moritz Hartmann, Berthold Auerbach, Gutzkow, Richard Wagner, and others. The revolutionary and socialistic tenor of 'Ziska' (1846) so much displeased the German authorities that Meissner thought it best to go abroad. The revolution of 1848 brought him back from France, the conflicts between the Czechs and Germans drove him in disgust from his native country, and the failure of the German revolution from Frankfort to Paris. Here he associated much with Heine, who was so charmed with his drama "Das Weib des Urias" (1851) that he declared him, as a dramatist, "héritier présomptif de la gloire de Frédéric Schiller." This was as false prophecy as Meissner's prediction, in the 'Revolutionäre Studien aus Paris' (1849), of the fiasco which the foolish ambition of Louis Napoleon, then President of the French Republic, was bound to make. Napoleon became Emperor and Meissner a novelist. Leaving France, he visited England, returned to Bohemia, and from 1869 lived in Bregenz, on the Lake of Constance. He remained faithful to his liberal convictions, and in his attractive novels 'Zwischen Fürst und Volk,' 'Zur Ehre Gottes,' 'Schwarzgelb,' 'Die Kinder Roms,' and others, painted reaction and clericalism in the darkest colors. His romances, tales, later poems—epic, dramatic, and lyric—and miscellaneous writings are very numerous. Meissner's course as a man and as a writer was remarkably even and consistent.

—The award is announced of the Russian Geographical Society's great Constantine Medal to M. Woeikoff, for his work entitled 'The Climates of the World, and of Russia in Particular.' During his residence in this country, a number of years ago, M. Woeikoff was recognized as a leading meteorologist, and his travels here and in Asia have been so extended as to give him adequate knowledge at first hand of their chief topographic and meteorological features. He divides the world into eight distinct regions—Atlantic, North and Middle, and Tropical America, South and Middle Africa, the Mediterranean Basin, Northwestern and Middle Europe, Southeastern Asia, and Russia and Northern Asia, and discusses the climatology of each. *Nature* gives an abstract of Doctor Lenz's analysis of Woeikoff's work in the Annual Report of the Society for 1884, and shows the originality of its fundamental idea, which, instead of representing climates as they result from the averages of climatological elements—the method usually followed in meteorological works, except Doctor Hann's 'Handbuch der Klimatologie'—undertakes to explain the local variations of the general laws of meteorology as a consequence of the varying topographical features of the several countries to which they are applied. M. Woeikoff's conclusions are verified for each particular country by comparison with the conclusions with regard to the climates of its adjacent countries, thus establishing the elements of a comparative meteorology. Twenty-two chapters of M. Woeikoff's work of nearly 700 pages contain a detailed analysis of the chief meteorological elements of the globe: the heat received from the sun; the dynamic and thermic consequences of the rise and fall of masses of air; the influence of snow and ice-coverings; the temperatures of lakes, seas, and oceans; the influence of wind; the variations of temperature with elevation; the diurnal and unperiodic changes of temperature; and finally the influence of climate on vegetation.

—Nikolai Ivanovitch Kostomaroff, who recently died at the age of about sixty-eight, ranks among the foremost historians of Russia. He rivalled Karamzin in artistic skill and animation of style, and was inferior only to Solovieff in vastness and soundness of research. He was a man of poetic gifts, a South-Russian by birth and spirit, intensely religious, but fond of bold generalizations, original in his conceptions, and pas-

sionate in disseminating them. He was persecuted and for a time kept in confinement by the Government of Czar Nicholas for his ideas on popular Slavic federalism in the past and future, which conflicted both with the orthodox views of autocratic Czarism and the special national claims of the Great-Russians and their capital, Moscow; was well treated in the beginning of the reign of Alexander II., and appointed professor at the University of St. Petersburg, where he became a favorite of the students; but retired from public service in consequence of the riotous student movements of 1861-62. His pictures of the Little-Russian past, in histories, poems, and novels, exposed him to severe and not wholly unmerited criticisms from two opposite sides, the Muscovitish and the Polish, to which he replied with vigor. His writings embrace about forty volumes. Among them are historical sketches of the life and time of Bogdan Khmelnitzki, the chief of the Cossack rising against Poland in the middle of the seventeenth century; of Stenka Razin and Mazeppa—characters kindred to the preceding; of old Russian commerce, the old North-Russian commonwealths, and the poetical folk-lore of Little Russia. His most important work is the 'Russian History in Biographies,' which is, however, brought down only to the middle of the last century.

RECENT POETRY.

When one thinks what a triumph of human intellect, after all, is poetry, it seems as if even the poorest adventure in that line must be treated on a higher plane than any other work of the mind.

"Homer is gone, and where is Jove, and where
The rival cities seven? His song outlasts
Town, tower, and god; all that then was, save Heaven."

But it must be owned with regret that most of the new volumes of verse which have appeared during the last few months, seem to have hardly more of what the scientists now call "viability," than is possessed by the newest cheap tenement house in New York or the latest False Prophet on the Nile.

In this insecurity of the new it is something to be reassured as to the permanence of the old; and it is not wholly a cause for regret that three or four of the most attractive volumes on our recent list are devoted wholly to translations. First among these is Mr. Wharton's long-promised book on 'Sappho' (London: Stott; Chicago: Jansen, McClurg & Co.), a poet whose lasting fame is in one respect more remarkable than that of Homer, because it is based upon a few little fragments of song. Never, certainly, was there such a tribute paid to a woman as in this little memorial—gathering up from the whole range of ancient literature every fragment, every phrase, giving it in the original and as translated, together with an exhaustive review of all written about the original. The criticism is mostly drawn from German, the translation from English sources, including, however, one American version. We do not always like Mr. Symonds's renderings as well as Mr. Wharton does; and there is sometimes too much of Swinburne for our taste, since that poet is apt to Swinburnize everything, Sappho included. Mr. Wharton's fifteen pages of Sappho bibliography are so admirable that we are moved to contribute toward its completeness. It does not seem clear why he has included Mrs. Estelle A. Lewis's tragedy of "Sappho" and omitted the much better one by Grillparzer, so well translated by Miss Ellen Frothingham. Again, his exclusion of "well-known histories of Greece and Greek literature" seems to us carried quite too far when he leaves out authors who have paid especial attention to his heroine—as Felton in 'Ancient and Modern Greece' and Edwin Arnold in 'The Poets of Greece.' It would, indeed, seem as if Mr. Wharton must have altogether overlooked this last writer, whose translation of Sappho's chief ode seems to us far better than those of Symonds and Wodehouse which Mr. Wharton gives, and which scarcely attempt to reproduce the Sapphic metre.

We pass most agreeably from ancient to modern Greece through a volume of 'Greek Lays, Idylls, Legends, etc., a selection from Recent and Contemporary Poets,' by Miss Elizabeth M. Edmonds (London: Trübner). This work is drawn from a quarry that has hardly been so well worked since the French Fauriel and the German Müller first opened it—their versions being rendered in English by Margaret Fuller—nearly fifty years ago. Ever since that period there has hung a charm about the Romaic popular song; and though the names of Typaldos and Viziénos may not endure as long as those of Pindar and Anacreon, they at least prolong the heroic tradition. The translations of Miss Edmonds are fresh, vigorous, and not sentimental; and there is a good introduction by Mr. Jenkins, who has evidently some personal knowledge of the Greek struggle for independence.

Another thoroughly delightful book of translations is 'Representative German Poems, ballad and lyrical' (Henry Holt & Co.), edited by Karl Knortz, who has already earned much gratitude from American authors and readers as an interpreter in both directions between his native and his adopted country. In this handsome and substantial volume he has carried much further the plan adopted in Baskerville's little volume, which appeared in 1854, giving the German poem on one page and its English version on another. No book could be imagined more likely to beguile a reluctant student into acquainting himself with the language of the Fatherland, since nothing in German is at once so fascinating and so easily acquired as its ballad literature; and in the hands of translators like Longfellow and Brooks the translation, however poetical, is often so nearly literal that the "gradus ad Parnassum" is facilitated to the last degree. The two impressions left behind, after turning the pages of this attractive volume, are, first, the wealth of German poetry, and then its decadence. It really seems like having in our hands the *florilegium* of a dead language. Out of Mr. Knortz's seventy-eight poets there are actually but ten names of living men, and of these the only ones not obscure are those of Bodenstedt, Pfizer, and Scheffel, the youngest of these being in his sixtieth year. We commend these statistics to those who are fond of writing obituaries for American literature.

Another agreeable volume, upon a somewhat similar plan, is 'Selected Poems of Michelangelo Buonarroti,' edited by Mrs. Ednah D. Cheney (Boston: Lee & Shepard). It is nearly fifty years since Mr. J. E. Taylor, in his 'Michel Angelo as a Philosophical Poet,' first seriously attempted to introduce these poems in English; and Mrs. Cheney, improving upon him, gives the original Italian of each poem, and draws from a variety of translators. The later English volumes of Harford and Symonds of course afford her a good deal, and she is aided by several American friends—Mrs. Howe, Miss Eva Channing, and Messrs. Dwight and Sanborn—her own versions being among the best. We miss, however, that peculiarly beautiful translation in Taylor's volume—the eighth in Guasti's collection—beginning—

"I scarce beheld on earth those beauteous eyes."

In looking over any group of recent books of American poetry, one is almost tempted to exclude in advance those which go, as it were, on crutches. We mean, for instance, all books published on what may be called the "chromo" plan—offering, let us say, a prize of $1,000 to any one who will guess the author of a tame satire like 'The Buntling Ball' (Funk & Wagnalls), whereas it would plainly be worth that sum to read it through. Another form of crutches is to reprint those good-natured letters which elderly poets invariably write to all young aspirants. Thus, a letter from Mr. Whittier appears in facsimile both inside and outside of 'Sheaves,' by Harriet Maxwell Converse (G. P. Putnam's Sons); while, even with this encouragement, we can find nothing in the volume except what the class poet of this year's graduating class in every Woman's College might be expected to produce. So the publishers of Mr. W. H. Venable's 'Melodies of the Heart' (Cincinnati: Robert Clarke & Co.) offer a series of these dulcet phrases from Longfellow and Holmes, in the circular accompanying the volume; and yet what good do we gain by these endorsements when we open upon such verses as this, on an occasion which ought, if anything could do it, to call out real feeling and simplicity of utterance:

"When June exhaled her rose-sweet breath,
And earth in sunshine smiled,
Untimely came intrusive Death,
And robbed us of our child.

"The pallid spectre, frozen Sleep,
To Victor's cradle stole,
And kissed the babe to silence deep,
Then lured away his soul." (P. 69.

There is no doubt a great deal of excellent sense in Mr. Venable's book, but no sworn jury of septuagenarian bards can ever convert it into poetry.

Again, another form of crutches—or perhaps we should now say masks—is to make the titles of new volumes so imposing, and so out of all proportion to the contents, that one is reminded of that passage in Mrs. Leighton's delightful 'Life at Puget Sound,' where she arrayed herself in her best for a landing at "Empire City," and found that it consisted of one log-hut. Thus we open Mr. W. C. Richards's 'Science in Song' (Boston: Lee & Shepard), and find no song and very little science, but only a tiresome series of efforts to annihilate Darwin and Huxley in rhyme. Again, in 'Lays of a Bohemian,' by Scott B. Sherwood (New York: Brentano), we find nothing that savors of that wandering race; because we are assured by Mr. Leland that cases of lunacy rarely occur among them, and what other hypothesis can account for the production of such verses as the following, which occur in the closing address "To my Critic"?

"Sooth grant, with my sense none
Can phrase or weld accordantly as I have done,
Since no machine doth work like mine of Jove's invoice—
Or will, so long as Procreation's Pow'rs rejoice.

"My mold distinct from yours as David's from St. Mark's—
As Milton's from Dean Swift's, or Scott's or Jared Sparks'—
As Byron's, Bolingbroke's, or Goldsmith's from Montaigne's—
As Pope's, or Sheridan's, or Lamb's from G. F. Train's—

"As Bulwer's or as Thackeray's from Joaquin Miller's,
Or any prosing screed's or rhyming caterpillar's—
Of all the medley memory may nimbly trill,
From Clio's phalanx, life and legend leave us still."

Once more, we cannot think that the beautiful old tale of "Hero and Leander" is aided by such a setting as is given at the hands of Mr. Carl R. Zache (New York: The Author) in verses like these:

"O Hero is not well in this stiff breeze;
She thinks not of her face, her form, her side,
Her ruby lips, 'neath which her teeth parade,
Her eyes' clear lustre of their lashes' shade.
She has ten fevers, all combined in one,
And ten times ten, t' fire her imagination.
Each threatening breaker causes her to run,
Each lull to stop and hope his preservation;
To list for every sound and noise and cry,
And then to swear, 'He is too good to die.'" (P. 40.)

Passing beyond the realm of chromos, crutches, and great names, we find with regret that with one striking exception—to be mentioned presently—the American poetry of the last few months seems to offer but little promise. Several small

volumes possess a certain interest as coming from regions hitherto rather unproductive. A book of verses from Canada, for instance, comes almost as unexpectedly as if from Labrador; and Mr. Nicholas Flood Davis, in his introduction to 'Eos—a Prairie Dream, and Other Poems' (Ottawa, Can.: Citizens' Publishing Co.), explains that this is but a part of a book soon to appear in England. With laudable patriotism, he prefers that the strictly Canadian part should appear on its proper soil; and the verses certainly have merit so far as they go. The same may be said of 'New Poems,' by James Avis Buckley (Charlotteville, Va.: Jeffersonian Printing House) and, to some extent, of the 'Ode to Virginia' by Gilbert R. Frith (Richmond, Va.: West, Johnston & Co.)—the latter being deprived of all aspect of sectionalism by being dedicated in warm and generous terms to the memory of the late Barnas Sears, D.D., General Agent of the Peabody Education Fund, at whose instance it was written. Another volume having a certain topographical interest to eke out any rhythmic deficiencies is 'Rural Lyrics, Elegies, and Other Short Poems,' by the Hon. J. F. Simmons, of Henderson, Ky. (Philadelphia: Lippincott). It is dedicated, with right Southern courtesy, to "Miss Olivia P. Hill, of Memphis, Tenn., a fair bright daughter of the Muses." Still another volume, apparently Southern, is entitled 'Fragments from an Old Inn,' by Lilian Rozell Messenger (New York: Putnams). It is made up of verses and prose fragments, sometimes graceful, oftener crude, and including a poem called "Alabama," which tells us that the author has resided in that State. It is curious to notice that in all these contributions from what some of the writers like to call "the Southland" a certain quality is common—a glowing, effusive, sometimes rather trite effect, suggestive of that old-time type of Southerner who was, as Willis said, incapable of a short word or a mean action.

Local coloring from a different direction may be found in Mrs. Helen H. Rich's 'Dream of the Adirondacks, and Other Poems' (New York: Putnams); and some of this lady's dialect poems and verses on labor questions have a vigor and personal force quite above the commonplace average of such compositions. From the Middle States we have the serenity of Pennsylvania Quaker life represented by David Newport in 'The Pleasures of Home, and Other Poems' (Philadelphia: Lippincott). Mrs. Piatt contributes two very small volumes—one called 'An Irish Garland' (Boston: Houghton, Mifflin & Co.), and the other published conjointly with her husband under the title 'The Children Out-of-Doors, by Two in One House' (Cincinnati: R. Clarke & Co.)—these "two" being explained by the publishers in a circular to be Mr. and Mrs. Piatt. Such an exceedingly thin semblance of anonymousness might naturally suggest something counterfeited in the poems, but there is no such exhibition; both books show genuinely that combination which we have come to associate with these gifted writers—a great love of childhood, and a great power of extracting unhappiness from its contemplation. But the work of Mr. and Mrs. Piatt is never crude, which is a good deal, and is more than can always be said for Mr. James B. Kenyon's 'Songs in All Seasons' (Boston: Cupples, Upham & Co.); for Mr. Herbert Wolcott Bowen's 'Verses' (same publishers); for Mary Barker Dodge's 'The Gray Masque, and Other Poems' (Boston: Lothrop); or for E. Yancey Cohen's 'Sir Cupid, and Other Poems' (Cambridge, Mass.: King). Several of these authors venture on translations, of which Mr. Bowen's are decidedly the best, we should say—indeed, there is a flavor of Heine through his original work—and Mr. Cohen's the worst. It is little less than sheer cruelty to make Chateaubriand in exile address his sister with—

"Sweet sis, dost thou remember?" (P. 82.)

Some of the parodies of hymns in Mr. J. G. Dalton's 'Sixty Poets on the Wheel' (Boston: Hodges) are quite as objectionable, although some of his bicycling lyrics are capital imitations. 'Agamemnon's Daughter,' a poem in four cantos, by Denton J. Snider (Boston: Osgood), does not strike us as being so valuable a fruit of his Greek studies and travels as 'Delphic Days,' which was fresher and less conventional.

But the one recent American volume of poems that yields genuine satisfaction is 'A New Year's Masque, and Other Poems,' by Edith M. Thomas (Boston: Houghton, Mifflin & Co.). Here again we have the element of local interest, for Miss Thomas is understood to have spent her life in Ohio, and her single pen has given to that State, as Miss Murfree has given to Tennessee, the right to claim the production of a classic writer. Miss Thomas's work, both prose and verse, has rapidly made itself known through the magazines to thoughtful readers; and among those of this class who have met with it there is, we believe, no doubt as to its rare quality. It does not yet combine all merits—the rich and mellow human element is still rather wanting in it; but it is unsurpassed in contemporary literature for the fineness of its interpretation of nature, and the delicate subtlety of its imagination. Shelley, Keats, Andrew Marvell pass before us in turn as we gaze on these airy structures, that seem to touch the common earth just at one point, as when a child's glittering soap-bubble drops and floats along the floor. How wholly aerial, for instance, is her "Light Round," and how exquisitely handled is the disappearance of the fairy troop, a thing far more difficult to handle than the process of evoking them. This we forbear to quote, as it has often been reprinted, but give the following, which might have been written by Marvell:

"THE GRASSHOPPER.

"Shuttle of the sunburnt grass,
Fifer in the dun cuirass,
Fifing shrilly in the morn,
Shrilly still at eve unworn;
Now to rear, now in the van,
Gayest of the elfin clan:
Though I watch their rustling flight,
I can never guess aright
Where their lodging-places are;
'Mid some daisy's golden star,
Or beneath a roofing leaf,
Or in fringes of a sheaf,
Tenanted as soon as found!
Loud thy reveille doth sound,
When the earth is laid asleep,
And her dreams are passing deep,
On mid-August afternoons;
And through all the harvest moons,
Nights brimmed up with honeyed peace,
Thy gainsaying doth not cease.
When the frost comes thou art dead;
We along the stubble tread,
On blue, frozen morns, and note
No least murmur is afloat:
Wondrous still our fields are then,
Fifer of the elfin men!" (P. 97.)

Here, again, is something that would not seem out of place had we found it in one of Browning's later volumes:

"THEANO.

"The sacred rites of Eleusis, Demeter's mysteries old,
Hath Alcibiades mocked, profaning with mimicry bold;
Wherefore, ye priests and priestesses, hear what the city commands:
'Spare not, but curse Alcibiades, lifting your reverend hands.'

"Not loath were they of the temples to hear and obey the decree,—
Not loath were they, all save one; fair daughter of Menon was she.
'Obey, if ye will, man's word. By me shall the gods be obeyed.
Lo! I am here, not for cursing: a priestess for prayer was I made!'

"Praise to thee, daughter of Menon, star of Agraulos's fane!
Praise to thee, steadfast Theano! Thy words bright-blazoned remain;
Forgotten are theirs who from altars of wrath their malisons hurled.
So ever: the curse falls void, the prayer wins the heart of the world." (P. 47.)

This might be placed beside Browning's noble "Echetlos," as might another poem, "Lityerses and the Reapers," also in the volume before us (p. 113). There is certainly no American poet under forty who can be said, so truly as Miss Thomas, to represent an indefinite possibility; given life and health, there is no telling what high imaginative work she may not yet produce.

The volumes of poetry that have reached us from England during the last few months offer nothing very noticeable, if we except Lord Tennyson's "Becket" (Macmillan), which has now been before the public for some time without greatly arresting attention, and is to be viewed rather as a vigorous and sometimes rude rendering of English history than as a poem. Even its lyrics lack the exquisite finish which we are accustomed to expect from the laureate. It is a curious proof of the transfer of public interest from the drama to prose fiction that this work, like its predecessor "Queen Mary," has fallen so dead. Had Lord Tennyson written a novel, every reader of the English tongue would have sought it with the greatest eagerness. It is perhaps in recognition of this fact that Lord Lytton tries to make his "Glenaveril, or the Metamorphoses: a Poem in Six Books" (New York: Appleton), seem like a novel, but the attempt is hopeless; if it were a novel, it would be as dull and unreadable as now. The fault of dulness cannot perhaps be charged on Mr. Alfred Austin in his 'At the Gate of the Convent, and Other Poems' (Macmillan)—at least when he tries to avert it by such detestable verses as these, in his "Te Deum":

"Thanks for all things that are—
For the fair, the foul, the fell.
Thanks for the Morning Star,
And the nethermost murk of Hell;

"For the music of moonlight nights,
And the savor of summer days;
For the swoop of carrion kites,
And the stench of gibbeted jays." (P. 94.)

But Mr. Austin rarely gives us any actual poetic quality, except as it was elicited by foreign travel, in some of his earlier volumes.

It is needless to say that we have from England a supply of "ballades" and "virelays" and similar confectionery. This comes partly from the well-known establishment of Mr. Austin Dobson, whose 'At the Sign of the Lyre' (New York: Holt.) it is impossible not to treat good-naturedly, or to care very much about. He disarms criticism, too, by dedicating so many of his verses to American friends. Mr. Andrew Lang's 'Rhymes à la Mode' (London: Kegan Paul, Trench & Co.) have rather more body to them; and the following hit at one of the old tormentors is certainly worth preserving:

"BALLADE OF THE PRIMITIVE JEST.

"'What did the dark-haired Iberian laugh at before the tall blonde Aryan drove him into the corners of Europe?'
—*Brander Matthews.*

"I am an ancient Jest!
Palæolithic man
In his arboreal nest
The sparks of fun would fan;
My outline did he plan,
And laughed like one possessed,
'Twas thus my course began,
I am a Merry Jest.

"I am an early Jest!
Man delved, and built, and span;
Then wandered South and West
The peoples Aryan,
I journeyed in their van;
The Semites, too, confessed—
From Beersheba to Dan—
I am a Merry Jest!

"I am an ancient Jest,
Through all the human clan,
Red, black, white, free, oppressed
Hilarious I ran!
I'm found in Lucian,
In Poggio, and the rest,
I'm dear to Moll and Nan!
I am a Merry Jest!

"ENVOY.

"Prince, you may storm and ban—
Joe Millers *are* a pest,
Suppress me if you can!
I am a Merry Jest!" (P. 113.)

'A Child's Garland of Verses,' by Robert Louis Stevenson (Scribners), is fresh and delightful, and sure not to disappoint the large constituency of children who have enjoyed his 'Treasure Island'; while it has a literary quality that will also hold his elder readers. 'Echoes of Memory,' by Ath-

erton Furlong (London: Field & Tuer), is a quaint volume, with etchings by Tristram J. Ellis; there is some good verse in it and some commonplace, with a good deal of what may be called the romance of domestic antiquity—poems about "The Dear Old Knocker" and "The Old Town Pump." Of much higher aim and execution is 'A Heart's Life, Sarpedon, and Other Poems,' by Ella Sharpe Youngs (London: Kegan Paul). In the poem of "Sarpedon," especially, there is a grasp of passion and power that gives hope for the future career of this new aspirant. Mr. Mark André Raffalovich can hardly be called a new aspirant, so marked was the impression made by his previous volume 'Cyril and Lionel.' His present work, 'Sesame and Lilies' (London: Kegan Paul), seems scarcely an advance upon the earlier one in feeling, though its execution is more even and sustained; for the fleshliness becomes rather cloying, and is not pervaded by an inner fire like Rossetti's. A whole bookful of red mouths and lips hungry for kisses becomes as monotonous as a garden full of peonies; and amid such torrid heats one sighs at last for a hospitable ice-house. Jean Ingelow's new volume of 'Poems' (Boston: Roberts Bros.) does not exactly offer this refuge, but it is refreshingly cool and pure after passion's heats. It certainly does not quite equal in imaginative power some of her earlier work; but it has the merit of a charming prefatory poem by Miss Woolsey ("Susan Coolidge"), which is unsurpassed by anything else that is contained between the covers:

"TO JEAN INGELOW.

"When youth was high, and life was new,
And days sped musical and fleet,
She stood amid the morning dew,
And sang her earliest measures sweet—
Sang as the lark sings, speeding fair
To touch and taste the purer air,
To gain a nearer view of Heaven;
'Twas then she sang 'The Songs of Seven.'

"Now, farther on in womanhood,
With trained voice and ripened art,
She gently stands where once she stood,
And sings from out her deeper heart.
Sing on, dear Singer! sing again;
And we will listen to the strain,
Till soaring earth greets bending Heaven,
And seven-fold songs grow seventy-seven."

THE REVISED OLD TESTAMENT.—II.

WE continue our comparison of the old and the revised versions:

JOB X.

1. My soul is weary of my life; I will leave my complaint upon myself [*I will give free course to my complaint*]; I will speak in the bitterness of my soul.
2. I will say unto God, do not condemn me; shew me wherefore thou contendest with me.
3. *Is it* good unto thee that thou shouldest oppress, that thou shouldest despise the work of thine hands, and shine upon the counsel of the wicked?
4. Hast thou eyes of flesh? or seest thou as man seeth?
5. *Are* thy days as the days of man? *are* [*or*] thy years as man's days?

The new rendering in verse 1 is less literal, but more correct, as well as more intelligible, than that of the Authorized. The original says, "I will let loose my lament within me" (Zöckler correctly compares the use of *'ālai* in Job xxx. 16, Ps. xlii. 6 [5], 12, and Jer. viii. 18), or, possibly, "over myself" (Canon Cook). The free rendering is that of Gesenius and the latest editors of his Lexicon (1883; *s. v. 'āzab*): "freien Lauf lass ich meiner Klage." While so much liberty is exceptionally taken in verse 1, the first eighteen words of verse 3 are left unaltered, to represent eight short words of the original, which would be quite faithfully translated thus: *Is it good to thee to oppress? to spurn the work of thy hands?*

PSALMS X.

1. Why standest thou afar off, O LORD? *why* hidest thou *thyself* in times of trouble?
2. The wicked in *his* pride doth persecute the poor [*In the pride of the wicked the poor is hotly pursued*]: let them be taken in the devices that they have imagined.
3. For the wicked boasteth of his heart's desire, and blesseth the covetous *whom* the LORD abhorreth [*And the covetous renounceth*, yea, *contemneth the* LORD].
4. The wicked, through [*in*] the pride of his countenance, will not seek *after God* [saith, *He will not require it*]. God *is* not in all his thoughts [*All his thoughts are, there is no God*].
5. His ways are always grievous [*firm at all times*]; thy judgments *are* far above, out of his sight: *as for* all his enemies [*adversaries*], he puffeth at them.

In order to explain—to those of our readers who are not familiar with the Hebrew tongue—how verses 3 and 4 could be so differently translated by two sets of thoroughly learned men, equally bent on verbal accuracy, we must state that the Hebrew verb *bērēkh*, which generally signifies *to bless*, has exceptionally the meaning of *to curse* (as the Authorized Version translates it in Job i., 5, ii., 5, 9, and I. Kings xxi., 10, 13; compare *salutem imprecari* and *imprecatio*, or of *to renounce* ("den Abschied geben," Mühlau and Volk's Gesenius); that *dārash* signifies both *to inquire* and *to require;* that the Hebrew text, here unusually obscure, contains various ambiguities, such as we should find in English poetry, in "The wicked boasteth, and the covetous curseth," which, if not explained by the context, would leave it doubtful whether the covetous curses or is cursed by the wicked, or in "The covetous the Lord contemneth," which might be ambiguous in the same way; and that the marginal notes in both versions allude to diverse explanations. Neither of the two renderings of the five verses, however, is even tolerably satisfactory. Finer and more correct on the whole, though not entirely in accord, are, among others, those of De Wette, Sachs (in Zunz's Bible), and Reuss (in his French Bible), and especially the following rendering by Prof. John De Witt—a member of the American Old Testament Revision Company—in his admirable Psalter, entitled 'Praise-Songs of Israel' (New York, 1884):

"Why, O Jehovah! standest thou afar?
Why hidest thou in times of distress?
Through the pride of the wicked
Is the lowly in anguish;
He is caught by the wiles they devised.
The wicked praise God over their soul's greed;
Defrauders bless and despise Jehovah.

"The wicked man saith with a proud face,
'He will not avenge.'
'THERE IS NO GOD' is in all his plans.

"Bold are his ways at all times;
Thy judgments are high away from him;
As for his foes, he puffeth at them all."

PROVERBS X.

1. The proverbs of Solomon. A wise son makes a glad father: but the foolish son *is* the heaviness of his mother.
2. Treasures of wickedness profit nothing: but righteousness delivereth from death.
3. The LORD will not suffer the soul of the righteous to famish: but he casteth [*thrusteth*] away the substance [*desire*] of the wicked.
4. He becometh poor that dealeth *with* a slack hand: but the hand of the diligent maketh rich.
5. He that gathereth in summer *is* a wise son: *but* he that sleepeth in harvest *is* a son that causeth shame.

"The proverbs of Solomon" ought to have been changed into *Proverbs of Solomon*. The Hebrew *Mishlē Sh'lōmōh*, it is true, may, like the Vulgate's "Parabolæ Salomonis," mean the one or the other; but the book of Proverbs has three principal divisions, the first and the second beginning with *Mishlē Sh'lōmōh*, and the third (xxv. 1) with "These are also proverbs of Solomon." It is thus clear that neither division could be headed "*The* proverbs of Solomon," and modern German translators, like De Wette, Arnheim (in Zunz's Bible), and Zöckler (in Lange's), have therefore "Sprüche" [not *Die Sprüche*], in i. 1 as well as here. In verse 3, "thrusteth away" is better than "casteth away." The substitution of "desire" for "substance," in choosing which King James's translators followed the Chaldee version and Aben Ezra, is in accord with the sounder rendering of the Vulgate, adopted by Gesenius, Ewald, Fürst, Bertheau, and recent translators and lexicographers generally.

ISAIAH X.

1. Woe unto them that decree unrighteous decrees, and that write grievousness *which* they have prescribed [*and to the writers that write perverseness*];
2. To turn aside the needy from judgment, and to take away the right from [*of*] the poor of my people, that widows may be their prey [*spoil*], and *that* they may rob the fatherless [*may make the fatherless their prey*]!
3. And what will ye do in the day of visitation, and in the desolation *which* shall come from far? to whom will ye flee for help? and where will ye leave your glory?
4. Without me they shall [*They shall only*] bow down under the prisoners, and they shall [*and shall*] fall under the slain. For all this his anger is not turned away, but his hand *is* stretched out still.
5. O [*Ho*] Assyrian, the rod of mine anger, and the staff in their hand [*the staff in whose hand*] is mine indignation.

Both renderings of the second part of verse 1 are inadequate; that of the Authorized Version may be said to be beneath criticism. The prophet denounces in well-chosen, powerful terms official scribes busily writing out or registering decrees pregnant with iniquity and mischief. (Compare Gesenius, Delitzsch, Nägelsbach, etc.) The Hebrew noun *'āmāl*, rendered by *grievousness* and *perverseness* respectively, is derived from a verb having the various meanings of Lat. *laborare*, and designates *labor, toil, trouble, sorrow, evil, mischief*. It occurs upward of fifty times in the Scriptures; more than twenty times in Ecclesiastes, where both the Authorized Version and the Revised render it uniformly by "labor," excepting that the former has twice "travail," instead. Ten times it is coupled, directly or in parallelism, with *āven;* and it is characteristic of the two versions to see how the two words thus coupled are translated by them respectively. The Authorized Version has (for *āven* and *'āmāl*) "iniquity" and "mischief" (twice), "vanity" and "mischief" (twice), "iniquity" and "perverseness," "iniquity" and "wickedness," "iniquity" and "grievance," "unrighteous[ness]" and "grievousness," "affliction" and "trouble," "sorrow" and "labor"; the Revised has "iniquity" and "mischief" (four times), "iniquity" and "perverseness" (twice), "iniquity" and "trouble," "unrighteous[ness]" and "perverseness," "affliction" and "trouble," "sorrow" and "labor." A close examination and comparison shows that the renderings of the Revised are both more uniform and more correct, without being entirely so; that the Authorized Version's "vanity" in this connection is wholly indefensible; that "unrighteous" in both versions stands quite unnecessarily for "iniquitous"; and that "perverseness," also in both, is very questionable.

In verse 2 "of" is better than "from," and "spoil" than "prey," but "may make . . . their prey" for "may rob," after Cheyne, is no improvement; *may plunder* would be the right expression. Verse 4 is decidedly improved, but, there being no room for an explanation, remains obscure. It is "the answer to the question in *v.* 3. This is the only place where the Jewish nobles can hide their head or deposit their glory" (Cheyne), and that in vain (Knobel). The changes in verse 5 call for no remark.

HOSEA X.

1. Israel is an empty [*a luxuriant*] vine, he bringeth forth fruit unto himself [*which putteth forth his fruit*]: according to the multitude of his fruit he hath increased the altars [*multiplied his altars*]; according to the goodness of his land they have made goodly images [*pillars*].
2. Their heart is divided; now shall they be found faulty [*guilty*]: he shall break down [*smite*] their altars; he shall spoil their images [*pillars*].

3. For now they shall say [*surely now shall they say*], we have no king, because we feared not [*for we fear not*] the LORD; what then should a king do to us? [*and the king, what can he do for us?*]

4. They have spoken words [*They speak vain words*], swearing falsely in making a covenant [*covenants*]: thus [therefore] judgment springeth up as hemlock in the furrows of the field.

5. The inhabitant of Samaria shall fear [*shall be in terror*] because of [*for*] the calves of Bethaven: for the people thereof shall mourn over it, and the priests thereof *that* rejoiced on [*over*] it, for the glory thereof, because it is departed from it.

Here every verse is improved, in accord with the best commentators, though, perhaps, not sufficiently. It is, however, not in renderings of words and phrases frequently occurring in the Scriptures, like almost all those we have hitherto had occasion to examine, that the Revised Version displays marked verbal innovations. This is in the nature of the subject. Expressions often repeated are explained by the context. Most of the Hebrew Bible would be perfectly clear, even without the aid of Jewish tradition, if no other Semitic dialect existed to throw light upon meanings. There are, however, numerous words which occur so rarely, or are so obscurely or so loosely connected, that the light of comparative lexicography is needed to explain them. It is in regard to these that the Revisers have had special advantages over the translators of the beginning of the seventeenth century. Our knowledge of Arabic and Ethiopic is incomparably greater than it was then. The Syriac, Greek, and other old versions have since been studied with greater care. Egyptology and Assyriology have opened new sources of information. Research and minute examination have been constantly going on. The Revisers have examined, collated, and weighed the results of modern and most recent inquiry, and adopted what appeared to them best founded. We cannot assume that the latest view is always correct, but we may assume that the Revisers have not substituted their renderings without more or less cogent reasons—as, for instance, in translating the names of animals contained in Lev. xi. 13-31, where the two versions differ thus:

Authorized Version.	*Revised Version.*
Eagle, ossifrage, ospray.	Eagle, gier eagle, ospray.
Vulture, kite; raven.	Kite, falcon; raven.
Owl, night hawk, cuckoo, hawk.	Ostrich, night hawk, sea mew, hawk.
Little owl, cormorant, great owl.	Little owl, cormorant, great owl.
Swan, pelican, gier eagle.	Horned owl, pelican; vulture.
Stork, heron, lapwing, bat.	Stork, heron, hoopoe, bat.
Weasel, mouse, tortoise.	Weasel, mouse, great lizard.
Ferret, chameleon, lizard, snail, mole.	Gecko, land-crocodile, lizard, sand-lizard, chameleon.

RECENT FRENCH LITERATURE.

THE second volume of Paul Albert's 'Littérature française au dix-neuvième siècle' (Hachette) has at last appeared. Like the first, it is edited by his son, and shows at every page the lack of the final touches of the author, whom it would not be just to judge by his posthumous works, so inferior are they to what he was willing to publish in his lifetime. The present publication was to have been in three volumes; yet, incomplete and fragmentary as it is, it contains the best general view we have of the literature of France in the nineteenth century. This is not saying much, as there is nothing of the kind that is satisfactory, nothing so good as the same writer's lectures on the literature of the eighteenth century, his best work. For Paul Albert, literature was not confined to what is, or rather was, usually studied by literary historians of the school of Nisard or Geruzez. He had, if anything, too much contempt for mere form and fine writing. In a spirit of reaction against his predecessors, he was often unjust to celebrities who, in his opinion, had been overpraised in the current manuals. The Song of Roland, the works of Ronsard and his disciples, even Racine and all the merely literary writers of the eighteenth century, found little favor in his eyes. Severe and even harsh in his judgments on Bossuet, he is in full sympathy with many of the less known authors, especially if they were men of action neglected in previous histories of French literature. Thus, he devotes three of his best lectures to Montluc, Agrippa d'Aubigné, and Bernard Palissy. This explains why the historians Thierry, Guizot, Thiers, Michelet occupy so much space in this second volume—why the philosophers and political writers are not omitted; and we may be sure that, had the author lived, the lion's share in the literature of the nineteenth century would not have been given to the dramatists, novelists, and poets.

A short time before his death Paul Albert had been appointed Professor at the Collège de France. M. Émile Deschanel succeeded him, but cannot be said to have continued his teaching. Light, rambling, always eloquent and never deep, M. Deschanel's qualities, good and bad, show forth in his last work, 'Pascal, La Rochefoucauld, Bossuet' (Calmann Lévy), a collection of his later lectures. It is the fourth volume of the series which, with a love of paradox that is characteristic of the writer, he has entitled 'Le Romantisme des Classiques.' The pages on La Rochefoucauld are among the pleasantest that the author has written, for he is at home in the world in which the great moralist moved. It is with evident pleasure that, with reminiscences of Sainte-Beuve, he traces the four periods of his life as influenced in turn by Mme. de Chevreuse, Mme. de Longueville, Mme. de Sablé, and Mme. de La Fayette. One short lecture is devoted to Pascal; no less than two whole volumes are given to Racine in the same series. The pages on Bossuet are very unsatisfactory. M. Deschanel is more at ease, more in his own element, when he talks of the Précieuses of the Hôtel de Rambouillet, or of the circumstances that brought about the writing of Racine's "Bérénice," than when he tries to judge the author of the 'Histoire universelle.' As to his favorite paradox in regard to traces of what he is pleased to call Romanticism in the classic writers of the seventeenth century, he frequently and fortunately loses sight of it in the present volume.

It would not be difficult to dilute the last book of M. Gaston Paris, 'La Poésie du moyen âge' (Hachette) into three or four readable volumes such as those just noticed. Here we have original research coupled with the highest scholarship, and some of the results of a life of study presented with that charm of style which French scholars so often possess. Part of the work was written nearly twenty years ago, yet it is all as fresh as if written to-day. It consists of four lectures and three papers read before the Academy of Inscriptions and Belles-Lettres. Two of the articles—one on the beginnings of French literature and one on the Song of Roland—were never before published; the others were not easily accessible. The first lecture, which gives its title to the collection, "The Poetry of the Middle Ages," is the best and broadest, as well as the most beautifully written, exposition of a very difficult subject. In this, as well as in the next, on the beginnings of French literature, M. Gaston Paris defends (or rather states and develops as fully as can be done in so limited a space) the theory which assigns a Frankish origin to the old heroic French poetry. He shows the rise of the *poésie courtoise*, born in Provence and developed in northern France, whence it spread to all the courts of Europe. He traces the influence of the Celtic spirit as first shown in the poem of "Tristan and Iseult," later in the Romances of the Round Table. "What the Celtic poem sings is love freed from all bonds, from all constraint, from all duty other than itself—love, fatal, passionate, illegitimate, vanquisher of all, of obstacles, dangers, death, and even honor." Nor has this inspiration ceased to be felt; and love, such as it is understood in the early romances, "has remained since then the favorite and almost sole subject" of all imaginative French literature. The other chapters in the volume are equally interesting and suggestive. They are: The Song of the Pilgrimage of Charlemagne; The Angel and the Hermit, a wide-spread legend known to English readers through Parnell's "Hermit," and the Ancient French Versions of Ovid. The last is a beautiful filial and affectionate yet discriminating tribute to the father of the author, Paulin Paris, who did more than any man in his generation to further the study of French literature in the middle ages.

The literary success of the year in France has been M. Paul Bourget's last psychological novel, 'Cruelle Énigme' (Lemerre; New York: Christern); for Zola's 'Germinal' owes its great sale, in part at least, to causes with which literature has nothing to do. The fine, and even subtile, analysis of M. Bourget does not seem of a kind to appeal to the general public. His 'Essais de Psychologie contemporaine,' of which a new volume is announced to appear shortly, seemed to stamp him as a writer who would be fully enjoyed by a few only; but, in spite of all previsions, his last novel has been widely read. He is one of the youngest of the rising celebrities in France; the French papers tell us he is not thirty, but this is a slight exaggeration. His book is dedicated to Mr. Henry James, with whom he expresses himself as in sympathy. Having discussed together "cet art du roman, le plus moderne de tous," they agreed that all the laws imposed upon the novelist by the various systems of æsthetics are summed up in one—"to give a personal impression of life." This impression, in 'Cruelle Énigme,' is saddening. The story is simple and could be told in a page, but it would give no idea of the book, which leaves us with a feeling of disenchantment. The keynote of the whole is in the final sentence: "Alas! it is a profound truth that man is such as his love is; but this love—why, whence comes it to us? A question without an answer, and, like the treachery of woman, like the weakness of man, like life itself, a cruel, cruel enigma." Not to mislead the reader, it must be added that M. Bourget is a writer who, while remaining always pure in expression, neither seeks nor avoids certain situations common in French novels, but, with the impassive serenity of an observer, looks upon morality as something that may be neglected.

Very different in style and purpose from M. Bourget is another rising novelist, M. Georges Ohnet. He has thought proper to give a collective title to his novels, 'Les Batailles de la Vie.' The immense success of his first and best, 'Serge Panine,' may have contributed to make him careless in the style of his later books, which seem written with the ease of a Dumas or a Boisgobey. His last work is 'La Grande Marnière' (Paul Ollendorf; New York: Christern), of which the scene is laid in Normandy. The story recounts the culmination of a feud between the Marquis de Clairefont, the *grand seigneur* of the neighborhood, and Jean Carvajan, the banker, who has never forgiven the injury received thirty years before when both were young. The situation is similar to that in 'L'Idée de Jean Têterol' of Cherbuliez, but M. Ohnet has not that master's power of creating living men and women, and the characters, like those in his 'Le Maître de Forges,' are conventional and unreal. But his story has life and interest, and there is in it nothing to offend the English reader.

Hetzel, in his excellent "Bibliothèque d'Édu-

cation et de Récréation," has published 'Le Grand Vaincu,' by Henry Cauvin, an historical story founded upon the last campaign of Montcalm in Canada (New York: Christern). Boys and girls and some other readers who have not lost the youthful appetite for adventure, will follow with interest the two young Frenchmen who crossed the ocean to finish a duel begun at Versailles, and who, after much fighting but no duel, return the best of friends. Montcalm and Wolfe are both among the prominent characters, as well as the traditional Indian chief and his friend, the hunter and trapper, a young French Canadian, the hero of the story.

'Solange de Croix-Saint-Luc,' by M. Albert Delpit, recently completed in the *Revue des Deux Mondes*, has been published by Paul Ollendorff. The author of 'Le Fils de Coralie' has made a very readable and interesting story out of the old materials, though with an evident attempt to mould them over into something new and fresh.

The great indiscretion, some say the great scandal, in Paris during the first part of the year was the publication by M. L. Andrieux in his newspaper, *La Ligue*, of his 'Souvenirs d'un Préfet de Police.' We may expect further revelations in regard to the secret service of the French police, as the publishers, Jules Rouff et Cie. (New York: Christern) present these as a first volume. If M. Andrieux is not taken too seriously, his book will be found to be very amusing. He writes in a helter-skelter way, and is never dull. He is rather indiscreet in regard to some of the men now or lately at the head of affairs in France, and this has caused some very lively discussions in the French press. An interesting part of the volume is that which relates to the carrying out of the decrees of March, 1880, directed against the non authorized religious congregations, and especially against the Jesuits. This execution M. Andrieux carried out in his official capacity with rigor and promptness, but since then the ex-prefect of police, the ex-ambassador to Spain, seems to have tried to conciliate the very clerical party which he had so offended. The memoirs touch upon many things: Freemasonry, Rochefort, Louise Michel, anarchism, the *Kulturkampf*, and Gambetta, whom the author cordially hates.

An interesting addition to the "Petite Bibliothèque Artistique" (Jouaust) is the republication in six volumes of the first French translation of 'Don Quixote,' by Oudin and 'Rosset, in 1614 and 1618. The work is preceded by an historical introduction by M. Émile Gebhart.

THE PARSIS.

History of the Parsis, including their manners, customs, religion, and present position. By Dosabbai Framji Karaka, C.S.I. With colored and other illustrations. 2 vols. Macmillan & Co. 1884.

In beauty of outward appearance, in magnificence of type and paper, these volumes, which recite the fortunes of what is now one of the most humble of religions, might well satisfy the most powerful on the earth. The author, Presidency Magistrate, and Chairman of Her Majesty's Bench of Justice, Bombay, has filled many of the highest offices attainable in India by the native population, and visited England more than a quarter of a century ago, at the time of the great Mutiny. During the height of it he wrote a pamphlet which had extensive circulation among the Parsis and Hindus, and in which he urged the superior benefits conferred by English rule. Later, he wrote a history of the Parsis for the instruction of the English world, and in the Gujarati vernacular an account of his travels in Great Britain. His present work is mainly interesting and valuable as the work of a Parsi speaking from within a circle which heretofore has been apprehended almost exclusively from without. It adds little or nothing to our knowledge of the earlier history of the Parsis, their religion, and their sacred books. All that the author has to say upon these heads is less instructive than Professor Whitney's fifty-page article, "The Avesta," in his volume of 'Oriental and Linguistic Studies.' The Parsis of Bombay are indebted to European scholarship for their best knowledge of the historical development of their own religion, and Mr. Karaka frequently resorts to Haug and other European scholars for a better exposition than he is able to give in his own words. It is when he speaks of the present condition of the Parsis, of their various customs, of their enterprise and thrift, of their educational institutions, and their philanthropic zeal, that he speaks as one having authority, and generally in an engaging manner.

His book is one of most effusive loyalty. Englishmen who are in danger of forgetting that they have an Empress-Queen will refresh their memories at the fountain of Mr. Karaka's exuberant adulation of her imperial person. The book is dedicated to the Prince of Wales as an account of "a community that claims to be the most loyal among the many millions of Eastern subjects who recognize the beneficent sway of the British Crown," "in commemoration of his auspicious visit to India." This note recurs at intervals not widely separate, and, in the closing paragraph of the book, rings out with special energy. The Parsis' brighter and better days are dated from the advent of British Power in 1668:

"Upon that Power they depend and implicitly rely. . . . To it they owe everything, and from it they hope to gain still more. Can it then be wondered at that loyalty—consistent, deep, and abiding loyalty—coupled with a touching reverence and affection for the royal family, has become a part of the Parsi nature, almost a part of the Parsi religion? so that with one consent the whole community daily prays, 'God bless the Queen!'"

There is a suggestion of the "thrift that follows fawning" in this sort of thing, and possibly the book is typical in this respect. That the Parsis have not been persecuted in India is a fact illustrative of the beatitude, "The meek shall inherit the earth." Mr. Karaka frankly acknowledges that they originally established themselves by dissembling their true faith, and by conforming, to the verge of its allowance and sometimes beyond, to the customs of the Hindu population.

The book begins with the amusing statement, which is one of many that betray a lack of training in the art of clear expression: "The Parsis are probably the smallest community in the whole world, for they number scarcely one hundred thousand." About 8,000 of these are in Persia. In India, on the night of February 17, 1881, there were 85,397. Our author is delighted with their numerical insignificance as compared with the total population of India, 253,891,821. Even in Bombay—the Presidency—there is only one Parsi in two hundred persons; and in the city of Bombay there are only 48,000 to 502,000 Hindus and 158,000 Mussulmans. The census of 1881 showed that the Parsi population was increasing. There are more males than females: the proportion is 108 to 100. The statistics of the different occupations and professions are interesting and instructive. They have 855 priests and other religious officials to their 48,000 in Bombay; 141 male teachers out of 951, and 44 female out of 165; 33 civil engineers in a total of 84; 26 ship-builders out of 46; 1,384 ordinary clerks, and 115 business managers; 6 mendicants out of 10,000 in the city! The ancient Persians were famous agriculturists and soldiers. The modern Parsis are remarkable for their disinclination to both agriculture and war. This their historian regrets. There are signs of improvement in respect to agriculture, but the census of 1881 did not show a single Parsi soldier. That their veneration for fire prevents their using firearms is, we are told, absurd, though it prevents their smoking opium or tobacco. They are not soldiers because soldiering doesn't pay. "The poorest Parsi woman would want at least two silk *saris* a year, costing at least ten rupees each, besides trousers, shirt, shoes, etc., with proper covering for the children. How can a Parsi, then, become a soldier on seven rupees a month?" In this connection we have one of the most naïve of Mr. Karaka's remarks: "If, however, a few Parsis could be induced to take service as soldiers, however poor the remuneration might be, a bright future would after a time open out for them. They would have the opportunity of proving what good soldiers they could make."

The Parsis of India are divided into two sects, which do not differ on any point of faith or ritual, but only as to the correct computation of the era of the third Yezdegerd, the last king of the Sassanian dynasty. Mr. Karaka's impression is that the Kadenis and Shehenshais are both wrong. Both sects observe the same festivals—in which the Parsi year is rich—but on different days. Both use the same prayers, but date them audibly in a different manner. Every day in the Parsi month has a peculiar name, and is supposed to have a peculiar fitness for one thing or another. But this fitness is observed no longer, and the circumstance is viewed by Mr. Karaka without regret. In general, he is pleased with the increasing aptitude of the Parsis for European modes of life. Their way of eating has certainly been improved by the substitution of plates for plaintain leaves and forks for fingers.

The "Historical Sketch," which constitutes the first chapter of the book, is extremely slight. For the history of ancient Persia we are referred to Sir John Malcolm and to Gibbon. When the Persian monarchy fell in 641 A. D., before the Mohammedan invaders, almost the entire population embraced the religion whose alternative was death. Mr. Karaka, generally so gracious and conciliatory, makes an exception whenever the Mohammedans are named. For them he has a hearty hatred and contempt. A few who would not yield, but did not choose to die, fled to Khorassan; thence, escaping persecution, to the little island of Ormus at the entrance of the Persian Gulf, and thence to India, about 716 A. D. Here also they had various wanderings, concentrating in Surat more strongly than elsewhere, and from there emigrating midway of the seventeenth century to Bombay, where they have lived and flourished ever since. Chapter second, treating of the Parsis that remained in Persia, is one of the most interesting in the book. The Persian Parsis are confined to Yezd and the surrounding villages. In 1854 there were less than 8,000. They are much inferior in thrift, intelligence, and knowledge of their own religion to the Indian Parsis. The interest which these have taken in their welfare is exceedingly pathetic. Owing to their exertions the oppressive taxes of their Persian coreligionists have been equalized with those of the Mohammedans. "The Persian Zoroastrian Amelioration Fund" carried on this noble work for a quarter of a century—from 1857 to 1882—when the desired result was finally achieved.

Chapters third and fourth have for their subject "The Zoroastrians in India—their Manners and Customs." The women have much larger social liberty than their Hindu neighbors. They are extremely fond of dress and jewelry. There are Parsi women whose jewelry is worth £20,000. The ceremonies attendant on the birth

of a Parsi child are so multiform, and the custom of seclusion that follows childbirth is so dangerous to both mother and child, that it is passing strange that they so frequently survive. Parsi marriages are seldom consummated at such a tender age as those of Hindu children, but betrothals are arranged for children still in arms and sometimes for the yet unborn. The "dokhmas," or "towers of silence," in which the bodies of the dead are exposed, are carefully described, and there are illustrative diagrams which are a valuable addition to the text. Their appearance is that of the large circular gasometers attached to gas-works. Mr. Karaka is able to quote Professor Monier Williams as an authority in favor of the Parsi method of disposing of the dead body as compared with ours. He would prefer cremation but for his religious scruples. He makes the astonishing statement that the bodies in the "dokhmas" are denuded of their flesh by the vultures "in an hour at the outside." The skeletons, when bleached by sun and wind and rain, are thrown into a receptacle in the middle of the "dokhma," without distinction between rich and poor.

A chapter treating of "Internal Government and Laws" is mainly interesting as showing that the Parsis have had their "benefit of clergy" in conflict with the principles of secular justice, and finally going under. The concluding chapter of the first volume is wholly taken up with an account of Parsi education. A great improvement dates from the Governorship of the Hon. Mount-Stuart Elphinstone in 1820. The establishment of the Bombay Native Education Society was his work, and after his retirement a college was founded which is honored by and is an honor to his name. The wealthier Parsis were at first reluctant to send their children to the college and to the schools of lower grade that were also established, but they were soon convinced that it was for their advantage to avail themselves of the privileges offered them. An accompaniment of the educational progress has been the translation into the vernacular language of valuable European and Asiatic books. The principal name associated with this fund is one that is better known in Europe and America than that of any other Parsi, Sir Jamshedji Jijibhai, whose munificence in this particular was but an humble fraction of a charity that was of boundless range and uniform wisdom.

The first and second chapters of Mr. Karaka's second volume, which treat respectively of the "Distinguished Parsis of Gujarat" and the "Distinguished Parsis of Bombay," savor too much of a quality preëminently characteristic of those county histories which are so wasteful of the poor man's earnings in the United States; but they record some wonderful successes and some noble actions. The Readymoney family bears in its name, deliberately too, the sign of its abounding affluence. The story of Sir Jamshedji Jijibhai's life and his beneficence is told with special fulness, as it deserves to be, for he is one of the world's great philanthropists. The chapters on "Zoroaster" and "The Parsi Creed" add nothing to the knowledge of these matters that we have derived from other sources. The chapter on "Monotheism and Fire Reverence" is an indignant denial of the charge that Parsis are fire-worshippers. A closing chapter on the "Progress and Present Position" of the Parsis is an enthusiastic résumé of the preceding chapters. It has the vice of these—their lack of self-restraint, their too flowing admiration, their disposition to magnify the Parsi community unduly in the eyes of Western people. A more critical observer might give a somewhat different impression; but it would still be plain enough that we have here the survival of a great people and a great religion, and that it has vitality which will insure it many future centuries of honor and success.

A Migration Legend of the Creek Indians, with a linguistic, historic, and ethnographic Introduction. By Albert S. Gatschet, of the United States Bureau of Ethnology. Vol. I, No. 1V of Brinton's Library of American Literature. Philadelphia: 1884. 8vo, pp. 251.

THE legend which gives its name to Mr. Gatschet's book occupies but a small part—less than twenty pages—of the present volume, all the rest being taken up with an investigation into the manners and customs, languages, forms of government, local habitations, etc., of our southern Indians. To prepare a work of this character in a thoroughly satisfactory manner not only requires great familiarity with the early writers, but presupposes a knowledge, more or less complete, of the languages of the tribes with which it deals. In both of these branches Mr. Gatschet is proficient, and accordingly he has collected and brought within easy reach a mass of ethnological information which is invaluable to all students who have not access to the same sources from which he has drawn his inspiration.

While thus acknowledging our obligations, we may be pardoned the fear lest our author's devotion to one branch of study may have been so absorbing as to blind him, somewhat, to facts and inferences that may be gathered from other sources. For instance, basing his conclusions upon linguistic grounds, he tells us (p. 23) that the river "Savannah was named after the prairies extending on both sides," and that this term, or its French equivalent, *savane*, "has nothing at all in common with the Algonkin word shawano, *south*, from which are derived the tribal names . . . Shawano or Shawnee." These statements may be true, but with all due deference we question it, for the reason that, strictly speaking, there were no "prairies" along this stream, though swamps and "openings," called by some of the early writers "Savannas," were more or less common near its mouth and, perhaps, in other portions of the wooded valley through which it flowed; and because, further, it would have been more in accordance with the usual custom for the river to take its name from the tribe of Indians that dwelt upon its banks. Whether this tribe was the same as the Chaouanons of the French, or, as we call them, the Shawnees, is an open question. Lawson is generally understood as saying that they were not, though it seems to us that his language may bear a different construction. Gallatin, too, inclines to the same opinion, and thinks that the Savannahs, or, as Archdale calls them, the Serannas, were identical with the Yemassees. On the other hand, Charlevoix tells us that the river "St. Croix or Ediscow," which in Homanno's map is put down as the Savannah, was sometimes called "the river of the Chaouanons," and there can be no doubt that in some of the early French charts, as, for example, in that of Guillaume de l'Isle, it is so styled, and this people is set down as living upon its head waters. We may also add that Adair says positively that it was so called "because of the Shawano who formerly lived there," "at the late Savanna town"; and this statement, except so far as it relates to their place of residence, is confirmed by Milfort. Indeed, this latter writer, as if to leave no doubt as to the identity of the tribe, tells us that "a part of the Savanhaugay" left the headwaters of the "Savanha," and "retired toward the north, to the banks of the Ohio, near Quintockey," as the Shawnees are known to have done; while "another portion betook themselves to the country of the Creeks, who gave them homes on the Tallapousse," where they were living in Hawkins' time, and were known as Shawanee, or, as our author prefers to call them "*Sawanogi*," which, he tells us, means "dwellers on the Savannah River," and is identical with Shawanos or Shawnee.

This is but a part of the evidence that might be brought forward to show that this people lived somewhere on the Savannah River in the beginning of the eighteenth century, and there are reasons for believing that they made their first appearance here at a much earlier date. Be this as it may, we do not pretend that the fact alone would be sufficient to identify them with the Serannas of Archdale; and if it were, it would not justify us in assuming that this river could not have received its name in some other way than in the one we have indicated. What we do assert, however, is that the presence of this tribe on this stream is sufficient to account for the origin of the name; and we maintain, further, that the historical evidence of their existence here, at this early day, is of such a character as to make it imperative, on any one who rejects it, to give the reasons for so doing.

In regard to the orthography which our author has seen fit to adopt, there is not much to be said. Admitting that there are sounds in the Indian languages for which no adequate sign can be found in the English alphabet, a change, or rather an addition, can of course be justified; but when we are asked to endorse such wholesale changes as the substitution of the French *i* for the English *ee*, at the end of words as firmly rooted in the language as are Cherokee and others of a like character, we unhesitatingly draw the line. The difference in pronunciation is not so great as to warrant the introduction of another disturbing element into what has been, not inaptly, termed "the tangle of diverse values and meanings which has grown up around the Roman characters"; and if it were, there is nothing to be gained in this particular case by the change, since both Cheroki and Cherokee are said to be incorrect. Tsallagi, according to our author, or Tsallakie, as Gallatin writes it, is the true form; and, obviously, one or the other of these ought to be adopted in case any change should be deemed necessary. Of this, however, we do not entertain any apprehensions. Words, or rather proper names, which have become part and parcel of our mother tongue, and which long and constant use have made familiar to the eye, do not readily take on new forms; and we are persuaded that any effort at this late day to Gallicize them will result, as did Mrs. Partington's attempt to mop out the tide, in signal failure.

The map which was to have accompanied the present volume, and without which much of it is lost to the general reader, will, we are told, be given in the next; and the legend, too, will then appear in a Hitchittee dress, with notes and a vocabulary. We are also informed that the version here given is to be republished, its present form being more or less imperfect, owing to the fact that Mr. Gatschet was unavoidably absent when the work was going through the press, and could not give to the proofs that careful personal supervision which the subject required. Until this is done, all comments upon the legend itself or its translation into other languages would, of course, be premature.

Three Months in the Soudan. By Ernestine Sartorius. London: Kegan Paul, Trench & Co. 1885. Pp. x, 259. Illustrated. 8vo.

MRS. SARTORIUS landed at Suakim on the 8th of December, 1883. She accompanied her husband, Maj. Gen. Sartorius Pasha, commander of the First Division of the Egyptian army sent out under Baker Pasha to relieve the garrisons in the Sudan. The place at this time was closely invested by Osman Digma, and consequently her

experiences are confined wholly to life within the lines. These, however, were not uninteresting, and are pleasantly told, with no little picturesqueness. While her husband drilled his soldiers she undertook the scarcely less difficult task of providing for a large mess of Europeans—officers, correspondents, and civilians of one kind and another. The most exciting events of the days or nights were the attacks of the besieging Arabs, none of which proved serious, though the cowardice of the Egyptians might have made them disastrous at any time. The night before they landed, for instance, there was an alarm, and "the soldiers left the gates, bolted into the muderieh or Government house, and hid themselves under the tables and divans." In addition to these constant alarms, excitement was furnished by the coming and going of steamers, but especially by the arrival of messengers with reiterated despairing appeals for aid from the brave Tewfik Pasha, commander of the garrison at Sinkat. Several of his letters written in French are given, as well as the translation of one sent by Osman Digma to the commander of the garrison at Tokar. Our author's stay in Suakim came to an end with the destruction of Baker Pasha's army at Trinkitat on the 4th of February, 1884. With half-trained, unwilling, and insubordinate soldiers, who could not be taught to take aim, but invariably fired in the air and so rapidly as to get rid "of their hundred rounds in less than fifteen minutes," this result was inevitable. Their excessive cowardice, according to Mrs. Sartorius, was, owing in great part to their conviction that Osman Digma had power to render his men invulnerable. The book has evidently been hastily written, and several errors which we have noted tend to shake one's confidence in the writer's entire trustworthiness in the recital of facts. The illustrations are from photographs taken by a German who was killed at Trinkitat.

First Middle English Primer. Extracts from the Ancren Riwle and Ormulum, with Grammar and Glossary. By Henry Sweet, M.A. Oxford: At the Clarendon Press. 1884.

THIS little volume of less than 100 pages is intended as an introduction to the study of English of the early *thirteenth* century in the Southern and in the East Midland dialects, the former being represented by the 'Ancren Riwle' and the latter by the 'Ormulum.' This period has been called Early Middle English by Doctor Murray, in his new English Dictionary, and simply Early English by Professor Skeat, in his Introduction to Morris and Skeat's 'Specimens of Early English,' Part I; but until there is some common agreement among scholars as to the designation of the periods of English, First Middle English will answer as well as any other title. A brief grammar of eighteen pages is prefixed to the twenty-three pages of extracts from the 'Ancren Riwle'; and a still briefer one of four pages to the thirty-two pages of extracts from the 'Ormulum.' Most persons will, however, agree with Mr. Sweet (p. v) that it is "a great mistake to begin the study of Middle English without a previous elementary knowledge of Old English"—that is, Anglo-Saxon. After such knowledge is acquired, this little book may be very useful to the student of English, yet he will perhaps then think it rather too meagre to suit his requirements, and will prefer Morris and Skeat's 'Specimens of Early English,' or Maetzner's 'Altenglische Sprachproben,' which, although without grammar, still remains the best collection of extracts that we possess. Mr. Sweet has arranged his grammar of the southern dialect on the same lines as that in his 'Anglo-Saxon Reader,' and has paid special attention to the phonology. It may, however, cause some inconvenience to students that the same symbols are used in this Primer to denote different sounds from those in the 'Reader.' The careful marking of the quantity of all vowels, although "only tentative," will be approved by all scholars. While we can hardly agree with Mr. Sweet's sweeping statement (p. vi) that without the 'Ancren Riwle' "the history of English prose from the close of the Old English period down to the beginning of the seventeenth [?] century would be little more than a dreary blank," we can heartily thank him for his praiseworthy effort to make a knowledge of it a more common possession, and thus aiding the historical study of English.

Ecclesiological Notes on Some of the Islands of Scotland. By T. S. Muir. Edinburgh: David Douglas. 1885.

MR. MUIR'S handsomely printed volume is not all ecclesiological notes. It is an epistolary diary of excursions extending over a score of years, the first eighty pages of which are boiled down into "General Notes," while in the remaining three-quarters of the book the reader is left to do the boiling down for himself. Mr. Muir is apparently the best-natured of travellers, or of antiquaries, and his itinerary is of a kind that looks garrulous in print. The ecclesiology is mainly descriptions of a great many rudely carved stone crosses—showing the characteristic Scotch form and the Celtic tendency to interlaced ornament—and such damaged remains of rude stone chapels and oratories as are to be found among the Orkney and Shetland and other still more remote and unfriended islands which fringe the shore of Scotland. The antiquarian eye will catch a glimpse here and there of a slender, tapering tower, rudely imitating those of the Irish churches which have been so long a puzzle, or of a rough, hut-like oratory, domed or wagon-vaulted in layers, after the fashion that is the archetype of Roslyn Chapel, but is the natural type of primitive stone construction everywhere. Mr. Muir writes like a close observer, apparently accurate, and with no bees in his bonnet. His book is generously illustrated with pen drawings neat enough, which would have been better diagrams if there had been no effort to combine picturesqueness with instruction.

BOOKS OF THE WEEK.

Beaconsfield, Earl of. Home Letters. Written in 1830-31. Illustrated. Harper's Handy Series. 25 cents.
Betwixt My Love and Me. A Novel. Harper's Franklin Square Library. 15 cents.
Bliss, E. F. Diary of David Zeisberger, a Moravian Missionary among the Indians of Ohio. 2 vols. Translated from the original German manuscript. Cincinnati: Robert Clarke & Co. $6.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Volume Two of McMaster's 'History of the United States.'

A History of the People of the United States,

FROM THE REVOLUTION TO THE CIVIL WAR. By JOHN BACH MCMASTER. *Volume Two.* 8vo, 676 pages, cloth, gilt top. Price, $2.50.

The second volume of McMaster's 'History of the People of the United States' extends from 1790 to 1804, including the greater part of the Administration of Washington, all of that of Adams, and the first term of Jefferson. It will be found to be a singularly vivid and stirring picture of the period, throwing not a little new light on many political questions, and affording an insight into the manners and social condition of the people not elsewhere to be found; while some of its portraits of leading men are likely to provoke considerable discussion.

II.

Selections from the Prose Writings of Jonathan Swift.

With Preface and Notes by STANLEY LANE-POOLE. "Parchment Series." With Portrait. 16mo, antique, gilt top. Price, $1.25.

"Selections have their justification. They serve a double object —to introduce and to remind. They provide the unadventurous reader with the easiest way to learn a little of an author he feels he ought to know; and they recall the fruits of fuller study to the memories of those who have passed on to other fields."—*From the Preface.*

III.

The Common Sense of the Exact Sciences.

By the late WILLIAM KINGDON CLIFFORD. Volume Fifty of the "International Scientific Series." 12mo, cloth. Price, $1.50.

"My sole desire has been to give to the public, as soon as possible, another work of one whose memory will be revered by all who have felt the invigorating influence of his thoughts. Completed by another hand, we can only hope that it will perform some, if but a small part, of the service which it would undoubtedly have fulfilled had the master lived to put it forth."—*From Editor's Preface.*

IV.

Colonel Enderby's Wife.

A NOVEL. By LUCAS MALET, author of 'Mrs. Lorimer: A Sketch.' 12mo, paper. Price, 50 cents. Authorized edition.

"There is another novelist coming forward who, if we do not misread 'Colonel Enderby's Wife,' will speedily be recognized as belonging to the front rank in literature."—*The Spectator.*

V.

Part Three of Owen Meredith's New Poem.

Glenaveril; or, The Metamorphoses.

By LORD LYTTON (OWEN MEREDITH, author of 'Lucile'). To be published in Six Monthly Parts. Part Three. 12mo, paper. Price, 25 cents.

The third part of "Glenaveril" is of thrilling interest. As a romance in verse "Glenaveril" is destined to take very high rank.

VI.

New cheap edition of 'Uncle Remus.'

Uncle Remus:

HIS SONGS AND HIS SAYINGS. The Folk-Lore of the Old Plantation. By JOEL CHANDLER HARRIS. Illustrated. *New cheap edition,* paper cover. Price, 50 cents.

A cheap edition of the famous, bright, and shrewd sayings of Uncle Remus will undoubtedly introduce this admirable type of the old Southern negro to a large number of new readers.

For sale by all booksellers; or any work will be sent by mail, post-paid, on receipt of price.

LIFE AND LETTERS OF BARONESS BUNSEN. Portraits. Two vols. $5.
The same, two volumes in one, $3.

Of 'Walks in London' *Scribner's Monthly* said: ". . . To follow Mr. Hare's book is walking the streets of London with a well-mannered, refined, and eminently well-informed Englishman, who knows just what you would wish to see."

'Appleton's Cyclopædia' says of 'Walks in Rome': "Not only exhaustive in regard to the geography, but the history, incidents, and legends of Rome, and is the best and only complete guide to all its places of interest and attraction. This is high praise, but it is deserved, and is corroborated by all who have had occasion to use the work."

Of 'Studies in Russia' Scribner's *Book Buyer* says: "A work of permanent value. . . . Books such as these are not common. The illustrations are admirable."

The *London Spectator* says of 'Wanderings in Spain': "The ideal book of travel in Spain; it exactly anticipates the requirements of everybody going to that enchanted land, and ably consoles those who are not so happy by supplying the imagination from the daintiest and most delicious of its stories."

Respecting 'Florence' and 'Venice,' the N. Y. *Nation* says: "Include all of note that a man of taste would need to know in regard to the historic and artistic treasures of these cities."

'Cities of Northern and Central Italy' notice in Boston *Traveller:* "By all odds it is the most complete, elegant, and interesting work designed for the use of sojourners and tourists in the most visited parts of Italy."

The Nation.

NEW YORK, THURSDAY, JUNE 25, 1885.

The Week.

THE report on the *Dolphin* raises the curious question, What is "Bill" Chandler's "fate" which he staked the other day in New Hampshire on her soundness and efficiency? What will his fate be now that it is shown that the vessel is not what he said he thought she was? What is the ordinary fate of a man like Chandler, when his politics have been confounded and his knavish tricks frustrated, as the English National Anthem says? When he stakes his fate what does he risk if he loses, and what does he gain if he wins?

There is in this *Dolphin* report and in Mr. Roach's explanation of his work a first-rate Democratic campaign document, which would be of great service in this State this year. The full report should be laid before the people as a description of the kind of vessel which a Republican Administration regarded as belonging to the "best type." Mr. Roach admits that the *Dolphin*, as it sits now in dry dock, was the kind of a vessel he had in mind when he put in his bid. He apparently does not see that he was guilty of any wrong in trying to pass off that kind of work upon the Government as first-class. He says his bid was low, and the inspectors thought his work was good enough, and the men whom Mr. Whitney has sent to spy out the flaws have no legal right to interfere between him and the Government. He even thinks of calling the attention of the President to the fact that there is no law authorizing their appointment. Their competency to judge of his work and the truth of their report he very wisely refrains from questioning. "I have done all that could be expected of me," he says, and perhaps he has. He was expected to build a vessel to be used, like the dear old *Tallapoosa*, as a ship for Secretaries of the Navy like "Bill" Chandler to cruise about in, arrange "deals" and "dickers" in, and furnish a basis for periodic "repairs," and with those ends in view he builded well. The "Social Hall" obstructs the gun, but it is a fine place for a political conference or a jolly good time. The whole vessel is full of defects, but so much the better for "repairs."

The importers who are protesting against Secretary Manning's efforts to have the customs laws enforced are getting themselves into a curious position. The Treasury Department has no alternative but to carry out the laws which Congress enacts to govern the collection of duties; it has no right to decide whether those laws are oppressive or obsolete or impracticable. Many of the importers appear to have the idea that if they do not like the working of a law, they have only to petition the Secretary, and he will modify it to suit their desires. The practice in the Appraiser's and General Appraiser's offices during the past fifteen years or more has had a great deal to do with disseminating this erroneous notion. Nobody in either of these offices, except a few conscientious examiners, took the view that so long as the law stood on the statute books it must be obeyed. Mr. Manning and Mr. Fairchild insist that this view must prevail now in all branches of the service, and the importers who are protesting are cutting a very queer figure. Their protests should be addressed to Congress, which alone has power to heed them. Whether the regulations about appraisements are too strict or not, we do not pretend to decide, but that their modification and systematic violation by officials in the Appraiser's and General Appraiser's departments has been in the interest of fraud upon the Government, cannot be questioned. It is very important that this fraud be stopped, and if honest merchants suffer by too high appraisements because of the strict enforcement of the law, they should console themselves with the knowledge that dishonest importers are forced to pay full duties for the first time in many years, and should wait patiently for redress of their grievances till the next Congress meets.

There are ten Irish girls under detention at Castle Garden because they came here under a contract to work for somebody who advanced their passage money. This proceeding takes place under the act of Congress of last session which makes bringing laborers here under contract a penal offence. It is undoubtedly a strange law for a civilized people which owes a large part of its greatness to immigration, to adopt, but it is not a whit more objectionable in principle than the protective tariff. In fact, it is a proper supplement to the tariff, which does everything for the protection of manufacturers, and nothing for the protection of laborers. For the latter there is only one effective mode of protection, and that is the exclusion of all foreign laborers. Congress has only provided for their partial exclusion, but so far so good. As to the poor Irish girls, it is more ridiculous on its face to exclude them than to exclude the products of their labor, from the market here, but it is no more unjust or unchristian. If they had instead of coming over here sent over stockings they had knitted, or flannel they had woven, the person who bought the goods would have been fined 50 or 60 per cent. on the value. Why then should the man who has brought the girls themselves not be fined $1,000 and the girls be declared forfeited to the Government, and be disposed of by being sent back to their own unhappy island?

A member of the President's Cabinet is credited with the entirely probable statement that had not the Administration been inflexible in its adherence to the Civil-Service Law, the country would have been in danger of a revolution within six weeks after March 4. "The country and the Democratic party," he added, "owe a deep debt of gratitude to President Cleveland for the firmness with which he has adhered to his engagement in regard to the public service. I can say that he has been the master of us all in this matter; and I will add that while I believed in civil-service reform before, I never saw the absolute necessity of it for the safety of the country, for its peaceful and orderly continuance, as I have learned to see it since I have been a Cabinet officer. The country has become too great and populous for a continuance of the spoils system. It would breed revolution." Nobody can doubt the truth of this. It is gradually becoming manifest to the Democratic party that the President's course is not only wise and honest, but the best one from a political point of view. Even the Vice-President himself has begun to comprehend this, for he has stopped talking politics for the first time since the election.

The Boston *Herald* has done a very cruel thing to the Democrats of Massachusetts, some of whom are grumbling about the extreme reform policy of the national Administration. It republishes extracts from their platform, adopted three years ago, containing such declarations as this:

> "Fifth—A thorough reform of the civil service. The use of the Federal patronage to reward personal friends or party favorites and punish personal or political enemies, in payment for the rendering of partisan or personal services, or in punishment for failure or refusal to render such services, is one of the most debauching influences of the period.
>
> "Sixth—Fitness, not favor, should be the passport to the public service. There should be no removals of public employees before the expiration of their terms of service except for cause. We favor the principles of the Pendleton bill in regard to appointments in the civil service, and the Willis bill in regard to the assessment of Federal office-holders."

The Democratic platforms, State and national, were for many years honored by declarations of that kind, and the President is obeying them to the letter. It is going to be extremely awkward for his party to upbraid him for keeping both its pledges and his personal ones as well, and we have no idea that any member of the party will have the courage to do so publicly. Every man of them who takes the stump this year will on the contrary point with pride to the President's course, and hold it up as the chief reason for giving his party support—and with sound judgment, for that course will bring more votes to the party than it has enjoyed for a quarter of a century.

No witness as to the effect of a Democratic Administration upon the condition of the negroes in the South could be summoned whose testimony ought to have more weight with Northern Republicans than that of John R. Lynch, the temporary Chairman of the last Republican National Convention. Mr. Lynch is a colored man and a strong Republican, who on general principles is disposed to "view with alarm" the course of the Democrats, and who should be prompt to discern the first sign of special danger to his race. Mr. Lynch commends very highly the President's action in revoking the appointment of Meade, the Copiah County (Miss.) ruffian, and says that

many of the white Bourbons in the South are disappointed at the President's policy of moderation. As for the blacks, he says: "There was some apprehension on the part of the colored people in consequence of Democratic ascendancy, but that has been entirely allayed." In other words, for the first time since they were emancipated, the negroes now feel assured that their future is as safe with one party in power as with the other. No sign could be more fruitful of promise for both races.

Bloody-shirt organs cannot afford to be squeamish, and in justice it must be said that they seldom are. The Cleveland *Leader*, however, confesses that it is ashamed of its Mississippi Republican ally, James R. Chalmers, whom it calls "the unhung fiend who massacred Union prisoners." But when it says that "he cannot and would not be received into our party," and that he "failed" in his effort to get back into Congress by way of the Republican party after the Democrats had dropped him, it shows the grossest ignorance of recent political history. In 1880 Chalmers ran as the Democratic candidate for Congress in his district against Lynch, the colored Republican, and was elected. In 1882 the Democrats refused to renominate him, and he promptly made terms with the Republican Administration at Washington for its support as the opposition candidate, and with its help he was elected. If the *Leader* will turn to page 130 of the latest 'Handbook of Politics,' compiled by that eminent Republican statistician, Edward McPherson, it will find the name of Chalmers recorded among the Republican members of the Forty-eighth Congress; and if it will refer to page 232 of the *American Almanac* for 1885, it will see that Chalmers was again the Republican candidate for Congress last fall, receiving almost all the opposition votes, though fortunately not enough to elect him this time. Indeed, if any man in Mississippi to-day is entitled to be considered a Republican in good and regular standing, it is "the hero of the Fort Pillow massacre."

Mr. Dorman B. Eaton's article in the *North American Review* for July, upon "Two Years of Civil-Service Reform," presents facts and figures which clearly demonstrate the successful operation of the merit system. The classified service, to which competitive examinations apply, includes 5,650 places in the Washington departments, 5,600 in the postal service, comprising almost half of all the postal clerks and carriers in the Union, and 2,600 in the customs service, or five-sevenths of all the customs officials. The experiment was thus broad enough to make the test complete, but not so broad as to make a thorough supervision impossible. Since July 16, 1883, when the new system went into operation, more than 11,000 persons have been examined at 225 separate examinations in all parts of the Union, and from those graded highest nearly 2,600 have been appointed, in all cases originally for a probationary period of six months. The success of this method in securing good officials is shown by the fact that the proportion of probationary appointees who failed to win permanent places was so low as 2 out of 109 in the Washington departments, while of more than 500 persons appointed there under the rules, only three were removed in a whole year. The theory that competitive examinations would result in filling the service with gay young college graduates is conclusively disproved, by the facts that the average age of all the applicants was thirty years, and that of 5,556 as to whom the record is complete, 3,920 received their only education in the common schools, while but 449, or less than one in twelve, had ever been to college. The perfect fairness of the system is shown by the discovery that the successful contestants have been about equally divided between the great parties, which is exactly what would happen in the filling of similar places by men engaged in private business. In short, all the objections of the spoilsmen have been overthrown by the one unfailing test of experience, and Mr. Eaton is justified in his conclusion that "the new system is permanently established." He bears hearty testimony, which is worthy of especial weight as coming from an old Republican, to the fact that "the Democratic leaders have the wisdom and patriotism to carry forward the reform policy," and entertains no doubt that, if there is a conflict in the party over the Administration's policy, it will end in "a victory for the people standing for principle over the politicians grasping for spoils."

The report that Blaine and Logan were to take the stump for Foraker in Ohio is pronounced by the Cincinnati *Commercial Gazette* "at least premature." The same authority doubts if Mr. Blaine's participation in the campaign will be anything more than an informal speech in commendation of the Republican ticket. At the same time it declares that the "spirit of the Blaine campaign in Ohio" was in the Convention which nominated Foraker, and we think it is right. The method of nomination was a precise imitation of the memorable Blaine nomination at Chicago. It was secured in advance by the same Machine methods, and then put through with similar "outbursts of enthusiasm," yelling, brass-band music, and flag-waving. The platform, as we have already pointed out, is the Chicago one warmed over. The reception of the Convention's work by the State is also much like that which the country gave to Blaine's nomination. There is something very like a "sickening thud" audible, accompanied with renewed Democratic confidence. In view of all this similarity, it is to be regretted that Blaine and Logan are not to take the stump. We should like very much to see the campaign of 1884 in Ohio fought over again without the assistance of Marshal Wright in Cincinnati, and the secret aid of the McLean ring.

The "land movement," as it may be called, has taken a very curious form in Ohio, in the shape of a bill called "an Act to provide against the evils resulting from periodical depression in manufacturing industries and to promote agriculture." A summary of the measure is given in another column in a letter from a correspondent who evidently believes in it. The sum and substance of it is, that the State is to buy or appropriate, if necessary, as if for public use, a farm of twenty acres of land within the State for every married citizen of full age who swears that he is not worth $1,000, and desires to reside on and cultivate a farm. The money for the purpose is to be provided by State 3 per cent. bonds, and the farmer is to pay the State 6 per cent. annually on the amount of the purchase money—the tax to be a lien on all produce of the land and improvements thereon over and above the value of $1,000, and the lessee to have exemption from debt to the same amount.

The motive of this extraordinary measure is to be found, it is said, in "the disturbances in the iron and coal industries, which are continually dooming a larger and larger number of industrious men to hopeless dependence on small jobs," while "acres and acres of land hard by our large cities are raising nothing but thistles and briers, but ought to be yielding sustenance to hungry men." We venture to say that there is not one acre of land "hard by" any of our large cities that would yield sustenance to a hungry *and industrious* man and his family, and pay 6 per cent. on its value, which is not now under cultivation. The country contains great numbers of hungry men who would like farms of twenty acres, and probably think they could get a living out of them, and would ask the State for them if they knew they could be had for the asking; but the number of hungry men who have the industry, tenacity, and knowledge to work a farm to advantage, and have not got farms already is very small indeed, especially in the neighborhood of large cities. Such men get land very rapidly without State aid, and may be found about midnight every day in summer making their way to the market with loads of vegetables. Moreover, when anybody sees a piece of land near a city growing nothing but thistles and briers, he may be sure it would be a bad purchase for the State, because it is evidently a bad purchase for an individual. The reason why thistles and briers grow on it is that nothing else can be made to pay. A nice time iron workers and coal miners would have on bits of rented land which industrious German and American market gardeners cannot get a living out of! The best thing the Ohio philanthropists who are backing this measure can do is to agitate for a repeal of the enormous duties which, in the coal and iron industries, draw more men into these industries than there is any steady and real demand for, so that none shall be drawn in hereafter for whom there is not a natural and healthy call; and then subscribe to send the surplus to the West, to the rich land on which it pays to grow wheat and corn. Briery, thistly land in Ohio is a bad place for the best farmer in existence. For a coal-and-iron man who never farmed in his life, it would simply be a sort of State poor-house.

The report just issued from the Geological Survey office upon the mineral products of the United States for 1884 shows very plainly the effect of the business depression which prevailed during the year. The value of all the metallic and nonmetallic substances produced in the country last year aggregated but $413,104,620,

as against $452,204,628 in 1883, which in turn was smaller by $3,000,000 than the total of 1882. The decline was due more to a reduction in price than to a decrease in quantity, and the production in several important industries showed a decided growth. Thus the amount of copper placed upon the market in 1884 was 145,221,934 pounds, and in 1883 only 117,151,795, but the smaller output of the earlier year was valued at $18,064,807, against $17,789,687 for the product of 1884. In like manner the total production of coal showed a net gain in tonnage of 4,038,326 tons over 1883, but a decline in value of $15,726,277, anthracite having fallen 25 cents per ton in spot price and bituminous fifteen cents per ton. The petroleum industry appears to have felt this influence most of all, the production having risen from 23,400,229 barrels in 1883 to 24,089,758 barrels in 1884, while the average price fell off from $1 10 to 85 cents per barrel, so that the value of the larger supply was more than five million dollars less.

Henry Ward Beecher took up the tobacco question Sunday evening at Plymouth Church, and acknowledged that he had modified some of his earlier opinions with regard to it. He no longer maintains that "tobacco will lead to rum, and rum to sheol." While generally disapproving of its use, still, all that he insists on in the way of special restriction is, that the habit of smoking shall not be begun in early youth, and that it shall be made as little offensive to others as possible, and above all that the tobacco smoked shall be good. We have seen no full report of his remarks, and therefore do not know whether he said anything about the practice of spitting; but if he did not, his discourse had one serious defect. There is one broad rule applicable to all uses of tobacco, and that is that no man who cannot use tobacco without spitting should ever touch it. If a smoker finds he needs to spit, he should stop smoking. The same thing is true, *a fortiori*, of a chewer. What makes chewing such a disagreeable practice to non-chewers is, that it is usually accompanied by excessive salivation, which blinds the chewer to other people's comfort, and in fact often to decency in general. Why a man should consider expectoration on floors and stoves and grates a less repulsive practice than blowing his nose in his finger and thumb, it is hard to see. All his excretions are disgusting to other people, and it is his duty not to parade them, but to hide them away by all such means as the resources of civilization place within his reach. The practice of spitting, in the cities at least, has greatly declined at the North, but no one can visit any of our public buildings in Washington and see the way in which the marble pavements are degraded and befouled by huge stains of tobacco juice, without blushing for our civilization. Some men from the South and West are as insensible to the demands of decency on this point almost as red Indians, and will shoot saliva into a costly polished grate in a drawing-room just as readily as into the sawdust of a bar-room floor. In fact, in some parts of the country a well-considered lecture on the Origin and Use of the Pocket-handkerchief seems to be much called for. There has been within twenty years a great reform in and about New York, in this matter. The beastly little pools of tobacco juice, on the floors of railroad cars in trains leaving this city, which twenty years ago were very common, are now seldom seen.

There are renewed stories of trouble awaiting Mr. Keiley at the Austrian Court, but the last one, that he will not be received because the Italian Minister at Vienna will not like him, is on its face a little ridiculous. Mr. Keiley will never trouble the Italian Minister in any way. The Italian Minister probably does not speak English, and Mr. Keiley probably, indeed almost certainly, speaks nothing else. Moreover, there is probably hardly any subject in which the Italian Minister feels interested about which Mr. Keiley cares anything at all. Consequently, although he and Mr. Keiley may see each other at a distance on public occasions, the chances of Keiley's ever inconveniencing him in any way are too remote to be worth consideration. In fact, we predict that Mr. Keiley's appearances in Austrian society will be few and greatly wanting in splendor. He will never either sparkle in the drawing-rooms of the Archduchesses, or gather crowds of statesmen around him in the lobbies of the Parliament House. Besides all this, there would be absolutely no precedent for rejecting the Minister of one Power because the Minister of another Power objected to him. If the Austrian Foreign Office were to give any such reason for refusing to receive Mr. Keiley, it would be an impertinence which our State Department would certainly be justified in resenting, by sending nobody to take Keiley's place. In such a contingency, in fact, Mr. Keiley would find the whole nation ranged behind him as one man, and we would bring him home triumphantly in the *Dolphin*, which we would borrow from John Roach for the purpose.

Lord Salisbury has made up his Cabinet, and it is a very curious affair. If there ever was a conspicuous and lamentable failure as a foreign minister in England, it was Lord Salisbury under Lord Beaconsfield. The series of blunders perpetrated under his Administration—the greatest of all being the Afghan war, which he deliberately got up, as appeared from a now celebrated despatch—had most to do with driving the Beaconsfield Ministry from power. Yet he now appears not only as foreign minister, but as the head of the Cabinet. Sir Michael Hicks-Beach, who is to succeed Mr. Gladstone as Chancellor of the Exchequer, is a shrewd and sensible Gloucestershire squire, who has never given any proof of marked financial capacity. Sir Richard Cross, for the Home Department, is good enough, and so is Mr. Gibson, the best speaker the Tories have in the House of Commons, as Lord Chancellor for Ireland. Nor is there anything to be said against Mr. Smith as Secretary for War. But making Lord Randolph Churchill Secretary for India has something astounding in it. Lord Randolph's sole claim to any place of responsibility in the Cabinet is the vigor and brutality of his attacks on Mr. Gladstone. Of constructive statesmanship, or indeed of any kind of statesmanship, he has never given the slightest sign. Yet he is put in what appears to be at this moment the most trying and critical and responsible of all the positions under the new Government. It has already alarmed the Russians, and it appears to be doubtful whether Lord Dufferin will consent to remain in office under him.

The subjugation of the Tory party by a young man like Lord Randolph Churchill is even more wonderful than its subjugation by Disraeli. Disraeli had worked his way up from a much lower position than Churchill's, but he did it by slow degrees in the course of long years. Churchill's rise has taken place in two years, and by the display of qualities much further removed from statesmanship than Disraeli's. His blundering and inaccuracy about matters of fact have been just as remarkable as Disraeli's ever were, and his lucky hits infinitely fewer. Nothing can better illustrate the lack of talent in the party than his elevation. Nothing, too, could go further to confirm the popular idea as to the length of time the new Ministry will remain in office. Even if a dissolution were not necessary in order to make way for the new constituencies, the Tories would undoubtedly have to dissolve Parliament this winter. It is quite certain that they cannot go very far under their present leadership without making even the forbearance of the Liberals impossible. By the time the dissolution comes in the natural course of things, they will doubtless have piled up enough claims on popular distrust to make even their brief *ad interim* administration of the Government seem a public calamity.

The Irish press, in debating the probable effect of a change of Ministry on Irish affairs, seems to conclude generally that the Irish will be able to make better terms with the Tories. The *Times*, of this city, says, there is "something Hibernian in the naïveté" of this view, but this is said apparently by somebody who has not looked into the matter at all. What either Whigs or Tories will do for Ireland can only be inferred from experience. Most of the coercion bills of the last fifty years have been passed by the Whigs. Catholic Emancipation, the first great healing measure for Ireland since the Union, was passed by the Tories. So was the second one—the Tithe Commutation Act. So was the introduction of the English Poor Law. The Whigs under Melbourne gave the one bit of local self-government the island has received from Parliament, namely, the Municipal Reform Act. Gladstone, after ceasing to be Tory or Whig, disestablished the Protestant Church and passed the Land Act. But it was Forster, the Liberal Secretary, who shut up a thousand men in prison on his own warrant. In fact, it is hard to say whether Whig or Tory has done most or least for Ireland. What seems now probable is that the Radicals are much more advanced about Ireland than the bulk of the Liberals, and that the Tories, who are pretty unscrupulous when in search of power, will be ready to outbid them if necessary for Irish votes under the new franchise.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 17, to TUESDAY, June 23, 1885, inclusive.]

DOMESTIC.

THE President made the following appointments on Wednesday: John B. Stallo, of Ohio, to be Envoy Extraordinary and Minister Plenipotentiary to Italy; Bayless W. Hanna, of Indiana, to be Minister Resident and Consul-General to the Argentine Republic; Charles A. Dougherty, of Pennsylvania, to be Secretary of Legation at Rome. To be Consuls-General —William L. Alden, of New York, at Rome; Pierce M. B. Young, of Georgia, at St. Petersburg. To be Consuls—George W. Savage of New Jersey, at Belfast; Richard H. Stoddard, of New York, at Athens.

Charles A. Dougherty, appointed to be Secretary of Legation at Rome, is a son of Daniel Dougherty, of Philadelphia. He is a young man, and has never been active in politics. William L. Alden, Consul-General at Rome, is about forty years of age, and a son of William Alden, formerly principal of the Albany Normal School. He is a member of the editorial staff of the New York *Times*. He has visited Italy, and speaks the Italian language fluently. Pierce M. B. Young, of Georgia, Consul-General at St. Petersburg, is a native of South Carolina, forty-five years old. He was a cadet at West Point, and was within one month of being graduated when the rebellion began. He resigned, entered the Confederate army, and rose by promotion to the rank of Major-General. Richard H. Stoddard, Consul at Athens, is the well-known poet and author. He served fifteen years in the Custom-house in this city, and was a Secretary of the Democratic National Committee during the last campaign. He will decline the nomination.

William A. Day was appointed on Friday to succeed Judge Ferriss as Second Auditor of the Treasury. He is an Illinois lawyer. He has been Mayor of Champaign and a member of the State Legislature. Although a comparatively young man, he has been prominent in the political affairs of the State for several years.

The Department of State announces that the appointment of State Senator Carl Jonas, of Wisconsin, as Consul to Prague, must be revoked, the Austrian Government objecting. When a young man, a student at Prague, Mr. Jonas's liberal views so excited the ire of the Austrian Government that time has failed to erase the memory of it.

All that Secretary Bayard will say as to the alleged refusal of the Austrian Government to receive Minister Keiley is, that the report is premature. There can be little question that representations of some sort have been made to the Department in the matter.

The *Iroquois*, of the Pacific station, has sailed from Panama to Guayaquil, Ecuador, under sealed instructions from the Secretary of State in regard to the case of Santos, the American citizen, held there under arrest. It is understood that the commander of the *Iroquois* is instructed to make a formal demand in the name of the United States for the prompt release of the prisoner, and to afford him all possible assistance.

The official text of the Board of Examination on the *Dolphin* is published, and confirms the announcement that it pronounced the *Dolphin* a failure. It is signed by George E. Belknap, Commodore United States Navy, R. D. Evans, Commander United States Navy, and Herman Winter, Constructing Engineer.

Secretary Whitney has asked the Attorney-General for his opinion whether the builder, Mr. Roach, or the Naval Advisory Board which planned her, is responsible for the *Dolphin*, and whether, as a consequence, the Government must accept her even as a bad bargain or may hold Mr. Roach responsible for her.

The War Department has received reports from Fort Reno, Indian Territory, dated June 20th, to the effect that great excitement prevails there over a threatened Indian outbreak by the Cheyennes. The Indians, known as the Southern Cheyennes, are making preparations to go on the war-path. Troops have been despatched to quell the disturbance.

It is understood that General Wesley Merritt will be relieved from command at the Military Academy at West Point in August next, and ordered to organize a cavalry school at Fort Riley, Kansas, and that he will be succeeded at West Point by General William T. Carlin.

Internal Revenue Commissioner Miller has dropped 300 persons from the rolls of his department since March.

Mr. James Russell Lowell arrived in Boston on Saturday.

General Grant, after a walk on Wednesday afternoon at Mount McGregor, had a relapse. He made known his desire for pen and paper and wrote two notes. One was addressed, "Memoranda for my family." It was a brief and simple farewell message. The General felt, he wrote, that he was failing, and in case the worst should suddenly happen, he asked that certain directions be carried out which had been explained by him in more detail in memoranda written before he left home. The second note was to Dr. Douglas, conveying the General's belief that the end was near. A telegram was at once despatched asking Dr. Sands to come on at the first possible moment. On Thursday the General's condition was much improved, and on Friday he was better than for a week previous. The improvement continues.

The Massachusetts Senate on Friday rejected the section of the bill to preserve health in Boston which limits the height of dwelling-houses to eighty feet.

A meeting of a new "independent" political party was held in Rochester on Thursday. Delegates were in attendance from all parts of the State. Among the organizations represented were the organized workingmen of the State, the Irish National League, the ex-soldier element, the Liquor Dealers' Association, the Greenback Party, and the People's Party, while a number of the other delegates represented local citizens' associations. William Fero nominated for Governor Joseph Drexel of New York. Mr. Severs presented the name of Joseph B. Carr. Dr. John Swinburne, of Albany, was also nominated. All the names suggested will come up at a convention to be held during the summer.

At Wednesday's meeting of the trustees of Cornell University a letter was read from President Andrew D. White, which was in part as follows: "The present meeting completes twenty years since, with our dear and venerated friend, Ezra Cornell, I took part in securing the charter of the University, submitted its plan of organization, and entered this honorable Board. And now, in accordance with a purpose long since formed, I hereby present my resignation as President and Professor of History. At two different periods, when about to leave the country for a time, I have placed my resignation in your hands, and you have not thought best to accept it. I now contemplate another absence from the country in obedience to what seems to me to be a duty, and must respectfully insist that I be now permanently relieved, and my resignation finally accepted." The trustees accepted the resignation, to take effect in September next. Professor Adams, of Michigan, and James Russell Lowell are mentioned among those most likely to be chosen for the position.

Bartholdi's statue of "Liberty Enlightening the World" was received on Friday by the American Pedestal Committee and Mayor Grace with great ceremony. The French vessel *Isère*, with the statue on board, was escorted up the bay to Bedloe's Island by a number of United States men-of-war and a great variety of other vessels. All the shipping in the harbor was decorated. A procession of military escorted the French Admiral and other French officers from the Battery to the City Hall. A formal reception was given them in the Aldermanic Chamber. Mayor Grace, the President of the Board of Aldermen, and Frederick R. Coudert made addresses of welcome.

Chauncey M. Depew was on Wednesday elected President of the New York Central Railroad.

In the Court of General Sessions of this city on Thursday evening, Charles A. Buddensiek was found guilty of manslaughter in causing the death of Louis Walter by negligence in erecting the buildings in West Sixty-second Street which fell on April 13. Under the conviction Buddensiek may be sentenced to State prison for from one to fifteen years and fined $7,000. Buddensiek was on Tuesday sentenced to the State prison for ten years and to pay a fine of $500.

The Cornell University crew won the Childs Cup in the race with the University of Pennsylvania crew over the Shawmont course on the Schuylkill River on Friday. The time of the winners was 8m. 51s., the Pennsylvanians crossing the line 3½s. after the victors. The course is one mile and a half, straightaway.

Harvard won the university boat-race at New London on Saturday evening over Columbia in 24:27, Columbia's time being 26:22. The course is four miles straightaway.

Twenty-five iron mills in Pittsburgh have resumed operations since signing the scale, and, notwithstanding the rumor of opposition to the Conference Committee's action, it is believed that three-fourths of the mills in that district will soon be running.

Tornadoes on Saturday night visited Kansas City and Independence, Missouri, and Leavenworth, Kansas, doing a great deal of damage.

The will of Robert Treat Paine bequeaths $50,000 to Harvard College for the maintenance and support of a professorship in the University to be called the Professorship of Practical Astronomy. All the rest of his property the testator leaves to the President and Fellows, the net income only to be expended in the support of the Observatory and of the assistants, and in the purchase or repair of instruments, or in rewards by medals or otherwise for the discovery of new comets and planets, or for the writing of essays on astronomical subjects, etc.

James W. Nesmith, who was United States Senator from Oregon from 1861-67, died on Wednesday at the age of sixty-five. He was born in Maine, and went to Oregon in 1843. The next year he was made a territorial judge, and has always exercised a commanding influence in Oregon. In the Senate he achieved a wide reputation as a Democratic War Senator. He was on the Military Committee.

Duff Green, of Stafford, Va., one of the most prominent Republicans of the State, and for two terms a member of the Virginia House of Delegates, died on Monday.

Richard T. Merrick, a distinguished Washington lawyer, died on Tuesday at the age of fifty-seven. He was the son of United States Senator Merrick, of Maryland. Before he was of age he took part in the Mexican war; practised law in Maryland on his return, and later in Chicago; and for the past twenty years has been one of the most eminent Democratic lawyers at the Washington bar. He was one of the principal counsel before the Electoral Commission, and was for months daily before the public in his prosecution of the Star-route cases.

Mr. John Rittig, editor of the Sunday edition of the New York *Staats-Zeitung*, died suddenly on board the North German Lloyd steamer *Neckar* on its way from Southampton to Bremerhaven. He was one of the most prominent German journalists in this country. He was born in Prague in 1829, took part in the revolution of 1848, and was made a prisoner, but escaped.

FOREIGN.

Queen Victoria arrived at Windsor from Balmoral on Wednesday. A conference of Conservative leaders was held at noon at the residence of the Marquis of Salisbury. The result was that all obstacles to the formation of a Cabinet were apparently surmounted. It is said that Lord Randolph Churchill made it a condition of his acceptance of office that Sir Stafford Northcote should not be made leader of the Conservatives in the House of Commons. He is to be given a peerage.

The British political situation was seriously complicated on Friday. It was reported that a communication had been received from St. Petersburg announcing that if Salisbury formed a Ministry, and he and Churchill did not retract or explain satisfactorily their recent utterances about Russia and Russian officials, then Russia's ambassador would be withdrawn from London.

In the House of Lords on Friday the Marquis of Salisbury rose amid cheers and asked Lord Granville to consent to an adjournment of the House until Tuesday next. He said the conference of Liberals and the Conservatives had not yet reached a stage to enable either side to make a statement. He wished to make one observation. It was in respect to a very important order on the paper. He was aware of the importance of pushing the Redistribution of Seats Bill to a conclusion, but a very serious question had unfortunately arisen in connection with the measure. It had become known that the Redistribution Bill had destroyed one set of constituencies. The Marquis of Salisbury further objected to this bill because, when passed in its present form, it would prevent, even in case of necessity, an appeal to the country before November. The motion of the Marquis of Salisbury to adjourn until Tuesday next the consideration of the Redistribution Bill was then adopted by a vote of 124 ayes to 56 noes. This avowal by Lord Salisbury created great excitement, and doubled the uncertainty of the whole situation.

Lord Salisbury asked on Friday a pledge of the Liberals that they would fairly consider the budget scheme, and if they disapproved it would consent to let the deficit be carried to 1886, and allow the Conservatives the whole time of the House of Commons during the remainder of the session. Mr. Gladstone declined to give a pledge regarding an unseen scheme of finance. The London *News* of Saturday morning said it was able to state that Mr. Gladstone's reply is final, and that there is no chance of the matter being arranged by further Liberal concessions. The Liberals have resolved to stop supplies until the Redistribution of Seats Bill is completed. They will probably oppose the making of the First Lordship of the Treasury a sinecure when a vote is asked for the salary of £5,000 attached to that position. Earl Spencer's departure from Dublin has been postponed on account of the political deadlock.

The Marquis of Salisbury on Monday consented to assume office on the promise of Mr. Gladstone that the Liberals will give the new Government as much time as possible during the remainder of the session. It is stated that the leaders have arranged to make an effort to carry the Welsh Intermediate Education Bill, the Australian Confederation Bill, the Irish National Education Bill, and the Minister for Scotland Bill. Mr. Gladstone reserved full liberty of action in regard to any new measures that may be introduced.

The Earl of Granville announced in the House of Lords on Tuesday evening, and Mr. Gladstone made a similar announcement in the House of Commons, that the Marquis of Salisbury had accepted office, and that he had gone to Windsor Castle to inform the Queen. The House of Lords adopted all amendments to the Redistribution of Seats Bill which passed in the House of Commons. The House then adjourned until June 25. The Commons only adjourned until June 24.

The following is the list of the new Cabinet as it is believed it will be announced: Prime Minister and Secretary for Foreign Affairs, the Marquis of Salisbury; First Lord of the Treasury, Sir Stafford Northcote; Chancellor of the Exchequer, Sir Michael E. Hicks-Beach; Lord High Chancellor, Sir Hardinge Giffard; Lord President of the Council, Viscount Cranbrook; Lord Privy Seal, the Earl of Harrowby; Secretary for the Home Department, Sir Richard Assheton Cross; Secretary for the Colonial Department, Colonel Frederick Stanley; Secretary for War, the Right Hon. William Henry Smith; Secretary of State for India, Lord Randolph Churchill; First Lord of the Admiralty, Lord George Hamilton; President of the Local Government Board, Arthur James Balfour; President of the Board of Trade, the Duke of Richmond and Gordon; Vice-President of the Council, the Hon. Edward Stanhope; Lord Lieutenant of Ireland, the Earl of Carnarvon; Lord Chancellor of Ireland, the Right Hon. Edward Gibson; Postmaster-General, Lord John Manners; Attorney-General for Ireland, Mr. Holmes; Solicitor-General for Ireland, Mr. Monroe; Chancellor of the Duchy of Lancaster, Henry Chaplin; First Commissioner of Works, the Right Hon. David R. Plunket; Parliamentary Secretary to the Treasury, Rowland Winn; Parliamentary Secretary to the India Office, Lord Harris; Secretary to the Admiralty, Charles T. Ritchie; Civil Lord of the Admiralty, Ellis Ashmead Bartlett.

One hundred and forty miners were killed by an explosion in the Pendlebury colliery, near Manchester, England, on Thursday.

In the French Chamber of Deputies on Monday M. de Freycinet, Minister of Foreign Affairs, submitted the draft of the Franco-Chinese treaty which definitively confirms the rights of France over Anam. The latter country must henceforth treat with foreign Powers only through France. France undertakes to pacify Tonquin. China will be allowed to appoint consuls for the principal towns in Tonquin. France will construct roads and railways in Tonquin in order to develop commerce, and it is understood that when China constructs railways she will obtain the necessary staff of officials and workmen and plant from France. The commercial clauses are to be revised after ten years. The French will cease to search vessels on the high seas, and will entirely evacuate Formosa and the Pescadores a month after the treaty has been signed. The Chamber voted urgency for the discussion of the treaty.

The French Minister of Marine has official despatches confirming the news of the loss of the French gunboat *Reynard*, which foundered in the terrible cyclone that recently swept the Gulf of Aden. Every one on board—127 persons—perished.

The Berlin *North German Gazette* asserts that it is prominently intimated that the tension in regard to the Zanzibar question no longer exists.

Field Marshal Baron von Manteuffel, the distingushed German commander and Governor of Alsace-Lorraine, died suddenly at Carlsbad on Wednesday morning of pulmonary congestion. Baron von Manteuffel was born in 1809. He entered the army when seventeen years of age. In 1858 he became Major-General in the suite of the King, and in October, 1861, Lieutenant-General. The alliance of Prussia and Austria for the so-called liberation of the Elbe duchies was generally regarded as the work of Manteuffel. He took an active part in the Schleswig-Holstein campaign, and in recognition of his services was made Governor of Schleswig. When war broke out with Austria he invaded Hanover under Falkenstein, and as Commander-in-Chief of the Army of the Main he was uniformly successful. In April, 1868, Manteuffel was made General in command of the First Army Corps, taking the leading part in the north of France during the Franco-Prussian war. After the capitulation of Bazaine he opened the way across France to Dieppe, taking Rouen on his way. In January (1871) he was called upon to stop Bourbaki in the southeast of France, which he did, driving the remnants of the French army under Clinchant across the Swiss frontier. In June (1871) Manteuffel was made Commander-in-Chief of the army of Occupation, and Field Marshal in 1873. As Lieutenant of the Emperor in Alsace-Lorraine, his administration was considered adroit and liberal.

Mr. Pendleton was on Sunday formally presented to the Emperor William at Berlin.

The Spanish Ministry on Saturday resigned in consequence of King Alfonso's decision to visit the cholera-infected districts. Immense crowds gathered on the streets of Madrid on Saturday night, and made a demonstration in favor of the King and Queen. The crowd becoming riotous, the civil guard was called out and fired upon the mob, who thereupon stoned the soldiers. Disorder continued throughout the night with slight abatement, but the crowd was finally dispersed on Sunday. It is reported that two workmen were shot dead and several wounded. It is also reported that fourteen soldiers were wounded by stones and two by shots. Many of the rioters were arrested. On Sunday the King asked Sagasta to form a new Ministry, but the latter declined and advised the King to remain in Madrid. The King finally yielded, and the old Ministry was reinstated. Another account of the riot says that it was caused by the opposition of the populace to the enforcement of sanitary regulations in the city.

In the Italian Chamber of Deputies on Thursday Prime Minister Depretis announced the resignation of the Ministry. The immediate cause was the closeness of the vote on the foreign estimates on Wednesday evening. It was believed on Monday that Signor Depretis would reform his old Cabinet.

The report of a rebellion against the Amir of Afghanistan in Badakshan is confirmed. The people have murdered the Governor of the province, who was reported to be secretly negotiating with Russian agents for the surrender of the capital, which is one of the most important strongholds in the Hindu-Kush Mountains. The Amir has sent a body of troops to Badakshan to inquire into the facts of the revolt and to restore obedience to his authority.

As a result of the recent earthquakes in Cashmere, 3,081 persons lost their lives, 70,000 houses were laid in ruins, and 33,000 animals perished.

The report that Kassala is still holding out against the Sudan rebels is confirmed.

The Northwest rebellion is believed to be ended. General Middleton has given up the chase after Big Bear. The latter's men have separated into small bands, and it is impossible to capture them. The McLean family, whom General Middleton especially desired to rescue from Big Bear, have escaped through the assistance of the Wood Crees, and have arrived at Fort Pitt. The two daughters and their mother are terribly broken in health by exposure and rough usage. It is believed that Big Bear will soon be compelled to give himself up by reason of destitution. A permanent force of troops is being organized for duty in the Northwest to prevent further uprisings.

Mail advices from Newfoundland received on Saturday give details of a terrible storm which raged there on June 14. It was the most severe for forty years. Shipping was wrecked by wholesale and many lives were lost. At Bonavista seventy-five vessels were driven ashore.

The revolutionary General Caceres, with 3,000 men, is now in the neighborhood of Lima, Peru, having dodged the column of Colonel Mas to the south, and a final struggle is expected to take place in Lima within the next few days.

TWENTY YEARS LATER.

With the present number the *Nation* completes the twentieth year of its existence. It was started in July, 1865, when the last shots of the civil war were still ringing in men's ears, when the work of reconstruction at the South was only just beginning, and when the whole administration of the Government was still marked by the disorders and anomalies of military necessity. The future, too, was still so uncertain that many were disposed to believe, in Wendell Phillips's words, that our "old farming and reading republic" was gone forever, and that a republic of large standing armies, of centralized power, and of complicated foreign relations, on the European model, was to succeed it. The way in which the whites of the South would take their defeat, and, one might add, their ruin, and the way in which the blacks would take their emancipation, were still unknown. A fictitious prosperity, caused partly by war expenditures, and partly by the inflation of the paper currency, had made a return to specie payments seem remote, difficult, and unpopular. Moreover, the habit of political discussion, which had almost been lost under the pressure of military emergency, was, owing to the distrust excited by Andrew Johnson's course, reviving but slowly. The dominating influence in politics was, in fact, the somewhat fierce, unreasoning, patriotic, and anti-slavery sentiment bred by the war, which was perhaps best represented by such leaders as Thaddeus Stevens in the House, whose motto was "Thorough," and to whom all scruples born of legality, or precedent, or tradition, were a little sickly. In short, topics for discussion in such a weekly journal as it was proposed to make the *Nation*, were abundant enough. Whether a sufficient audience could be found willing to hear them discussed from an independent standpoint, was a question about which there was much difference of opinion. But it is no harm to say, at this distance of time, that nobody connected with the press, who was consulted about it, thought such a project likely to succeed; and most of those who were generally considered qualified judges, were certain of its failure within a year. The kind of work it proposed to do can perhaps be best described by quoting the prospectus issued at the time:

PROSPECTUS OF THE NATION.

Its main objects will be:—

First. The discussion of the topics of the day, and, above all, of legal, economical, and constitutional questions, with greater accuracy and moderation than are now to be found in the daily press.

Second. The maintenance and diffusion of true democratic principles in society and government, and the advocacy and illustration of whatever in legislation or in manners seems likely to promote a more equal distribution of the fruits of progress and civilization.

Third. The earnest and persistent consideration of the condition of the laboring class at the South, as a matter of vital interest to the nation at large, with a view to the removal of all artificial distinctions between them and the rest of the population, and the securing to them, as far as education and justice can do it, of an equal chance in the race of life.

Fourth. The enforcement and illustration of the doctrine that the whole community has the strongest interest, both moral, political, and material, in their elevation, and that there can be no real stability for the republic so long as they are left in ignorance and degradation.

Fifth. The fixing of public attention upon the political importance of popular education, and the dangers which a system like ours runs from the neglect of it in any portion of our territory.

Sixth. The collection and diffusion of trustworthy information as to the condition and prospects of the Southern States, the openings they offer to capital, the supply and kind of labor which can be obtained in them, and the progress made by the colored population in acquiring the habits and desires of civilized life.

Seventh. Sound and impartial criticism of books and works of art.

The *Nation* will not be the organ of any party, sect, or body. It will, on the contrary, make an earnest effort to bring to the discussion of political and social questions a really critical spirit, and to wage war upon the vices of violence, exaggeration, and misrepresentation by which so much of the political writing of the day is marred.

The criticism of books and works of art will form one of its most prominent features; and pains will be taken to have this task performed in every case by writers possessing special qualifications for it.

It is intended, in the interest of investors, as well as of the public generally, to have the questions of trade and finance treated every week by a writer whose position and character will give his articles an exceptional value, and render them a safe and trustworthy guide.

A special correspondent, who has been selected for his work with some care, is about to start in a few days for a journey through the South. His letters will appear every week, and he is charged with the duty of simply reporting what he sees and hears, leaving the public as far as possible to draw its own inferences.

As to the manner in which this programme has been carried out, it is difficult now to appeal to any determinate body of our readers. We have still a number of them who began with the first issue, and continue till to-day, but the proportion of these to the whole still left is necessarily small. A very considerable body of our readers to-day were children when the *Nation* was started. Among those who had reached mature age when it made its appearance, death has of course been busy. Many, too, have found, while sharing its opinions on most questions, its opinions on some too unpalatable for continued reading, and have dropped it. In fact, there is nothing more curious in newspaper history than this readiness of subscribers to close their ears on all subjects, even to a journal which they have trusted for years, because on some one subject it happens to run counter to their convictions or prejudices. It is only to an editor that people say that failure to agree with them on a single question deprives what he says on any question of all value.

It was the fate of the *Nation* to suffer more or less from this cause at a very early period. Almost in the first number it questioned the wisdom and soundness of a plan then in favor among many of its friends for having the Supreme Court do the work of reconstruction, by deciding what was or was not "a republican form of government." At a somewhat later period it questioned, amid much obloquy, the necessity and value of the impeachment of Andrew Johnson, on the success of which a large proportion of the Republican party had set its heart. It maintained that even if Johnson were impeachable, his conviction might work mischief by throwing the Government into the hands of extremists, among whom Benjamin F. Butler was the most influential, and that his acquittal would simply be the end of a piece of elaborate and expensive folly. In one month after the failure of the trial the whole country, including its chief promoters, were ashamed of the undertaking. The *Nation*, too, undertook to expose the pretensions of Butler to be considered an honest and useful politician in 1867, or many years before his party found him out, and while criticism of him still, in Massachusetts at least, seemed an expression of indifference to the results of the war. In fact, it was nearly ten years in advance of popular opinion about this particular politician, and has had the satisfaction of seeing its very earliest diagnoses of him accepted by all Republicans at last. After warmly supporting General Grant for the Presidency, it pointed out, before his first term had expired, the beginnings of those errors which finally brought about the defeat of the party in nearly all the Northern States, and which more than aught else made the attempt to give him a third term seem dangerous. It was the first Northern journal of Republican leanings to denounce the carpet-bag governments which, supported by Federal bayonets, sprang up at the South, and for so many years desolated that region and disgraced its conquerors. It contained the very earliest exposures of Moses, Niles G. Parker, and their kind at a period when few good Northerners were disposed to question the motives of anybody calling himself a Republican at the South. It took only three or four years, however, to produce general acquiescence in the justice of the *Nation's* criticisms.

By far the most serious collision into which the paper was ever brought with any considerable number of its readers, occurred in 1876, when it denounced in unsparing terms the fraudulent proceedings in Louisiana by which Mr. Hayes was inducted into the Presidency, and the official rewards subsequently bestowed on the chief conspirators in that most deplorable and debauching enterprise. The Republican horror of Democratic rule was still so strong that many good people could hardly be brought to think anything fraudulent which kept the Democrats out of power, and looked on anybody who threw, or seemed to throw, any obstacles in the way of continued Republican ascendency as little short of a public enemy. The *Nation* accordingly lost nearly three thousand subscribers for refusing to believe that Mr. Hayes could honorably accept the Presidency at the hands of the Louisiana and Florida Returning Boards. His term had not expired, however, before the great bulk of the party were ready to acknowledge that another such victory as his would be worse than a defeat.

The *Nation* opposed the greenback theory from the first moment of its appearance, and when it had such very respectable Republican champions as the late Oliver P. Morton; and advocated a return to specie payments when a large number of leading Republicans doubted whether a return would ever be practicable, and if practicable desirable. It was, if not the first journal to engage in regular and persistent advocacy of civil-service reform, after Mr. Jenckes of Rhode Island had brought it up in Congress, certainly the first to place it in the front rank of public questions The first foreign complication, its discussion of which attracted any attention, was the *Alabama* case, in which it from the opening of the negotiations attacked the theory of consequential damages, then in much favor with the public, and continued to attack it amid some obloquy, until it was rejected as an

absurdity by the Geneva Tribunal. The silver craze it opposed from the beginning, and has had the satisfaction of seeing the correctness of most of its positions as regards the use of silver in the United States acknowledged by most of its opponents.

To say that it never went wrong would be to make a claim which, even if well grounded, nobody would acknowledge. But it may be said without fear, that it has not been greatly wrong on any leading question of the last twenty years, and that its errors, when they occurred, have consisted mainly in underestimating the resistance which the rapid growth of the country in wealth and population would offer to the working of legislative follies. It used to be a not uncommon criticism on the conduct of the *Nation* that the paper denounced evils without suggesting a remedy. In numerous cases, however, the utterers of this complaint have been challenged to produce from its files an example of this sort of denunciation, but have never responded. It is safe to say that its columns since 1865 may be searched in vain for the exposure of an abuse, unaccompanied by the suggestion of a cure, except of course in cases where the cure is obvious. When a journal denounces lying, for instance, there is no need to mention truth-telling as a specific.

To say what the *Nation* has done or failed to do in the fields of literature and art, even in mere outline, is more difficult, because there is no thread of events to be followed in describing it. This part of its work we must therefore leave, without comment, to the memory and judgment of our readers who have followed the course of the paper during these twenty changeful years. From the first we made it a rule to have each book, if possible, reviewed by some one who had given special attention to its subject, and, having once chosen the reviewer, never to interfere with his judgment if competently expressed as regarded literary form. That many mistakes have been made in our literary and artistic criticisms, and that injustice has often been done, there is no denying. All we can claim for the editorial conduct of the paper is an earnest and constant effort to avoid them. The best thing we can offer in support of this claim is the list of those who have contributed to the columns of the paper from the first issue to the present day. It contains a large number of the most eminent names in American literature, science, art, philosophy, and law. We have taken some melancholy pride in selecting from it a few of those from whom, in the earlier years especially, we received not only frequent articles, but, what was then nearly as important, constant encouragement and applause, and who have now gone over to the majority.* To us, who have one by one seen them drop away, there could be no more impressive reminder than this list of the slipperiness of the soil on which any work in this world has to be done. Of some of these, as, Edmund Quincy, Frederick Kapp, Henry James, Dr. J. P. Thompson, and Mrs. Parkman, it is difficult for us to speak at all without emotion, so much were we indebted to them in every way. To John Richard Dennett, who was connected with the *Nation* from the beginning, and whose early death in 1874 extinguished what was, it is no exaggeration to call, a rare genius, the paper owed many of the articles in the first years of its existence which attracted attention to it as a literary critic. But of another, James Miller McKim, who was one of the founders of the paper, to whom, as an old abolitionist of mature age, its methods at the beginning were often startling as well as novel, but who never for one instant doubted its success, or its value, or withdrew a most devoted hand or wise head from its support until his death, it must be said that no record of its career would be complete which did not contain a loving tribute to his memory. Without him and Mr. Charles Eliot Norton, of Cambridge—both its principal projectors—it would probably have never seen the light, or have lived through its first year. It was their faith, and hopefulness, and untiring exertions that carried it through the difficulties which were sure to beset an enterprise so novel, and the aims of which were so difficult to define.

In twenty years more there will probably be but few, if any, left of those who took part in its formation or helped it on its way; but it is not too much to say that they will carry with them from this world the credit of having, through its columns, done something to hasten the coming of the better time, the reign of sweeter manners and purer laws.

WINE, BEER, OR SPIRITS?

A WELL-INFORMED correspondent, writing to us apropos of our remark in a recent article on the wine production of the world, that "the question which (wine or beer) will get the upper hand as a popular cheap drink in this country, is still doubtful," calls our attention to some light thrown on this point by the Treasury statistics.

By reference to the reports of the Bureau of Statistics of the Treasury, it appears that the increase in the consumption of distilled spirits, wines, and malt liquors in the United States since 1840 is, taken by decades on a scale of 100, as follows:

	Distilled Spirits.	Wines.	Malt Liquors.
1840	100	100	100
1850	120	130	157
1860	209	227	435
1870	185	251	878
1880	148	581	1,777
1884	188	423	2,531
1881-2-3-4	176	492	2,266

The year 1880 being exceptional in the unusual amounts of domestic wine produced in the United States, as also in the unusual decrease in the production of distilled spirits, the average consumption for 1881-82-83-84, together with the statistics for 1884, is given.

To understand the above figures correctly, it may be necessary to explain that, *e. g.*, the amount of distilled spirits consumed in 1850 was 20 per cent. greater than in 1840, and in 1884, 88 per cent. greater than in 1840. So, too, the amount of wine consumed in 1880 was 581 per cent. of the amount consumed in 1840, etc., etc., etc. To get at the actual increase or decrease in the per capita consumption, comparison is to be made with the statistics of population since 1840, and we find that the increase of population by decades since 1840 is as follows:

1840	100
1850	136
1860	184
1870	226
1880	294

As will be seen, the population nearly trebled between 1840 and 1880.

If, now, we consider the actual number of gallons of each consumed at the successive decades, and for purposes of comparison estimate the population from '81 to '84, inclusive, at 52,000,000, we find the actual per capita consumption of distilled liquors, wines, and beer, to have been as follows:

Gallons Consumed Per Capita.

	Distilled Spirits.	Wine.	Beer.
1840	2.52	.29	1.37
1850	2.23	.27	1.58
1860	2.86	.35	3.23
1870	2.07	.32	5.31
1880	1.24	.56	8.26
1881-2-3-4	1.46	.46	10.16

From the above it will be seen that the percentage of per capita consumption for the several decades is as follows:

	Distilled Spirits.	Wine.	Beer.
1840	100.	100.	100.
1850	89.	93.	115.
1860	114.	121.	236.
1870	82.	110.	388.
1880	49.	193.	603.
1881-2-3-4	58.	159.	742.

In other words, it clearly appears that during the past forty years there has been a decrease in the per capita consumption of distilled spirits of fully 40 per cent., an increase of 60 per cent. in the per capita consumption of wines, and the enormous increase of 642 per cent. in the per capita consumption of beer and other malt liquors.

From these figures it would hardly appear a question of doubt as to whether wine or beer was to get the upper hand in this country. Whatever may have been the result from an economical point of view of this decrease in the use of distilled spirits, of which whiskey is the type, and in the great increase in the consumption of beer and of the light wines, there can be but little doubt that it has been beneficial to the general cause of temperance and good order in the community. It is also to be observed that the decrease in per capita consumption of distilled spirits does not accurately represent the rate of decrease which has taken place in their use for drinks, since doubtless a far larger amount is now used in the arts than formerly.

There is another point of importance in connection with this matter. By reference to the statistics it is found that the percentage of the total amount consumed of distilled spirits, wines, and malt liquors produced in this country, has undergone a great change during the past forty years.

The following table of imported beverages represents the percentage of each consumed in the country for each decade:

	Distilled Spirits.	Wines.	Malt Liquors.
1840	6.2	97.4	.63
1850	9.8	96.5	.55
1860	6.7	83.2	1.11
1870	1.8	75.0	.49
1880	2.2	17.8	.24
1884	1.9	15.1	.34
1881-2-3-4	2.1	23.3	.31

It will be seen that only about 2 per cent. of

the distilled spirits consumed in the United States is imported, while not over one-third of 1 per cent. of the malt liquors consumed is imported, and yet the amounts consumed are so great that even these small percentages amounted in 1884 to 1,511,680 gallons of distilled spirits, and 2,010,908 gallons of malt liquors.

The statistics of the wine industry are of especial interest. It has been shown that the increase in the per capita consumption during forty years equals 60 per cent., but, owing to the very rapid development of this industry in this country, the average importation during the last four years has been only 23.3 per cent. of the total consumption, while in 1840 it was 97.4 per cent., and even so recently as 1870 equalled 75 per cent. The total importation of wines is to-day about the same as it was in 1840, notwithstanding the fact that our population has been trebled and that there has been an increase of 60 per cent. in the per capita consumption. In 1840 the amount of domestic wine produced was 124,734 gallons, and there was imported 4,748,362 gallons. During the last five years the average annual production has been 19,994,916 gallons, and the average importation 5,473,467 gallons. No one conversant with the present condition of the wine industry in our country can doubt that it has "come to stay," and the character of our domestic wines becomes a question of very great importance, the discussion of which must be reserved for a future occasion.

FRANCE AS A COLONIZER.

HERBERT SPENCER has thanked M. Guyot, the author of 'Lettres sur la Politique Coloniale,' just published, for "opening the eyes of the French to the illusion that colonies are of any advantage." M. Yves Guyot may not have proved quite so much, but has certainly demonstrated at a propitious moment—that is, at a moment when a sad military discomfiture, humiliating to the national conceit of his countrymen, has rendered their eyes more accessible than usual to the light of reason and evidence—that the colonial policy of France, from its beginning to this very day, has been a failure—complete, disastrous, merited, and ignominious. Leaving out his wider speculations, let us look at some of his statistical data, all drawn from official or equally good sources.

He begins with India. All that France has preserved there, after so many contests for "prestige" and "expansion," "glory" and "civilization," is equal in area to the Department of the Seine, the smallest of French departments. In Calicut she holds "a lodge occupied by a watchman"; in Surat, the same; the "lodges" of Dacca, Patna, and other districts, consist each of "a house, with a small tract of land, inhabited by Indians," as officially stated. Mahé alone is salubrious. The torrid climate of Pondicherry, the largest possession, is destructive to Europeans; he whom dysentery spares, falls a victim to anæmia. The colony contains few Frenchmen. In Further India, there is first Cochin-China, equal in extent to nine departments of France; next Camboja, which is somewhat larger, but until quite recently under French protectorate only; and then Tonquin, said to be as large as one-third of France, but which is—still to be occupied. Here, in Indo-China, M. Ferry expected the dry trunk of France to develop new and vigorous sprouts. But how could it? The Frenchman degenerates there. In Cochin-China European women seldom survive childbirth. In Saigon there were in 1880, among Europeans, 7 marriages, 46 births, and 102 deaths. It was here, M. Guyot remarks in his rather cynical vein, that "artificial hatching was to produce a swarming brood of little Frenchmen: we see the broken eggs, but find neither omelette nor chicks."

In the Indian Ocean the Isle of Réunion has been held by the French for more than two centuries. Here the colonial experiment ought to be complete. What is the result? In 1872 the population was 193,000; in 1882 it had dwindled down to 170,000. In 1877-81 there were 4,492 births, against 6,378 deaths. Sainte-Marie, off the east coast of Madagascar, was long ago designated "the Frenchmen's cemetery." Nossi-Bé, off the west coast, is somewhat healthier. These islands, with Mayotte, between Madagascar and the African continent, have together an area smaller than four-tenths of Corsica. Obock, on the east coast of Africa, is—a point. The population of the nominally vast Senegal colony, in the west of that continent, was 210,000 in 1872, but in 1880 only 190,000—of course, almost all natives, the "colonizing" element consisting of 2,000 officials and soldiers, and some hundreds of other individuals of varying nationality. The establishments on the coast of Guinea are hardly worth mentioning: the foreign population dies off almost as fast as it comes. De Brazza's annexations on the Congo have not yet been subjected to the civilizing processes of France; nor can Tunis, lately seized, yet be called a French colony.

The greatest colonial possession of France is Algeria, almost as vast — Tell, desert, and all—according to the official claim, as the country of the conquerors, who have been organizing, colonizing, and civilizing it for half a century. Has it become a new France? The French population in 1881 was 233,900. Deducting from this number the army, gendarmerie, and police (nearly 50,000); functionaries and Government employees of all descriptions, with their families (35,000); employees of the subsidized railroads, Government "concessionaires," purveyors of every kind, transport agents, and numberless other people directly or indirectly sustained by the Government—there remain, as M. Guyot computes, not fully 100,000 individuals of all ages, living by independent labor, among them—giving on an average four persons to a family—about 25,000 producers, or colonists in the true sense. In most years the Algerian army consists of more than 50,000 men. Now, "imagine an engraving representing a tiller of the field guarded by two soldiers, one on each side of the furrow. You laugh and exclaim, This is a caricature. By no means; it is an exact picture of Algeria." And considering how many French warriors have fallen or died in Algeria during or on account of the conquest, you can also say that each French colonist, when resting, sits on four corpses. And is the country really pacified, the Arab reconciled, the Kabyle in any way civilized? Who dares answer in the affirmative?

In the Antilles, the island of Martinique is a fit abode for negroes only. Guadeloupe shows a mortality among people of every color much exceeding the increase by birth. St. Barthélemy is salubrious, but lacks water. All the French islands together have an area about equal to one-fourth of Corsica. French Guiana, in South America, a country of undefined limits toward the interior, has a deadly climate. A French child born there has less chance of reaching the age of two than one born in France of living to the age of thirty. The French populations in Oceania are quite insignificant. There are not a thousand French individuals in Tahiti, not a hundred in the Marquesas Islands. Chauvinists of colonial expansion like to compare New Caledonia, the French penal settlement, to Australia; that is "comparing a sardine to a whale." The general fatal defect of French colonization is, that it is all, geographically considered, latitudinal, instead of being longitudinal. All the French colonies, with the exception of Algeria and Tunis, are in the Torrid Zone. False governmental methods and false economical principles do the rest in ruining every effort. The sacrifices are enormous; the gains, in the best instances, questionable.

THE DRESS OF THE SEASON.

WE have been looking for some weeks in vain for the Summer Resort Article or the College Commencement Article in the columns of our esteemed metropolitan contemporaries. The former would, if printed, have shown the advantages of rest, of communion with nature, and of contact with plain farming people to the tired American of the city. The latter would have pointed out to the new college graduate his callowness, his inexperience, his very small importance in the world at large, and the vast inferiority, as a preparation for life, of his college education, to that which he would have received in the same period as a boy in a store, or as the reporter of "a great daily." Neither of these topics seems of late to have been receiving anything like the attention once bestowed on them; and more's the pity, for the Tired American, in the absence of the articles on them, doubtless often lingers in town throughout the summer, in ignorance of what the country would do for his nervous system and his general moral make-up; while the College Graduate, by his rampant self-sufficiency and ignorant attempts to thrust himself into places of great trust and dignity, often excites the disgust of the community, to say nothing of the sages in the newspaper offices who are specially charged with the duty of watching him.

We should regret all this more, however, if a totally new topic had not come up, and one which was likely to excite considerable popular interest—we mean "The Dress of the Season," on which the Albany *Evening Journal* has led the way by the production of a really beautiful article, although marked by some generalizations which we take leave to consider too sweeping, such as the assertion that "in *no* matter is there room for more improvement or for the exercise of greater taste than in the summer wardrobe." The writer, too, seems not to have got himself up in his subject with the care which generally marks these sum-

mer articles, if we may judge from his statement that hitherto "stiffness and gaudiness" have during the summer been too often "found in the piazza, hammock, and phaeton," instead of "slimsiness or crushableness." A more careful observer would have known that it is now many years since the stiff summer dresses disappeared both from land and sea. For ten years, certainly, the women both of the piazza, hammock, and phaeton have been clothed in soft woollens, owing to a revolution in the wool manufacture which came near causing the ruin of many of our best woollen mills before they adapted their machinery to the new fashions. The stiff-starched gown, which was the terror of washerwomen and the despair of girls of small means, has gone completely out of fashion, and the world is well rid of it. There is no smart girl—using the word in its English sense—who is not now in the summer season attired in slimsy and crushable goods.

A similar revolution has taken place in the clothing of the men. Twenty or even ten years ago, before the fashion of taking exercise in summer had set in, the smart young man of the cities put on as much white linen or cotton as his purse would allow. The poorest and most forlorn revelled in a waistcoat which used to be white early in the week. Those better off wore spotless waistcoats of the same material all the week, and, if their means allowed it, added thereto white duck trousers. The real swells, however, the men who had nothing to do, and did it, clothed themselves in white linen from head to foot in warm weather. The Southerners who used in ante-bellum days to be the wonder and delight of Newport and Saratoga and Sharon, were particularly given to raiment of this sort, and in fact it was the mark of pecuniary ease combined with perfect leisure.

Nobody who is anybody is ever seen in such attire now. The stiff linen has gone out; the soft woollen has come in. The men are, in short, all slimsy and squeezable as well as the women. A suit of white flannel in summer, in the country at least, is now the highest point in the matter of dress to which the ambition of the most restless dude carries him. It means not only disregard of expense, but perfection as regards comfort. But then the wearers of white flannel by no means monopolize the good results of the woollen revolution. All summer clothes are now in a sense flannels. Of whatever color they may be, they are thin, porous, and light to a degree which makes linen seem hot, heavy, and cumbersome in comparison. It has been discovered, and the discovery will never be forgotton in any change of fashion, that woollen clothing, if thin enough, is to the wearer very much what the Irishman's whiskey was both in winter and summer. It keeps the heat in when it is cold, and keeps the heat out when it is hot. It enables anybody to lounge on the grass or on the deck without getting rumpled or soiled, and to exercise into any amount of perspiration without getting chilled. In fact, a well-educated man, clothed in thin flannel from the skin out and free from any organic disease, is, in summer, one of the highest products of modern civilization. Greece and Rome in their palmiest days produced nothing better, for their summer clothing was not as well cut nor as well adapted to exercise in the open air. The only danger in the present male summer dress is, in fact, the effect of white flannel on the vanity of the young. There is current at most watering places a popular saying, that "every man looks well in it," which has planted the seeds of weakness in many a fine character. But anybody who can protect himself against its corrupting influence on this side, may rest satisfied that in the matter of dress he is among the foremost in the files of time.

THE FALL OF GLADSTONE'S MINISTRY.

LONDON, June 11.

THE House of Commons is proverbially a place of surprises. Yet even there such a surprise as the vote of last Tuesday morning, which turned out Mr. Gladstone's Ministry, is without precedent. That a Government which had weathered so many storms during the last three years, been assailed by so many votes of censure in cases where its conduct, whether excusable or not, had at any rate involved grave misfortunes, and repelled these assaults by strenuous appeals to the loyalty of its supporters—that this Government should fall, on a minor question, after one night's debate, and that a languid debate, without summoning all its forces—this is indeed an extraordinary close to its eventful history. Now that the event has happened, everybody is trying to show that it might have been foretold. But the best proof that it was not expected is to be found in the fact that some twenty-five or thirty steady followers of the Government, men who have voted with them on every previous party issue, were absent from the division; and the fact that they were absent unpaired proves that the Government itself—that is to say, the whips, who are responsible for bringing members together—did not realize the gravity of the situation. Even during the eventful evening there was little of that tension in the atmosphere which precedes a great struggle. Members scarcely listened to the speeches. There was not that concourse of newspaper men in the inner, and miscellaneous quidnuncs in the outer, lobby, which testifies to the excitement of the public. Ministers themselves were taking matters easily, and talking as if nothing particular was in the wind. Not till about midnight did the impression get about that the division would be a close one. Mr. Gladstone rose a few minutes later and confirmed this impression by the tone of his speech, which made the question one of confidence, and implied that he knew his Government to be in peril. Yet even after he had sat down, and during the earlier minutes of the division, there was comparatively little stir among the Ministerialists, and it was not till their lobby was seen to be exhausted, while members still continued to return into the House from the Opposition lobby, that the temperature of men's minds suddenly rose many degrees, and every moment seemed an age till the numbers were announced. To the Tories and the Irish Nationalists their victory was less of a surprise. The latter had brought across the Channel nearly every one of their available votes, the former had issued a very pressing "whip" (notice to attend) to their supporters. But as neither could count on the number of Ministerialist absentees, they cannot have had any certainty of the issue.

Was the division, then, an accident? In one sense, yes. It was so far accidental that it was not foreseen, and might by the exercise of greater care have been avoided. In another sense, no. Even the chance absence of twenty or thirty Liberals would not have caused it had not the Government been steadily losing ground, so that its hold on many of its supporters was so weakened that some few did not fear to vote against it, while others felt too listless to rally to its help. It is a maxim in English politics that weak governments may fall at almost any moment, and more probably on some minor question than on a great question, where the feeling of the constituencies forces the whole of the party to follow the old banner. In this particular case there was not only the slackened zeal of many who deplored the unlucky conduct of foreign affairs, but also the feeling of indifference which comes at the end of a Parliament, when all the main work has been done, and the centre of interest has been transferred to the constituencies, whose mandate is so soon to be given to a new Parliament. Since the passing of the Franchise and Redistribution Bills, the House of Commons has become demoralized. It is like a man with so reduced vitality that any germ of disease may effect a lodgment in his system. For the last two months close observers have seen that the position of the Ministry was so precarious that a fatal stroke might come almost from any side.

Another question which has been often put during the last day or two is, How came the Ministry to let itself be beaten? There are not wanting persons to suggest that it was willing to be beaten, and took the opportunity of a question on which it believed that the country would be with it, fearing that if it lasted longer it might fall upon an issue which would excite less popular sympathy. This particular issue of taxation, a tax on intoxicants and on succession to real estate, versus a tax on tea or sugar—was one which interests the temperance party—a strong party, a party mainly on Mr. Gladstone's side, but a party which had been disappointed by the small legislative encouragement they had received from his Ministry. It also interests the working class as a whole, because, although some of them do not wish to have beer and spirits taxed, all of them gain by the cheapness of tea and sugar, and all of them are willing to see the burdens on real estate increased. The question is therefore not a bad one for the Liberals to use in an electioneering campaign, and proportionately a difficult one for the Tories. It is, at any rate, a safer topic for the Ministry to dilate on than those questions of foreign policy on which they have been so often arraigned, and on which the Opposition would have much preferred to obtain their condemnation. Certain it is that the defeated party took their defeat in no melancholy spirit. Mr. Gladstone himself showed his usual composure, continuing to write his nightly letter to the Queen, recounting the proceedings in Parliament, while the tempest of cheers and counter cheers raged round him after the announcement of the vote, while he stood mo ionlessly waiting to move the adjournment of the House. But most of his supporters and some of his Cabinet made no secret of their satisfaction. The Radicals in particular almost embraced one another in the passages as they trooped out. The Conservatives, except a few fiery spirits who were carried away by the sense of victory, seemed too much startled to know whether to rejoice. Their shouts and cheers were far less loud than those which came from the Irish benches.

There were good reasons for the pleasure of the Radicals. They count confidently on obtaining a majority, probably a large majority, at the general election, and wish to obtain it from opposition rather than in power, because they believe that they will thus be freer to speak their minds, put forward a bold programme, and obtain the assent of their party to it. This was one

ground. A still stronger one existed in the position of the Irish question. Lord Spencer, the Irish Lord Lieutenant, has been insisting in the Cabinet on the renewal of a portion of the now expiring Act for the Better Prevention of Crime in Ireland, while several of his colleagues have opposed this so stoutly as to threaten to resign if it were made a Cabinet measure. Neither party would give way, and it seemed probable that the Ministry would break up, the more Radical section giving out, and that this breach would involve a breach in the Liberal party itself. Even had the difficulty been patched up and the new Prevention of Crimes Bill been brought in by a united Cabinet, it would have received much opposition from the Radicals, and would have put the Government in a disagreeable light before the Liberals of Ireland even more than of England. Relief from these embarrassments was a great relief; and it has made many people think that the Government took the course of the mariner who, finding his ship has sprung a leak, runs her ashore rather than let her go down in the open sea.

Notwithstanding these suspicious circumstances, it would be too much to say that the Government really courted defeat. They committed the imprudence of allowing a very serious division to be taken immediately after the Whitsuntide recess, when many of their supporters had not returned to London. They did not realize their danger, and did not therefore put proper pressure on their men to come up to the division. They were in fact careless, and would hardly have been so careless had they been eager to retain office. That is all.

The reasons which make Ministers glad to quit office ought to make the leaders of the Opposition slow to take it. They come into a position full of difficulties—difficulties with Russia (for the frontier question is not fully settled), difficulties in Egypt and the Sudan, difficulties in various parts of southern and southeastern Africa, and a financial deficit. They may and will say that these difficulties are not of their own making, but that is a defence which soon ceases to carry weight. They will have to conduct the business of the remaining two months of the session in the face of a hostile majority, which will pull them up if they should try to give effect to their own views. The fact that they are in office will make the country forget those faults of their predecessors on which they have been relying for success at the general election, and put them into the position of defenders instead of the more agreeable one of assailants. There can be little doubt that their wisest policy would be to repeat Mr. Disraeli's in 1873, and wait for the results of the election. But the temptation, after five years of opposition, to have even a few months of power is a strong one. It tells upon all those who expect some kind of office or honor, and such persons are both numerous and influential. At this moment, the general expectation is that the Queen will send for Lord Salisbury or Sir S. Northcote, and that he will consent to form a Cabinet. But the issue will doubtless be known before these lines can reach you. Perhaps the strangest thing about the situation is the contrast between June, 1885, and May, 1880. The Gladstone Government came in with a burst of exultation from its followers such as has seldom been seen in England. It goes out with a sense of relief, almost of satisfaction, from those followers, that its course is run. Yet the popular loyalty to its head is not diminished. Fortune seems to have been stronger than the strongest men, and the fault is laid on her—on her and on the inevitable difficulties of our form of government.

Y.

MUSIC IN LONDON.

LONDON, June 5.

ON Monday evening Hans Richter, the Viennese conductor, gave the fifth of his series of nine concerts at St. James's Hall. A gentleman who heard them all informed me that this one was by far the least satisfactory of all that had been given this season; and to me it was certainly disappointing in more than one respect. The orchestra is by no means to be compared with our New York Philharmonic in quality of tone and the excellence of individual performers. The strings are good and unanimous, the wood-wind much less satisfactory, and the brass still less so. One of the French-horn players made some sad blunders in the Pastoral Symphony. Nevertheless, it is in coping with such defective material that the genius of Hans Richter is revealed. In regard to *ensemble*, it is astonishing to see what control he has over his band; how he makes them follow every *nuance* of his intentions by his emphatic though not exaggerated gestures. In rhythmic and dynamic shading the orchestra approaches perfection, and I have rarely heard anything so well done as the intoxicating, turbulent finale of the first act of "Die Walküre." The vocal parts of this selection were interpreted by Mme. Valleria, who sang with good tone and proper expression, and Mr. Lloyd, whose voice has the genuine mellow tenor quality, and who also made a good impression, although deficient in dramatic passion. Dr. Hueffer, of the *Times*, assures me that this tenor is admirable in Walter's Prize Song from "Die Meistersinger," and I can easily believe it. He certainly has as fine a lyric voice as I have heard in a long time.

Besides the Beethoven and Wagner selections, the programme also contained two numbers from Liszt's oratorio "Christus," which were more favorably received than was to be expected of a London audience; for it is well known that in general musical culture London audiences are not only inferior to Continental audiences, but certainly also to the New York public. It is true, the most famous musicians in all parts of the globe make their annual pilgrimage to London, to carry away a pocketful of John's guineas; but in this very fact lies the weakness of the London concert business. The artists seldom take less than a guinea for a good seat, and the consequence is that the general public is almost entirely excluded from high-class musical entertainments. A floor seat at a Richter concert, twenty-one rows from the stage, cost me 10s. 6d.; the programme was a shilling extra—no programmes being distributed gratis except for the following week's concert; so that an ordinary concert of this kind comes to $3. And this was not the worst of it: there was no ventilation, and the atmosphere was tropical. The seats are more uncomfortable than in a suburban variety theatre; they consist of rows of simple benches, with nothing to lean against except a board of the width of a hand on top. Two hours of such torture produces an effect comparable to that of riding on a Broadway stage from the terminus to the Battery; and I no longer wonder at the old saying that "the English take their pleasures sadly." Under such circumstances most people would prefer to dispense with them altogether. Some time ago Mr. J. C. Rodrigues, formerly editor of the New York *Musical Review*, exposed the absurdities of the concert system here in the London *Times*, and I now hear that, evidently in consequence of this exposure, which was widely discussed, a company has been formed to build a new concert hall, with comfortable seats, reasonable admission prices, and large enough to hold 4,000 spectators. London may then perhaps hope to enjoy as good and as cheap concerts as may be attended in New York and Brooklyn.

In opera, also, we can claim, after last winter's experiences, that New York is ahead of London. Italian opera had been languishing for several years, and this year, for the first time since Handel's days, the London "season" is without Italian opera; and no one seems to miss it. Carl Rosa, however, has just brought to a close one of the most successful seasons of English opera on record; partly, no doubt, owing to the absence of competition. Carl Rosa still courts favor with some of the insipid "ballad-operas" of the Balfe school. But his greatest successes this year were two new operas, one French and one English—Massenet's "Nanon," and Mr. Goring Thomas's "Nadeshda." This last work was given no fewer than nine times, always to crowded houses. Yet it is difficult to make any inferences from this as to the future of this opera. Last year the same composer's "Esmeralda" enjoyed a similar success; yet this year Mr. Rosa found it expedient to give it only once. "Nadeshda" is one of the most favorable specimens of English music I have heard. The libretto is fairly well constructed, and may in a certain sense be regarded as "timely," inasmuch as it is based on a Russian subject, introducing serfs, boyars, Russian costumes and scenery, all of which was admirably presented under the management of Mr. Harris. The cast included Mme. Valleria, Miss Yorke, Mr. McGuckin, and Mr. Crotty, all of whom were fairly satisfactory, although Mme. Valleria alone succeeded in "electrifying" the audience. Carl Rosa's orchestra is well balanced and well trained, and so is his chorus; incidental flaws, however, are observable. Of course, the opera is too long. What modern composer ever wrote an opera, oratorio, or symphony that was not too long? As for the music, it is a judicious mixture of the English and French styles, with occasional reminiscences of "Lohengrin," "Carmen," and Mendelssohn, of course. Mr. Thomas is, I believe, a pupil of M. Ambroise Thomas, but does not slavishly follow his master's style. His melodies are not highly original, nor his modulations ultra-modern; yet he succeeds in keeping his music throughout on a level considerably above the commonplace. His dramatic sense is unusually fine for an Englishman, and the most promising feature of his music, from a theatrical point of view, is its rhythmic variety and animation. Mr. Thomas is certainly one of the most gifted of the young school of English composers, and his "Esmeralda," it is well known, has also been produced with success in Hamburg.

If Mr. Goring Thomas's star seems to be in the ascendant, Mr. Sullivan's is beyond doubt rapidly sinking. His "Mikado," which still draws large audiences, is certainly the weakest thing he has ever done. In "Pinafore," "The Pirates," and in "Patience" respectively there were at any rate a few melodies that bore the stamp of individuality; but in the "Mikado" the trained ear waits in vain for a few strains of melody that it has not heard a thousand times before. As in some of his other works, Handel is Mr. Sullivan's prototype and inspiration; and it need not be said that of all the composers who have ever written a page of music, Handel is the least suited to serve for such a purpose. The only thing in the "Mikado" that seemed to me to possess the least charm was the instrumental introduction, which contains some dainty effects; but as English operetta audiences are not sufficiently educated to appreciate instrumental music, this number was lost to most in the din of conversation. There cannot be a shadow of doubt that had the "Mikado" appeared before "Pinafore" and "Patience," it would have been a dead failure; but Gilbert and Sulli-

van have got the wheel rolling now, and the people run after it. It must be stated, however, that although the audiences are large, there is little applause, and on the evening when I heard the work there were only two encores.

Mr. Gilbert has not distinguished himself in the "Mikado" much more than his collaborator. There are a few rather funny conceits in the libretto, but as a whole it has a very artificial aspect; it is too obviously made after an approved recipe, which all theatre-goers know by heart. As it is, the *Mikado's* exclamation, on page thirty-nine of the text-book, would serve as a capital motto for the whole operetta: "Dear, dear, dear; this is very tiresome." The plot is already known to most New Yorkers who are interested in such matters, and need not therefore be retold. But it is worth recording that one of the three or four things that made the audience laugh was this: The *Mikado's* son has assumed the guise of a wandering musician to win the love of *Yum Yum*. When he finds that he has a dangerous rival, he exclaims: "What if it should prove that, after all, I am no musician?" And she replies: "There! I was certain of it directly I heard you play."

The "Mikado" is placed on the stage with a regard for realism and picturesqueness in costume and scenery that constitutes almost its sole charm. The chorus is effective, and the orchestra rather better than those we are accustomed to in New York at similar theatres. The leading actors and actresses seem to suffer from an excess of dignity and want of power to express the simplest emotions. They all have an annoying habit of accenting the wrong syllable and putting the emphasis on the wrong word of a sentence, thereby entirely destroying its "point." The Englishman is not a theatrical animal, even if he does claim Shakspere as a countryman.

It must nevertheless be admitted that London audiences do appreciate a good thing when they hear it well done. "Boccaccio" has just been revived at one of the theatres, and the animation of the audience affords an encouraging contrast to the Sunday-school dignity and primness of the Gilbert and Sullivan audiences. Through Suppé it may be hoped that the Londoners will ultimately be educated to an appreciation of Strauss, who has not been fairly placed before English audiences heretofore, or they would have found out how infinitely superior he is to their own Sullivan in originality of melody, modulation, rhythm, and instrumentation—in everything, in fact, that constitutes a good composer. An encouraging sign is the enthusiasm with which Strauss's brother Edward is received every afternoon and evening at the Inventions Exhibition. Thousands surround his stand, and almost every Viennese piece he plays is redemanded; for there is a charm in the coquettish *rubato* of Austro-Hungarian music that carries away even English dignity. Edward Strauss receives no less than $30,000 for the services of his band during the exhibition. The Viennese, on their part, do not miss their favorite conductors Richter and Strauss, in their respective spheres, for the Vienna "season" ends when the London season begins. F.

Correspondence.

THE PHILADELPHIA POSTMASTER.

To the Editor of The Nation:

Sir: A paragraph in the last *Nation* respecting the probable dismissal of the Philadelphia Postmaster does injustice to a very worthy officer. His letter of 1881, rescinding the appointment of a Democratic carrier, was known to the delegation of Mugwumps which called upon the President, as also the fact that the letter had been shown to Mr. Cleveland. It was not felt that this in any way rendered him liable to the charge of "offensive partisanship," seeing that his action had virtually been taken under orders, that he had strictly obeyed the Civil-Service Act, and that at the present moment he has in his office quite a number of Democratic subordinates. This letter is the only charge that has been heard of against him during a service of, I believe, eight years, in which his management of the office has given universal satisfaction to the community. To replace, for so flimsy a cause, a competent and experienced official with a new and untried man, will be regarded by all who are acquainted with the facts as simply yielding to political pressure, and will be hailed by the opponents of civil-service reform as an evidence that we are no nearer the reform than we should have been under Mr. Blaine. I believe that I may claim to have been one of the first to give practical support to Mr. Jencks's early efforts in the cause, and, after so many years of apparently hopeless struggle, it is my zeal for it which leads me to hope earnestly that Mr. Cleveland may not be misled into making a serious blunder which will discourage his friends and embolden his enemies. L.

Philadelphia, June 18.

CIVILIZED EATING.

To the Editor of The Nation:

Sir: After reading your ironical review of the book 'Dinners and Dishes,' in your issue for June 4, I am prompted to speak a word in defence of some of those whom the author so sharply criticises. Without pretending to any right to speak as an epicure, I have had the pleasure of dining in a number of countries on both sides of the Atlantic, and as I think of the dinners I have enjoyed I am astonished that "Wanderer" should have been so unfortunate in his experiences while gathering the materials for his book. One thing has struck me forcibly in my own experience, viz., that there is no essential difference in the manners—and I may now add in the dinners—of the cultivated classes in the countries where I have had an opportunity to observe them. Certainly, except in minor details, I cannot see what there is to choose between the dinners of those who have taste and means in America, England, Germany, Austria, and France.

As Vienna comes in for a sharp thrust from "Wanderer," I would add that nowhere have I sat down to more elegant and appropriate dinners than in that beautiful city. And as to the instance of a "fair barbarianess" eating peas off a knife, mentioned by "Wanderer," may he be forgiven for intimating that this is a common practice among the refined inhabitants of Vienna! Surely, he must have made this observation—and, I suspect, some others—in the Gasthaus, where so many of the *bourgeoisie* take their meals. If this be the place where "Wanderer" got his ideas of German eating, he might have recorded still more remarkable performances. But no record of what goes on in these feeding places can be fair to the class who are the true criterions of a nation's culture in this, or in any other, matter.—Yours respectfully, C. W. D.

Philadelphia, June 22, 1885.

BABOO ENGLISH.

To the Editor of The Nation:

Sir: Among the specimens of "unsurpassed English" in your issue of June 11 is the following: "A certificate testifying to the excellence of his character and his *cui bono* in the post he held."

Here is an interesting parallel passage from one of George Eliot's letters:

"Mr. Lewes wants me to tell you something amusing—a bit of Baboo English, from an Indian journal sent us by Lord Lytton. Apropos of Sir G. Campbell's statement that India was no good to England, the accomplished writer says, 'But British House of Commons stripped him to pieces, and exposed his *cui bono* in all its naked hideousness.'"

Edw. Graham Daves.

Baltimore, June 22, 1885.

THE OHIO HOMESTEAD BILL.

To the Editor of The Nation:

Sir: Among the factors likely to enter largely into State politics in the near future must be reckoned a movement which originated last winter in the city of Cleveland, Ohio, and which found expression in a measure known as the Ohio Homestead Bill. The bill was offered in the Legislature by Mr. C. C. Burnett, a member of the House from that city. It proposed "to provide against the evils resulting from periodical depressions in manufacturing industries, and to promote agriculture" by empowering the State Board of Agriculture to acquire arable land within the State, and to allot the same in plots not exceeding twenty acres for the use of such heads of families as should apply therefor, provided that the applicant furnish a certificate from the Probate Court of the county in which he resides, attesting that he has been for three years a citizen of the State, is head of a family, and is not the owner of real estate in fee or of personal property to exceed $1,000 in value.

The fee simple of the land was to be forever vested in the State, and the conditions under which the applicant was to hold it were as follows:

1. Either he or his heirs must actually reside upon and cultivate the land.

2. He must pay into the treasury of the county where the land was located an annual tax or rental of say 6 per cent. on the actual cost of the land to the State.

3. Improvements were to be the property of the occupant making them, and, up to the value of $1,000, exempt from debt or execution or State taxation.

4. The occupant might sell his improvements to any other person who had complied with the requirements of the law, and the latter thereby acquired the same right to hold and use the land as the former occupant had.

Widows were also included in the provisions of the law if they were heads of families and had for three years been residents of the State.

The bill was endorsed by the District Assembly of the Knights of Labor of this city, and the petition for its passage was signed by large numbers of wage-workers as well as by many of the leading business firms of the city. It was also endorsed by the Republican clubs of several wards of the city. This last endorsement settled its fate. The Legislature was strongly Democratic, and the bill was referred to a committee, which speedily reported it back, recommending its indefinite postponement. This report was at once adopted, and all attempts to secure a reconsideration were promptly voted down.

But the causes which gave rise to the bill, *e. g.*, the disturbances in the iron and coal industries, which are continually dooming a larger and larger body of industrious men to a hopeless dependence upon odd jobs; the acres upon acres of land hard by our large cities, land which is raising nothing but thistles and briers, but which ought to be yielding sustenance to hungry men: the growing conviction

among thoughtful wage-workers that the only constant and certain outlet for idle labor is the idle land—these have not been indefinitely postponed, but are certain to force the question to the front again as soon as the public begin to discuss the men who wish to be sent to the next Legislature, and the measures that are to come before them.

L. B. TUCKERMAN.

CLEVELAND, O., May 23.

SECRET SOCIETIES AND COLLEGE GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: That the secret societies which exist in almost all our colleges are constantly attempting to control—and in great measure do control—undergraduate politics, is a matter so completely recognized that the public has lost all interest in its discussion. The charge is admitted, but it is answered that students are sure to split into parties of some sort, and that the societies do no more harm than would be done by unorganized "sets." On the other hand, it is claimed that they do much good, that the sense of common responsibility for the good name of the society stimulates scholastic and literary effort, and furnishes a very effective check upon all the more disreputable forms of immorality,

But the extension of society influences beyond the undergraduate curriculum, and the introduction of these influences into graduate politics, is a matter of which little has been said. It is, in fact, a new thing. It has become possible only through the new policy which confers the power of electing trustees upon the alumni—and it is a much heavier stake than the division of class-day honors which is here in play. Under the American system the trustees of a college are not simply the legal holders of its property: they are the supreme organ of college government. They appoint and remove the members of the Faculty and fix their salaries. They regulate, so far as they see fit, every detail of internal policy. Some legislative power is usually left to the President and Faculty, but the extent of that power is determined by the trustees.

The election of a trustee is now in progress at Amherst; and, in the election, society influences have played, if not a greater, at least a more open part than at any previous time. The Amherst system is as follows: Three inspectors of election are chosen by the alumni at Commencement. These gentlemen send circulars to each alumnus of the college, requesting him to nominate three candidates for the vacant trusteeship. The votes are counted by the inspectors, and the three names which head the list are announced in new circulars. Each alumnus has then the right to vote for one of these three candidates.

The preliminary balloting was completed some weeks ago. It is a significant fact that the three candidates nominated represent the three oldest societies having the greatest number of graduate members. I am informed that one of these societies issued a circular before the preliminary balloting, recommending *three* candidates—all, of ccurse, members of the society in question. One of these three emerged from the preliminary balloting as an official candidate; and his society has now sent out a printed letter, a copy of which I append, urging his election.

Probably the younger alumni of a college in which the secret-society system exists, will usually vote on society lines. The desire to carry "their man" into the Board of Trustees will probably exercise a stronger influence than their estimate of his relative fitness for the position; and any effort to stem such a silent current of prejudice will certainly be useless. But it is quite another thing when a secret society openly attempts to whip up its alumni for its candidate. For the overt act there should be some remedy; and the best remedy seems to be the widest publicity.

I therefore append a copy of the circular in question. It should be explained that the Columbus manifesto is not a society appeal. Its signers represent different societies, or, rather, no society. But the reprinting of the Columbus circular over the signature of a college society gives the entire document a totally different character.

MS.

AMHERST, MASS., June 15, 1885.

DEAR SIR: The following circular note from the Alumni of Amherst, in Columbus, Ohio, speaks for itself:

"COLUMBUS, OHIO, June 1st, 1885.

"DEAR SIR: The Alumni of Amherst College, in Columbus, have decided unanimously to vote for George A. Plimpton, of New York, to fill the vacancy in the Board of Trustees. They trust their action will command your approval, and have some influence to persuade you to vote in like manner,

"Signed, J. R. Smith, Henry J. Booth, Thomas P. Ballard, Linn B. Kaufman, George T. Sparks, George M. Lattimer, G. Stanton Coit, H. N. Galloway, Committee."

In a trustee our college needs earnest loyalty; the strongest desire to see Amherst yet more prominent among the leading colleges of our country; tried business ability and energy; a wide and thorough acquaintance with the educational men, methods, and institutions of the day, and withal, as a balance, a wise conservatism.

In every particular Mr. Plimpton meets the requirements. His loyalty needs no statement. His business capacity and his thorough acquaintance with educational affairs are fully assured by his position as a leading publisher of educational works. Yours, very respectfully,

SIGMA CHAPTER OF DELTA KAPPA EPSILON.

Notes.

IF sufficient support be promised, D. Van Nostrand will bring out a new (limited) edition of Hallock's translation of Jomini's 'Strategical Life of the Emperor Napoleon,' in four volumes, with atlas, at the original price. The work has been for some time out of print.

A new 'Cæsar,' equipped with cuts, diagrams, plans, and a colored map of Gaul, by Professors W. F. Allen and J. B. Greenough, and Messrs. J. H. Allen and H. P. Judson, is in the press of Ginn & Co. The ordinary text-book of this classic has hitherto been singularly regardless of these aids to understanding and enjoyment. The same firm announce 'Questions on Cæsar and Xenophon,' by Professor E. C. Ferguson; and 'Andreas: a Legend of St. Andrew,' edited by Professor W. M. Baskervill, of Vanderbilt University, and collated with the MS. by Professor Wülcker, of Leipzig.

C. N. Caspar (Milwaukee) will shortly issue, to subscribers only, a 'Directory of the Antiquarian Booksellers and Dealers in Second-Hand Books of the United States,' in three alphabets.

G. P. Putnam's Sons have converted a showy holiday book of last winter into an attractive summer guide-book in paper covers. We refer to Searing's illustrated 'Land of Rip Van Winkle: Legends and Traditions of the Catskills,' which falls off but little, save in price, from the original edition.

There is something luring about the portfolio of eleven sheets of 'Marblehead Sketches' published by Houghton, Mifflin & Co.; but its chief merit is as a souvenir for those who have already tasted the delights of the North Shore of Massachusetts. Two ladies are the artists—Anne Ashby Agge and Mary Mason Brooks. Their India-ink drawings are fairly suggestive of the old town, and one or two make some approach to the spirit of wave and shore. The decorative sense is here weaker than the feeling for landscape, and both adventurers have been wrecked on the shoal of lettering.

'Field, Fort, and Fleet' (Wilson & Ellis) is a typical subscription book, flashy in its external appearance, and pretty nearly worthless in its contents. The "brilliant and authentic sketches" by "M. Quad" (alias C. B. Lewis) are jerky and hysterical, and are only to a limited degree based upon personal experience of the events in our civil war attempted to be related. The author has a grudge against Lincoln, Stanton, Halleck, and the War Administration generally; but his opinions carry no weight with them.

Last October occurred the dedication of a simple monumental shaft on the field of the cavalry engagement on the right flank of the Army of the Potomac at Gettysburg. The inscriptions record the commands on both sides, without distinction, except as "Union" and "Confederate." The exercises were in excellent taste, the principal address being delivered by Capt. William Brooke Rawle, of Philadelphia, from whom we have the pamphlet which relates the whole story of the celebration, with the aid of a map and a photograph.

Two historical pamphlets on our table are noteworthy. One is a lecture by Sir Francis Hincks on 'The Boundaries formerly in dispute between Great Britain and the United States' (Montreal: John Lovell & Son). The northeastern boundary and the Ashburton treaty are the chief subjects of this discourse, which vindicates the English negotiator against adverse colonial criticism. Sir Francis Hincks holds that the famous "red-line map" of 1782, sent by Dr. Franklin to the Count de Vergennes, was intended to throw dust in the eyes of that little scrupulous statesman, whose object it was to prevent a settlement between England and the United Colonies, encouraging the one party to ask too much, and the other to reject excessive pretensions. In other words, Franklin deliberately misrepresented the state of the preliminary negotiations as to the Maine (Massachusetts) boundary.

The other pamphlet is a reprint from the *Magazine of Western History*, being the Rev. C. F. Robertson's account of Burr's attempt to separate the West from the Union.

A curious paper in the same periodical for June is that on the disappearance of the "Great American Desert" from text-books and public documents before the advance of accurate knowledge of the trans-Mississippian region. The author is the Rev. W. Barrows, author of a recent work on the founding of Oregon.

Readable and instructive will be found Mr. Lewis W. Wilhelm's 'Local Institutions of Maryland,' constituting Nos. v., vi., vii. of the Third Series of the Johns Hopkins University Studies in Historical and Political Science. It begins with the Land System, and reviews successively the Hundred, the County, and the Town.

Mr. Edward Eggleston, in his search at the British Museum for material for his colonial history, has found documents which throw new light on Nathaniel Bacon's rebellion in Virginia, and solve the mysteries hitherto attaching to this romantic episode.

A discussion, with charts, of the remarkable thunderstorms of May 18, 19, 1884, in the tract east of the ninety-fifth meridian and north of the Ohio, constitutes No. 20 of the United States Signal Service Notes. This pamphlet is the first fruit of a system of widespread observations by fixed methods established by the Signal Office.

Two broods of locusts, the seventeen-year and the thirteen-year, are due the present season over a large section of the country. A monograph of the Periodical Cicada has accordingly been issued by the Division of Entomology in the Department of Agriculture. Its most important feature, after the description of the locusts and the means of prevention, is a chronological history, with dates of future appearance of all known

broods. A special effort is making to have the appearances this year carefully observed.

An abridged translation of the eighth chapter of A. Woeikoff's 'Climate of the Globe,' is given in the *Zeitschrift* of the Berlin Geographical Society, No. 116. The map of this number shows the route of P. Ascheron from Fayum to the Lesser Oasis in the Libyan desert, and is commented upon by the author.

An account of the late Admiral Courbet's operations on the Min River in August of last year, somewhat woodenly translated from the French, is given in No. 33 of the Proceedings of the United States Naval Institute, with a chart of the engagement. Unequal as were the combatants, some light was thrown on the capacity of torpedo warfare.

Mr. W. C. Lane's catalogue of Boston and Cambridge Dante collections, of which the first part has been published, is the only achievement noted during the past year in the report of the Dante Society. It is announced that the concordance to the 'Divina Commedia' undertaken by Prof. E. A. Fay, of Washington, will probably be completed by the end of next year. A special value is given to the present report by an appendix containing Mr. Longfellow's notes designed for a revised edition of his translation of the 'Divine Comedy.' These consist largely of parallelisms, but in one case we find an unpublished version of a sonnet by Vanni Fucci, which will be welcomed by all admirers of Longfellow's command of this form of verse. Some of the notes have been usefully annotated by Professor Norton.

An illustrated article on 'Handel and his Portraits' stands first in the contents of Cassell's *Magazine of Art*. No less than six likenesses are reproduced; they are worth far more than the musical judgment of the accompanying letterpress.

Le Livre for June does not fail to pay such honor as it can, at short notice, to Victor Hugo. It masses together the most significant tributes of the Paris press of May 23-26, the funeral discourses of MM. Émile Augier, Jourde, H. de Bornier, Jules Claretie, and L. Ulbach. More—and better, as some might say—it reproduces two young and beardless portraits of the poet in the Romantic period: a profile of 1832—the Hugo of "Le Roi s'amuse," and a full-face of 1840—the Hugo of "Les Rayons et les Ombres." Both are extremely interesting.

To the fund being raised for a national monument to Victor Hugo are dedicated the proceeds of a little "édition du monument" just issued by Hetzel-Quantin, Paris. This duodecimo of 250 pp. gives, in three parts—poetry, drama, and fiction—selections from each of Hugo's works in prose and verse, in chronological order. The first extract, from the 'Odes et Ballades,' is "Mon enfance"; but the rest have no personal or autobiographical significance. The idea seems a happy one.

'Der Shakespeare-Mythus,' published recently at Leipzig by F. A. Brockhaus, is Mr. Appleton Morgan's iconoclastic work done into German by the ardent Mr. Karl Müller-Mylius. We can see very little objection to the transfer of this discussion to another tongue, and for once we have no prejudice against the use of the Gothic characters. The translator enlarges upon and goes into raptures over Mrs. Henry Pott's worthless 'Promus,' in a long foot-note on p. 193.

Instead of the often promised 'History of Babylonia and Assyria,' by Professor Schrader, of Berlin, intended to form vol. ii. of Oncken's 'Allgemeine Geschichte in Einzeldarstellungen,' we receive the first instalment of a work on the same subject by Dr. Fritz Hommel, Privatdocent at the University of Munich. This is, we cannot refrain from saying, a disappointment; for there is no more generally acknowledged authority in this historical field than Schrader, while Hommel, a nervously restless worker in it, is far from enjoying an equal reputation for soundness. The beginning, however, is very promising. Almost the whole of the 160 pages is occupied by the Introduction, which treats with particular fulness of the cuneiform literary system and the various attempts of discoverers and philologists to decipher it. Dr. Hommel's style must have been improved by Oncken's editorial supervision or admonition, for we detect nowhere such tortuous periods, bristling with insertions and quotations, as here and there fill entire pages of the same author's 'Die Semitischen Völker und Sprachen' (1883). But from this failing Schrader himself, especially in his 'Keilinschriften und Geschichtsforschung,' is not entirely free.

The "Allgemeiner Verein für Deutsche Literatur," of which Grand Duke Charles Alexander of Saxe-Weimar-Eisenach and Prince George of Prussia constitute the "Protectorate," and Professors Gneist, Werder, and Scherer, of Berlin University, and City Councillor Adolph Hagen, of Berlin, the "Curatorium," continues its activity with a lively regard both for the higher needs and the general predilections of the German public. Its last series of publications—the ninth—comprises three crowned works: 'Heinrich von Kleist,' by Dr. Otto Brahm; 'Deutsche Geschichte im Zeitalter der Reformation,' by Professor Egelhaaf; and 'Geschichte des deutschen Einheitstraumes und seiner Erfüllung,' by Dr. J. Jastrow. Among its latest announcements are essays on recent literature from the surpassingly prolific pen of Rudolph von Gottschall; a literary sketch of Margaret of Navarre and her time, by Professor Lotheissen; a work by Professor Gneist on the English Parliament, in its "changing aspects, down to the present Reform Bill"; pictures of Berlin life, by Julius Rodenberg; and pictures of the concert-life of our time, by Professor Hanslick, who has already contributed three volumes to the Society's publications. Another of its favorites is Bodenstedt.

August Boltz, a German linguist, author of works on modern languages and translator from the Russian, modern Greek, and Sanskrit, has published a critical dissertation on the Cyclops, 'Die Kyklopen, ein historisches Volk' (Berlin, 1885), intended to prove that the Cyclops of Homer were not the fabulous one-eyed beings of Hesiod, sons of Uranus and Gæa; that the Odysseyan story of the one-eyed giant Polyphemus and his fellow-shepherds—who are *not* described as one-eyed monsters—was based on mariners' tales of a stalwart people of shepherds, dwelling round Mount Etna; that the Greek name Kyklōps was a corruption of Siclos or Sicŭlus, which was that of the inhabitants of eastern Sicily, sprung from Italy, for whom the island was ultimately named; and that these Siculi, or Cyclops, there and elsewhere—in Greece as well as in Asia Minor—were builders of "Cyclopean" wall circles. The author pours out a great deal of philological lore on the subject, and indulges in many digressions; but the historical thread he spins is very slender.

—The July *Harper's* is well suited for a midsummer number: there is plenty of light reading, good of its kind. Grenville Murray's "His Royal Highness' Love Affair" is bright and amusing. Mr. Burdette's "Aunt Powell's Will" is moral and amusing. Mr. Howells's new story is in his pleasantest vein, full of his quiet humor clothed in the neatest expressions. It is international: the contrast of American and foreign ways runs through it, and Mr. Howells has added the contrast of the old and the new Americanism. The hero is a Western journalist, a Mugwump, much given to banter of the American sort; the heroine is—perhaps there are two heroines; and the scene is Florence. Miss Woolson's new instalment of "East Angels," though she is above the art that suddenly ends a number with the dagger brandished above Melissa's breast, leaving it and the reader in suspense till the next number, is yet all too short. But the articles are not all light; there is a long one in which the progress of silk from the mulberry seed to the dress is clearly told by Mr. R. R. Bowker. And there is much geography—a Western article (no magazine is now complete without one) telling picturesquely how the Montana cow-boys drive their cattle; an Eastern one, by F. Marion Crawford, on the Mohammedans in India, with most successful woodcuts of the wonderful architecture; two Northern ones, the first on the city of our President, which the writer prophesies will become "a commercial Constantinople, stretching along the Bosphorus of the broad Niagara"; the other on the lake, mountain, and river Ampersand in the Adirondacks—one of those pieces in which enthusiastic and injudicious lovers of nature point out beautiful spots to the *profanum vulgus* of tourists, who straightway flock there and ruin them. There is nothing on the South, unless "East Angels" be taken for that, as it well might, since the idea it gives of the old Florida could not be more vivid. In the Easy Chair Mr. Curtis discourses of Willis and Poe, "the skirmishers, dashing and brilliant," who preceded "the first distinctive American literary group," Longfellow, Hawthorne, Emerson, Lowell, Holmes, and Whittier.

—There is a great deal of fiction in the July *Lippincott's*, and it is not very good. "On This Side" continues its somewhat commonplace humor; Miss Tincker finishes "Aurora"; "Dieu Dispose" and "Mees" are short and slight. Edmund Kirke contributes the first of two papers on "The Pioneers of the Southwest," an account of the first settlement of the Watauga Valley in 1770, at a time when a tract of country larger than England and Scotland together, to be seen from the top of the Alleghanies, had not a single human habitation, not even a wigwam, for it was "the hunting-ground and battle-field of the Indians, claimed by hostile tribes, but occupied by none." Another interesting paper is a sketch of Joseph J. Mickley, pianoforte maker and tuner, of Philadelphia, member of all the societies in numismatics, history, and archæology throughout the world, the owner at one time of the largest collection of coins in the United States, the victim of the greatest known numismatic robbery, which yet his Quaker placidity recorded in his diary in only four lines. He was a character, living all alone over his shop, in a spacious house crowded with books, autographs, and coins, in extreme disorder—a man of indefatigable industry and perseverance, who learned Swedish after he was seventy, in order to write a history of the settlement of the Swedes on the Delaware, and later still travelled in Europe, making curious observations which are given in this sketch.

— Dr. Holmes's "Portfolio" in the *Atlantic* is very medical: Dr. Butts reads a paper before the Pansophian Society, in which he recommends the fortieth chapter of Rasselas as the first book a medical student should read, to teach him "caution in the pursuit of the most deceptive of all practical branches of knowledge." The next article is a medical story too, the case of a man whose memory was reversed so that he recollected the future; a state of mind which was extremely inconvenient, since it led him to utter all sorts of embarrassing things—for example, saying in the presence of the young man who was beginning to pay attentions to his daughter, "I shall give you my consent soon." The gift, which so many people would inconsiderately long for, is not of the

slightest value for the avoidance of danger, because of a curious dilemma. If the future event could be made not to happen, it would not have been known beforehand, for only that which happens can be remembered. This psychological puzzle at the beginning of the number is matched by the Contributors' Club at the end, which is unusually subtle in criticising Henry James's criticism of George Eliot. The *Atlantic*, like *Lippincott's*, has a paper on the Watauga Valley—Mr. Warner's "On Horseback," written with less than his usual humor, but yet agreeably. He takes down the romantic ideas of the Tennessee and North Carolina mountains which we derive from Charles Egbert Craddock's *Atlantic* story, for he finds no dialects and no stills, or at least no evidence of their existence in any abundance of good liquor. But he finds a plentiful lack of good food. Critics from time immemorial have blamed travellers without number for dwelling on the discomforts of inns and the distastefulness of fare. Mr. Warner would fall under such ban, but he has a good defence: the traveller must relate the characteristics of the country, and the most obtrusive characteristics of North Carolina and East Tennessee are slack-baked bread and fried meat. There is some scenery, to be sure; but who can enjoy scenery when tormented by hunger and dyspepsia? How much does the seasick voyager enjoy the majesty of the ocean? For more sentimental aspects of mountain life let the reader turn to Miss Murfree's story, where D'rindy has a brief moment of perfect happiness, which is all swept away—a most artistic contrast. Mr. Scudder treats thoughtfully of "Childhood in Mediæval Art," Miss Miller eulogizes the blackbird and defends his song, Mrs. Leonard tells how she saw Southwestern Kansas with Eastern eyes and found it good. But what greasy food is to the traveller in Tennessee, that the high, hot, dusty, cold, rainy, destructive winds are to the dweller in Kansas. No wonder that the people have enthusiastically planted trees, since trees are thought to break the force of the tornadoes. In contrast to this prairie land are the Mexican mountains in which Sylvester Baxter describes a week's vacation, leaving an impression of picturesque beauty and rich fertility. W. L. Alden sets forth the extravagance and childishness of Garibaldi's ideas about everything but war, for the hero of Aspromonte was an example of what we have seen conspicuously in our own country, that a great general may be a wretched governor. In "Paradise Found" President Warren's discovery of Eden at the North Pole is combated with arguments which to us seem conclusive; but it is surprising and discouraging to find the *Atlantic* uncertain about the use of shall and will: "If we accept the best evidence of geology, we will be compelled to assign an even more remote position for... this Miocene warmth at the pole." When a periodical born and nurtured in Boston, and in this very number containing contributions by half a dozen New Englanders, confuses its futures, what can be expected from the mixed race of the rest of the country?

—The first number of the published Proceedings of the Modern Language Association of America has just appeared. It gives a synopsis of the work done at the Annual Convention held in this city, December 29, 30, 1884, to which is appended a valuable supplement containing the names of modern-language professors, with their official titles, in nearly three hundred colleges of the United States. In glancing through this neatly arranged pamphlet, of about one hundred octavo pages, we find that fourteen papers were read during the Conference. A dozen of these bear either upon purely literary subjects or upon educational matters connected with English, French, and German culture in our colleges, or discuss questions touching modern-language study in general. The other two essays, on points of French and German syntax respectively, are of a scientific character. Besides these Proceedings, the Association announces a "Modern Language Series," consisting of papers in which its aims are especially represented. Nos. I, II, of this series, "A Plea for a Liberal Education," "The Preparatory Schools and the Modern Language Equivalent for the Greek," have already appeared. In connection with the above publications, it may be of interest to note the active movement that is now going on with reference to the studies they represent. Information has reached us that, during the last few months of the academic year just closed, one university alone, the Johns Hopkins, of Baltimore, has had thirteen applications for trained instructors to fill vacancies in different departments of the modern languages. With such a demand as this before them, and one which is likely to increase in the immediate future, young men who are looking for employment as teachers need not hesitate which way to turn. They must satisfy the requirements of a good preparation for their work, as in other branches of learning, and then a position is ready for them.

—We spoke last week of the field of historical research open to cultivated women of leisure. Elizabeth M. Farrand's unpretentious 'History of the University of Michigan' is an example of what we had in mind. It is the more remarkable, perhaps, as being a woman's production where we might have expected a man's. Forty years have elapsed since the University held its first commencement, and only fourteen since women were admitted to an equal enjoyment of its privileges, in simple default of any statute or regulation to the contrary. The number of bachelors' degrees taken by them is but 106; of degrees in medicine, 176, in pharmacy, 17, in dentistry, 6, in law, 17. It is clear that the aim of the majority has been to acquire the means of independence. Two-thirds, at least, we are told, of those who have taken academic degrees, "have, within a few months after graduation, commenced a course of teaching which still continues." This is rightly regarded as an evidence of the compatibility of the higher education with sound health. Another curious fact is, that a larger percentage of women than of men have, after taking a regular course, graduated from it.

—The chief interest pertaining to the history of the Michigan University lies in its dependence upon the State, in which respect it is, of course, typical of a large number of Western institutions of the same class. On the whole, the relation, here as in Wisconsin, has been such as to confirm the wisdom of these State foundations. The temptation on the part of the body which sustains, to interfere with the working of the University is constant, but the courts have kept this in check to some extent, as in the case of the Legislature's endeavor to force homœopathic professors upon the medical school. In the end, the Legislature founded a special college for this school, and then, of course, the Regents had no objection to supplying it with professors. An irregularity in the financial conduct of the Laboratory led to a legislative "investigation," and that to the importation of politics into the controversy. Still, the University has kept pretty clear of entanglements. It is perhaps worth noting that chapel exercises were compulsory from the start, and twice a day. Afternoon prayers were given up when the dormitory system was abandoned. For a dozen years there has been no compulsory attendance at the chapel. Harvard, therefore, so far from setting an evil example of innovation, as Dr. Peabody fears she might, will be at least half a generation behind Michigan.

—In the *Revue Critique d'histoire et de littérature* for May 18, M. Henry Harrisse, the biographer of Christopher Columbus and his natural son Fernando, gives a pathetic account of the pitiable fate of the celebrated "Biblioteca Colombina." Fernando Columbus, who was the greatest bibliophile of his time, left his books, numbering nearly 20,000 volumes, at his death in 1539, to the chapter of the Cathedral at Seville. Here they suffered, from various calamities, to such an extent that in 1684 the library contained only four or five thousand volumes originally belonging to him. From this date, apparently, greater intelligence was shown in caring for it, and acquisitions were made from time to time by gift and purchase, so that in 1871 it was estimated to contain 34,000 volumes and 1,600 manuscripts. When Fernando bought a book he was accustomed to write a note of its classification on the top of the first page, and the price and the place at which he bought it at the bottom of the last leaf, so that it was perfectly easy to separate all his books from the others. M. Harrisse proposed some years ago to the librarian that this should be done, and offered to bear the expense of locked cases to contain them. Unfortunately, this design was never carried out, with the single exception that three volumes annotated by Christopher Columbus were placed in a case by themselves. During the last winter M. Harrisse discovered in Paris certain manuscripts and books, many of which were incunabula, which he recognized as belonging to the Biblioteca Colombina. So far as he was able to discover, or is willing to tell, they were brought from Seville with other precious works of art to a dealer in bric-à-brac, who sold the books for "a morsel of bread" to an ignorant bookseller. He, in his turn, sold them at a comparatively slight advance upon the price which he paid. M. Harrisse gives a list of eight books out of a lot sold for 650 francs, one only of which had brought at auction 11,000 francs. He also sold 'Les Œuvres de Lovize Labé, 1555,' for forty crowns, which the purchaser immediately resold, if we are not mistaken, for 15,000 francs. The only answer to inquiries addressed to Seville has been that these thefts are "one of the effects of the earthquake"! It may be well to note here that this same Cathedral of Seville had a library in 1454 which the chapter valued so highly that it procured from the Pope, Nicholas V., a bull threatening with the greater excommunication "all those who should dare to take away the books of this collection, even with the consent of the chapter, were they kings, cardinals, or archbishops."

TWO RECENT TRANSLATIONS OF THE DIVINE COMEDY.

The Divine Comedy of Dante Alighieri. Translated verse for verse from the original into Terza Rima, by James Innes Minchin. London: Longmans. 1885. 8vo, pp. lxxvi-390.

The Divine Comedy of Dante Alighieri. The Inferno. A Translation, with Notes and an Introductory Essay, by James Romanes Sibbald. Edinburgh: Douglas. 1884. 8vo, pp. cxix, 277.

THE circumstances in which Mr. Minchin made his translation of the 'Divine Comedy' were striking. In 1857, the year of the Indian Mutiny, he was living alone as the only English officer in charge of a large sub-district in the Madras Presidency.

"Throughout that year I was absolutely without any English companion, and with the terrible tales of mutiny and massacre that reached me daily through the press, I lived unarmed and in absolute security amidst a peaceful agricultural community. Such a life was singularly

suitable for literary labor, and during my many hours of solitary leisure in that stirring year I completed, in the month of October, my translation of the 'Divine Comedy.'"

After nearly thirty years, during which the work has been subjected to careful revision, it is at length published. "In my opinion," says Mr. Minchin, "Dante cannot be fairly represented to the English reader without his triple rhyme." "In his interlinked rhyme and marvellous melody consists the most exquisite portion of his charm." "The terza rima is a metre perfectly suited for English poetry." "My effort has been to reproduce with exactitude the thoughts and, when possible, the words of Dante, in verse that may give the English reader some idea of the exquisite harmony of the original."

Mr. Sibbald, in his translation of the 'Inferno,' has made use of the same kind of verse, but admits that "whoever chooses to adopt it with its constantly recurring demand for rhymes necessarily becomes in some degree its servant," while he still believes it "to be that best fitted to give some idea, however faint, of the rigidly measured and yet easy strength of Dante's *terza rima*."

These two versions are but the latest in a long series of attempts to render the 'Divine Comedy' into English verse, in which the triple rhyme of the original should be reproduced. It began more than forty years ago. Byron, Shelley, Merivale, and others had already tried their hands on fragments of the poem rendered in this wise, but the first complete version of the 'Inferno' in triple rhyme was that of Mr. Dayman in 1843. This was followed by a translation of the whole poem in similar mode, by Mr. Cayley, in 1851 to 1854; and this, in turn, by a triple-rhyming version of the 'Inferno' by Mr. Brooksbank in 1854, by Mr. Thomas in 1859, by Mr. Bruce Whyte in 1859, by Mr. Prebendary Ford in 1865, and finally by Mr. Warburton Pike in 1881. To complete the list, the version of the first ten cantos of the 'Inferno' by Mr. Ellaby, in 1874, may be added.

It is plain that the task has a charm for certain scholars, perhaps because of its very difficulty. The wrecks of previous adventurers do not deter from new attempts. Most of these versions show patience and ingenuity, and some of them considerable skill in versification. The most labored if not the best of them is probably that of Mr. Cayley. But the student of the original will not be inclined to rate even his work as a success, if measured by the aim to give a just expression to the form no less than to the substance of the poem.

The difficulties of making any sort of a translation of the 'Divine Comedy' in which the qualities of its style and form may be adequately rendered are, indeed, in larger measure insuperable than is the case with any other poem. For, in the whole range of literature, there is no other in which the form and the spirit are so intimately combined; in which so much of the spirit resides in the precise word and phrase, in the measure, the accent, the vocalization of its lines. With all its depth and intricacy of significance, and all the elaboration of its verse, the simplicity and directness of its expression are yet unique. There are scarcely a dozen passages in it in which any difficulty of interpretation arises from obscurity inherent in the form given to the thought. The style, elevated throughout, is yet as plain as prose. There are comparatively few inversions in the natural order of the words, and few forced constructions, in spite of the exactions of rhythm and rhyme. At the time that Dante wrote, the Italian language still possessed not only a primitive simplicity, but also a pliability that allowed the poet to adapt it alike to the external needs of his verse and to the more intimate demands of his own poetic temperament and taste. There is truth, though it requires some limitation, in the often-repeated passage from the 'Ottimo Commento,' in which the writer declares, "I heard Dante say that the rhyme never led him to say aught else than he intended, but that he many a time and oft made words say in his rhymes other than that which, as used by other poets, they were wont to express."

Now it is quite evident that even if the laws of versification and the forms of language were similar in another tongue to those of the Italian, yet the difference in words alone would make it difficult to render the quality of Dante's verse. But the difficulty is enormously increased if a translation be made into a language so different from Italian as English in its accentual character, in the range of its rhymes, and in its natural forms of construction. To set this forth in full would require more space than we have here to devote to it. But it is obvious that the highest art of versification would be incompetent to overcome these differences to the degree that the impression produced by a version in the same form should be equivalent to that of the original. Whether the translator undertake to give us the triple rhyme or not, he will be forced by the genius of the language into verse widely differing in effect from the hendecasyllabic line of Dante, with its five iambic feet and its closing unaccented vowel, and with its marked cæsura after the fourth or sixth sy'lable. And if he try the rhyme it must force him often into inversions remote from Dante's style, or into the employment of unusual words, or into verse-endings which match but imperfectly.

Every one of the translations of which we have given the list affords frequent illustrations of these facts. Take the tenth canto of the 'Inferno,' for instance, in Mr. Minchin's version. Here we find such rhymes as these: *drew, do, view; know, how, now; mien, strain, keen; speed, bed, heed; bestirred, heard, reared.* This jingling hardly corresponds with that "interlinked rhyme and marvellous melody" in which Mr. Minchin finds the most exquisite charm of the original. Nor is Mr. Sibbald more felicitous: he gives us, in the same canto, *down* and *son* rhyming with *thrown*, and *on* with *known; knot, sought* and *got; house, anxious, brows; raised, amazed, placed;* and other scarcely less imperfect rhymes.

An illustration of the mode in which the tone and quality of the original are lost by the translator who holds to the rhyme, may be given briefly by taking the three lines from the same canto in which Cavalcanti asks concerning his son, Dante's friend—lines, as Dante wrote them, characteristically simple, direct, impressive:

> "Piangendo disse: se per questo cieco
> Carcere vai per altezza d'ingegno,
> Mio figlio ov'è? e perchè non è teco?"

"Weeping he said, 'If through this blind prison thou goest through loftiness of genius, my son where is he? and why is he not with thee?'"

How different from this, in all that makes it poetry of the noblest order, is Mr. Sibbald's:

> "Weeping: 'By dint of genius if it be
> Thou visit'st this dark prison, where my son?
> And wherefore not found in thy company?'"

Mr. Minchin succeeds no better in spite of omission and addition:

> "Weeping he said, 'If through this prison free
> To wander thou through genius dost attain,
> Where is my son, and wherefore not with thee?'"

But both these versions are superior to Mr. Cayley's somewhat comic rendering, forced from him by the rhyme:

> "He weeping said, 'If thou into this blind
> Prison-house by loftiness of soul art brought,
> Where is my son? Why is he not combined?'"

No, this is not translation of Dante! Nor can any similar attempt be counted so. We may admit that the authors of these versions are, like the knight in 'Don Quixote,' "masters of the Italian idiom, who, where the Italian says *piace*, translate it *please*, where it says *più*, render it *more; sù above* and *giù beneath*," but Don Quixote's criticism still holds good: "This kind of version is like viewing a piece of Flemish tapestry on the wrong side, where, though the figures are distinguishable, yet there are so many ends and threads that the beauty and exactness of the work are obscured."

It is an interesting question how the 'Divine Comedy' may be best translated; how much of the poem can be adequately brought into English, and whether it be not necessary to sacrifice even the poetic form in order to preserve what is most essential in the spirit of the original.

RECENT NOVELS.

The Duchess Emilia. By Barrett Wendell. Boston: James R. Osgood & Co.

A Modern Dædalus. By Tom Greer. E. P. Dutton & Co.

A Week of Passion. By Edward Jenkins. Harper's Franklin Square Library.

Kamêhaméha, the Conquering King. By C. M. Newell. G. P. Putnam's Sons.

THE term "a Romance" is added to the title-page of 'The Duchess Emilia' in that special sense of the word which implies an element of the supernatural in the story. There is no more hazardous undertaking for an author, since only consummate skill can maintain, both in action and in style, the poetic dignity which alone can save the improbable from becoming the absurd in the eyes of a sceptical generation. To choose such a theme is perhaps a mistake at the outset; but, having once taken it up, even a partial success is praiseworthy, and it is not surprising that the execution should fall short of the conception. Were a reviewer to say that the plot is based on the old theory of the transmigration of souls, and that we are told how the soul of a sinful woman is whirled over the earth till it finds a body in which to work out an expiation for her crimes, a marked injustice would be done the book, and the reviewer would be only setting up a story of his own upon which to pass judgment, instead of studying Mr. Wendell's.

The author has chosen and has very carefully kept the only point of view from which any coherent presentation of his idea is possible. From first to last it is an hallucination, existing only in the brain of the writer of the journal which makes the chief part of the book. He believes that upon him has been laid the burden of atonement for the sin of another. Only by his struggles and his personal suffering can the wrong be expiated. No one of the whole group of personages has any knowledge of his fantasies until the dying appeal to the old Cardinal, whose conscience, quick with remorse, responds in faith and hope. Is it needful to point out how entirely different this presentation is from what it would have been blankly narrated as a series of *events* by a third person? It must be admitted that the action falters and at times breaks off, but the leading conception is very noble, especially after the hope of redeeming one's self is exchanged for the higher aim to lose one's self in the happiness of others.

It is a pity that such a story is in danger of being taken wholly *à tort*, and a first impression of that sort is almost ineffaceable. With this risk in mind the author should have set double guard upon his pen. There are lapses in style, there are false notes often enough, we fear, to cost him more than one reader. He was the more bound to spare no pains in finish, since the manner he has adopted—that of studied simplicity—is in itself full of peril to the unwary. But all these mistakes we pass, and permit ourselves the more gracious part of indicating to the reader some of the best of the work, such as, on page 148, the story of Santa Emilia, and the description of her festival on page 160. We copy two admirable

passages which give the treatment—the one of outward, the other of inward things:

"Whence came the colors which the dead masters laid upon their canvases, he wondered for a while in vain. Then, one evening, as he stood at Fiesole and looked down on the soft valley of the Arno, the sunset light of Italy came streaming up from the west and told him."

"It is not like the peace of the blessed, that great contentment which comes to happy souls when their work is done. It is like the peace of one who has shuddered for years in the fear that death may take him unawares, and who finds himself at last face to face with a fate that may not be shunned, and breathes freely because the terrors of uncertainty are past; yet all the time the death that he sees before him is ever a vaster mystery."

'A Modern Dædalus' belongs to the class of books of which 'The Battle of Dorking' is the well-known type. Nothing could be purer fiction, and nothing could be less like the ordinary novel. If, and if, and if, is always the premise of such a tale, but this, it must be owned, goes a long way beyond its predecessors. If the problems of the aeronaut are so fully settled that a few hours will make a man as skilful upon the wing as a sea-gull, and if dynamite is as regular a material of warfare as gunpowder, why, then, whoever is first in the fight is master of all the rest. Though Mr. Tom Greer chooses Ireland for his suppositious experiments, he is very careful to insist that he is no enemy of England, but that he is a believer in the necessity of a firm and lasting union between the two countries. Granted his premises, he is a good master of the logic of events. He makes a very vivid and dramatic story, which, we should add, it will take strong nerves to enjoy. The timid will comfort themselves with remembering that there are certain marked peculiarities in the Irish character which will prevent them from combining and winning success in the obvious way suggested. The dénouement is worked out through a travesty of the scare about the Channel Tunnel, and some droll satire upon the English Ministry, so anxious not to be outwitted and so perplexed how to prevent it.

The poisoned dagger and the fatal ring were accepted stage properties to the Romanticists. Shall dynamite hold the same place for the realists, or will the use of it put a writer into the former class? The question will be of little consequence, so long as it is used to no better effect for literary purposes than it is by Mr. Edward Jenkins. While the 'Modern Dædalus' proposes to take the terrible explosive out of the hands of political assassins to use it in legitimate warfare, 'A Week of Passion' goes quite the other way, and shows it employed for the most private and personal villany. True, to dispose of the victim so completely that there is nothing left of him but spatters has its convenience, but the effect is too gruesome for the first chapter of a novel. The book is a poor imitation of Boisgobey and Trollope, incongruous as the combination may seem. The first supplies the hair-breadth escapes, the detectives, the murders; the latter, the model young man in whom the noble lord is deeply interested, and to whom he at last marries his daughter.

The number of titles of books, pamphlets, and monographs that have been written about the Hawaiian Islands since Cook discovered, or rather rediscovered, them — for their situation was marked on the Spanish charts long before the time of the great English sailor—is to be counted by many hundreds. In this long list works of fiction are scarce. Jarves's 'Kiana' and a few collections of native myths, notably Judge Fornander's and Adolf Bastian's, are among the foremost; and a few modern Hawaiian stories and poems have been published at Honolulu. Doctor Newell's 'Kaméhaméha' easily leads the list of Hawaiian-founded fiction, whether we regard the extent of the work or the scope of treatment. It is a romantic story, half mythic, half historic. The era which it covers is that of the generations immediately preceding and including the visit of Captain Cook. Its characters, divine and human, are the progenitors of the great Kaméhaméha; that prince himself, from the time of his birth in the *adytum* of the heathen temple to that of his conquest of the entire Hawaiian group; his chief warriors and councillors; and the divine Pélé herself, goddess of the volcano, presiding genius of war, and chief of the island deities. The charms of the islands are vividly drawn, from the beauties of Hilo to the gloomy ravines of Maui and the grandeur of Kilauea, the home of Pélé. This pagan paradise, placed as it was in the Halemaumau, or lake of everlasting fire in the great lateral crater of the Mauna Loa, was a somewhat embarrassing thing for the Protestant missionaries, and required new explanations on their part of theological cosmogony as related to the future state. Doctor Newell's narrative is, however, concerned with the Hawaiian as he was before any foreign civilization, and in the social state to which many centuries of undisturbed development had brought him. He was by no means a savage as the term is generally understood; he had well-established social grades, with a system of land tenure closely resembling that of feudal France in the early middle ages; and he had an elaborate religious and a less developed military system. Of the latter, Doctor Newell's hero was for many years, until his death in 1819, the chief. His romantic birth, his exploits, his loves and conquests, are described with a glow of enthusiasm which sometimes gives almost excessive color to the style. The book is one, indeed, which lies outside of the beaten track of romance; it is Hawaiian myth and history as seen by an impressionable foreigner, and seen by the moist light of a Northern imagination. It is to be wished that the historic parts of the narrative had been more clearly distinguished from the romantic. The ordinary reader may sometimes confound them; the reader who is versed in Hawaiian history will have no trouble in disengaging the two.

Collected Essays in Political and Social Science. By William Graham Sumner. Henry Holt & Co. 1885.

It is a significant fact that the English Social Science Association holds no meeting this year. We cannot suppose that no social topics remain to be investigated, or that the supply of essays upon these subjects has failed. It is more probable that the leaders of the Association have reached the conviction that their work had become so hampered by the irresistible intrusion of incompetent sympathizers as to be more mischievous than profitable. Of all the sciences, social science is the least deserving of the name. No department of knowledge requires a more profound and thorough preparation on the part of its votaries as a condition precedent to the attainment of any valuable results, and in no department is there a more prodigious accumulation of the crude productions of feeble and ill-trained minds. The body politic labors under grievous ills, but its case is not rendered less doleful by the officious platitudes of Eliphaz the Temanite and Bildad the Shuhite and Zophar the Naamathite.

This evil plight of social science is partly due to the fact that it lacks the defence of a nomenclature of its own. The problems of physiology or mathematics are couched in technical language, and the mere difficulty of acquiring this language is sufficient to repel the obtrusiveness of amateurs. But the terms of social science are the terms of common speech, and any ignoramus can use them without much danger of making himself ridiculous to the community. Nor is it possible to supply this lack, for the principles of the science must be applied for the most part by legislation, and they must therefore be expressed in language fitted for the comprehension of the ordinary legislator. Moreover, social subjects are of the most supreme and general interest. They concern every one, and it would be highly unreasonable to expect people to keep silence about them. The advisory propensity in human nature is extremely strong: we all love to tell other people what is best for them when they are sick; and when it comes to prescribing for a whole nation or a universe, only a man of trained self-control and educated wisdom can hold his tongue. Were the "counsel of fools" never followed, we might regard this propensity as an amiable weakness; but unfortunately quacks are sometimes gifted with an eloquence that is fatally popular.

As a counteractive to all "false doctrine, heresy, and schism" in social science this book of Professor Sumner's is to be recommended. It may be urged that he is deficient in intellectual sympathy; that, as Sidgwick says of Cairnes, he cannot help representing any doctrine that he does not hold in such a way as to make it almost inconceivable to his readers that it can possibly be maintained by a man of sense. But we do not find that his roughest blows are struck in the discussion of what are fairly debatable doctrines. It is to palpable blunders in logic and wilful misstatements that he is merciless, and we know of no reason why he should not be, if he so chooses. He is not likely to make converts of those whose heads have come in contact with the bludgeon of his logic, but the spectacle of their overthrow is a terrible warning to all who may be tempted to talk of what they do not know. It is not a mere gladiatorial exhibition: it is like a well-deserved punishment inflicted upon malefactors with due process of law. For bad reasoning is here an immorality. It is quite as wrong to urge measures upon the public without having made sure that they are supported by arguments logically sound, as it is to offer for sale adulterated food or unsafe houses. The law takes care of offences of the latter kind, but the former can only be repressed by the firm stand of able and public-spirited men, and it is their duty to do this work, as it is their duty to expose any dangerous humbug.

Although the essays collected in this volume treat of a diversity of subjects, they are marked by a striking continuity of thought. The author is so thoroughly master of the system that he has adopted, that he is guilty of no inconsistencies, whether his theme be Bi-metallism, or Protection, or the Theory of Elections. But although we heartily concur in most of his conclusions, we cannot but regard the statement of his principles as occasionally unfortunate. He declares that he rejects all theories of natural rights: "Men are born without any endowment of either physical or metaphysical goods. A man is born to struggle, work, and endure, as long as he can, by the expenditure of his energies." But, Professor Sumner immediately adds, man has certain "moral claims" to help in this struggle. One of these moral claims is for "good government"; and good government embraces "peace, order, liberty, security, justice, and equality before the law." Now, it seems to us quite immaterial whether we say that a man has a natural right or a moral claim to all these blessings; the practical consequence is the same. At all events, if the distinction is to be taken, it would be well to explain the difference; there is a difference at law between a right and a claim, but we can hardly suppose that Professor Sumner has this in mind.

A more striking illustration of the obscurity

resulting from arbitrary statements concerning fundamental principles is afforded by the following definition of justice: "The fundamental notion involved in justice is that each shall get his deserts. This can be realized only under the play of natural forces, for we have no definition of a man's deserts except what he actually gets in return for his efforts under the free play of natural forces." We have no hesitation in saying that this passage is certain to mislead and likely to disgust any reader who is not already familiar with political science; for it is most reasonable to suppose that when what takes place "only under the play of natural forces" is spoken of, the institutions of government, if not of civilized society, are not included among these forces. If they are, we have the absurd proposition that every man actually gets justice in this world; if they are not, then it should seem that justice is to be found only among the lower animals, and that men can attain it only in a state of anarchy. The latter proposition would be heartily accepted by the Communists, but of course their adhesion would not be pleasing to Professor Sumner. Justice is the most important concept in social science, and time spent in clearly defining it is never thrown away.

We fear that we can put no construction upon Professor Sumner's language upon this point that will lessen its offensiveness to most readers: "Nature has no system for handicapping superiorities. On the contrary, she gives them all full operation. The state in establishing justice does not aim to correct Nature in this, but to leave her laws undisturbed." It is hard to make anything out of this but

> " . . . the good old rule,
> . . . the simple plan,
> That they should take who have the power,
> And they should keep who can."

We must maintain that it is precisely the chief end of the state to correct Nature in this, and to handicap such superiorities. The stern law of natural selection is modified by the institution of government in response to the craving for an ideal justice that is never realized in Nature, and we must still trust that love is

> " . . . Creation's final law—
> Though Nature, red in tooth and claw,
> With ravine, shriek against the creed."

It is because of our hearty sympathy with Professor Sumner's practical aims that we make these strictures upon his method of exposition. He occupies a position of singular responsibility, and he has made the position what it is by his own courage and ability. He is the most distinguished, almost the only distinguished, trustee, in this country, for a theory of government that has had the mightiest results for good to the English race. In the discharge of this great trust, assailed as it now is not only by socialistic dreamers but also by many benevolent though misguided persons, every possible effort should be made to win converts. No amount of labor would be thrown away that should serve to make the principles of social science clearer, or its precepts more impressive.

Harrow School and its Surroundings. By Percy M. Thornton, author of 'Foreign Secretaries of the XIX. Century.' London: W. H. Allen & Co. 1885. Pp. xii and 483.

A SCHOOL of the age and fame of that at Harrow on the Hill well deserves a formal history. This, in the fulness of time, we now have, and from one of her grateful and admiring sons; for Mr. Thornton was, as he tells us, a Harrow boy between 1856 and 1860. Agreeable throughout are his memories of his Harrow school-days. Even his services as a fag, as he recalls them, are untinged by any unpleasant associations. But then it was to one who evidently imposed a light yoke, the recent Cabinet Minister, Mr. G. O. Trevelyan, that he officiated in that capacity. "It may," he thinks, "prove a consolation, to learn that a hungry boy who cleared away the tea-things, when the stentorian voice of Macaulay's nephew summoned him by the word 'Bo-o-o-y!' (a prolongation which Harrovians will understand), often received, as a reward, a capital hot meal, and always a kind word for his pains." However, there is fagging and fagging. More especially the imperious bearing which so largely characterizes English gentlemen, is just what might be expected from those who once discharged the duties of virtual menials. Fagging, in spite of all that we have ever seen urged in its defence, we are compelled to regard as most likely, in the case of the majority of youths, to be demoralizing.

What has long been known as Harrow School, the successor of a school of which all that has been discovered is that it had existence, was founded by John Lyon, in 1571. Since that date it has been presided over by twenty-one masters, the last of whom, the Rev. J. E. C. Welldon, has just been elected. The characters and achievements of these masters, down to Mr. Welldon, with an account of the vicissitudes experienced by the school under each of them, Mr. Thornton details with a particularity which leaves little to be added by whoever may tread in his footsteps. Nor does he concern himself with these matters only. With laborious research he has amassed all the facts, apparently, that are available as contributory to a history of Harrow itself, and also of its neighborhood. Their picturesqueness he never wearies of expatiating on. And, certainly, there is a charm about Harrow and its environs which cannot but impress for life any one whose fortune it may be to link them with the reminiscences of his boyhood.

It would require a long list to enumerate all the notabilities who have received their early education at Harrow. The school of Sir William Jones, Doctor Parr, Sheridan, and Byron has, in later years, fully sustained the reputation which it earned, toward the end of the last century and at the beginning of this, as a nursery of youths destined to acquire fame. Of members of Parliament who were sitting in April, 1884, no fewer than sixty-four, comprising an equal number of Liberals and of Conservatives, were Harrovians. One of our former ministers at the British court, Rufus King, sent two of his sons to Harrow; and his avowed reason for selecting it was, in Mr. Thornton's words, "because it was the only school in which no special honor was attached to rank." That the system pursued at the school is, on the whole, one calculated to develop and foster a spirit of manliness and independence, has never been questioned.

Onerous as is the programme of studies which was devised by John Lyon, amusements, and as an integral part of the duties of a student, were not forgotten by him. Besides tennis, he, like Roger Ascham, laid great stress on archery. At Harrow, as at all other English public schools, the form of athletics now mainly in vogue is cricket. For this diversion the historian of Harrow School evinces an enthusiasm which must recommend him warmly to schoolboys. In connection with his favorite game, he tells a story which will bear repeating. In the days when one F. C. Cobden distinguished himself by his fast bowling, an Harrovian stripling, to whom he was, of course, a subject of laudatory discourse, was asked by one of his parents what relationship his hero bore to the great Cobden. "He *is* the great Cobden," replied the lad, with naturally indignant emphasis.

To the numerous alumni of Harrow—among whom is a fair sprinkling of Americans—scattered over the two hemispheres, the outcome of Mr. Thornton's zeal and diligence will doubtless be acceptable. His book supplies a desideratum, and, in point of exhaustiveness, it may be said to afford a veritable model for works of the class to which it belongs.

Democratic Government. A Study of Politics. By Albert Stickney. Harper & Bros. 1885.

ANY man who gives time and thought and money to the study of the means of improving the machinery of our Government is entitled to praise, and it is one of the most hopeful signs of the times that so many are ready to do this in a disinterested spirit. We fear, however, that Mr. Stickney is more to be congratulated upon the motive than the results of his labors. In politics, the most dangerous method of reasoning is the *a priori*. As the science has to do with that very arbitrary product, human nature, the first step must be to examine thoroughly how that product has been developed and manifested itself in the past. For Mr. Stickney, as far as appears from this book, history has no existence. Assuming that while other governments have had some democratic features, ours is the only one which has really been democratic, he pays no attention to any other. We have been unable to find any reference to precedent except in the most general terms. Thus, in speaking of his idea of the public meeting, he says: "The system has been tried, tried for ages. It has, whenever it has been tried by ordinarily honest and reasonable men, worked well." A little specification as to when, where, and by whom it has been tried, and with what concrete results, would have added materially to the weight of evidence. Even as to our own country, with the exception of some faint praise of the Constitutional Convention of 1787, and some vague denunciation of professional politicians, there is no attempt to enforce the lessons of actual experience. Evidently that which absorbs Mr. Stickney's whole interest is the plan which he has evolved from his own consciousness, and which he feels to be strong enough to dispense with anything more than general argument.

In his introduction, after saying that it is not necessary that every reader should agree with the details of his conclusions, he adds: "It will be sufficient for my immediate purpose if he shall be convinced that we must have constitutional reorganization of some kind, and that to that end it is necessary that the people of these United States should again assemble in its National Constitutional Convention." We regret to say that even this preliminary conviction has not been borne home to our mind; and lest we should be charged with wilful obtuseness, we will submit one of the arguments upon which his own conviction rests: "The Convention of 1787 was in effect only a convention of the individual men who were its members. It had the assistance of no outside thought. But a National Constitutional Convention of the people of the United States, held at this day, will be, in effect, a convention of all the wisest political thinkers on the face of the earth." Shades of Madison and Hamilton! And then Mr. Stickney adds (the italics being ours): "It will be certain to have in its membership many very able men. Most of them will be men who have, to some extent, *made politics a profession.*" We will not be so severe as to suppose that Mr. Stickney expects to derive this superhuman wisdom from Congress as it has of late years been composed; but then he falls upon the other horn of the dilemma, that by some new and patent process it is to be evoked from the mass of the nation. In fact, he thinks that by a particular organization of the public meeting and of the method of voting, which, as he repeats in at least six different places, would secure the free and healthy action of the people, this result would be obtained. Without stopping

to inquire whether his expectations are justified, we remark that he has omitted to point out how this organization is to be brought about. We should think a study of the great conventions for nominating Presidential candidates, and of their "platforms," might shake even his robust faith; but if it does not, there is a fruitful field in the constitutional conventions of the States. We believe it has come to be admitted, at least in the older States, that these bodies are as unpractical and absurd as any of those which have excited so much ridicule in France; and this conviction has led to the adoption of the much more commonsense process of the passage of particular amendments by two or more successive Legislatures, and the submission of that particular question to the popular vote.

The cumbrous, expensive, and dangerous experiment of a national convention for the mere purpose of reconstructing the Constitution, without any definite plan, is too wild to be thought of, and Mr. Stickney evidently means, though modesty forbids him from saying so plainly, that its object should be the making of certain changes which he thinks desirable. We will therefore state what these are, so far as they make any material change from what exists:

1. The continuance in office, until removed, of the present national officials—the members of the Senate and House of Representatives, the President, and all other officials of the national Government.

2. The abolition of the system of term elections for members of Congress and the President.

3. The adoption, for the filling of vacancies hereafter occurring in Congress and in the office of President, of a system of popular election, wherein the popular assembly, of citizens and their representatives, at every stage shall be the fundamental feature.

4. The conversion of the present Senate and House of Representatives into one supreme legislative body.

5. The giving to that body the control and removal of its own members and the control and removal of the President.

Without stopping to discuss the surprising arguments by which these propositions are supported, we merely ask what probability there is that a national convention would listen to anything of the kind, and what must be the state of mind and knowledge of the people of this country in a man who seriously thinks they could be adopted.

Alaska: its Southern Coast and the Sitkan Archipelago. By E. Ruhamah Scidmore. 8vo, pp. viii, 333. Map and illustrations. Boston: D. Lothrop & Co. 1885.

THIS little volume is the result of several summers passed by the author in the region it refers to, and is based on correspondence written for the press. In the revision and arrangement of the material many errors have been corrected, new matter incorporated, and the style revised. The illustrations are from various sources, some of which are of unusual interest, especially the "process" renderings of amateur photographs of the Muir glacier and vicinity.

The author has given a pleasant and readable narrative of her experience, a graphic account of the unparalleled scenery of the archipelago, and has preserved in her work a number of historical incidents, interesting in themselves, and for the rescue of which the future historian may be grateful. The book in its literary finish and verification of facts is decidedly in advance of the usual work of newspaper correspondents, whose misfortune it is to be always hurried and therefore necessarily more or less superficial and inaccurate. There are a few errors, most of which are so obvious as not to mislead—for instance, the rendering of the old watchword, "fifty-*nine*, forty, or fight" (p. 23); but on the whole the author's accuracy is commendable. The map is rather small to enable the narrative to be followed, but with the maps of the 'Coast Survey Pilot of Alaska,' which most travellers would find a useful adjunct for an Alaskan summer excursion, this little work will form a very entertaining handbook for the inland passage, and as such will be welcome to the adventurous tourists who are only now beginning to find out the marvels of Alaskan scenery and the ease with which they can be reached.

There is an interesting account of the rise and progress of the mining interest in southeastern Alaska, and of other resources of the Territory. The author does not seem to have heard the story of the sturdy miner, prospecting far in the interior, whose partner died from an accidental wound, and who, to preserve his reputation, hauled the frozen body on an improvised sledge over 200 miles of ice and snow to the nearest settlement, where he was honorably acquitted. But of other tales of hardy endurance and of the local color of this unique region, the book has a fair share and will well repay the reading.

Obiter Dicta. Charles Scribner's Sons. 1885.

THIS little volume of essays, which, after a warm welcome in London, has run through several editions, and finally made its appearance on this side of the Atlantic, contains seven essays, on Carlyle, on Browning, on Truth-Hunting, on Actors, on A Rogue's Memoirs, on the Via Media, and on Falstaff. They are all more or less humorous, and are written in that leisurely essayistic style which lends itself so readily to humor. This humor is sometimes natural and naïf, as where the author says: "It becomes plain that the real wants of the age are not analysis of religious belief, nor discussions as to whether 'Person' or 'Stream of Tendency' are the apter words to describe God by; but a steady supply of honest, plain-sailing men who can be safely trusted with small sums," etc. The idea is not new, but the mode of expression certainly is. More often his humor is studied and literary in character, as in the following distinction between actors and artists of another kind: "Again, no record of his art survives to tell his tale, or account for his fame. When old gentlemen wax garrulous over actors dead and gone, young gentlemen grow somnolent. Chippendale the cabinet maker is more potent than Garrick the actor. The vivacity of the latter no longer charms (save in Boswell); the chairs of the former still render rest impossible in a hundred homes." The author has, too, a gift for a certain kind of pathos that is closely allied to humor, as in his essay on Truth-Hunting, where, after quoting Dr. Newman's account of his prayers for Truth, followed by his extraordinary statement about the impossibility of doubting the liquefaction of the blood of St. Januarius at Naples, the motion of the eyes of the Madonna, and other modern miracles, he goes on:

"So writes Doctor Newman, with that candor, that love of putting the case most strongly against himself, which is only one of the lovely characteristics of the man whose long life has been a miracle of beauty and grace, and who has contrived to instil into his very controversies more of the spirit of Christ than most men can find room for in their prayers. But the dilemma is an awkward one. Does the Madonna wink, or is Heaven deaf? Oh, Spirit of Truth, where wert thou when the remorseless deep of superstition closed over the head of John Henry Newman, who surely deserved to be thy best-loved son?"

The critical portions of the essays, those relating to Carlyle and Browning, contain some good but not very original points. The author seems to have not wholly escaped from the prejudice against criticism which has led to so many denunciatory remarks by authors. A certain species of critics constitutes, we presume, the literary body referred to as "that ghastly crew, the wreckers of humanity, who are never so happy as when employed in pulling down great reputations to their own miserable level." If this is what criticism really is—that is, if the motive of criticism is usually personal malice—such language is none too strong. Our feeling is, that every one should let the critics "have it" as hard as possible. They can say what they like: why should not others say what they like of them? They have a great advantage, too, in writing anonymously, and in numbers greatly disproportioned to those of their victim. Carlyle was only one author against hundreds of savage critics; common fairness requires that he should have the right to use all the weapons within his reach—and, as a matter of fact, we believe he did.

BOOKS OF THE WEEK.

Agge, Anne A., and Brooks, Mary M. Marblehead Sketches. Houghton, Mifflin & Co. $3.
Allison, Frances Ekin. Men, Women, and Money. Chicago: Jansen, McClurg & Co. 50 cents.
Anecdotes Nouvelles. Wm. R. Jenkins. 30 cents.
Annual Register: A Review of Public Events at Home and Abroad, for the Year 1884. New Series. London: Rivingtons.
Architectural Studies. Part I. Twelve Designs for Low-Cost Houses. Wm. T. Comstock. $1.
Auerbach, B. Briefe an seinen Freund Jakob Auerbach. 2 vols. Frankfort: Rütten & Loening.
